Mr. Eaton contended in the filmed interview that the FBI was just one of scores of agencies in the United States investigating citizens. If you were to take the police forces of the cities and of the counties and of the State and governmental agencies and add them up, Hitler in his prime, through the Gestapo, never had any such spy organization as we in this country today.

There was much more of this material which sounded like a Daily Worker editorial and included the frequent Red boast; namely, that the Soviet Union and Communist China were pleased with the anti-Christian dictatorship and it's there to stay.

That this amazing performance should come from Eaton is not too surprising, for he has been a critic of the anti-Communist attitude of our Government and probably despises our Armed Forces as well as the FBI. The key to the disgraceful performance are those who pay for such a broadcast. The 74-year-old industrialist was a guest in a new series of interviews by Mr. Wallace on the overall theme of survival and freedom. It is being produced in association with the Fund for the Republic, which was established by a $15 million grant from the Ford Foundation.

Labor Reform

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I include an article from the Newark News, N. J., of May 8, 1958, entitled "Labor Reform":

LABOR REFORM

Having defeated Senator KNOWLAND's efforts to write labor reforms on the Senate

floor, the Senate leadership has begun what it calls an orderly approach to the problem. A Senate subcommittee headed by Senator KENNEDY, of Massachusetts, is conducting hearings on legislative proposals by Senator MCCLELLAN'S investigating committee, the Eisenhower administration, organized labor and Senator KNOWLAND'S rejected program.

The first witnesses, Messrs MCCLELLAN and KNOWLAND, emphasized the need for assuring the union members control over their organizations and protecting union funds from embezzlement by union bosses.

Documented disclosures of widespread abuses have forced national leaders of labor to abandon the arbitrary stand that no restrictive legislation is needed. On behalf of the AFL–CIO its president, George Meany, has submitted a list of remedies it would approved.

They deal almost entirely with halting thefts of union funds. They fall far short of what the McClellan committee, the administration and Senator KNOWLAND have demanded. They ignore one of the major needs, the establishment of democratic procedures.

Of this omission Mr. Meany says:

"We have secret ballots. The idea of Congress writing constitutional provisions and compelling voluntary organizations to put them in their constitutions is repugnant in itself."

The idea may be repugnant, but that doesn't mean it isn't necessary. Banks and railroads and other public utilities also found the idea of public regulation repugnant, but they had to accept it because abuses had developed in their operations.

Mr. Meany says that "we have secret ballots," but he doesn't say that all unions use them all the time. Besides, more than secret ballots is required to insure periodical elections and guard against trusteeship abuses and collusive contracts obtained through bribery.

In an election year labor leaders undoubtedly will be able to block a comprehensive reform program. But even if Congress at this session goes no further than Mr. Meany is willing to go, that would be a substantial victory for union members who have been robbed by their leaders.

Judge John J. Parker

EXTENSION OF REMARKS
OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1958

Mr. JONAS. Mr. Speaker, one of the all-time great jurists of our country was the late Judge John J. Parker, of Charlotte, N. C. His long service to the Federal judiciary as chief judge of the fourth circuit was outstanding and earned for Judge Parker not only the respect but the admiration of lawyers and litigants alike. At ceremonies in Richmond recently memorializing the late Judge Parker, his long-time friend and neighbor from Charlotte, Dr. Frank Porter Graham, former president of the University of North Carolina, later United States Senator and presently United Nations mediator, delivered the principal address. Under leave to extend my remarks in the Appendix of the RECORD, I include the following excerpts from that address as quoted in the Charlotte Observer:

(Here are excerpts from a talk made by Dr. Frank P. Graham at ceremonies in Richmond memorializing the late Judge John J. Parker. Dr. Graham, United Nations mediator and former president of the University of North Carolina, entered the university as a freshman to find Parker, a junior, already a distinguished student leader. It was, for the two, the start of a lifelong friendship.)

(By Frank P. Graham)

In this brief compass of his life and within my own limitations, I am not adequate to do more than suggest the origin, the quality, and the range of the life and services of John J. Parker.

Starting with little money and no pull, by sheer integrity of character and mind, steadfast work and relentless will, he climbed the judicial heights of his time but never lost the common touch and remained loyal to old friends and appreciative of their meaning in their common life.

John Parker, by personal sympathy and by the unpretentious life of his father, a highly respected merchant in the small historic town of Monroe, N. C., was proudly a man of the people in the full dignity of our North Carolina democracy.

Characteristic of many North Carolina families who triumphed over their small incomes in a resurgent State on the way up from post bellum poverty into a more general well-being through education and industry, he seldom spoke either of poverty or lineage.

Through his mother and his descent from colonial Albemarle he had either direct or collateral heritage from a professor of oriental languages at the University of Glasgow, a colonial governor who served the longest period of any governor in the history of North Carolina, and a postrevolutionary governor who was one of the leading Federalists of his day.

The Associate Justice of the Supreme Court from North Carolina appointed by George Washington is still the only North Carolinian who has sat on that Court, which his descendant, John J. Parker, missed by one vote in the Senate of the United States. He was the grandson of the rector of historic Saint Paul in Edenton, N. C., in whose beautiful shades many of Parker's forebears lie buried in sacred memory. * * *

Parker was one of those student leaders who helped to build in Chapel Hill a campus climate of opinion and attitudes in which excellence in scholarship, literature, debate, and leadership were no less renowned among students than triumphs in intercollegiate athletics.

Foremost leader of the insurgent nonfraternity student democracy of the University of North Carolina, he was throughout life a champion of the equal freedom and dignity of the individual person.

He was essentially a progressive conservative who would conserve the best of our heritage and advance the fairest of our hopes.

For him progressive measures were not to be the exhibitions of superficial novelty and passing popularity but in their deeper meaning were to be the revelation of enduring values of equal freedom and justice under law for all. * * *

For John Parker the transitions of leadership were a natural evolution from high responsibility in a campus democracy to leadership in one of the original historic States to eminent influence in the Federal Union of States and in the international affairs of the free concert of nations.

As a Republican in a dominantly Democratic State, his defeats in strenuous high-level political campaigns for Congress, for State attorney general and for governor, never embittered but rather schooled him for later victories of the spirit over disappointments and sorrows which might have undermined the character of a man without his high faith in the democratic process, generous understanding and dauntless courage.

With wisdom tempered by experience, preeminent became his services on the court of the fourth circuit in which he served as the chief judge, the senior Federal judge and the judicial peer under four of the 14 Chief Justices of the Supreme Court.

He wrote some 1,500 opinions, unsurpassed in numbers and epochal in basic cases for civil liberties, religious freedom, the right of the national Government and the local community to cooperate in the use of public money for public power, and for the right of a member of a labor union to sue the union for damages on account of discrimination because of race.

It was a part of his loyalty to the Constitution, the courts, and the law of the land that he, as a circuit judge, supported the position of the Supreme Court as it stood before and then as it stood after the epoch-making decision of 1954.

It is notable that following the decision of the Supreme Court, in the hot southern area of civil rights, the chief judge for the fourth circuit, second only to the Chief Justice of the Supreme Court, wrote the basic opinions which provided the clear-cut interpretations and feasible implementation of the historic decision which did not compel integration but did prohibit legal segregation in the public schools on account of race or color.

Almost unanimous has been the judgment of Federal and State judges and lawyers, that, in the improvement of the procedures and administration of justice in the Federal courts, Judge Parker stands preeminent in the history of American jurisprudence.

It is recalled that an eminent English jurist, who sat with Judge Parker, the alternate American judge on the International Tribunal for the trial of the Nazi leaders charged with war crimes against humanity, himself visited the United States in tribute to the quiet but profound character of the eminently judicial services of Judge Parker on that tribunal.

Three Presidents of the United States in succession turned to him for light and judgment in difficult situations.

Roosevelt asked him to make a judicial recommendation in a controversy of rights between the Office of the Comptroller General and the War Shipping Administration.

Truman appointed him as the alternate American jurist in the postwar international tribunal.

To the side of President Eisenhower he valiantly rallied in resistance to a constitutional amendment which would have tragically limited the initiative and responsibility of the President in the conduct of foreign policy as an accepted part of the structure of the United States since the founding of the Republic.

His speeches in strategic places and his testimony before the Senate committees were among the decisive forces in preserving the meaning of the American presidency in its responsibility and opportunity for international leadership in the modern world.

The life and service of John Parker today add to the democratic meaning of the homes and public schools of Monroe, N. C., the rock walls and ivied halls of the University of North Carolina, the Federal Building and Queens Road of Charlotte, and to the court of the fourth circuit in this capital on the James River in old Virginia, whose flag of responsible representative government under law must ever fly free and high in the modern world.

UNIVERSITY OF MICHIGAN LIBRARIES

Constitution Week

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. HIESTAND. Mr. Speaker, by Presidential proclamation dated August 30, 1956, the week beginning September 17 of each year was set aside as Constitution Week, a time for the contemplation and commemoration of the historic acts which resulted in the formation of our Constitution. This proclamation urges the people of the United States to observe that week with appropriate ceremonies and activities in their schools and churches and in other appropriate places.

The entire text of the proclamation is as follows:

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION

Whereas on September 17, 1787, after 4 months of debate, highlighted by sharp differences of view and by wise compromises, the outstanding leaders of our Republic, who were meeting in Convention at Philadelphia, signed the Constitution of the United States of America; and

Whereas the story of the framing, signing, and adoption of that epochal document constitutes one of the most significant chapters in the history of our country; and

Whereas it is fitting that every American should reflect upon the vision and fortitude of our forebears in creating a charter designed "to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty" for themselves and for the fortunate millions who were to follow them as citizens of this Nation; and

Whereas the Congress, by a joint resolution approved August 2, 1956, has requested the President to set aside the week beginning September 17 of each year as Constitution Week, a time for the contemplation and commemoration of the historic acts which resulted in the formation of our Constitution:

Now, therefore, I, Dwight D. Eisenhower, President of the United States of America, do hereby designate the period beginning September 17 and ending September 23, 1956, as Constitution Week; and I urge the people of the United States to observe that week with appropriate ceremonies and activities in their schools and churches, and in other suitable places. I also urge them at that time to give solemn and grateful thought to that eventful week in September 1787 when our Constitution was signed, delivered to the Continental Congress, and made known to the people of the country, thus laying the foundation for the birth of a new Nation.

In witness whereof, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

Done at the city of Washington this 29th day of August in the year of our Lord 1956, and of the independence of the United States of America the 181st.

DWIGHT D. EISENHOWER.

By the President:

JOHN FOSTER DULLES,
Secretary of State.

My purpose at this time is to remind the Nation and particularly our schools and colleges, of this significant and patriotic event. Since it occurs shortly after the fall term commences in September, such institutions may find it expedient to begin preparation before summer vacation begins.

No Bombings in Charlotte

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. JONAS. Mr. Speaker, on May 5, 1958, the gentleman from New York [Mr. CELLER], in an extension of remarks at page A4106 in the Appendix of the RECORD, included a statement issued by the Anti-Defamation League of B'nai B'rith which contained a compilation of alleged bombings of religious institutions, schools and other property. Incidents numbered 24 and 25 were listed in that statement as follows:

24. November 11, 1957, Charlotte, N. C.: Bombing attempt at Temple Beth-El failed.

25. November 5, 1957, Charlotte, N. C.: Police investigating three dynamiting incidents in Negro section since October 27; latest explosion in vacant house practically destroyed.

These statements were called to the attention of the Police Department of Charlotte by a staff writer of the Charlotte Observer who interviewed police officials and prepared the following article which appeared in the May 7 issue of the Charlotte Observer:

Local police Tuesday challenged a statement by the B'nai B'rith that three race-inspired dynamite explosions occurred in Charlotte during October and November of 1957.

The controversy arose Monday when Representative EMANUEL CELLER, Democrat, of New York, introduced into the CONGRESSIONAL RECORD a list of bombings as compiled by the Anti-Defamation League of B'nai B'rith, a Jewish fraternal organization. Included was this statement:

"November 5, 1957, Charlotte, N. C.: Police investigating three dynamiting incidents in Negro section since October 27; latest explosion in vacant house practically destroyed."

City and county police said flatly that this was not true.

"No bombs have gone off in the city of Charlotte," said Assistant Chief John S. Hord of city police. He was backed up by Detective Capt. W. A. McCall.

"If these bombings had happened, I would have been there," McCall said.

County Police Capt. G. A. Stephens said his department had no knowledge of any bombings in the county at that time.

CELLER also mentioned the attempted bombing of Temple Beth El in Charlotte November 11, 1957; the attempt at Temple Emanuel in Gastonia February 9, 1958, and one at Woodland School in the county February 15.

Police pointed out the explosions did not occur at any of these places.

At Temple Beth El, six sticks of dynamite were found in an outside corner of the building. The fuse had been lighted but burned out.

The situation was about the same at Temple Emmanuel. Police discovered an overnight bag sitting beside the church at 4 a. m. This fuse also had gone out.

At the Woodland School incident, county police had been tipped off about the try and were waiting when the men arrived. Five were arrested and three were later convicted. All admitted being Ku Klux Klansmen.

I have received a letter from the Police Department of Charlotte requesting that the RECORD be corrected. The gentleman from New York [Mr. CELLER] was informed of my intention to insert the foregoing newspaper article and the following letter in the RECORD and he assured me that he would be glad to have me do so. I am sure the gentleman from New York desires to have the RECORD factually correct. Following is the letter I received from the police department:

CITY OF CHARLOTTE, N. C.,
OFFICE OF POLICE DEPARTMENT,
May 9, 1958.

Hon. CHARLES RAPER JONAS,
Member of Congress, House of Representatives, Washington, D. C.

DEAR MR. JONAS: Monday, May 5, 1958, the Honorable EMANUEL CELLER, of New York, had the following statement inserted into the CONGRESSIONAL RECORD, page A4106 under the heading of "Bombings" as follows:

"November 11, 1957, Charlotte, N. C.: Bombing attempt at Temple Beth-El failed.

"November 5, 1957, Charlotte, N. C.: Police investigating three dynamiting incidents in Negro section since October 27; latest explosion in vacant house practically destroyed."

The attempt bombing at Temple Beth-El is correct. However, Congressman CELLER has evidently been misinformed as to the three dynamiting incidents having been investigated by the police in this city on November 5, 1957, as this is incorrect. We had no bombings in the city of Charlotte in a number of years.

I hope the statement made in the CONGRESSIONAL RECORD will be corrected and we would appreciate it very much if you will see that this is done as we feel it is doing the city of Charlotte and its citizens a grave injustice.

With kindest regards, I am

Cordially yours,

F. N. LITTLEJOHN,
Chief of Police.
JOHN S. HORD,
Assistant Chief of Police.

The good people of Charlotte do not condone bombings or other acts of terrorism or violence. The police department of that city is alert and efficient in its efforts to maintain law and order, and in these efforts it has the support of the overwhelming majority of the people in the city.

Vital Legislation

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the United States Tobacco Journal of May 5, 1958, on the

vital subject of the proposed extension of the Reciprocal Trade Agreements Act:

VITAL LEGISLATION

The recent decline in foreign purchases of American-grown tobacco, arising from overseas competition and the necessary price structure for this country's leaf, can reach serious proportions unless immediate action is taken to insure the maintenance of these diminishing markets.

One of the problems involved, of course, is the cost of production of tobacco in the United States. Since the cultivation of a leaf crop requires a high proportion of hand labor, there is no way of reducing costs without simultaneously reducing the quality of the product. The latter alternative is unthinkable, for it is the quality of American leaf which has given it supreme standing in the world market.

It would be convenient if there were some readily available method of subsidizing leaf exports in order to retain this country's share of the international tobacco trade, but other than the so-called Public Law 480 shipments—whose extent is severely limited by the supply of Federal funds for foreign aid—no such quick answer to this question exists.

Actually, it appears that the only fruitful avenue of approach to the problem of retaining foreign markets for American tobacco growers is the direct converse of a direct subsidy to the domestic producers: A further development of the process of helping overseas buyers to help themselves.

The Reciprocal Trade Agreements Act, whose proposed 5-year extension now is being argued in Congress, represents the only means of stimulating foreign purchases of American commodities, unless the distasteful and costly system of subsidies is accepted as a workable alternative.

The trade act, as long experience has demonstrated, makes it possible by mutual reduction in import duties here and in the customer countries, to maintain a constant flow of goods in both directions. Just as an automobile factory can expect to sell more cars when its own and its competitors' labor forces are working overtime, so can American tobacco growers expect to find broader markets for their leaf when foreign countries can sell their goods here at reasonably competitive prices.

A full 5-year extension of the act is needed to keep the free world economically healthy. It is in the best interests of the United States to renew the act.

Major Health Organizations Announce Program for Aged

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. MULTER. Mr. Speaker, in the CONGRESSIONAL RECORD of May 8, 1958, I directed the attention of our colleagues to the announcement of an award for research on the medical and biological aspects of the aging. I am pleased to note the news release of four of the major national health organizations announcing a comprehensive program to improve the health care of our aged citizens.

The release, dated May 8, 1958, follows:

MAJOR HEALTH ORGANIZATIONS ANNOUNCE PROGRAM FOR AGED

Better health care for the Nation's 14 to 15 million aged is the goal of a comprehensive program announced today by the Joint Council To Improve the Health Care of the Aged.

The council's attack on the more knotty problems of health care for the aged is designed to: (1) increase opportunities for older people to obtain voluntary health-insurance coverage, (2) expand health-care facilities tailored to the needs of the aged regardless of economic status, and (3) develop more community-health services for the aged.

The program will be implemented through the active and aggressive leadership of the council's four sponsoring organizations—the American Dental Association, American Hospital Association, American Medical Association, and the American Nursing Home Association.

"Member organizations of the Joint Council," said Dr. Edwin L. Crosby, director of the American Hospital Association and interim secretary of the council, "have already undertaken studies and work projects aimed at improving the health care of the aged." Among the many activities which these groups have undertaken or in which they have cooperated he listed the following:

(1) The American Hospital Association, in cooperation with the Public Health Service, is conducting a conference on the care of patients with long-term illness.

(2) An American Medical Association committee is working with the American Nursing Home Association in preparing upgraded standards for nursing homes which will result in improved nursing home care for the aged.

(3) A National Conference on Homemaker Services is being arranged under the joint auspices of the Department of Health, Education, and Welfare and 26 national voluntary organizations including the American Medical Association. This project is aimed at reducing the financial expense of disabling illness among the elderly by performing the necessary household tasks to enable them to remain at home among their family and friends, with qualified nursing and medical attendance in the home.

(4) Six regional conferences have been held under the auspices of the American Medical Association to help doctors cope with problems of the aged, and a national conference will be held in September.

The joint council will appraise the success of these programs and seek their application through united effort.

"The long-range aim of the council is better health for all the aged," Dr. Crosby asserted. "This can be achieved by helping everyone to prepare throughout his life for the later years. Our more immediate concern is better care for the aged who are chronically ill, and better ways to meet the financial and social problems that accompany such illness."

He said, "The joint council has found that sufficient up-to-date information concerning the problem is not available. A series of research projects has been launched to pinpoint the problems that require the most urgent attention."

"In addition," he continued, "the joint council will seek the expansion and improvement of health care facilities by encouraging legislative action to accelerate construction and remodeling of hospital and nursing home facilities for the aging."

To better meet the problems of the financial expense of prolonged hospitalization for chronic illnesses, the joint council is working with the voluntary health insurance industry, including Blue Cross and Blue Shield prepayment plans, to accelerate and broaden their programs that have already resulted in some degree of coverage of 6 million persons over 65 in a few short years.

The joint council has emphasized the need for State and local governments to assume their proper responsibility to indigent patients, by providing realistic financial support for medical, dental, hospital, and nursing home care for the aging who are unable to pay.

Dr. Crosby said, "The broad health care plan of the joint council includes an educational program at the national, State, and local levels. Its purpose is to make all citizens aware of the growing health problems of the aging and what can be done by the individual to assist in this field. The council plans to enlist the continued aid and support of America's voluntary community organizations."

G. H. Alford

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, on April 20, 1958, the State of Mississippi and the Nation lost a valuable and distinguished citizen in the passing of Hon. George H. Alford.

Widely known as a leader in agricultural, political, journalistic, civic, and church circles, Mr. Alford devoted his long and fruitful life to serving the cause of human advancement. His good works—and they are many—will be long remembered by the people of Mississippi.

Mr. Speaker, I am sure that I speak for all of my colleagues from Mississippi in expressing sorrow over the passing of Mr. Alford, and in extending to his fine family our deepest sympathy in their bereavement.

Under leave to extend my remarks, I am including herewith a copy of the press account of Mr. Alford's passing, along with an editorial which appeared concurrently in the April 21, 1958 issue of the McComb (Miss.) Enterprise-Journal. The editorial was written by one of Mr. Alford's long-time friends, Hon. Oliver Emmerich, and is a fine tribute to a great and good man:

[From the McComb (Miss.) Enterprise-Journal of April 21, 1958]

NOTED FARM LEADER, G. H. ALFORD, DIES

Services for George Howard Alford, 83, prominent Pike County farmer, writer and community leader who died Sunday, were held at 2 p. m. today at Progress Baptist Church.

Mr. Alford died at 2:35 a. m. at St. Dominic Hospital at Jackson following a trip to Mississippi State College where he attended an alumni meeting.

He was a veteran farm leader, editor and former Pike representative.

EXCELLED IN FARM WORK

He excelled in all these fields, and he was Pike County's first county agent and was the first Federal field agent of agriculture in the United States.

He was a Baptist, deacon, and Mason.

Mr. Alford was born January 28, 1875, at Progress community in southern Pike

UNIVERSITY OF MICHIGAN LIBRARIES

County—the eldest of 10 children of J. Dock and Laminda Fortenberry Alford.

At the time of his death, he lived within 200 yards of his birth place in Progress.

He was graduated from Mississippi State College in 1899 and later was graduated from George Washington University, Washington, D. C.

COLLEGE ATHLETE

At Mississippi State, he played center on the college's first football team. He was captain of that team and also was editor of the college yearbook, Reflector.

His one ambition in life was to help develop the agriculture and rural life of Mississippi and the South.

This was evidenced in legislation which he supported when he served as a legislative representative from Pike County.

He championed a bill to provide county departments of agriculture, a bill to authorize the establishment of agricultural high school and legislation to eradicate ticks.

FIRST PIKE AGENT

With the inauguration of farm demonstration work, Mr. Alford became Pike County's first county agent.

He also served as agent in Claiborne and Forrest Counties and later was district agent for south Mississippi.

He served as State agent in charge of agricultural work in Maryland and also was Federal field agent for Maryland, Virginia, West Virginia, and Kentucky.

He also was secretary-manager of the Texas Farm Bureau and superintendent of Magnolia Electric Association.

In the field of farm journalism, Mr. Alford was editor of the Southern Farm Gazette, the Progressive Farmer, and the Progress Enterprise.

HONORARY POSITIONS

As a civic leader, he held the following honorary positions:

President of the Pike County Farm Bureau, president of the Mississippi Farm Bureau, president of the Pike County Development Board, president of the Southwest Mississippi Livestock Association.

Member of the Pike County Board of Education; trustee of the Progress Consolidated High School; president of the Pike County Baptist Sunday School Convention.

Included among the books and pamphlets Mr. Alford wrote were:

Southwest Mississippi Livestock Association, How To Prosper in Boll Weevil Territory, Southern International Harvester Co. Demonstration Farms, Talks to Farmers, Twenty-eight Selected Addresses.

Health Bulletin, Diversified Farming in the Cotton Belt, Getting a Start With Alfalfa in the Cotton Belt, How To Grow Cotton in Spite of the Boll Weevil.

How To Live a Long and Happy Life, Autobiography of G. H. Alford, and Prayer Changes Things.

SURVIVORS LISTED

In 1902, Mr. Alford married Mayme Simmons, daughter of Dr. Willis Fleet and Annie Hall Simmons. They had five children.

Survivors of Mr. Alford include 2 sons, Percy K. Alford, Washington, and George H. Alford, Jr., Jackson; 3 daughters, Miss Ruth Alford, Houston, Tex.,—Mrs. Clyde E. Day, McComb, and Mrs. Lura W. Alford, Roseville, Calif.; 4 brothers, Delis C., Washington, Yarbor and Claud, both of Progress, and Dr. T. C. Alford, Mashulaville, Miss.

Three sisters, Mrs. J. H. Elizey, Progress, Mrs. Ethel A. Byrne, Los Angeles, and Mrs. Effie A. Ball, Columbia; and 11 grandchildren and 4 great-grandchildren.

The Reverend Joe Hinton, pastor of Progress Baptist Church, and the Reverend Dr. Wyatt Hunter, pastor of First Baptist Church, McComb, officiated at the service.

Masonic graveside rites were conducted. Burial was in the church cemetery.

Hartman Funeral Home was in charge of funeral arrangements.

A TRULY GREAT MISSISSIPPIAN PASSES

(By Oliver Emmerich)

G. H. Alford, native Pike Countian, who is being buried in Progress community today, was among the outstanding men to live in this or any part of Mississippi. His claim for this distinction is not being based upon his accumulation of money. Though he was successful in his own business affairs his chief claim for recognition is the fact that consistently throughout his life he sought to make the world a better place in which to live. It is better because he lived in it.

G. H. Alford was a progressive-minded individual. He was born at a time when agriculture was backward in many ways. As editor of the Progressive Farmer, as director of agricultural extension service in the State of Maryland, as the first county agent in Pike County and as district agent in South Mississippi, he sought earnestly to improve the methods of agriculture.

He was an ardent believer in good schools. As a legislator he voted for the creation of a State department of agriculture and the eradication of cattle ticks. He advocated consolidation of schools, fought for improved rural schools, sought rural telephones and devoted his years to improving rural life in Mississippi.

He was a devoutly religious man. Even after becoming an octogenarian his alert interest in human problems continued. This editorial is being written because the editor of this newspaper feels that a humble but great man has lived and died in this county.

His memory is rightly honored. His philosophy of life, his zeal for progress, his devotion to community improvement, his years of unselfish service to Mississippi and mankind have helped all of the people of Pike County and Mississippi. His memory should be cherished by our people.

The New Benson Look

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1958

Mr. CEDERBERG. Mr. Speaker, there is growing evidence in the country of increased support for the farm program of Secretary Benson. The Secretary of Agriculture is a man of strong conviction in his belief that the less the Federal Government meddles in the management and control of the affairs of our farmers, the better off our farmers will be in their economy.

The soundness of Secretary Benson's policies are reflected in the current price picture on a number of farm commodities.

Certainly we need more men in government of the courage and conviction typified by Secretary Benson.

The Washington Daily News on May 5, 1958, presented a splendid news picture of the situation in an article by Columnist Lyle C. Wilson entitled "The New Benson Look."

The article follows:

THE NEW BENSON LOOK

The possibility that Secretary of Agriculture Ezra Taft Benson is becoming moderately acceptable in the farm belt seems incredible although it may be true and, even, reasonable.

There is some evidence in support of it, not the least of which is that the well-informed Secretary, himself, believes it to be true.

A United Press lead on the first farm price report for April revealed why Mr. Benson believes he is emerging from the farmers' doghouse and, moreover, why the Secretary is planning this year to take an active part in the Republican congressional campaign.

The United Press lead went like this:

"Farm prices bounded upward in April, bringing improvement in farmers' purchasing power for the sixth consecutive month.

"The Agriculture Department reported that farm production costs kept pace with prices received, rising to a new all-time high for the seventh consecutive month. The parity ratio—the relationship between prices received and prices paid—remained at 87 percent, the same as in March."

The Wall Street Journal found this to be editorially interesting and commented:

"There are a number of groups in the population that aren't doing as well as a year ago, but one of the largest groups of all is doing quite a bit better—the farmers."

The Journal calculates that farm prices as of last April 15 were about 10 percent above April 1957, while farm costs rose only 3 percent in the same period.

Farmers will not accept Wall Street's yardstick to measure Mr. Benson, but in this instance it is a matter of mathematics rather than a matter of sentiment.

Whether Republican politicians will be persuaded by the new Benson look remains to be seen. Republicans must contest this year's election against Democrats who would rely more on the taxpayers to hike farm prices. Some Republicans have been demanding that Mr. Benson be fired.

They passed the word to the White House that Mr. Benson must go if Republican candidates are to have a reasonable chance to win. President Eisenhower has supported Mr. Benson consistently with a determination which has dismayed the congressional politicos. They have acknowledged that Mr. Benson's departure would not much, if any, change administration farm policies.

What they want is to get rid of the man, regardless of future policies, on the theory that the farmers just don't like him, mistrust him, and believe that Mr. Benson's sympathies lie elsewhere.

Improvements in net farm income, however, may change all of that. Mr. Benson believes that it will do so. He notes accumulating invitations to campaign this year in congressional districts and in States where the farm vote is decisive.

Mr. Benson is a conservative who believes in less, rather than more, Government control and regimentation. He advocates the law of supply and demand as both sane and safe. He has a high regard for the taxpayers' dollars and would be among the last to be freehanded with other people's money.

Since American conservatives are leaderless and lost in the political wilderness, perhaps they should take a second look at Mr. Benson as a man who might lead them to the promised land.

Retirement of Hon. Ralph E. Flanders, of Vermont

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13, 1958

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, two edi-

torials which relate to the prospective retirement of my colleague, the junior Senator from Vermont [Mr. FLANDERS].

One of the editorials is entitled "FLANDERS TO LEAVE SENATE," and was published in the Rutland Daily Herald of May 1. The other editorial is entitled "In the American Grain," and was published in the Boston Herald of May 4, 1958.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Rutland (Vt.) Daily Herald of May 1, 1958]

FLANDERS TO LEAVE SENATE

While it is true that Senator RALPH E. FLANDERS' announcement that he will not seek reelection this year comes as no surprise, it will undoubtedly help to crystallize the plans of a number of other candidates for State or Federal office.

However sure they have been that the Senator would not run again, the slight uncertainty remaining while his announcement was held off has acted as a deterrent to definite commitments by these other candidates while it has also helped strengthen the Senator's influence in Washington. As he said in his statement, his support of certain measures has been more effective while he was presumed to be a candidate for reelection.

The praise for Senator FLANDERS voiced by State officials, party leaders, and his colleagues in Congress reflects, we believe, the sentiments of a majority of Vermonters, who twice gave him substantial majorities—in the Senatorial elections of 1946 and 1952.

As a member of Vermont's team in Washington he has helped to maintain and extend the State's reputation for sound but forward-looking ideas—conservative, if you will, in the proper sense of that often-misused word.

FLANDERS' is still the junior Senator from Vermont—and will be through 1958. But as his announcement clears the air for the choosing of a successor it also becomes the occasion for the expression of deserved thanks for his service that covered two terms during some very critical times. It also provides opportunity to offer best wishes for the years of retirement, with the certainty that his energies will continue to be devoted to the development and progress of his native State.

[From the Boston (Mass.) Herald of May 4, 1958]

IN THE AMERICAN GRAIN

Vermont Senator RALPH FLANDERS' decision to retire from public life removes one of the most colorful and independent of legislators from the national political scene. His motto might well be modeled after the legendary one of Davy Crockett: Be sure you're right, then go ahead.

In the 12 years that FLANDERS spent in the Senate, he revealed a dauntless aspect. No foe was apparently too large for him when he thought he was right. He was among the first to join battle against his fellow Republican, Joseph McCarthy. He took on the labor unions, who had supported him, by voting for the Taft-Hartley Act and increased excise taxes. He upset the elders of his party in 1947–48 by flouting the tradition that first-termers should be seen but not heard.

A Senator who has taken a definite stand on so many controversial issues, who has been so outspoken, who has followed the eccentric way of the maverick, might well expect to draw fire from many quarters. It is proof of Senator FLANDERS' popularity—and political sagacity—that the people of his State returned him to the Senate at an age when many men his juniors were in retirement. He was a freshman Senator at 67 after a half century of spectacular success as an industrialist and, in Boston, 2 years as president of the Federal Reserve bank from May 1944.

RALPH FLANDERS brought to the Senate a clear social philosophy. "My social objective," he said, "is a good living for everyone willing to work." His voting record was conditioned by that philosophy, but more often by his own unfettered conclusions. It was only on very rare occasions that he voted for the sake of party regularity.

For RALPH FLANDERS also has brought to the Senate a whiff of frontier individualism. One can take issue with him. But there is in his presence something of the salty, enduring, cantankerous proud rural character of his State. He is very much in the American grain.

Troops Departing—The Lesson to Uncle Sam: Never Again

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an editorial which appeared in the Nashville Banner, a great southern newspaper, on May 8. The editorial is entitled "Troops Departing—The Lesson to Uncle Sam: Never Again."

The editorial concerns the mistake made when the order was given to send Federal troops into Little Rock last fall and expresses the hope that such a tragic blunder will not be repeated. I commend it to your reading.

TROOPS DEPARTING—THE LESSON TO UNCLE SAM: NEVER AGAIN

With the ordered withdrawal of all Federal troops from Little Rock's Central High School, a stupid, tragic blunder will wend its way into history. A Nation of conscience, concerned for the fundamentals of constitutional law, trusts it never will be repeated.

By that affront, Little Rock became an occupied city—in violation of bedrock principle. The Federal Government was in an untenable position, unrelieved by the obvious fact that it was on a spot of its own making, and unredeemed by repentance at leisure of a bungle contrived in haste.

Unquestionably the President was pushed into that insufferable action by advisory forces of reckless irresponsibility. That is no excuse for military invasion of a sovereign State, remindful of reconstruction and prejudicial to the very cause of orderly government and balanced authority, American style.

That this withdrawal coincides with the end of the school year is, of course, significant. It at least indicates, however, that the Army does not intend to chaperone these eight or so children through the vacation periods.

It is a safe wager that Federal authorities have had an ample lesson in this experience, dissuading them from notions of armed encroachment—or bayonet rule—in the future. The difficulty of graceful extrication speaks for itself. The high dive of dudgeon busted several necks, including that of the erstwhile Attorney General, Herbert Brownell, Jr., who nudged Uncle Sam out onto that tricky limb.

Wounds can heal—whatever the scar they leave—if treated intelligently. The Little Rock blunder inflicted that wound. It provides a perpetual lesson of how not to treat a case or an issue which is, under the law, for local or State amelioration.

It is an inglorious chapter thus concluded.

The departure of these troops will be 9 months late.

They should never have been sent.

Let this be the end of an experience that affronted decency and could have erupted into major tragedy for the Nation.

TVA

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13, 1958

Mr. SPARKMAN. Mr. President, Sunday, May 18, is the 25th anniversary of the Tennessee Valley Authority. My colleague, the able senior Senator from Alabama [Mr. HILL] is one of the few still in Congress who had an active part in establishing TVA. As a Member of the House he joined with Senator George Norris, of Nebraska, in sponsoring and in pushing through Congress the act setting up TVA.

No one can speak of TVA with greater authority and better understanding than Senator HILL.

On May 7, Senator HILL delivered a speech on TVA before the American Public Power Association in New Orleans, La. It is a fine presentation. I commend its reading by every one.

Mr. President, I ask unanimous consent to have this speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TVA: ENGINE FOR DEMOCRACY

(Address of United States Senator LISTER HILL commemorating the 25th anniversary of TVA, before the American Public Power Association, New Orleans, La., May 7, 1958)

Mr. Chairman, delegates to the American Public Power Association convention, guests and friends, I am honored and happy to be with you today and to join with you in commemorating the silver anniversary of one of the greatest victories ever won for the people of America—the creation of the Tennessee Valley Authority.

Twenty-five years have passed since the enactment of the legislation creating the TVA and a new generation of Americans has grown to maturity. A generation is time enough to test the strength of an idea and the truth of a concept. It is likewise time enough for people to forget what life was like before that idea was placed in action and that concept built into our Nation's life.

I am specially proud to have this opportunity to remind you of TVA's beginning, for I was one of the sponsors of the legislation which created TVA. Of all the members of the conference committee appointed to adjust the differences between the two Houses in 1933, I am the only who is today a Member of Congress. I am the only who has had the privilege of participating year by year in legislation affecting TVA, first from my seat as a member of the Military Affairs Committee of the House which used to handle legislation concerning TVA and

UNIVERSITY OF MICHIGAN LIBRARIES

in these later years as a member of the Appropriations Committee of the Senate. Alone of all the group gathered to witness when the President signed the act in 1933, I have seen the dreams, the hope and the faith that we wrote into the statute become a reality.

Those of us who have worked and fought through the years to make TVA a reality know that it can never be taken for granted. We recall that there was a great river, its tributaries rising in the mountains of North Carolina, of Tennessee, and of Virginia, flowing southward through the foothills of Tennessee, then west to meander across the sun-baked fields of Alabama and of Mississippi, northward to meet the Ohio River in Kentucky, and finally to join the mighty Mississippi on its southward course to the gulf. It was a moody and inconstant river, changing from season to season, an angry flood in spring and winter, a sluggish trickle in summer and autumn, when shoals and sandbars held it almost useless for navigation. In flood and in drought, racing or heavy with summer's langor, in every season the river was dark with the precious cargo it carried, the fertile soil of the valley, to be wasted in the sea.

For generations that soil, the priceless heritage of the people, had washed away. This was an agricultural area, one of the oldest in the Nation, an area of small farms, growing the cash crops for which the climate was ideal but which left no cover on the ground to proect it as it lay, bare and helpless against the pelting winter rains. Once majestic forests had been devastated, a sacrifice to avarice, to ignorance, and to hunger. So the rains were unimpeded. They took the soil to the river, and the river carried it to the sea, and every year the brown scars of eosion grew wider and deeper over the landscape. Every year more farms were abandoned. Every year fewer jobs became available, and the youth of the land was exported along with the soil and the timber. Every year the people had less hope and less faith in the future.

This was the Tennessee River and its valley before the establishment of TVA. On this anniversary, this occasion for remembrance, for recognition, and for reappraisal, let us remember that the dream of the unified development of all the resources of a great river basin for the people's benefit was not born of sectional interest nor parochial concern. From the beginning TVA has been a national project. It was born because statesment from the Great Plains, from the mountain West and the industrial East saw this Nation as a whole, and knew that it would be strong only as each region grew in strength. It was the great and indomitable Norris of Nebraska who was the first to envision that the Government-owned properties at Muscle Shoals might be the beginning of a comprehensive program of resource development in the Southeast. I recall his tireless efforts to educate his colleagues, to arouse the public conscience that the dam and the chemical plants built in north Alabama, a heritage of World War I, should be held for public use.

The fight, first to keep those properties in the hands of the Government, and then to devise a method to promote their effective use, went on for over a decade. Twice bills to provide for Government operation of the properties at Muscle Shoals were adopted by the Congress, only to be vetoed by Presidents Coolidge and Hoover. Each time the fight was renewed, and in 1933, after years of struggle, President Franklin D. Roosevelt added his vision to the concept, and his support and moral leadership to the valiant bipartisan group in Congress. Then the statute creating TVA was finally approved, the properties at Muscle Shoals were turned over to the new agency, and a great concept started the road to realization—the concept that makes TVA unique in America's history, the concept that has made TVA the admiration and awe of millions of visitors, the model in 20 countries for resource development.

As we worked to set out the concept in legislative language, we had doubts; we were uncertain about a great many points. We were creating a new kind of Federal instrumentality. The tasks to be undertaken were not all new; the problems were not novel; only the kind of agency was different. Reluctant rivers had been improved for navigation from the beginning of the Nation. The problem of vanishing resources had been with us for a long time. But always rivers and resources, problems and opportunities had been considered piecemeal. In TVA we tried something new and bold. The heart of the concept lies in the fact that for the first time in the history of Federal legislation Congress accepted the unity of Nature. For this one river basin the interrelationship of land and water, of trees and pastures, of men and nature, was recognized in a Federal statute. This was a more startling innovation than it sounds. For then and now the traditional organization of the Federal Establishment divides responsibility for the resources of a river and its basin among a dozen bureaus and departments, each with a single purpose, a different head, working under separate statutes. When we created TVA we abandoned the familiar pattern. We gave one agency responsibility to inaugurate a total program committed to the full development of all Nature's resources for all the people.

At the same time we tried as we drafted the statute to build a bulwark against the steady tide of centralization. We knew then as we know now that too many decisions were made in Washington on the basis of papers and reports; too much was decided by remote control. The experts were too far from the problems, the administrators too far from the people. So we told the Board of TVA to make its headquarters in the region, close to the work to be undertaken. We authorized it to work with State and local governments and groups of citizens. We made it an independent agency, corporate in form, removed from centralized control in Washington. We gave the power of decision to the men in the field.

We wanted TVA to be efficient, and we accepted the basic principle of modern management, still too often not recognized in government. We gave authority commensurate with responsibility and we determined to judge by results. By law we freed the agency from rigidities of the classified civil service. We told the Board to select its own employees, but absolutely barred political considerations in appointments. We authorized the Board to buy or condemn the land and the equipment required in its program, and to sell whatever proved to be surplus. They could enter into contracts, and sue and be sued in the courts.

All these characteristics have proved to be essential—the unified approach, the location in the region and the encouragement to management to develop a decentralized administration, the accountability which is the counterpart of independence, the stern rejection of political interference. All have been vital to TVA's success. All of them have required defense against attack over the years, but to this date each one has been preserved. But TVA achievements, its matchless spirit, rest I think on something greater than all of these together. It is rooted in the fact that the overriding purpose of the statute was clear on every page.

The administrative innovations were not to be ends in themselves, nor were the projects and the programs they would facilitate to be objectives in themselves. Every undertaking was to be seen as a means to widen the economic opportunity and promote the well-being of the people. That is assumed to be the ultimate objective of every government program, but the purpose for which projects are undertaken is too often obscured by the projects themselves. Dams and plants and projects are judged as engineering achievements. Construction becomes an end in itself. Somehow, in some way, some ingredient in the formula we devised for TVA has so far kept the overriding purpose sharp and clear. TVA still knows that what happens to the river, the land, and the forests is not the final test. It is still aware that its success must be judged by what happens to the people when the resource base is strengthened, when energy is made abundantly available for their use.

Because of this bold and imaginative and unique concept and the magnificent TVA management that has given the concept such rich meaning, today the river is no longer a menace and a problem. It has been put to work for the people. A series of majestic dams has transformed it. Now a chain of lovely lakes, its bars and shoals have vanished, and commerce moves in stately sequence over a modern water highway. Last year over 2 billion ton-miles of freight was carried on the river, in contrast to less than 33 million ton-miles which moved, mostly in short hauls, in 1933. Grain comes down from the upper Mississippi, oil and sulfur move up from the gulf, automobiles, trucks, and steel and coal are carried for unloading at thriving river ports on the Tennessee. From the Great Lakes to the gulf the products of other regions come to new markets in this valley, and the river serves the people.

Today the people know that when the rains come and the water rushes down in angry torrents the same massive dams which create the navigation channel will stand watch through all the days and all the nights of peril, silent guardians of their safety.

This is the only river so controlled, the only river in the world where, under a single management, a whole system of dams and reservoirs is mobilized in harmonious unison to protect the people and their property.

Today transmission towers rise high from the valleys and the hills, supporting over 11,000 miles of lines which carry to the people power generated at these multipurpose dams and the gigantic modern steam plants built by TVA. Through the efficient and dedicated management of TVA, 20 dams have been built and 8 great steam plants have been constructed, along with chemical plants and other facilities. In 1933 the TVA service area had only a little over 800,000 kilowatts to meet all its power requirements. Today the area has over 10 million kilowatts of capacity. In 1933 there were only 225,000 residential electricity consumers. Today TVA reaches more than 1,300,000 domestic consumers through more than 150 municipal and cooperative distribution systems. These systems have a total plant investment of their own of almost $600 million and are partners with their Government in the great enterprise. In 1933 TVA consumers used an average of 600 kilowatt-hours in their homes every year. Today their average anual use has increased more than tenfold. In 1933 only 3 percent of the farms, just a few near towns and cotton gins, were connected to lines for electric service, and all over the region the countryside was dark at twilight. Today more than 95 percent of the farms use electricity in their homes and in their barns. Every year the farms of this area use as much power as all the region used, in all its towns and cities, in all its business enterprises, before TVA.

The river is only one resource which is providing more abundantly for the people because of TVA. Since 1934, 328 million seedlings have gone from TVA nurseries to stimulate forestation programs. The forests and the soil are in the process of rebuilding

and the cycle of devastation has been reversed. Slowly the scars of erosion are healing. Where acres were brown and barren in 1933, trees stand tall and pastures lie green beneath the sun. The landscape is more beautiful, the land is more productive, and the region has started the long road back to robust strength and full productivity.

The Tennessee Valley is no longer the heart of what was once called America's economic problem No. 1. Within a generation, average annual income has increased eightfold. Agricultural income has nearly tripled and the index of family living—the measure of the comforts of modern living—has improved 130 percent. This is double the national rate. With diversification as the watchword, the number of industrial establishments has increased about twice the national rate of increase. Manufacturing income increased more than 10 times during the first 20 years of TVA's existence, from $127 million to $1.4 billion. Progress toward more finished products has meant higher wages and greater return to valley industry. With its greater earnings the region provides a better market for the goods and services of other areas.

Improved land use with TVA's concentrated fertilizers was demonstrated on some 3,500 farms in 28 States during 1957. Through the years some 72,000 farms in 35 States have taken part in farm demonstration programs.

Recreation and fishing, waterfowl and deer conservation, and other activities add to the benefits and satisfactions of living in the valley.

TVA was not conceived as a military project. But today TVA is in the forefront in the development of atomic weapons, missiles, vital light metals, and new chemicals. Almost three-fourths of TVA's power output goes to defense and defense-related industries. More than half—a staggering 30 billion kilowatt-hours in 1957—goes to the Atomic Energy Commission plants at Oak Ridge and Paducah. These plants alone use twice as much electricity as New York City, and more than is used by all the homes, businesses, and industries in each of 41 States.

Large amounts of power go to the Army's guided-missile center at Redstone Arsenal, Ala., where the two successful Explorer satellites were produced; to the Air Force wind-tunnel center at Tullahoma, Tenn., where missiles and supersonic aircraft are tested; to the defense-related industries throughout the valley—titanium, aluminum, ferroalloys, chemicals, and others.

I am proud when I survey the financial record of TVA. My colleagues of 1933 would be proud if they could know that from the beginning revenues from power sales have covered all the costs of operation, including depreciation, and in addition have provided for the Government, the owner, a return which has averaged 4 percent on the investment. I am proud to say that over $400 million from proceeds has been reinvested in the system, enhancing the Government's investment without requiring appropriation, and that $240 million has been paid to the United States Treasury in cash.

TVA has demonstrated the ancient democratic principle that participation in their Government stimulates and releases the initiative and resourcefulness, the creative energies of a people. TVA began as an experiment in grassroots democracy and it has proved to be a matchless example of democracy functioning at its best. TVA works with and through local and State governments, businessmen, farmers, labor, colleges, and public and private groups of the Tennessee Valley, and thus it has given new life and meaning to Thomas Jefferson's dream that every citizen be a sharer in the direction of his Government. This partnership with the people is the hallmark of TVA. It has enriched the lives and the welfare of the people, it has made stronger State and local governments, and it has made our America stronger.

In the quarter of a century since TVA was established we have had time to forget some of the myths slain by TVA, myths that were advanced as truth when we were fighting to establish this new instrumentality of Government. There was the myth that Government activities could not be competently managed, but were bound to be wasteful and inefficient. You would be surprised to know how stubbornly that dogma was imbedded in our national folklore. Today it has been vanquished by the record. TVA projects have not been let out to contract, as the custom is. These projects have been designed and built by TVA itself. World records in construction time have been broken, new standards for safety in hazardous employment have been established. Costs have been held within estimates, as men working for their Government have turned in a record of performance to destroy a myth forever.

There was another myth. As we wrestled with the legislation the private power companies tried to frighten us with tales of the vast surplus of electric energy which they said would be wastefully created if multipurpose dams were built by TVA. I find, for example, that when one official testified before our committee in 1935, he said in a colloquy in which I engaged him, as we were considering the first amendments to the TVA statute:

"There is not the slightest present economic justification for the building of any of the hydro plants now being built by the Tennessee Valley Authority, nor for the building of any of those planned."

The building of dams continued in spite of his advice, and just a few years later the hydro resources of the region were approaching exhaustion as the people found more uses for electricity every year, and TVA turned from dam building to the construction of modern steam plants. Then coal, another resource of the region, was put to work for the people, and another myth had disappeared.

The myth of surplus capacity rested on some other legendary notions. It rested, for example, on the dogma that electric energy could not be made available to rural areas. We remember how firmly that conviction was rooted in the creed of America's private power suppliers a quarter century ago. In the printed transcript of the hearings I just quoted I find the same witness benignly advising the committee that we were in error if we expected TVA to find a market for power on the farms of the area. He said:

"The records of the Bureau of the Census indicate that only about 33⅓ percent of farms have an annual income in excess of $1,000. We do not consider any farm customer a prospect unless his income is in excess of $1,000."

With that complacement formula hope of obtaining electric service was denied to two-thirds of the farms of the region. This myth died too. It died because the statute creating TVA rejected the approach and the advice of the private power companies, and adopted a new standard for TVA to follow.

In the TVA Act we specified that municipal and cooperative agencies should be given preference in the sale of power. This is a common provision in Federal legislation. But in the TVA statute we did much more than that. We required the resale rates to be established by TVA to be such as would encourage use, particularly in the homes and on the farms in the area. These were the consumers neglected by the private companies. And the communities which voted and groups of farmers that organized to exercise the prefeernce rights to power which the statute made available to them on their part accepted a responsibility beyond the responsibility of providing the capital to finance the facilities of distribution. They joined wholeheartedly in carrying out the program envisaged by the act creating TVA. This is a point too often missed when TVA is discussed. We made clear that this Government investment wa snot made in order that towns and cities, or even rural cooperatives, should purchase power at low rates for resale to consumers at high prices. Nor was it to be made to transfer to the electric ratepayers of any community burdens which should be borne by the local taxpayers. This public investment in power facilities was made that a demonstration might be provided of the results achieved when power is made available to consumers at lowest possible costs.

In contracts with TVA the distributors agree to charge the rates established to promote abundant use and to dispose of revenues in such a way as to achieve the objectives we set out in the statute. In the beginning they took a risk, for when TVA's resale rates were announced in 1933 no one knew what revenues those rates would provide. We know now. The high-use, low-rate pricing policies which the private-power companies had been too timid to try turned out to be sound from the point of view of earnings. At low rates, the volume of sales rose as we had hoped, and increased revenues resulted. In spite of the rise in costs over the years, TVA's wholesale rate has been little changed and the resale rates to the consumer, considered low in 1933, have already proved for almost half of the present distributors to be too high to carry out the statute's injunction and they have been reduced. The trend of rates is downward in the TVA area and another myth has died. Sometimes an overriding concern for the public interest can accomplish miracles. This is the lesson of TVA.

The preservation of TVA as a strong, adaptable, responsive agency is just as necessary in 1958 as its establishment was in 1933. I know of no other agency of our Government which has met so well the problems of public responsibility. It is vital to our democratic processes to have government which can stand up under the hardest public scrutiny—even unjustifiable vilification and abuse—yet reply, not with guilt, but patiently with candor, as TVA has done. We must have government which can build strength for defense while concentrating on the arts and needs of peace, as TVA has done. We must preserve in the example of TVA our national determination to act for all our people, giving them always something more than second sitting at the table of special interests.

The new generation of Americans may well ask, "If TVA has been so triumphantly successful, why is its example not more readily followed?" Why, after 25 years of proof, do we yet behold the spectacle of those who would undermine and destroy TVA?

The answer is a story of the never-ending struggle between special privilege and democracy. After the First World War, private interests blocked the use of Wilson Dam and the nitrate plants and the development of the river. When Congress twice enacted legislation for navigation, power, and flood control on the Tennessee, the bills were vetoed.

For years after the creation of TVA, private power companies dragged out court injunctions and vexatious litigation. They built spite lines. Through false propaganda they sought to turn the farmers and municipalities against TVA. They tried every strategem to make TVA a failure.

Year after year, in virtually every session of Congress, we have had to fight off attacks on TVA—curtailed appropriations and crippling amendments that among other things would even deny TVA its authority to use its power proceeds for plant expansion and that would hamstring TVA's ability to grow and to meet the expanding needs of municipalities, industries, farmer cooperatives, and the national defense.

UNIVERSITY OF MICHIGAN LIBRARIES

In recent years new impetus has been added to the threat against TVA.

First came the Dixon-Yate's deal. Under this secret scheme, the Atomic Energy Commission opened negotiations with private companies for plant construction and power in the TVA service area, at high costs. The power would not have gone into atomic plants but to TVA customers. Another Government agency was to be the instrumentality for violating the TVA Act, boosting power costs, destroying TVA's yardstick rates, and opening all public power investments to similar private exploitation. Public exposure in the Senate caused even its proponents to turn against this blatant conspiracy.

A straightforward, self-financing plan, under which TVA will finance future capital expansion through the sale of revenue bonds to be paid off from TVA power revenues, is now before Congress. The private utilities, which a few years ago urged revenue-bond financing for TVA when they thought it was impractical, now cry out against this plan. They have publicly announced lobbying plans to defeat the proposal. They continue to carry on their nationwide campaign of false and misleading propaganda against TVA.

Why the unceasing fight against TVA?

The private utilities hate TVA because TVA is a yardstick against which the people in all the States can measure excessive rates and monopolistic practices. TVA stands as a perpetual challenge to the utilities. It is an argument they cannot answer. Consequently they would destroy it. They will never cease their attacks. This generation and the next and the next must stand mobilized and alert. We can never take for granted this great engine for democracy.

In evaluating and reappraising this magnificent experiment of 25 years duration, let us always remember that the triumph of TVA is recorded in the homes and the farms of the valley—in installation of stoves and washing machines, refrigerators and freezers, milking machines, pumps, water systems, and hay driers. It is recorded in the increased use of electricity by the people, not only in the region it serves but all over the Nation. It is recorded in the contributions of the great REA, which was born in this valley, of the faith and courage of the people. The symbol of our TVA is revealed when the lights go on at nightfall all over the region. They shine out at dusk from barns, from kitchens, and from parlors, deep in the coves and high on the hillsides.

This is the realization of the dream, the dream of energy made abundantly available to lighten the hours of the people's toil, to brighten the time of their leisure, to nourish their aspirations for the future, and to strengthen the Nation and the Nation's defense.

This is TVA on its 25th anniversary. This is indeed a time for remembrance, for recognition and for reappraisal of TVA, our great engine for democracy. With the faith of our fathers in the future generations, with calm confidence in the material and spiritual resources and vital strength of our America and her people, and with the firm resolution to defend and protect our heritage, we shall go forward to the glorious achievements and the rich rewards that on this historic and memorable occasion await the new generation of Americans.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. MACHROWICZ. Mr. Speaker, the 10th day of May is celebrated throughout the world as a Rumanian national holiday. Toward the end of 1944, when the Soviet troops occupied Rumania, that country lost its freedom and independence. Its enslavement is so complete that even the 10th day of May, a national holiday, celebrating the unity and independence of the Rumanian nation, has been forbidden by the occupying power, which has forced instead upon the subjugated people the celebration of their invasion under the guise of liberation.

The Rumanians reestablished their independence during the 19th century, after the Crimean War. They had played a significant role in the history of Europe, at the time of the Crusades, through their heroic stand against the Ottoman invasions. The Rumanians, a Latin nation, have always constituted an obstacle in the path of Muscovite imperialism. Since the time of Peter the Great, they have been invaded more than 10 times by their insatiable neighbors and are now again suffering the blight of Moscow's military aggression in Europe on the Russian expansionist route toward the Mediterranean and the Middle East.

Never, during the last 13 years, since the end of the war, have the Russian tanks left Rumania. The country has been bled white by Soviet exploitation and tens of thousands have perished through deportation and slave-labor camps. It was in vain that a peace treaty was concluded with the Moscow puppet government of occupied Rumania and that afterwards this stooge government was accepted in the United Nations. Neither were the provisions of that treaty or of the United Nations' Charter implemented.

All reports coming from Rumania indicate that, despite the frantic Communist efforts to sovietize Rumanian life, the people have remained deeply attached to the West and have preserved their unshakable faith in America's ultimate will that they should regain the freedom they have lost. It is in the interest of the free world's policy, in its efforts to promote a secure peace, to support these legitimate hopes and ideals of these silent, waiting allies behind the Iron Curtain.

On this anniversary of Rumanian independence, I wish to add my voice with those of many in the free world today, in sending a message of encouragement in the hope that it will contribute in sustaining the spirit of resistance of the Rumanian people to Communist tyranny, the importance of which is more and more felt in the free world.

A Statement on the Economic Situation in Detroit

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mrs. GRIFFITHS. Mr. Speaker, during the past few weeks, the House Committee on Banking and Currency, of which I am a member, has been holding extensive hearings on various antirecession measures now pending before the committee. In my opinion one of the most outstanding witnesses to come before the committee was my own mayor, the Honorable Louis C. Miriani of Detroit. At this time, I wish to insert in the RECORD his statement as it succinctly gives the economic situation now existent in Detroit, a situation not far removed from every area in our country.

STATEMENT BY LOUIS C. MIRIANI, MAYOR, CITY OF DETROIT, MICH., REPRESENTING THE AMERICAN MUNICIPAL ASSOCIATION AND THE DETROIT METROPOLITAN CONFERENCE OF MAYORS, BEFORE THE COMMITTEE ON BANKING AND CURRENCY, HOUSE OF REPRESENTATIVES HEARINGS ON SURPLUS LABOR AREAS AND DEPRESSED AREAS, MAY 8, 1958

Mr. Chairman and members of the committee: Realizing that the welfare of our Nation and that of millions of its people depends upon the legislation now pending before your honorable body, I am most grateful for this opportunity to submit for your consideration such information as I have at my command.

I am appearing before you in a dual capacity. First, as a member of the executive committee of the American Municipal Association. Secondly, as mayor of the city of Detroit, and in behalf of the metropolitan Detroit area.

Last Friday, the Detroit Metropolitan Area Conference of Mayors, representing 91 communities in southeastern Michigan, unanimously passed a resolution supporting this plea that legislative relief be given quickly to their stricken area.

With more than 5 million Americans now unemployed it has become obvious that the first order of business, as far as the proposed legislative program under consideration is concerned, is for an immediate program to ease the shock caused by the present unemployment crisis.

The second phase, which also will have an immediate stimulating effect through restoration of public confidence, is the long-range legislative program designed to strengthen the Nation's economy by correcting inherent evils which have added to present conditions.

I know that this committee and other Members of Congress are aware that the restoration of jobs depends upon the restoration of consumer buying to more normal levels.

I know, too, that you have been presented with much testimony and are giving thorough consideration to the numerous proposals which already have been included in a variety of bills.

In speaking in behalf of the mayors of the Nation, I wish to thank this committee for the expeditiousness with which it is handling its tremendous responsibility.

I am in entire agreement with the idea that the creation of jobs is of prime importance. I cannot stress too strongly the dire need for immediacy of action in that direction.

The conflagration which threatens to consume us must be extinguished first. The problem of repairing and rebuilding the structure of our economy should follow.

I cannot understand the thinking of those who advocate a wait-and-see policy while debating the cause of the blaze and the relatively minute differences between the various available techniques and methods.

Surely, it must be recognized that even a wet blanket can be more effective at fighting a starting fire than if directed at every proposal on how to put the fire out.

There is no substitute for a steady, weekly paycheck in restoring a man's confidence or his buying power.

The hopes of the unemployed lie in such important efforts as are being made by this and other congressional committees who have had the foresight and the public interest to delve deeply into factfinding in preparation for remedial action.

Nowhere is this more appreciated than in Detroit metropolitan area, where 275,000 persons, 18 percent of the normal working force, are now out of work and thousands of others suffering under the inadequate income from part-time jobs.

I dislike statistics when discussing people. These are husbands and fathers who are unable to provide for their families. These include thousands of workers who never before have been out of work and are workers with 10, 20 and even more years of seniority. These are men who want jobs, not charity. Thousands are older men who have many years of productive life ahead of them, but for whom there are no jobs to go back to. These are the wage earners who have been hit by the evolution of manufacturing methods, of which automation is but a small part.

It was particularly heartwarming to learn, from the invitational letter from your chairman, that this committee also is concerned about the problems facing so-called depressed areas.

Detroit has been particularly hard hit by this industrial revolution. But it is not a problem unique to Detroit, but one that has been experienced by all large industrial centers where previously bustling plants now stand idle because of the obsolescence of multistoried structures, the lack of elbowroom for expansion, and other factors caused by abnormal population growth.

Detroit believes it has an answer to this problem, and I will discuss this in detail later.

Your committee has asked me specifically for information as to the situation in Detroit.

On March 31, I reported to the House Ways and Means Committee that unemployment in the Detroit area numbered 230,000, 15 percent of the labor force.

Two weeks ago, that figure already had increased to upward of 265,000, or 17½ percent of the labor force. Today it stands at 275,000, and almost 1 out of every 5 workmen is idle. This makes the Detroit metropolitan area the hardest hit in the Nation.

Of the total number of unemployed, 45 percent comprise those in the automotive industry; 28 percent from other manufacturing plants, and 12 percent from the construction industry.

I realize that many Members of Congress come from areas where the phrases, "temporary business slump" and "slight recession" are applicable in the present situation.

I realize, too, that some areas are even better off than that.

But none are too far removed to smell the smoke.

I am bringing you a firsthand report from the section of our Nation where the fire is out of control.

I'm old enough to remember back 3 decades when the same cries of fire were scoffed at, fallaciously waved aside with slogans, and with inadequate programs, and ignored up to the very point when those who had sneered the most also started jumping out of windows.

I am not talking about a slight business slump.

I am not talking about a slight recession.

I am talking about a depression.

I am talking about long lines at the unemployment benefit windows, many for their last check.

I am talking about long lines of welfare applicants now being processed in Detroit at the rate of 300 a day with the present backlog nearing 5,000 cases awaiting processing.

I am talking about more than 11,000 families, averaging 4 persons to a family, who are depending upon welfare aid for food and other bare necessities of life, 70 percent of them seeking welfare for the first time.

I am talking about block-long lines of those still worse off—those who cannot even qualify for welfare aid—getting their meager meals in soup lines.

I will not bore you more with statistics.

What I do want to point out is that while individual communities have in some measure been able to handle the situation, the financial breaking point has been reached.

Detroit has set up its budget for the fiscal year beginning July 1. In it we have financed a deficit of almost $8 million borrowed to offset the current welfare deficit.

In it we have included some $16 million to meet welfare costs for the 1958–59 period. A figure, by the way, which will be wholly inadequate if present trends continue.

We instituted drastic economies, including a savings of $2,800,000 in the current and $6 million for 1958–59 budget. All city employees have been denied cost-of-living adjustments to which they are entitled.

We have refunded a substantial portion of the debt service requirements. We have bonded and taxed up to our statutory limits.

In other words, we have reached our financial ability to cope with the situation. We are not alone in this plight. It is shared by countless other communities. It is shared by State governmental units as well.

Some time ago our department heads prepared a public works program totaling $45 million and which would provide almost 13 million man-hours of labor.

These are worthwhile and needed capital improvement projects which have been delayed and which we would have authorized if we had the funds. These projects are over and above the total authorized capital improvement program of $134 million already financed by normal local and State and Federal matching funds. I have attached the list hereto as exhibit A.

This program can be launched at once.

This program will put men to work at once.

Similar programs are available throughout Michigan as our Governor, G. Mennen Williams, testified recently before your committee. They are, no doubt, available in every hard-hit area.

You have before you several measures which would provide the necessary funds for the creation of jobs immediately through such programs.

Federal relief offers the only available solution.

Such relief must come as quickly as possible. It must come in a realistic form and tailored to the varied abilities of local governments to participate.

Many communities will require outright grants-in-aid, not only for works programs but to meet welfare obligations. Others will require long-term loans with a few years of moratoriums on repayment and/or interest charges.

I recommend a ceiling on the interest rate at 2 percent, in order to avoid future crippling effects upon local municipal economies.

There have been several bills submitted to Congress that recognize the need for making available useful employment opportunities to all those able, willing and desiring to work. I have had the opportunity to review bill S. 3231 submitted on February 5 and referred to the Senate Public Works Committee. This type of bill, in my opinion, hits directly at the problem and provides for a program that could be initiated quickly and gives the administrator authority enough to allocate funds for worthwhile public improvements in those areas where the unemployment is recognized as serious.

I have supported the proposal to remove the excise tax upon automobiles being firmly convinced that this would stimulate the sales of this product.

But whatever decision is to be made by Congress in this matter, it should be made at once because the mere fact that such action is under study has caused the withdrawal of countless prospective purchasers from the market.

I make this plea, not only in behalf of Detroit, but in behalf of communities in 19 States in which automobile manufacturing is being done. Only one-third of all automobile manufacturing is being conducted in the State of Michigan and, despite the popular conception, only 23 percent in Detroit.

I urge that proposed Federal projects for construction, flood control, and so forth, scheduled for areas of labor surpluses be put into immediate programing.

Tax relief measures should be evaluated as to their effectiveness in providing employment most quickly.

More effort should be given toward the channeling of defense contracts into surplus labor areas.

These suggestions I submit as my own humble opinion. I cannot qualify as an expert economist.

I am merely one of the thousands of chief executives of local units of government who seek desperately for jobs for our unfortunate fellow men.

I would like to submit for the official record of this committee a copy of the National Municipal Policy of the American Municipal Association for 1958 which was adopted at our last meeting.

You will note that on page 16, section 25 on urban renewal, we recommend to Congress that the Housing Act be amended to recognize the need for a broadened approach to permit a greater share of the Federal programs resources to be devoted to redevelopment for commercial and industrial purposes. This particular recommendation is given consideration in bill H. R. 6215 (introduced by Congressman SPENCE) and bill H. R. 5471 (introduced by Congresswoman GRIFFITHS). Other suggested amendments are also proposed in this section of our national policy which I would like you to give consideration to. Section 25–9 is of particular importance to our particular area.

Other sections of the national policy statement, which I refer to you for your consideration, are No. 26 and No. 27 which express the feeling of the cities of the United States on mutual assistance on Federal-aid public works programs, which you are considering in bills H. R. 11474 and H. R. 11272.

Mr. Chairman, I was most encouraged to note that your invitation expressed the committee's concern, not only for the critical employment situation caused by current business conditions, but for the chronic unemployment caused by physical factors in depressed areas.

I know you are all aware of the critical problems caused by the current trends of shifting populations from rural to urban areas and particularly the problems of large core cities of metropolitan areas.

Detroit provides a typical example of how this choking process has produced slums and its resultant deterioration of a city's tax base.

The fact that the assessed valuation of our downtown area declined by $100 million in 20 years, I cite as only 1 example.

Fortunately Congress provided the means of attacking slum housing conditions through slum clearance and rehabilitation legislation. Detroit has gained a national reputation in its application of this type of legislation and is successfully meeting and combating the problems arising from housing blight.

UNIVERSITY OF MICHIGAN LIBRARIES

However, another problem has arisen that has had a serious effect upon employment and one that cannot be met entirely under existing legislation—and that is in the area of industrial blight.

The rehabilitation of obsolescent industrial areas has become a vital issue to many of our older cities. The problem arises primarily because of a change from the old multistoried factory buildings to the new concept of structures that lend themselves to a more efficient operation.

The need for more parking space for the automobiles owned by employees and for more adequate streets to handle growing truck traffic are two more of the phases that have made the old style buildings inefficient and too costly to maintain in this highly competitive age.

While Federal assistance is available to such projects under the 1954 Federal Housing Act, providing that the areas can qualify under the slum housing provisions of the act, aid is still needed by cities who desire to rehabilitate areas composed solely of blighted industrial buildings.

Detroit is now in the process of tackling one such neighborhood at its own expense, and by so doing, has demonstrated the basic soundness of the concept of rehabilitating older deteriorated industrial areas.

I have attached hereto 2 exhibits, 1 an aerial view of this pilot site and the other, the site plan for its eventual rehabilitation as an industrial park offering modern facilities to meet the present day needs of small industries.

It is significant to point out that employment in this area had dropped off by one-third within the past 4 years and that this pilot area already has been assured of occupancy by firms that will provide hundreds of additional jobs as well as adding to the tax base.

We in Detroit have employed an industrial coordinator and created a hard-hitting industrial coordinating committee.

They are in the process of setting up programs for the rehabilitation of a number of industrial blighted areas.

Detroit has completed a number of detailed studies which clearly have indicated the nature and magnitude of the problem of industrial obsolescence and blight. These studies have set the framework for a coordinated attack on this serious problem.

This industrial renewal study measured the quality of industrial buildings and environment in each block of the city's industrial corridors.

It was found that of the 7,109 acres within the industrial corridors that are presently being used for industrial purposes, 840 or 11.8 percent, had an extreme degree of obsolescence and deterioration, and 1,700 acres or 23.8 percent had a considerable degree.

The industrial study determined that 40.6 percent of the city's industry is in need of room for expansion or rehabilitation. A significant proportion of these industries are threatening to move out of Detroit despite the availability of skilled labor within the city. The loss of these plants would mean a reduction of 60,000 manufacturing jobs and the loss of the purchasing power represented by these jobs.

Detroit, because of these background studies, is now in a position to undertake a large scale industrial renewal program which will have a great effect in reducing unemployment and thus help strengthen its economy.

The city has analyzed the Area Redevelopment Act as set forth in H. R. 5471 and H. R. 6215 and feels that such legislation would aid materially in speeding up the industrial renewal program if sufficient funds are made available to us.

In closing, I also would like to express my views concerning the financial problems of small businesses.

From our investigations in Detroit concerning the well-being of small business in our city, we have from time to time talked with officials of our banking community, our investment people, and the small business administration. We have found that it is the usual, rather than the unusual, that a well managed small business has not had any difficult in securing short term operating and capital loans. We, however, do not know of any facility within our State which provides long range equity capital or working funds to small business concerns. We believe that any added legislation which will assist in maintaining a good stable small business establishment, whether it be in Detroit or anywhere else in the country, is not only good but necessary so that small businesses can continue to grow even during times when available loan funds become tightened.

In order to avoid administrative restrictions that might be of such nature as to be contrary to the intent of relief legislation, perhaps some system should be included wherein capital loans could be insured by the Government like those now presently in force in housing and farming.

This would help liberalize the necessary conservatism that is required of our banking institutions under existing laws. There has been a great deal of effort made in Michigan for legislation which would enable the organization of a credit development corporation to assist small business, but it has not been formalized because the State is not able to finance such a plan.

Our recently appointed 27-man industrial and commercial development committee's primary purpose is to maintain and expand our existing business establishments and to bring into Detroit new industries.

We are much interested in securing diversified industries, which you would term small business, those with 250 or less employes.

We have no problem in getting businesses relocated that have large capital accounts, but have considerably difficuty in finding working or investment capital for small industries of good reputation but who have been in business only for the past several years. These businesses have not had sufficient time to establish a long credit rating, and as a result, are unable to secure loans for expansion or loans for necessary working capital in these times.

We have had insufficient time to review the previous testimony given before the committee, but we do know that there certainly are areas where funds should be made available to small business where equity and long term capital is not available from existing private sources.

Let me again thank you for the bpportunity of appearing before your honorable body. I hope I have been of some help.

I have tried to stress the impact of the present crisis, particularly upon the industrial communities of the Nation.

The picture, without a doubt, is a gloomy one at the moment, but it is not a hopeless one. This is still the strongest Nation on earth. Our economy is basically sound and all that is needed is quick action to keep it so.

We, the mayors, of the Nation, join in the prayers for prompt action on your part, to keep it so.

Truth and the Democratic Tradition

EXTENSION OF REMARKS

OF

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13, 1958

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Truth and the Democratic Tradition." These excellent remarks were delivered by my good friend and most able colleague, the Senator from Missouri [Mr. SYMINGTON], on the occasion of Delaware's annual Jefferson-Jackson Day dinner, last Thursday evening, May 8.

This gathering, Mr. President, brought together the greatest number of Delawareans ever assembled for such a meeting in our State. Senator SYMINGTON's address was so well received that I feel it will be of interest and value to Members of the Senate and to many other persons throughout the Nation. For that reason, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRUTH AND THE DEMOCRATIC TRADITION

(Address by Senator STUART SYMINGTON, Democrat of Missouri, at Jefferson-Jackson Day Banquet, Wilmington, Del., May 8, 1958)

Mr. Chairman, Senator Frear, General Craven, Chairman Lyons, Speaker Mahew, Senator Steen, and distinguished Democrats, it is always a privilege to address an audience of Democratic workers, those who furnish the backbone of our great party.

And it is a special privilege to gather with the friends and neighbors and supporters of one of America's great Senators—a man whose name in Washington is synonymous with ability and integrity, the two most priceless assets which can be possessed by any public servant.

All Senators of both parties are proud to be serving with the statesman I am referring to, the able gentleman from Delaware, ALLEN FREAR.

Much of my youth was spent in your neighboring State of Maryland; but my ancestors were closer to you than that.

When JAMES SYMINGTON first came to this country from Scotland, he started a flour mill in Brandywine, a town which is now a part of this great city of Wilmington.

His son Thomas, my great grandfather, was born right here in 1793, 6 years before the death of George Washington.

Later Thomas moved from Wilmington to Baltimore. An article in the Baltimore Sun, Two Generations That Span United States History, features his son, my Great-Uncle John, who lives in Baltimore today.

For these and many other reasons, I am especially proud to be visiting with you in Delaware tonight.

We Democrats have gathered here in Wilmington to reaffirm our faith in the Democratic Party, and in the principles for which that party stands.

We know that the United States has become the greatest country in world history primarily because of the philosophy and convictions of the two men we honor tonight.

Thomas Jefferson and Andrew Jackson believed in government for all the people, not just the few.

They passed that mandate on to us; and we as a party have been faithful to it over the years.

That is why in our country today there is normally so much purchasing power at the base; and why millions of Americans have achieved a standard of living never before equaled in history.

The physical base of any modern industrial complex is the production of steel. Our atuomobile industry is the greatest user of that steel.

In this connection, the more expensive cars are fine, but the true extent of our prosperity can be measured by the utilization of steel

production in such products as Fords and Plymouths and Chevrolets.

Until recently, nearly all Americans had good food, adequate medical care for themselves and their loved ones, the right to an education, and the blessing of those labor saving devices in the home which have contributed so much to a better life.

Thanks to Democratic policies, we now have had more time to enjoy life, with radios and television sets, and stimulating vacations.

And at least as important, we have the leisure to explore and appreciate the arts and humanities.

That is what the Democratic Party's policy of purchasing power at the base has done for the American people.

Once again, however, the Republicans, now that they have obtained control of the Federal Government, are taking the short-range view—disregarding what is best for the many in favor of what is best for the few.

In the past, Republican policies have always ended up by weakening that base of our prosperity described as "mass purchasing power"; and that is exactly what is going on today.

After 5½ years of Republican rule, business is down. In some instances—example, steel—production has now been curtailed over 50 percent.

Unemployment is up. Between five and six million men and women are now out of work, with unemployment benefits running out for many.

Because of decreased hours of work, take-home pay is also down for those who still have jobs.

Such are the statistical highlights of the current recession.

But they reveal only part of an involved economic picture.

Declining production and increased unemployment would normally result in lower wholesale and lower retail prices; and this would be particularly true when, as in the present case, there has been an actual decrease in the amount of wages and salaries paid to workers.

But the most recent price indexes show that both wholesale and retail prices are at alltime highs.

And so it is now clear that, if there was any true price competition in the market place, prices would now be lower, not higher, than they were a year ago.

Despite much rumor to the contrary, wage and salary payments have actually been declining for months. Week before last, for example, manufacturing workers received $1.36 per week less than they did a year ago; and less people are working.

Decreased employment and decreased hours per worker have resulted in the March annual rate of payment to labor being $4 billion lower than the annual rate just 12 months ago.

Last year the agriculture policies of this administration squeezed nearly 2 million more people off the land.

Many, if not most, of these displaced farmworkers are now in the cities, competing against urban workers for jobs, adding to the lack of purchasing power, to unemployment, and, therefore, to the general recession.

The Secretary of Agriculture advises the farmers squeezed out to go to the city to get a job.

At the same time the Secretary of Labor is advising unemployed city workers to go back to the farm.

How mixed up can you get?

This is just another illustration that the Republican Party does not have a good policy for combating this recession; nor does it have a poor policy. It has no policy at all.

The Republican Party's idea of leadership is to continue to sit on its hands, the same old story, hoping things will cure themselves, a policy which not only brings distress to millions, but also actually endangers our security.

In the last recession, which started in the fall of 1953, this administration promptly announced planned tax cuts of more than $7 billion.

But in the present recession, which is much deeper than the one of 1953–54, no tax cut, or any other positive action, has been announced to date.

In recent weeks the Democratically controlled Congress passed two bills which would have added purchasing power to the economy. One was to support the prices of agriculture; the other to provide more employment by means of a rivers and harbors bill.

Both bills were promptly vetoed by the President, however.

And so we stumble on, with little leadership at a time when leadership is becoming absolutely vital.

As this recession continues to dry up our income and profits, where are we going to get the money to pay for adequate defenses against communism?

Because in our way of life, defense strength can only come from economic strength, and the taxes which supply that defense strength can in turn come only from one source—income, including, of course, profits.

Private profits are essential to any economy operating under a system of free enterprise.

That is not true of a State-controlled economy, where the coin of the realm is the order of the dictator—and therein lies the economic danger which may be just as serious as any military danger.

As illustration, probably the best gage of a modern industrial complex is the production of steel.

Steel is the physical base of any modern economy.

Fifteen years ago, the Soviet Union had been laid waste for a thousand miles inside its borders. The Nazi armies were at the gates of Stalingrad.

Last week Director Allen Dulles of the Central Intelligence Agency made a shocking announcement; namely, in the first quarter of this year the Russian Communists produced more steel than the United States.

What more warning do we need about how necessary it is to get our own production back on the rails—now?

For years this administration has justified passing over quantitative military superiority to the service on the grounds we were retaining qualitative supremacy.

That premise, however, was blasted last October, when the American people saw the world's first satellite orbiting in the cool autumn sky.

The Russian sputniks required all of us to consider problems of national value and survival which did not exist before.

As a result of these launchings, President Eisenhower promptly promised the American people "a critical examination of our entire defense position."

Over 7 months have now passed, however; and very, very little has been done.

It is ironic that tens of thousands of our unemployed could be working on needed national defense items, which are being held back by the administration's self-imposed fiscal ceilings.

Yes, the iron hand of budget control of expenditures is back in control.

In my hometown, heavily hit by unemployment, the leading employer could double his employment if the rigid fiscal restrictions now in force were taken off his Government orders.

Six months after the Soviets launched their first Sputnik I, the United States has again fallen back into its former ostrich-like state of complacency.

As the beep of the Communist satellites fades into silence, inaction, delays, and expenditure ceilings have popped back into view.

The truth of the matter is they never really left. They were just temporarily unnoticed, as our attention was diverted by public statements of promised actions—and also by growing economic problems at home.

After sputnik, the President assured that the American people would not "sacrifice security worshipping a balanced budget."

Many of us were thereupon willing to overlook the Government's record during the previous years—a record of disgraceful disregard for our declining strength vis-a-vis that of the Soviets.

We were eager to cooperate to do everything possible to recover lost ground, and build up our defenses to the point where we could negotiate for peace from a position of relative strength.

Last November the Senate Preparedness Subcommittee started hearings; and received expert testimony from both civilians and military leaders.

On January 23, the subcommittee issued a unanimous report, signed by all Republican members as well as Democrats.

This report contained 17 specific recommendations for action.

Those recommendations—nonpartisan in origin and constructive in content—presented a framework for positive action on the part of the administration.

The Congress was ready and eager to do its part—and to this end, the subcommittee had the Secretary of Defense appear on February 26, and again on April 3.

We found then, and know now, that little or nothing has been done to translate most of these recommendations into action.

On the contrary, and solely to save money, SAC aircraft, defense missile facilities, and other important military equipment have actually been further concentrated on vulnerable bases, instead of being dispersed as recommended.

This action, or rather lack of action, can only please Mr. Khrushchev, the gentleman who has announced that he intends to bury us.

Let's take just one illustration of how little is being done.

Despite sputnik, almost every major expenditure item in the 1959 budget for the Army shows a cutback over expenditures for the fiscal year 1958.

There has been no modification of the program to further cut down to 14 the number of divisions in the Army (Russia alone has 175).

This continued reduction of Army divisions is being taken in the face of sworn testimony before our committee that 28 modern divisions is the absolute minimum required to meet our worldwide commitments.

Sworn testimony was also received that today the United States cannot lift and properly support overseas a single division.

Only 4 days ago a brilliant and dedicated officer, Lt. Gen. James Gavin, whose battle record equals that of any American, made the following statement on a public telecast:

"We have the Army today deployed overseas, facing an opponent it can't defend itself against and can't shoot back against."

Five of our divisions with families are today stationed in Germany, directly facing the vastly superior Communist forces.

What has happened to the President's promised "critical reexamination of our entire defense position"?

Adequate defense effort is being retarded and shackled by lack of decisive leadership.

Our position in the world, our very freedom, are being undermined by this continuing policy of placing fiscal objectives ahead of security.

It has been well said that the strength of a nation depends upon the will of the people—and that in a democratic form of gov-

UNIVERSITY OF MICHIGAN LIBRARIES

ernment that will can only function if the people are informed.

The people cannot participate in the great decisions which now face this democratic country unless they are given the facts.

The other day a great Democrat said, "We have now become a Nation of slogans, at the expense of the truth."

Whereas we Democrats regard the people as responsible partners, the Republicans consider them merely customers, to be sold a bill of goods regardless of logic or accuracy.

You know the promises that were made about agriculture.

What has been done to keep those promises?

You know the promises that were made to reduce Government costs.

What has been done about those costs?

You know the promises about education, and the building of more schools, and measures to reduce unemployment.

What has been done about those promises?

In their place, we have such slogans as Liberating Eastern Europe, Unleashing the Formosa Chinese, Rolling Back Communism.

Candor has apparently left our Government.

Month after month the Senate Armed Services Committee heard in closed session about Russian long-range missile firings, before this Nation was test firing any such missiles.

But at the same time, the American people were being told by a member of the President's Cabinet that this country was ahead in the missile race.

My friends, there has been very little candor about our true strength vis-a-vis that of the communists, economic, military, or diplomatic.

The progress of Soviet education has been ignored, and the growing weakness of our foreign alliance has been carefully concealed.

As has been well said, "Our prestige and influence and confidence has declined, and every setback and every disappointment and every defeat has been reported as a triumph of statesmanship from which we have emerged more respected and invulnerable than ever.

We all remember Operation Candor, the project for telling the truth about nuclear weapons.

You read and listen to the news every day. Have you ever seen anything as mixed up in the minds of the public as this question of nuclear testing?

Only a few months ago, this administration was assuring the American people that Russia was on the point of collapsing.

What has collapsed has been our own foreign policy, together with much of our prosperity; and most, if not all, of our military superiority.

As has been well said by the chairman of the freedom of information committee of the American Society of Newspaper Editors, when you act on the basis of partial truth, you act on the basis of what those people believe who gave you that partial truth; but when you act on the basis of all the truth, you act on the basis of what you believe is right.

Why won't this administration recognize the people's right to know?

There will be many issues discussed in coming months.

The problem of unemployment—millions of people walking the streets in the most prosperous country in world history.

The problem of education—rather the lack of it—brought home to the American people by the sputniks.

The problem of the growing economic menace of communism—and our vacillating behavior in meeting that problem.

No issue will be stronger, however, than the issue of telling the people the truth.

The position of our party on these issues is clear.

Great Democratic city, State, and congressional victories next fall will be but a prologue to an even greater victory in 2 years.

Believing in the importance of a leadership which recognizes that the Government should be in partnership with the citizen, in 1960 the voters of this country will return their Government to the people, in the greatest Democratic victory this Nation has ever known.

H. R. 10464 Provides a Partial Answer to Our Shortage of Scientific and Engineering Manpower

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. VAN ZANDT. Mr. Speaker, this morning it was my privilege to appear before the Subcommittee on Health and Science of the House Committee on Interstate and Foreign Commerce in support of my bill H. R. 10464, which is designed to attack the problem resulting from our shortage of scientific and engineering manpower.

My statement follows:

STATEMENT BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE SUBCOMMITTEE ON HEALTH AND SCIENCE OF THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, IN BEHALF OF H. R. 10464, MAY 13, 1958

Mr. Chairman, the opportunity of appearing before this Subcommittee on Health and Science of the House Committee on Interstate and Foreign Commerce in behalf of my bill, H. R. 10464, is appreciated.

My bill, H. R. 10464, is a companion bill to H. R. 10456 introduced by my colleague, Hon. MELVIN PRICE, of Illinois, chairman of the Congressional Joint Committee on Atomic Energy Subcommittee on Research and Development, of which I am ranking House Republican member.

Both of these bills result from lengthy hearings by the Joint Committee's Research and Development Subcommittee held in the spring of 1956 on the shortage of scientific and engineering manpower and our visit to Russia last fall as members of the Congressional Joint Committee on Atomic Energy.

Therefore, this is truly a bipartisan legislative effort.

Mr. Chairman, the Price-Van Zandt bills amend the National Science Foundation Act of 1950 in order to provide for certain educational programs which will improve mathematics instruction in our secondary schools as well as refresher courses and fellowships for mathematics and science teachers.

The legislation is designed to attack one of the greatest deficiencies to be overcome in this country that exists in our secondary schools where a serious deterioration in the quality of mathematics instruction has taken place.

It is pretty well agreed that this deterioration in the quality of mathematics instruction has prevented many of our young people from pursuing college level studies in science and engineering.

To remedy this situation, the Price-Van Zandt bills provide that an award program be set up—with no strings attached—to provide a $500 scholarship to all high school seniors who can pass an examination of prescribed difficulty in mathematics.

This program will serve not only to remedy the enormous annual waste of potential scientific talent but will help restore mathematics to its rightful place as a basic element of the high school curriculum.

In addition to the scholarship program, another provision of the Price-Van Zandt bills provide a stepping up of the present summer institute program administered by the National Science Foundation by providing refresher courses for high school mathematics and science teachers.

In this connection, the present program is handicapped by the fact that the National Science Foundation was only able to provide funds for 108 institutions last year on its relatively small budget of $5.3 million.

There were over 200 qualified institutions which proposed to set up summer institutes with the Foundation's cooperation but were unable to do so because of the lack of funds since the $5.3 million available was wholly inadequate.

It is conservatively estimated that in addition there are at least 200 other qualified institutions in the country which would participate in the program if adequate funds were available.

Therefore the Price-Van Zandt bills increase the funds for summer institutes from $5.3 million to $25 million, this making possible the quadrupling of the present summer institute program of the National Science Foundation as a concrete means of assisting high school mathematics and science teachers by improving the quality of their instruction.

In addition to scholarships and the summer institute program, the Price-Van Zandt bills provide that there should be established by the National Science Foundation a program of summer fellowships for those high school teachers who already have their bachelor of arts degrees and who desire to increase their scientific knowledge.

The program—at a level of $10 million a year—will be a valuable supplement to the summer institute program and will provide the advanced training needed to stimulate and guide talented young people in our better schools. Then too, it will provide the added advantage of improving the quality of instruction among teachers.

Mr. Chairman, the proposals made in the Price-Van Zandt bills if translated into action will be an important first step toward insuring that this country will have an adequate supply of scientific and engineering talent to meet the scientific challenge of the future.

Moreover, if the intent of these bills is enacted into law the need will be met without creating serious unbalances in the social and economic fabric of this country by serving to strengthen the country measurably through improvements in the basic educational preparation we give to all our young people.

Mr. Chairman, the provisions of the Price-Van Zandt bills represent a means of meeting to a marked degree the Soviet challenge to American education, which we as members of the Joint Committee on Atomic Energy came in contact with last October in visiting Russia and talking with Russian scientists.

When Congressman PRICE and I returned to the United States last October, and after reviewing our observations in Russia, we concluded that no time should be lost in perfecting appropriate legislation to meet the Soviet challenge. As a result, we drafted the Price-Van Zandt bills. When we introduced them we made the following joint statement:

"MEETING THE NEED FOR SCIENTIFIC MANPOWER—AN INTELLIGENT APPROACH TO THE PROBLEM

"(Joint statement by Representative MELVIN PRICE (Democrat, Illinois) and Representative JAMES E. VAN ZANDT (Republican, Pennsylvania), chairman and ranking House minority member of the Research and Development Subcommittee, Joint Committee on Atomic Energy, in the House of Representatives on Monday, February 3, 1958)

"We believe that the time has come, and in many respects is long overdue, for a forthright facing-up to the challenge presented to this country by the Soviets in their massive educational program aimed at outproducing the free world, both in quantity and quality, in the output of trained scientists and engineers.

"We are witnessing a life and death battle for brainpower in an age of rapid technological advance. The penalty for losing this battle is Soviet domination of the world and the destruction of our way of life as a free people. It is clear that we must act—and act promptly—to meet this threat. At the same time, we must not lose sight of our long-range objectives and adopt hasty measures which will jeopardize the attainment of these objectives.

"This battle for brainpower is not new. Back in the spring of 1956 the Research and Development Subcommittee of the Joint Committee on Atomic Energy, mindful of the mounting threat to this country posed by the Soviet Union, held extensive public hearings on the shortage of scientific and engineering manpower. As members of the subcommittee, we believed then, and we continue to believe today, that concrete remedial action is needed urgently if we are to meet the Soviet challenge successfully.

"Recent events, including Russian achievements in launching two earth satellites, serve to underscore this urgent need for action. We are faced not so much with a new situation as with dramatic proof of what many experts have been saying all along regarding the large scale efforts of the Soviets to achieve technological mastery of the world. Our recent firsthand visit to Russia where we had an opportunity to talk directly with top Russian scientists has clearly confirmed these findings.

"Since the advent of sputnik we have heard much in public forums and in the press about the need for crash programs to regain America's technological supremacy. We have heard proposals for stepping up scholarships in the individual scientific disciplines such as physics, chemistry, and biology and for channeling our young people into specific lines of activity within the scientific and engineering fields. These statements are reminiscent of the line of thinking which we ourselves indulged in prior to the subcommittee hearings in 1956.

"As the hearings progressed, however, it became clear that only by attacking the roots of the manpower problem, not its surface manifestations, can we effectively meet future requirements. We recognized then, as we do today, that in our haste to catch up with the Russians there is a natural tendency to call for special purpose legislation to cope with the pressing problems of the moment.

"But the more we looked at the problem, the more we became convinced that the shortage of scientists and engineers is only part of a larger shortage of specialized talent in all fields, and that the best and surest means of meeting future requirements in the scientific and engineering fields is to increase the overall supply of specialized talent—across the board. Laying undue emphasis on any one specialized field of scientific endeavor, to the exclusion of others, would create serious imbalances which would in the long run only serve to undermine the very strengths we are attempting to build up.

"In brief, we came to recognize that the shortage of specialized talent is total and that deficiencies exist in many areas which must be dealt with at the same time we are directing our attention to the scientific and engineering fields. Loading the deck in favor of one over the other is not only futile but may well be fatal to the long term national interest.

"It is clear, then, that any measures which are taken must be developed in the context of our overall needs and must serve to strengthen the Nation as a whole. This is not to say, however, that specific actions cannot be initiated now as part of a broad program of improvement, provided they contribute to our general long-term objectives.

"Going to the roots of the scientific manpower problem, the subcommittee found that one of the greatest deficiencies to be overcome is the serious deterioration in recent years in the quality of mathematics instruction in our high schools. We found that through inadequate preparation in our secondary schools, particularly in the traditional subjects of mathematics, many of our young people who might be scientifically inclined are actually prevented from pursuing college-level courses in science and engineering. This represents an enormous annual waste of potential scientific talent which we can ill afford if we are to compete effectively with the Russians in the years to come.

"Fortunately, this is one area in which concrete remedial action can and should be initiated immediately. We have been particularly impressed with the proposal originally made to the subcommittee at the 1956 hearings by Dr. I. I. Rabi, of Columbia University, that an award program be set up to provide a $500 scholarship to all high-school seniors who can pass an examination of prescribed difficulty in the traditional subjects of mathematics. There would be no strings attached to this award and there would be no requirement that the winners of such awards pursue a particular line of study, either in the scientific or other technical fields.

"The advantages of such an award program are obvious. In the first place, it would help restore mathematics to its rightful place as a basic element of the high-school curriculum through stimulating greater student interest in mathematics. An essential background would thus be provided for those intending to pursue scientific and engineering careers and at the same time the general curriculum would be strengthened for all students, whether or not they go on to specialize in these fields.

"The award program would also serve as an indirect stimulus to parents and community groups to seek improvements in mathematics instruction in their own local high schools. Since the program would be on a purely voluntary basis it would not involve the problem of Federal control of local educational institutions. Major emphasis would still remain on action by local groups but a new incentive would be provided for such groups to take the necessary corrective measures. This, it seems to us, is a commonsense approach to the problem and one which would achieve tangible results without upsetting delicate social and economic balances in this country.

"Intimately allied with interesting young people in science, is the caliber of the science teachers they have in high school. Without good teachers, well equipped with knowledge of recent developments in the scientific field, there will be no stimulus for students to excel in their subject, no one to alert youthful imagination to the challenges of the scientific frontier. It is difficult to calculate the influence good teachers have had in helping produce our scientific and other leaders of today, but no one would question that it has been substantial. Do we dare embark upon the future without assuring ourselves that we are doing everything possible to provide our young people with the best teachers available to prepare them for what lies ahead?

"But good teachers don't just happen. Incentives must be provided to attract young men and women of high intellectual caliber to the teaching profession. Once they are recruited, there must be continuing incentives provided to keep them in the profession. The question then arises: What form should these incentives take?

"As in the case of improving the high-school curriculum, much depends on the initiative and resourcefulness of local communities, particularly with regard to increasing teacher salaries, which in many areas are shockingly low. But beyond this, some means must be devised through which the Federal Government can lend assistance in cooperation with local authorities. Once again, this Federal assistance would have to be provided in such a way as to avoid undue interference with local school boards and State authorities.

"Perhaps the greatest need at the moment is to provide high-school teachers with the opportunity to improve their own knowledge of their subjects and thereby improve the quality of instruction offered their students. This applies to teachers of all subjects, but the need for improvement has become particularly critical in the case of mathematics and science teachers.

"One of the most successful means to date of meeting this need has been the summertime refresher courses for high-school teachers which have been held for the past several years under the auspices of the National Science Foundation. Through the cooperation of universities and institutions throughout the country, hundreds of teachers have attended special summer courses which average about 6 weeks in duration. Stipends of $75 per week are offered, together with $15 per dependent. The cost of running the courses is borne mutually by the Foundation and the participating university.

"While the program is excellent as far as it goes, it does not go far enough on its present limited budget to meet mounting needs. For example, the Foundation was able to provide funds for 108 institutions last year on its relatively small budget of $5.3 million. However, there were double that number of qualified institutions who proposed to set up summer institutes with the Foundation's cooperation but were unable to do so because of lack of funds. It is conservatively estimated that in addition to this, there are at least 200 other qualified institutions in this country who have not made specific proposals to the Foundation but who might be encouraged to join the program if funds were made available.

"We therefore propose, as a concrete means of assisting high-school math and science teachers and improving the quality of their instruction, that the present summer institute program of the Foundation for high-school teachers be quadrupled in size and that the present funding level for the program be increased from $5.3 million to $25 million. Chief value of such action would be to take an already going concern and through expanding its activities, increase the number of teachers being assisted with a minimum of delay and a maximum of effectiveness.

"In addition to the above program, we believe a new program should be established by the Foundation to provide summer fellowships for those high school teachers who already have their bachelor of arts degree but who desire to increase their scientific knowledge. Such a program—at a level of $10 million per year—should be a valuable supplement to the summer institute program and

UNIVERSITY OF MICHIGAN LIBRARIES

should provide the advance training which some of our teachers need to stimulate and guide talented young people in our better schools. It would have the added advantage of helping bring up the quality of instruction among teachers all the way up and down the line and would place a premium on competence.

"It is our conviction that the proposals we have made, if translated into action, would be an important first step toward insuring that this country will have an adequate supply of scientific and engineering talent to meet the scientific challenge of the future. They will help meet this need, moreover, without creating serious imbalances in the social and economic fabric of this country. They will, in fact, serve to strengthen the country measurably by providing improvements in the basic educational preparation we give to all our young people. This is the true answer to the Soviet challenge and in keeping with the best traditions of our free society.

"We are today introducing legislation in the House to carry out these proposals. We are hopeful it will receive prompt and favorable consideration."

Mr. Chairman, it was my privilege to address the annual meeting of the Pennsylvania Seconday School Principals Association at Harrisburg, Pa., on October 29, 1956, almost a full year before Sputnik I was launched.

My address was based in considerable measure on hearings held in 1956 by the Subcommittee on Research and Development of the Joint Committee on Atomic Energy, of which I am a member.

These hearings delved in considerable detail into the reasons for the shortages of scientific and engineering manpower and showed conclusively that the deficiencies of our educational system are the fundamental reason for this shortage. Actually the crucial shortage is not that of scientists today, it is today's and tomorrow's shortage of talented teachers.

As experts testified in the course of these hearings the progress made in science and technology, in such fields as nuclear weapons, Jet propulsion, radar, plastics, and electronic computers, has been so great that our educational system as a whole has lagged.

Compared to today's needs our elementary and secondary schools, and even many of our colleges, are living in a horse and buggy era.

Nearly 2 years ago these hearings revealed, and I repeated in my Harrisburg, Pa., speech that Russians are training intensively about 3 times as many scientists as we are, that by 1960 every Russian child in the Soviet 10-year school program will have to study 5 years of physics, 5 years of biology, 4 years of chemistry, 10 years of mathematics through trigonometry, and 1 year of astronomy.

I told my Harrisburg audience in October 1956 that not only are the Soviets training engineers at a rate three times as fast as we are, but, despite the fact that their own industrial capacity is only half the size of ours, they are sending scores of these engineers into other lands, engineers who will, of course, help convert these lands to communism. In December 1955, Khrushchev and Bulganin offered to build and staff a technological institute in Rangoon, "a gift to the people of Burma from the people of Soviet Union," as they put it. The following year Russian technicians started building a steel mill for the Indians in India. Enticing inducements have been advanced to Egypt, Afghanistan, and Latin America.

I warned my Harrisburg audience that this type of penetration by the Soviets may be expected to grow rather than wane as the supply of trained Russian personnel becomes ever greater. As I have stressed again and again, we must not allow ourselves to fall behind the Russians. If this ever happens we could easily find ourselves outwitted, outmaneuvered, outthought, and outbuilt throughout the world.

I continued by saying that as never before we know the key to our continued leadership in the free world lies in our schools.' Therefore, there is no project in the Nation that should have a higher priority than the rapid improvement of our educational facilities. The teacher shortage is desperate and must be dealt with aggressively. This problem cannot be solved on the present basis of recruitment, preparation, and utilization of teachers. The problem of the teacher shortage must be attacked on many fronts. Local communities and States must face up to the fact that this is their problem and must provide the tax support required. Teachers' salaries must be increased to attract more capable persons into the profession. Greater incentives and rewards for outstanding teachers should be provided. Teachers can be relieved of a good many routine housekeeping and clerical chores.

Ways must be found, as I told the convention of Pennsylvania secondary school principals in October of 1956, "to make sure that our teachers receive the recognition and the prestige which is commensurate with their high responsibility of training our young people."

We must also make certain that we obtain more thorough means of identifying talent and more effective guidance for our young people.

The need is great and it is immediate. The future of America lies not just in the hands of its educators. The burden of responsibility for America's future lies upon all of our citizens. We must lift ourselves to a new and higher plain of concern, of hard work, of expenditure, and of dedication to the increased development and undergirding of America's key to the future, our educational system.

Mr. Chairman, let me repeat again that what I have read to you represents excerpts from my speech in Harrisburg, Pa., in October 1956.

In calling my views to your attention, I do not pose as an expert in the field of education. I share, however, the concern you and all other Americans have in our educational system which we like to think is the best in the world.

My views are based on the lengthy hearings of 1956 by the Joint Committee on Atomic Energy, my visit to Russia last fall, and my great desire to enable the United States to meet the Soviet challenge to the American educational system.

Therefore, I sincerely hope that the Price-Van Zandt bills will receive your favorable consideration.

Agriculture Is a Stabilizing Force in Economy

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. HIESTAND. Mr. Speaker, various witnesses before our committee, including ex-President Truman, Walter Reuther, and a number of leftwing economists, have been mystified by the fact that consumer prices during this alleged recession have not sagged. They simply do not seem to understand it.

One of the reasons for the price firmness was very well expressed by Carroll Kilpatrick, in the Washington Post, May 3, 1958, in his very able article, "Agriculture Is a Stabilizing Force in Economy," which is herewith submitted for the RECORD:

AGRICULTURE IS A STABILIZING FORCE IN ECONOMY

(By Carroll Kilpatrick)

The United States has become so accustomed to its farm problems that it is having difficulty adjusting to the fact that in the current recession agriculture is proving to be a strong and stabilizing force in the economy.

At the same time, Democratic politicians have become so accustomed to thinking there is a farm revolt against Republicans that they may be overlooking a gradual change in sentiment that could surprise them in November.

This is not to say that the farm problems have been solved or that Secretary of Agriculture Ezra T. Benson has become a hero in the farm States. Far from it. But in recent months farm income has been rising and the farmer, who previously felt embittered as he watched his city cousins prosper, now is happier because his relative position is much improved.

As recently as a few months ago, there was a loud and angry cry for Benson's resignation and a great outcry from congressional farm spokesmen of both parties about the farm depression. In the last few weeks, there has been relative quiet.

Despite the improved situation, experts in the Department of Agriculture do expect the farmer to gain as much in the next few months as he has in the last few. Prices of some important commodities are expected to decline somewhat, bringing a little relief to the hardpressed consumer. There will almost certainly be a big glut of wheat this year, with the amount put in Government storage probably reaching a record high and depressing grain prices.

In the first quarter of 1958, prices and incomes to farmers advanced, with prices up more than 7 percent above the first quarter of 1957. The April index of prices received was 10 percent above a year earlier and at the highest level since January 1953. Prices paid by farmers in April were up 3 percent from April 1957. The parity ratio was thus about 6 percent higher than a year earlier.

Why has there been this improvement in farm income during a period of general recession? In 1949 and again in 1953, as the two earlier postwar recessions got underway farm income declined.

Here are some of the possible explanations for upward movement of farm prices in this recession:

The farmer has already been through his recession. It started toward the end of the Korean war. The decline lasted almost 5 years, forcing many adjustments on the farm and in the farm economy.

The most vulnerable farm prices in a period of recession are commodities traded on the world market, such as wheat, cotton, and some dairy products. These have been supported by the Government and have been aided by the Soil Bank and the costly foreign disposal programs.

In the last few years, the American consumer has demanded a steadily more expensive diet. Whereas, a few years ago, the per-capita consumption of beef was about 60 pounds a year, it is now up to 80 pounds. The per-capita consumption of poultry has doubled since 1940.

Weather. The citrus crop was badly damaged by last winter's freezes, and some citrus prices have almost doubled. The damage to the early vegetable crop has forced up the price of spring vegetables. When the sum-

mer crops are harvested, prices should begin to decline.

Consumer spending for foods has actually risen during the recession despite the decline in spending for automobiles, houses, and other expensive items. Sales at retail stores were 9 percent higher in the first quarter of 1958 than in the comparable 1957 period. The demand for food has helped keep prices high.

The annual rate of farm operators' realized net income in the first quarter of this year rose to about $13 billion, as compared with a rate of $11.7 billion for the same quarter in 1957 and $11.5 billion for the full year 1957.

The Agriculture Department predicts that, barring a further downturn in the economy, farm income for 1958 will be from 5 to 10 percent higher than in 1957.

"In spite of the troublesome problems besetting agriculture today," Secretary Benson told a recent press conference, "the picture is encouraging. The downtrend in prices which started in 1951 has been reversed. The standard of living on farms is the highest in history. The buildup of surpluses has been reversed."

Before the year is out, Benson may have to revise his comment on surpluses. The drought is ended in the Great Plains, and there are favorable growing prospects in nearly all wheat areas.

Three years ago, the Commodity Credit Corporation held 1.3 billion bushels of wheat in storage. That has been whittled down to about 750 million bushels. But the carryover may rise again.

Soil conditions now are so favorable that the wheat yield per acre is expected to be 6 bushels greater than last year, and many more acres will be planted.

Obituary Notice

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. HAYS of Ohio. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article which appeared in the East Liverpool Review, East Liverpool, Ohio, on May 6, 1958:

OBITUARY NOTICE

"Foreign competition, especially from Japan." That was the old story as another dinnerware concern prepared to close its doors.

The latest to feel the death blow from cheap labor and other operating conditions from abroad is the Pope-Gosser China Co. of Coshocton. The company was organized in 1902, but now has called a meeting of the shareholders this week to liquidate the business.

It's another example, becoming increasingly ominous to those trying to get the American pottery industry back on its feet of how inadequate tariff and lack of quota protection is knocking out industry in this country piece by piece. And while our people are trying to make both ends meet with dwindling paychecks the profits of those concerns from abroad are soaring as they flood our markets with their products.

The White House should be bombarded again with protests against this latest stab in the back to a once prosperous and proud industry. If nothing else, clip this editorial and send it to Washington.

Though President Eisenhower continues to encourage world trade, a continued pointing out of what foreign competition is doing to part of our economy may have the effect of bringing those safeguards necessary to preserve some vital gears in the American industrial machine.

Plain Talk on the Forest Preserve

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. O'BRIEN of New York. Mr. Speaker, one of the great natural resources cherished by the people of the State of New York is the wilderness within our Catskill and Adirondack parks—our wild forest lands protected by an article in the State constitution which provides that our forest preserve lands shall be kept forever wild.

A forthright spokesman for public interest in wilderness protection has been the Honorable Sharon J. Mauhs, the State Conservation Commissioner whose appointment to this position I consider one of Gov. Averell Harriman's great contributions to conservation. Governor Harriman recently told the president of Friends of the Forest Preserve, Mr. Paul Schaefer, that of course he was opposed to lumbering the State forest preserve, and his conservation commissioner, Sharon J. Mauhs on April 23 explained in detail the State's position on this wilderness preservation issue.

While voicing this public sentiment in the plain talk of an address which was entitled "The Forest Preserve Should Not Be Lumbered," Commissioner Mauhs emphasized his wish to make it clear that we do not regard our position to be in conflict with forestry for forest products. In fact, he pointed out that for the privilege of maintaining a forest preserve forever wild we actually are dependent upon our commercial forests. He insisted, however, that such forests should as at present continue to be managed outside the Adirondack and Catskill Parks.

Mr. Speaker, I ask unanimous consent that this address by New York State's conservation commissioner Sharon J. Mauhs, entitled "The Forest Preserve Should Not Be Lumbered," delivered on April 23, 1958, at the annual meeting of the Oneida Lake Association held in Syracuse, N. Y., be printed in the Appendix of the CONGRESSIONAL RECORD.

THE FOREST PRESERVE SHOULD NOT BE LUMBERED

(Speech delivered by Conservation Commissioner Sharon S. Mauhs, at the annual meeting of the Oneida Lake Association, held at Lincoln Auditorium, Central High School, Syracuse, N. Y., on April 23, 1958.)

I appreciate the invitation to be with you tonight and to talk to one of the largest single conservation associations in the State, because it gives me the opportunity to speak out on a subject I think deserves plain talk on the part of the Conservation Commissioner of this State.

For some weeks now there has been growing a somewhat curious chorus. The theme of this chorus is admiration for the great forest preserve of the Adirondacks and the Catskills, but underlying this theme is a strange proposal.

To make this great natural wonderland more beautiful, so they say, and to save the trees, they would cut down and lumber off portions of its great wilderness forests. They say they want to do this to end 63 years of neglect. They propose to bring in what they call scientific forestry and selective cutting, to remove, what they claim is now a forest cemetery.

I am not impressed by these statements. I am not impressed by this kind of argument.

RESPECT FOR FOREST MANAGEMENT

Now, let me say that I have a profound respect for good forest management in its rightful place. What I object to is using such terms as "scientific forestry" and "selective cutting" as a smoke screen to make the public think that you can log portions of the Adirondacks and the Catskills without messing up the woods. I do not want this department to be made the goat when people come to us, after we have supervised a cutting in some old-growth Adirondack hardwood, and say "So this is what you call forestry. I thought you told us it would be more beautiful when you got through."

It is true that there is spotty public land ownership in the forest preserve; that the State's holdings are not all in large, contiguous blocks of forest growth; that while there are large, unbroken blocks of forest preseve lands, there are also large numbers of scattered small areas of forest preserve which do not contribute to wilderness, and which constitute one of the big problems and one of the big headaches of forest preserve administration. This, of course, will be corrected in part as the result of the adoption of the detached parcel amendment last fall.

But this spotty public ownership, as I see it, is not an excuse for lumbering in the forest preserve. On the contrary, it is a reason to plan to consolidate our holdings where that should be done, and can be done, when it is feasible, and funds are available and for setting up in the forest preserve counties, outside the blue lines, and elsewhere in the state, more reforestation areas where timber production may be appropriately carried out. This would not, and need not, interfere with our wilderness forests.

A GREAT NATURAL RESOURCE

Now, let us take a look at today's forest preserve, and at the same time let us take a look at another great wilderness area in the Nation.

Then let us take a look ahead—to anticipate the problems of the future—so that we may determine whether these wilderness qualities of the forest preserve should be maintained, while we prepare, as we should prepare, for increasing thousands of our citizens to enjoy this environment.

What is the forest preserve?

It is one of our great natural resources.

It is an historical and a cultural resource.

It is expanse. Its purpose is wilderness. It is not a forest cemetery. On the contrary, it is one of the most beautiful wilderness areas in the United States. It has not been neglected for 63 years. On the contrary, the foresters and the rangers and other employees of the Conservation Department have given their blood and sweat and toil for at least 50 of these 63 years, to protect this wonderland against disease and forest pests and forest fires and unlawful cutting.

I have been in and over the forest preserve, I think, more times than most men.

UNIVERSITY OF MICHIGAN LIBRARIES

I cannot accept that kind of criticism of one of the finest wilderness areas in the Nation and of the finest men this department ever had, who have guarded it, and protected it, down to this day.

What is the forest preserve?

It is a whole complex of nature; trees and rocks and ferns and flowers and wildlife. It is clear water and clean air. It is the beauty of nature, as nature evolves. It is the solitude and the music of stillness. It invites man to adventure, to refreshment, and to wonder.

It is not mowed, and trimmed clean, and manicured, like a golf course or a city park. It was never intended to be, because wilderness exists only where nature is free, and where the hand of man is restrained.

These wilderness areas in the Adirondacks and Catskills, which belong to all the people, are set apart and dedicated by law, to be forever wild. Distance, ruggedness, climate, and the Constitution, are their most effective guardians.

Man, of course, is a part of the scene, because wilderness has no human value without man, but wilderness does not mean roads and motels and taverns and dance halls and merry-go-rounds and sawmills. These are all right in their places, but wilderness reaches out from the roadside, to be experienced by those who penetrate it, or by those who just look at it. This wilderness, this scenery, these natural objects, should remain unimpaired for the use of future generations.

THE FOREST PRESERVE AND THE PEOPLE

It is the will of the people of this State, as expressed in their constitution; in the determinations of governors, in the opinions of attorneys general, in the acts of legislatures, and in the decisions of courts, that we maintain this wilderness character for the benefit and the enjoyment of all the people.

There are qualities in the forest preserve you won't find anywhere else in the Western Hemisphere. These qualities provide that something, which makes the forest preserve one of the great natural wonders of America.

What are the features of wilderness?

A landscape of natural beauty.

An area removed from the sight and the sounds and the odors of mechanization and industry.

A vast area where thousands of citizens can feel safe and removed from highways and gas stations, and billboards, and from those other activities, the primary interest of which is making money.

A place where full enjoyment of life depends upon one's ability, one's physical skill, one's courage, and one's self-reliance.

PRIMEVAL WILDERNESS AND IDEALISM

The idea we hold today about wilderness are the result of many, many years of growth. The seed was planted long ago by great men. They saw a goal. They pointed out the direction.

I remember reading about a group of Montana citizens, who for 6 full weeks back in 1870, had been exploring with increasing awe, the remarkable country which today is known as Yellowstone National Park. At the end of the trail, they sat around a campfire, talking about this public land of the future. Those practical-minded citizens were so moved by the sight of these great natural wonders, and the impact of primeval wilderness, that they put aside, every one of them, all thought of personal gain. They there resolved that this wonderland should be forever preserved in public ownership, set apart as a shrine, for the use, and the enjoyment, and the inspiration of all.

Then in 1885, when the West was yet little more than a frontier, farsighted men conceived and brought into being another of the Nation's great treasures, the New York State forest preserve in the Adirondack and Catskill Mountains. In so doing they set a pattern for wilderness and forest protection which has never been equaled anywhere, and they recognized the need for maintaining this pattern, and these wilderness regions, for the benefit of generations to come.

And so for nearly three-quarters of a century New York State has pioneered, and I believe it will continue to pioneer, in guarding its wilderness forests, the scenic splendors of its wilderness landscapes, and the recreational values which they provide.

Our forest preserve was established in an atmosphere of high idealism. Yellowstone National Park was established in an atmosphere of high idealism. The men who gathered around that wilderness campfire in 1870, started the first major conservation movement in the United States. They were soon followed by the men from New York in 1885. These were the acts of unselfish men, which have become the guideposts to the world in conservation.

WILDERNESS: HERITAGE WITH AN OBLIGATION

We have inherited a great masterpiece; with that heritage is this obligation: To preserve, to protect, and to prepare this area for our enjoyment and inspiration and for the enjoyment and inspiration of our children and all other children to come.

Some people today want to remove this natural wilderness in sections of the forest preserve. Beyond all the hue and cry that they want to make the forests more beautiful by what they call selective cutting, or scientific forestry, I am afraid a lot of people across the State will be staying that the lumbering interests wouldn't be wanting to cut trees in the forest preserve unless they could make some money out of the deal.

Now just what are my good friends in the lumbering business concerned about? All the forests and all the trees we have in New York State are not just in the forest preserve. The truth of the matter is that there are only 2½ million acres in the forest preserve, while we have in this State over 12 million acres of commercial forests, where the lumber people can cut trees all they like, under their selective cutting practices. Why then do they want to pour this green gold of the forest preserve into the mouths of the saw mills?

As one of the custodians of the forest preserve, and in the face of these demands to cut down a part of it, I want to make it clear tonight that I believe these lands should not be taken for logging or for any other commercial operation.

On this broad front; the preservation of wilderness depends pretty much upon you. One of the most encouraging developments over the years has been the strengthening of conservation education. An informed public is the best safeguard of the integrity of the forest preserve's natural environment. Natural environment is the essential resource of a wilderness forest.

Wilderness serves all the people. Those who penetrate it gain its fullest reward. But even the wilderness beyond the road furnishes a tremendous setting and a tremendous background for others. People view, and enjoy, and are inspired by the wilderness, 5, 10, 20 miles away. Destroy that background, lumber off even a part of it, and the wilderness disappears. And there will also disappear the pleasure of those whose only contact with the wilderness is experienced as they look outward and over it, from a window or from the roadside.

PUBLIC ATTITUDE AND PUBLIC BENEFIT

The future will present many difficult problems. But the same factors which governed the writing of a great constitutional amendment will still guide the public in the days to come. I find every indication, as I travel about the State, that the public attitude in favor of preserving our great wilderness forests is becoming stronger.

What benefit does the public now get out of the forest preserve? Some people would have you think they get none, because we do not allow commercial recreational development or commercial cutting of the timber.

Is the forest preserve locked up? Can we build campsites, open up hiking and access trails, build more wilderness canoe routes, more lean-to's; can we improve our trout streams, our lakes, and our ponds? Of course we can. These are some of the things we are doing, and should continue to do in the forest preserve, because wilderness invites people to this kind of adventure, refreshment and recreation. And as I said before, man is part of the scene because wilderness has little human value unless you can see it, appreciate it, and enjoy it.

MEANING OF WILDERNESS PRESERVATION

Does wilderness preservation mean discarding hospitality? It does not.

Does it mean keeping people out? It does not.

Does it mean the elimination of tents and campsites and campfires and picnic areas and hiking trails and leanto's and canoe routes and public hunting and fishing? Of course it does not.

Does it mean people will have to walk a bit to reach their favorite trout stream, or trout pond, or hunting ground? Yes; it means that. There should be no vast network of new highways and jeep roads in these wilderness forests.

Without these, there are already open to the people many avenues of enjoyment and relaxation in the forest preserve, such as hunting, fishing, boating, swimming, hiking, camping, picnicking, photography, skiing, and just that plain relaxation which comes from standing out in the open with the wind in your face. We now have all these things; we can continue to have all these things and to increase their opportunities and we can preserve the wilderness at the same time.

What does wilderness preservation mean? It simply means preservation against commercial exploitation and private control. The beauty and the natural wonders of the forest preserve will not be endangered by reasonable public use, or even by some dead trees.

There is an old saying that all trees are wood, but pine is not mahogany. To me all trees in the forest preserve are mahogany. Undisturbed, natural beauty, is more than ample justification for the protection of its forests. I regard its growing trees—its monarchs, it shrubs, its second growth, its fallen trees, as exhibits, as museum pieces, valuable in their natural state because they are all a part of a natural association. However, the problem is not without difficulty. It will require clear heads and firm hands to keep this great forest preserve as it was meant to be.

* * * * *

CONSERVATION AND THE FUTURE

We in the Conservation Department believe that the good use of leisure, use that will strengthen the moral fiber of America, is one of our responsibilities. Soon we hope to have in action a program broad enough to overtake today's problems; broad enough to prepare for future problems before they develop. We will call this project forest reserve. I hope it will emphasize a firm determination to maintain, without compromise, article 14, section 1 of the Constitution.

Lumbering does not fit into this picture. * * * But we wish to make it clear that we do not regard our position to be in conflict with forestry for forest products. On the contrary, we are dependent upon our commercial forests to protect our wilderness forests. If ever we come to the borders of the Adirondack and Catskill preserve with a

need for timber which cannot be met elsewhere, then our wilderness areas are in trouble. It is to the foresters of New York State and their effective programs for sustained-yield cutting on the production forests to whom we also look for help in wilderness preservation. We in the Conservation Department recognize this—and we face our project forest preserve in a spirit of cooperation, and with a feeling that on sober second thought, the foresters and the forest industries will support us and cooperate with us in our determination to preserve our wilderness forests in the Adirondacks and Catskills.

Recreation and greater use and greater enjoyment of the forest preserve fit into this program in a very substantial degree. Stream and pond improvement; more public access sites to our lakes and streams; more foot trails and horse trails for better access to the remote areas; more campsites, more bathing and picnicking areas; more roadside clearings to afford better roadside views of beautiful panoramas for the enjoyment and the pleasure of the traveling public, are all part of this program.

* * * * *

We must always evaluate the forest preserve in terms of human benefits and human rights as opposed to financial benefits and property rights.

It will probably take longer than our lifetime to complete the job, but this is the direction in which we should move. The pattern is set. The way is clear to save and to use the most precious area we have in the State for a purpose for which it was intended to be used—refreshment of the body—refreshment of the mind—refreshment of the soul. These are human benefits, and I place them above, high above, financial benefits or financial gain.

People have a warm feeling for the word "wilderness." It reflects adventurous times and personal experiences. It reminds Americans that it is a part of American tradition. Americans think of wilderness as something which is close to all that is good and strong in their country's history.

May the interest of the people in this great, this wonderful forest preserve, continue to grow in the years ahead, and may it continue to provide forever, an inspiration and an outlet, for the mind and the soul, to those who venture into the woods, far beyond the end of a road.

The United States of America, Home for Public Enemies

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1958

Mr. HOFFMAN. Mr. Speaker, spending billions upon billions of hard-earned tax dollars through a program advertised as foreign aid, ostensibly to help less fortunate people, gain friendship, and through that friendship, make our own future secure, we make ourselves ridiculous, defeating our own announced purpose by providing a home for criminals, especially for Communists.

The Declaration of Independence, the Constitution, and the Bill of Rights were epoch-making documents and adherence to the principles so enunciated have made this the land of freedom.

Unfortunately, legislation enacted by the Congress and decisions by our courts have made it possible for the Republic's enemies to carry on with safety many of their programs because they are protected either by legislation overstressing the right of the individual, when opposed to that of the public as a whole, or by strained constructions by the courts of that legislation.

Skipping any detailed statement as to that legislation, or comment on those decisions, permit me to give you an outline of the present situation which has existed over-long, which demands a solution now.

J. G. Hayden, who hails from Cass County, Mich., now the very efficient Washington correspondent of the Detroit News, on April 30, wrapped the situation up very completely and very neatly when he wrote:

WASHINGTON, April 30.—When a regional immigration officer last week blew his top and spirited one William Heikkila off to his native Finland, only to haul him back due to protest by a Federal judge, the United States Immigration Service was made to look ridiculous.

But an effect of that incident may be to prod Congress into passing a bill long requested by President Eisenhower to check the endless legal ring around by which many convicted aliens delay and frequently defeat final orders for deportation.

The most famous victor in that line was Harry Bridges, west coast labor leader, first recommended for deportation by a Seattle immigration office in 1937 and finally freed from a fourth deportation order by a San Francisco Federal judge in 1955—a span of 18 years. Once in the meantime Bridges was convicted of perjury and sentenced to 5 years in prison, but exonerated by a 4 to 3 (less than full majority) decision of the Supreme Court in 1954.

HELD ONLY 20 DAYS

The High Court did not dispute the finding of fact that Bridges had sworn falsely that he was not a Communist, but released him on the ground tha a 3-year statute of limitation had expired between his indictment in 1945 and conviction in 1949.

Arrested over and over during 18 years, Bridges' longest incarceration was 20 days—August 5 to August 20, 1950.

For Heikkila, who never has denied that he was a Communist card carrier for 10 years (1929 to 1939) the first warrant of deportation was issued in 1947. In the intervening 11 years, scores of legal actions to delay his deportation have been brought by lawyers for a so-called Committee for Protection of the Foreign Born, often identified as a Communist Party arm. And his latest reprieve, at cost of two Atlantic crossings, appears to have started the legal process once more from scratch.

There are other cases comparably notorious. One of them is Carlos Marcello, gambler and henchman of Frank Costello and once convicted as a drug peddler.

After Marcello had been exposed by his crime investigation in 1951, Senator KEFAUVER (Democrat, of Tennessee) called him "the evil genius of criminal activities in New Orleans" and urged his deportation "as fast as the wheels of justice can be sent into action."

Marcello was first cited for illegal entry to the United States in 1953 and, while never acquitted, still is in New Orleans a free man.

His lawyers have brought 42 separate legal actions, graphically chronicled by the Immigration Service on a chart nearly 6 feet long.

Recently Marcello's counselors dreamed up a wholly unique gimmick—a suit filed in Rome to stop the Italian Government from issuing an entry permit, without which he cannot be deported to his native Italy.

Simultaneously, suit has been filed in United States Federal court to stop deportation on the ground that persons sent back to Italy are miserable there.

ANOTHER CASE CITED

Since 1950 the Immigration Service has been trying in vain to deport another alleged Communist, Harry Carlisle, of Los Angeles, to England. Before the un-American Activities Committee several witnesses identified Carlisle as a Communist Party member and he himself has persistently taken the fifth amendment to escape testifying.

But up to date the law has been unable to catch up with him.

There are a host of like cases, indicative that almost anyone can escape deportation provided he can raise money to keep his lawyers working.

Former Attorney General Brownell first proposed that Congress move to stop these delays in deportation cases by the process of one consolidated appeal by way of the district, circuit courts, and the Supreme Court. Citing the failure of Congress to act, President Eisenhower a year ago warned that many criminals and traffickers in narcotics and subversion were using legal maneuvers to avoid justified expulsion.

Immigration Commissioner Joseph M. Swing asked plaintively last week: "How are we going to get rid of these deportable aliens who keep coming back to court?"

Polish Government-in-Exile

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1958

Mr. MADDEN. Mr. Speaker, Dr. Julius Szygowski, Council of the Polish Republic in-Exile in Chicago, Ill., forwarded to me the following motion passed by the Polish Government-in-Exile located in London, England.

It does seem unfortunate that the United Nations has neglected to give to the people of the free world the truth concerning the facts regarding the aggression, infiltration, and military force used by the Soviets during the last 30 years to subjugate millions of free people. The following motion adopted by the Polish Government-in-Exile is contributing greatly in exposing to the people of the world the real truth about Communist aggression and infiltration.

EMERGENCY MOTION OF THE COUNCIL OF THE POLISH GOVERNMENT

Whereas the Polish Government is called upon to apply to the relevant Government authorities of the United States of America and to the Congress asking for accelerated execution of the recommendations of the select congressional committee that in 1951 and 1952 conducted a thorough investigation of the terrible massacre at Katyn and which on the conclusion of its inquiry, filed a report together with recommendations that were to be carried out into effect by the President of the United States.

The terrible crime of Katyn and the fate of the other Polish servicemen that perished on the territory of the Soviet Union after incarceration in the detention camps

UNIVERSITY OF MICHIGAN LIBRARIES

of Kozielsk, Starobielsk, and Ostashkov has not so far, despite above-mentioned recommendations of the Selected Congressional Committee on the Katyn Massacre, been brought up before the forum of the United Nations Organization.

Motives: The current year will mark the 15th anniversary of the discovery during the war, at Katyn near Smolensk, of mass graves of horribly murdered Polish officers who had been held as prisoners of war by the Soviet authorities. When the Polish Government applied at the time to the International Red Cross in connection with this discovery, the Soviet Union broke off diplomatic relations with that government by its note of April 25, 1943. The text of the Soviet note, signed by Mr. Molotov, agrees with the version formulated by on April 21, 1943 in his letter to President Roosevelt and Mr. Churchill, the British Prime Minister. It was only last year that these letters of Stalin were published in Moscow in a book issued by the Soviet Ministry of Foreign Affairs. Though Stalin is now dead and Mr. Molotov no longer in power at the Kremlin, Moscow continues to uphold Stalin's official version of April 21, 1943, as is borne out by a comment dated 1957 in respect of Stalin's letter of February 4, 1944, to Mr. Churchill cited in volume I of Stalin's wartime correspondence.

London, March 29, 1958.

Respectfully submitted,

DR. JULIUS SZYGOWSKI.

Bipartisan Action on Klamath Purchase Legislation

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13, 1958

Mr. NEUBERGER. Mr. President, now that S. 3051, the Klamath Reservation purchase bill, has been unanimously approved by the Senate, I should like to invite the attention of my colleagues to a thoughtful editorial from the Oregon Journal of Portland, Oreg., of May 9, 1958.

This editorial is entitled "Remarkable Bipartisanship Display." I am particularly pleased that it accords credit for bipartisan teamwork on this vital bill to Under Secretary of the Interior, Hatfield Chilson, to the distinguished senior Senator from Utah [Mr. WATKINS], and to State Senator Leander Quiring, of Hermiston, Oreg. The able junior Senator from Colorado [Mr. ALLOTT] might also have been so listed.

I also should like to add, on my own, the names of the distinguished senior Senator from Montana [Mr. MURRAY], who was as cooperative and helpful as any committee chairman could be; the name of the distinguished senior Senator from Oregon [Mr. MORSE], who joined with me as cosponsor of the pioneer bill in this realm, S. 2047; and the able junior Senator from New Mexico [Mr. ANDERSON], who suggested essential amendments which undoubtedly contributed to the unanimous action of the Senate on this legislation.

I ask unanimous consent, Mr. President, that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REMARKABLE BIPARTISANSHIP DISPLAY

A few months ago, a prediction that the Seaton bill—which insures continued sustained-yield cutting of the Klamath Indian Reservation timber—would pass the Senate unopposed would have seemed rash indeed.

But it has done so, and with this action goes willingness of the Senate to spend up to $90 million for Federal purchase of the timber—if that appears to be the only way sustained-yield cutting can be maintained.

Behind this achievement is a remarkable display of bipartisanship which, if matched in other areas, would greatly increase Congress effectiveness.

The bipartisan team on Capitol Hill which did the spadework was comprised of Senator RICHARD L. NEUBERGER, chairman of the Indian Affairs Subcommittee, and Assistant Secretary of the Interior Hatfield Chilson. Also effective in persuading Republican Senators has been Senator ARTHUR WATKINS (Republican, of Utah), member of the Interior Committee. The earlier willingness of Senator NEUBERGER to push the administration bill instead of his own has been a great factor in winning such a broad measure of support.

Senators were influenced too by the solid bipartisan front on the State level shown in the testimony of the State legislative interim committee on Indian affairs headed by Senator Leander Quiring (Republican, of Hermiston).

The measure may encounter more resistance in the House, but it has bipartisan friends there too, and its friendly treatment in the Senate ought to have some influence with the other branch. Those who have long been concerned with the Klamath problem, including not only the fate of the timber but the welfare of the Indians, are more cheerful now than they have been for years.

Our Debt to the American Indian

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13, 1958

Mr. MURRAY. Mr. President, I wish to call to the attention of the Senate a very important article which deals with the American Indian. The article is entitled "Our Debt to the American Indian," and appeared in the February 1, 1958, issue of America. It was written by Miss Dana Ann Rush, who for 7 years has been associated with the Marquette League for Catholic Indian Missions.

Miss Rush traces the history of the United States Government's shabby treatment of the Indians. She tells how the land which was rightfully theirs was taken away from them.

The present abysmal poverty of these first Americans stems from man's greed for land—

She writes.

In conclusion, she agrees with Msgr. Bernard J. Cullen, director general of the Marquette League, that—

Every American who has found prosperity in the New World should see to it that the original owners of our rich country receive an equal chance to share America's bounty.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR DEBT TO THE AMERICAN INDIAN

(By Dana Ann Rush)

The majority of Americans are not aware that within our borders there is a racial group as poor as any of the impoverished peoples of Asia or Africa. While we have been sending billions of dollars abroad to raise the economic level of destitute foreign nations, the American Indians, living below a decent standard, have a life expectancy of only 36 years, and on some reservations not more than 20 years.

Lack of nutritious food, poor sanitary conditions, and inadequate medical care are the causes of their high mortality rate. Glen L. Emmons, shortly after his appointment in 1953 as Commissioner of the Bureau of Indian Affairs, stated that medical service for the Indians was 50 years behind that for non-Indian Americans. Dr. John R. Shaw, chief of the Bureau's Health Branch, reported in 1954 that there were 3,000 seeding cases of tuberculosis on the Navaho Reservation that were not hospitalized.

As late as 1954, more than one-half of the school-age Navahos were unable to enter school because the Government had failed to provide schools and teachers for them—had not, in a word, lived up to the treaty of 1868 which the Navahos had signed with the United States and which promised adequate school facilities.

DOMESTIC POINT 4

Through a number of emergency programs—trailer schools and the transfer of children to boarding schools in adjacent States—the school shortage has been remedied. In fact, this particular reservation is an example of what can be done for destitute Indian reservations through a domestic point 4 program. In 1950, the Navaho-Hopi rehabilitation program was adopted, and Congress appropriated around $88 million to be spent within 10 years. In 1957, its seventh year, the reservations not only have more schools, but some of their arid acres are under irrigation and a few paved highways make traveling easier.

Organizations working for the welfare of the Indians—the Marquette League for Catholic Indian Missions, the Association on American Indian Affairs, and the National Congress of American Indians—advocate the enactment of an Indian point 4 program and oppose the relocation of Indians to industrial centers.

The poverty that prevails among the Indians is not, as many believe, the result of shiftlessness. Their sufferings come from the indifference of the American public, from a century of Government mismanagement of Indian affairs, and from the fact that in exchange for 2.5 million square miles of the best land within our borders, the Indians were given mostly unprofitable land, land the white man did not want because he could not make it yield him a living.

Moreover, the red man was left no other resources for earning a living than this submarginal land. There are no industrial plants in his country, no jobs from various occupations found in towns and cities, because it takes a prosperous countryside to establish a prosperous town.

In contrast with these unhappy conditions are the high principles expressed in the United States Indian policy. Our country is the only one in world history credited with attempting to deal justly with conquered aborigines. Shortly after we became a nation, Chief Justice John Marshall ruled that the Indians, because of centuries of prior occupation, had a natural right to their land. Thereafter land was bought from them with the same formality as from a foreign nation. Most of the 400 treaties between the Indians and the United States that are found in the

archives of Washington concern real-estate deals.

The present abysmal poverty of these First Americans stems from man's greed for land. From the days of Davy Crockett, Daniel Boone and other pioneer frontiersmen, the Indians' natural rights to their homelands were violated. And despite the fact that we have possession of all the land that once belonged to the Indians, with the exception of a few dusty acres, legislation passed in 1953 and bills that will come before the 85th Congress when it convenes in January raise new threats. These laws and proposed laws are labeled by Joseph R. Garry, the Coeur d'Alene Indian who heads the National Congress of American Indians, as "further designs to reduce the Indian land holdings."

A review of Indian land history may answer the question: "What do we owe the American Indians?"

The American colonists based their rights to the land on rules created by Anglo-Saxon jurisprudence. That is, title to the land rested originally with the sovereign, who made grants to his lords, and they in turn had power to make further grants. Though the colonists bought land from the Indians, they did so only in order to avoid hostilities.

Chief Justice Marshall was free to invoke the Anglo-Saxon land theory, but he refused. Instead he recognized the Indians' aboriginal rights. The late Felix S. Cohen, author of many learned articles on Indians, traced the concept of this ruling back to a professor in a Spanish university in the days of the conquistadors. In 1537, Pope Paul III in a bull defined the concept when he declared that "the said Indians and all other peoples who may be discovered by Christians are by no means to be deprived of their liberty or the possession of their property."

By 1840, the Indians had ceded almost all their territory east of the Mississippi. Many treaties were made under duress and the land bought at unfair prices. In some cases the Indians were disarmed and forced to march to a new reservation.

"The chief task of the Government's Indian agent for the first 50 years of our national existence," says a recent Government pamphlet, "was to secure Indian land for the white settlers." These land-hungry Americans pushed the frontier farther and farther west, regardless of whether it was into land that we had guaranteed to the Indians in a solemn treaty for "so long as the sun set in the west."

In those covered-wagon days, the white settlers took the land they wanted, and defended with the shotgun their right to keep it. "The only good Indian is a dead one," expressed their sentiment. When a United States marshal arrived on the scene, more often than not he was persuaded to settle the dispute by removing the Indians to another area. Each move meant the surrender of large tracts of Indian land, which was either opened for homesteading or given by Congress to the railroad companies or to the new States which were being established.

The Osage Indians, subjects of the Americans' favorite Cinderella story, were moved 10 times between 1808 and 1870, each time to a less desirable location. They were the last of 20 tribes to be settled in the Indian Territory (now Oklahoma), and consequently received what was considered the "ash heap" of the region. They were miserably poor on their sandy acres—until oil was discovered there. At the peak of the oil boom (1925), each Osage received $13,200 annually for his share in the communally owned property.

GOVERNMENT AND THE INDIANS

In 1871 Congress asserted its right to deal directly with the Indians. Contracts, not treaties, became the term applied to those pieces of parchment bearing the seal of the United States which we had treated with no more respect than if they had been "scraps of paper."

But our national conscience again asserted itself. To protect the Indian, who was not considered competent to operate in the white man's economy, his land was put under the trusteeship of the Federal Government. Indian land, of course, had been tax free during the era when the tribes were regarded as foreign nations. It remained tax free under the Govevrnment's trusteeship.

But by 1887 the white settlers again became restless—they wahted more land. The General Allotment Act of 1887 abrogated trust protection. Individual Indians, judged competent to handle their own affairs, were granted fee patents of their tribal holdings. During the time the law was in force, the Indians lost 88 million acres of their best land.

ON THE WARPATH

In 1934 the Indian Reorganization Act terminated the General Allotment Act and, it was believed, postponed indefinitely the removal of trust protection over Indian reservations. But in August 1953, House Concurrent Resolution 108 enunciated a proposal not only to terminate the trusteeship, but for Federal withdrawal from Indian affairs in general. It was followed by bills proposing termination of the trustee status of some 10 tribes in a dozen different States.

The Indians and their friends went on the warpath. President Gary of the National Congress of American Indians called the measures the gravest threat in many years against his people. Termination meant the end of freedom from land taxation, an exemption which the Indians considered as compensation for the many thousands of acres taken from them in the different land exchanges. Moreover, since most of the reservations are made up of submarginal land, they feared that much of their remaining land would be lost should they be unable to carry the burden of taxes.

Six Indian reservations were "terminated" before the Indians and their friends were able to rally sentiment to their side. So far, however, House Concurrent Resolution 108 has never been rescinded, though champions of justice have pronounced it "a compromise of legal and moral issues, as well as unwise from the economic point of view."

It is up to our generation, according to LeVerne Madigan, executive secretary of the Association on American Indian Affairs, to decide whether the Indian peoples of the Great Plains—the Sioux, Winnebagos, Omahas and other tribes of the Dakotas and Nebraska—shall survive with self-esteem in communities simultaneously Indian and American, or whether they shall survive as landless individuals, migrating desolately from camp to camp. "The forces allied to cause or condone the breakdown of these Indian reservations," declares Mrs. Madigan, "are organized stock growers of the Dakotas and Nebraska—powerful in State and Federal politics, and who covet Indian lands."

The American press forced Congress to enact the Navaho-Hopi rehabilitation program after the blizzard of 1949 focused the eyes of the world on the Navaho Reservation, where 1 baby out of every 4 died before the age of 5 and the TB rate was 28 times higher than that in non-Indian communities. People who love justice and scorn greed can force Congress to inaugurate an Indian point 4 program now for all of these much-abused Americans. As Msgr. Bernard J. Cullen, director general of the Marquette League, says: "Every American who has found prosperity in the New World should see to it that the original owners of our rich country receive an equal chance to share America's bounty."

Report by Former Moscow CBS Correspondent Dan Schorr

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13, 1958

Mr. HUMPHREY. Mr. President, on Thursday evening, April 10, 1958, on the Edward R. Murrow CBS radio program, the former Moscow CBS correspondent, Dan Schorr, reported on a 20,000-mile lecture tour of the United States which he has just completed. Mr. Schorr gave an interesting report on the kinds of questions he has been asked as he traveled up and down the United States—questions which indicate a new depth of curiosity about the Soviet Union and the Soviet-American relations.

I ask unanimous consent that the text of Mr. Schorr's comments be printed in the Appendix of the RECORD.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

Mr. SCHORR. For 2 months, Ed, I have been on the lecture circuit, traveling 20,000 miles up and down America, talking about Russia to 26 groups of all kinds—students, townhalls, women's organizations, and trade conventions. I don't know how much they learned, but for me it has been an exciting voyage of discovery. From the hundreds of questions put to me in Mississippi and Ohio, in New Jersey and California, in New York and Oklahoma, I got a sense of America's postsputnik mood about the Soviet Union, which, in a way, reflects America's mood about itself.

America today is full of questions—uneasy, self-examining questions. I got them not only in formal question periods, but from people who would come up later to ask something special that was in their hearts, from fellow passengers on airplanes, and from taxi drivers. There were differences based on region, on profession, on special interest. But there was a clear and definite pattern of questions that arose everywhere.

It was clear that sputnik had shaken if not shattered, many conceptions about Russia, but new conceptions had not yet been crystallized. A University of Mississippi student, with an air of now wanting to know the worst, asked if I would list the most common misconceptions about Russia.

Others suggested that they had long been misled about Soviet strength. One wanted to know why America had been lulled with propaganda all these years. A few still inquired hopefully, but without much sense of conviction any more, whether Soviet rockets were all made by captured Germans, whether there was enough unrest in Russia to make the overthrow of the Communist regime possible, whether the death of Premier Khrushchev might not plunge Russia into chaos.

Khrushchev as a personality, fascinated many. At a luncheon of Detroit bankers and industrialists, one asked: "How long will he last?" And, for some reason, the question was followed by laughter. All over the country I was queried about his habits, and what languages he spoke and just how did he run the country. The Louisiana student asked: "Would it help to invite him to America?" Americans like to personalize their problems. But, now they are aware

UNIVERSITY OF MICHIGAN LIBRARIES

that it isn't just Khrushchev, but Russia which must be understood. And the attempt to comprehend was deep and searching.

What was really on their minds was put by a lady in Cleveland: "Are we in greater danger of war since sputnik?" And a very old lady in Pomona, Calif., got up and said: "We in America are numb at the idea of an atomic war. How do the Russian people feel about this possibility?"

No one asked about the feasibility of a preventive war against Russia, not once. That idea seems almost obsolete today. But there was much perplexity about whether we could negotiate with the Russians and, if so, how? Why, asked the Drake University student in Des Moines, why is Russia pushing so hard for a summit conference? An auto company executive in Detroit, a housewife in Pomona, and a student in Florida were among the many who wanted to know how to work out a settlement with Russia. There was considerably more thinking about negotiations with Moscow than I had ever known before.

And along with that, the deep uneasy feeling that our leaders are not showing enough imagination and flexibility to negotiate, that today's events are leaving us behind. A girl at San Diego State College in California asked if I felt that our administration was a little psychotic about Russia. And many inquired whether it would help if Secretary of State Dulles was replaced. At a forum in Beverly Hills, Calif., a lady asked, half seriously: "Who is the greater obstacle to peace—Dulles or Khrushchev?"

Many questioners asked for an explanation of George Kennan's ideas about disengagement in central Europe, saying it was not clear from local papers what his ideas were. And, again and again, the question: "Are the Russians sincere? Can they be trusted?" At San Diego State College, the question: "What can we, as citizens, do to make our administration more aware?"

Many questions reflected special concerns. Almost everywhere the question about religion in Russia; could people go to church freely today? Some wanted to know about antisemitism in the Soviet Union. And oddly enough, almost every time I spoke in the South a question came—usually at the end of the evening and uttered with some misgivings—about the reaction in Russia to American problems of Negro integration. It was a subject which, as a visiting lecturer, aware of local sensitivities, I never raised; always, in the South, it was raised with me, usually with a bit of embarrassment.

Many questions reflected a profound hope that the West in general and America in particular could penetrate Russia. How effective, they asked in Oklahoma City, and in Palm Beach and Des Moines, how effective is the Voice of America? The student at Pennsylvania State Teachers College wanted to know if American history is taught in Russian schools. And, in San Diego, the wider question: Why is their propaganda so effective and ours so ineffective?

This Ed, is a sampling of hundreds of questions I have been asked about Russia. America—or at least the Americans who attend lectures—today feel shaken from their comfortable moorings about Russia. They are aware that the Soviet Union is a problem to live with. They are looking for simple, understandable answers that do not come. But they are open minded and searching, more ready than I have ever known them to discard prejudice and misconception. That is the sense of their questions to a lecturer. As to the answers, that, I'm afraid, would mean—heaven forbid—another lecture.

Mr. MURROW. On his lecture tour, Dan Schorr traveled 20,000 miles up and down America, lecturing and answering questions about Russia. He found an awareness of the problem and an eagerness to know. And he learned from the questions. For as Seneca said, "Speech is the index of the mind." "And curiosity," Julius Charles said, "is little more than another name for hope."

Goodnight and good luck.

The Four Dimensions of Higher Education

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. MULTER. Mr. Speaker, American higher education is faced with unprecedented apprehension and uncertainty concerning its future. Pressures to train vitally needed specialists in a variety of fields, to prepare for a tripled enrollment and to meet the economic hazards induced by rising costs, have resulted in a need for a reappraisal of its purposes and objectives. It is in this context that the sober and incisive views of Yeshiva University's distinguished president are presented here:

THE FOUR DIMENSIONS OF HIGHER EDUCATION

(By Dr. Samuel Belkin, president, Yeshiva University)

During the last few months a silent revolution has shaken the American mentality. The great change in the attitudes of intelligent laymen, primarily in their approach to education, is broadcast by all of the modern media of communication. One needs only to read the public press, watch television or listen to the radio, to discover that suddenly the field of education has become a matter of great concern, not only to scholars but also to laymen. This rather startling reversal is due to the spreading realization that today knowledge is important not only for the continuation of our cultural heritage, but, indeed, for insuring the security of our land and preserving our democratic heritage. In fact it is becoming increasingly patent that our very lives depend on the advancement of knowledge, patricularly scientific knowledge.

Many concepts which heretofore engaged the interest of the select few who dedicated their lives to scholarship, are now daily topics of animated and stimulating discussions among intelligent laymen the world over. The term "basic research," until recently as far removed from the thoughts of civic-minded and even professional men, not to mention those who limited their interests to business, is now current on the lips of all. That scientists and philosophers have wrestled with the problems of time and space is understandable, but today even elementary schoolchildren prattle authoritatively about outer space. Science fiction is today a flourishing new genre of literature, and exclamations over the wonders of manmade artificial moons all but drown out the psalmist's wonderment before God's creation: "The heavens proclaim the glory of God, and the firmament showeth his handiwork. Day unto day poureth forth speech, and night unto night proclaimeth knowledge."

The change in the attitude of the American community is the direct result of the Russian success in placing into orbit two earth satellites. This technical and scientific achievement, which may ultimately prove to be the most dangerous weapon of war the human race has ever produced, has so greatly alarmed and frightened the free world that all quarters have suddenly begun to cry the great need of more and better trained scientists, and the urgency of accelerated progress in the fields of mathematics, physics, electronics, and technology in general. In fact, the absent-minded professor, in recent years fallen so low that he has even ceased to be a figure of fun, now threatens to become a popular hero.

THE SOVIET CHALLENGE

Over 40 years have passed since the Russian revolution. In all that time very few people seriously concerned themselves with the system and method of education developed by the Russians. Suddenly we learn that in the Russian gymnasia, which correspond to our American high schools, youngsters are trained primarily and intensively in the sciences, particularly in chemistry, biology, astronomy, physics, and mathematics. This sudden knowledge has set off a scramble to study and assess our own educational system. Some charge it with failure because it does not place sufficient emphasis on the scientific training of our younger generation and demand an immediate redress of this neglect. On the other hand, many educators throughout the land are deeply concerned lest our sudden awakening to the need for increased scientific study, in itself a potential blessing in disguise, may cause us to overtip the balance in the opposite direction and press the study of the sciences at the sacrifice of other disciplines.

Thus, we find ourselves in an unaccustomed but happy attitude, pondering what educational policy we should pursue, and seeking a course which will, at the same time, advance our cultural heritage and promote our national security. At such a moment, the most significant questions we must front are: What, in the final analysis, constitutes an educated man and what branches of knowledge must a man master if he is to be truly knowledgeable? What, indeed, should be the ideals and goals of a university education and how can we best educate a man so that he not only acquires book learning but also becomes a moral and useful citizen?

THE FOUR STUDIES OF MAN

It seems to me that there are four major dimensions, each with its own particular specialization, into which all human knowledge naturally falls. These four dimensions may be called the four studies of man.

I

The first of these is a study of the world into which we are born. From birth we find ourselves in a vast, strange, impersonal, and remote universe. Man, being endowed with a mind, has from the beginning of time attempted to discover the mysteries and secrets of the cosmos. From the very first he realized that the world is not mere accident, but is governed according to an order and possesses a special design. It is, therefore, in the very nature of man to search, and research, so that he may better understand the divinely inspired laws of nature. The more deeply man studies the essence and laws of the universe, the more is he able to discover many things in nature which remained hidden from previous generations. Many practical inventions were made possible by the theoretical discoveries which preceded them. The man who is interested primarily in basic research and who makes theoretical discoveries is the real scientist. The late Albert Einstein, the greatest scientist of our age, did not invent anything practical in his life. The cosmos was his laboratory and the pad and pencil his tools. He was far removed from the field of applied science and concerned himself only with the pursuit of knowledge for the sake of knowledge. His basic research, however,

triggered many inventions. The inventor harnesses the theoretical discoveries of the great minds and uses them for practical inventions. This is what is commonly called applied science.

The study of the world in which we are born we designate as the study of the natural sciences, encompassing such branches of knowledge as mathematics, physics, astronomy, geology, and their many subdivisions.

II

The second dimension of human knowledge we may characterize as the study of the peoples among whom we are born. We are not the first humans to come into being; generations preceded us. The nature of man does not permit him to live in an ivory tower, completely isolated from his immediate environment. We are interested in achieving a better understanding of the people among whom we are placed, among whom we live, as well as of the people who live and have lived on our globe throughout history. We are intuitively inclined to learn the languages, read the literature, study the philosophy and discover the arts of other human beings. We pass the history of civilization through our modern sieves seeking to determine the cultural contributions different races and civilizations have made to our contemporary world. We endeavor to appreciate better the experiences, trials and tribulations of generations gone by, to comprehend more fully the causes of wars and the achievements of peace. We carefully study the rise and fall of empires and nations; their cultural origins and their decadence, their laws and their mores; and finally, their lasting contributions to world civilization. This study we label social science. All aspects of human creativity and human experience are, in a larger sense, the province of the social sciences.

III

The third phase of knowledge, we may designate as the study of man himself. Philosophers characterized man as a microcosmos; our sagas, in their wisdom, taught: "The Holy One, blessed be He, said: the entire universe was created for the sake of man and one man is equal in importance to the entire world." The study of man is a study of his abilities and disabilities; of his strength and his weaknesses; of his mental anguish and his physical pain; of his body and his mind; of his conscious and his unconscious; of his integration and his final unavoidable disintegration. From time immemorial man has sought a better understanding of the human organism, with the ultimate aim of bringing peace of mind to the mentally disturbed and good health to the physically sick; of preserving for every human being his natural dignity and inner pride; of safeguarding every man's physical endowment and intellectual gifts. The biological sciences, insofar as they are dedicated to the alleviation of human suffering, and above all, the study of medicine—in all of its branches—seeking to ease bodily ailments and mental ills, fall into the third dimension of human knowledge.

There is yet another dimension of human knowledge. Assuming that we shall acquire a better understanding of the universe in which we are placed, assuming that we will attain a greater appreciation of those among whom we are placed, and finally, assuming that in the course of time, we may succeed in eradicating all the diseases which plague the human race, we will not yet have met the fundamental requirement for decent living.

All the things which are created through the ingenuity of the human mind, man can use for his advantage or for his disadvantage, for his service or for his disservice, for his benefit or for his destruction. Atomic energy may be a blessing to mankind but it can also be used to destroy cities and continents, if not civilization in toto. To use the Biblical metaphor, the tree of knowledge bears knowledge of good and evil alike. A great mathematician or physicist or chemist may use his knowledge to benefit his neighbor, but he can also use his greatness to harm his neighbor.

Knowledge, in all of its branches, is of greatest importance for the development of man, but it can bring the most proper and the greatest benefit to mankind only if man recognizes a unifying principle for man's creative ingenuity. This phase of knowledge I characterize the fourth dimension of human knowledge. Its main concern is with the moral and spiritual purpose of life which alone can give true meaning to human knowledge. This fourth dimension is, in the true sense of the term, a science of living and gives human existence a moral raison d'etra.

For our moral purposes in life we are entirely dependent upon our spiritual heritage and religious experiences, upon the things which we classify as the divine law rather than as the laws of nature. Recognition of the unalterable fact that the moral law is as binding on us as human beings as the laws of nature are on the cosmos, is of paramount importance for the survival of mankind. This moral and spiritual purpose of life in no way conflicts with the three branches of knowledge discussed above. On the contrary, it complements and supplements the knowledge man has acquired through centuries of living and thinking. It affords an end and ideal purpose for all the inventions and discoveries of the human mind. Only after we succeed in integrating the four phases of knowledge, can we hope to build a peace loving society.

THE TRAGEDY OF IMITATION

The greatest tragedy which could befall the free world would be for it to attempt to imitate the Russian system of education, which, we have been informed, places supreme emphasis on the natural sciences and technological skill. If we should develop a philosophy of education based on the centrality of the natural and biological studies, then we shall merely create human sputniks, an end totally foreign to our democratic way of life and our spiritual heritage. The only true education is a rounded one, one which takes in all phases of knowledge, and every man must be free to choose his particular field of specialization. A scientist is not exempt from having a proper understanding of the cultural heritage of the people among whom he is born. Indeed, he must be inspired with an even higher moral purpose of living.

How refreshing are the words of our sages: "But a single man was created to proclaim the greatness of the Holy One, blessed be He; for man stamps many coins with one seal, and they are all alike, but the King of Kings, the Holy One, Blessed be He, has stamped every man with the seal of the first man, yet not one of them is like his fellow man. Therefore, it is the duty of every man to proclaim 'for my sake the world was created.'"

In the totalitarian states the head of the state sets the pattern for the seal—permitting only one particular idea, one way of thinking and acting—and the population are merely the coins stamped out by that seal. They all look alike and they must faithfully repeat the imposed pattern. If any should deviate from the exact image of the seal, they are declared counterfeit and their circulation is deemed a danger to the state and to the seal itself. If the state announces that it demands proficiency in the technical sciences, then all students must excel in such fields, and it becomes an unwritten law that all gifted men and women, in their achievements, must reflect that attitude. They must be genuine coins and, stamped with one seal, they must all look alike. This is true not only in the field of knowledge but in every phase of human action. Each person must become a human sputnik, whose every mode of living and thinking is directed by the head of the state or party.

It is different, however, in a democracy which accepts as its root principle the infinite worth of the individual and which, at least theoretically, affirms that it is not only the right, but the duty of each man to say, "for my sake the world was created." In great measure, a democracy attempts to reproduce the divine seal which stamps all coins with the same image but recognizes that all coins must not necessarily look alike. Accepting the fact of basic likeness and the fundamental principles of agreement, a democracy nonetheless recognizes man's personal right to differ in his thinking and his actions from his fellow man. The Russian system of education which determines into which channels human thought can flow is, therefore, actually inconceivable in a free and democratic society.

On the other hand, it would be a serious error to neglect the sciences and not encourage students with particular aptitudes (in scientific fields) to specialize in those fields. An elementary knowledge of the natural sciences, on the high-school and college levels, should be required of students, as should a knowledge of the social sciences. This will give students a well-rounded education and will stimulate them to pursue their graduate work in that branch of knowledge in which they reveal particular ability of living.

THE PROBLEM IN AMERICAN EDUCATION

What then are the major problems in our American education? A beeping sputnik has called us to recognize our failure in science education. Is it not possible that we are also neglecting the other dimensions of knowledge? The contemporary crisis merely throws into focus our dereliction in failing to train students properly in the natural sciences. We now recognize our mistake. Will "crash" programs solve our problems? Are colleges and universities really to be blamed for our present state of affairs? Are our high-school teachers and principals the ones to be blamed for the widespread juvenile delinquency which has alarmed the Nation? Are we perhaps unconsciously trying to trace the root of the evil to the doorsteps of our schools and thus absolve ourselves of any blame and responsibility?

I would suggest that perhaps our present difficulties are attributable to a source outside of the school environment.

In order to cultivate learning in the school, in order to inspire the scientist to do his research, we must first, and above all, develop proper respect for the scholar. The Greek term "philosopher," which in the English language is used to designate one who devotes his entire life to a certain branch of knowledge, means, in its literal sense, a "lover of wisdom." One need not necessarily be a scholar to be a lover of learning. Indeed, one may be an industrialist, a businessman, a merchant, a professional man, or a laborer, and still be a philosopher—a lover of wisdom. The love of learning among the members of the community creates a climate congenial for the research of the scholar and encourages young students to take their studies seriously. Our sages declared that, in one way, giving honor to the Torah (Bible) is more important than learning of Torah, for only in an environment where learning is honored and respected is there hope that gifted men will dedicate their lives to learning and pursue their studies in their chosen fields.

The American people are the most charitable people in the world. They are, indeed, philanthropists in the full sense of the term, but somehow they have not revealed sufficient insight in recent years to qualify as philosophers. The community in its to-

UNIVERSITY OF MICHIGAN LIBRARIES

tality has shown neither great love for learning nor great respect for those who transmit knowledge to others. Somehow, the absentminded professor does not enjoy the same respect as the prosperous businessman or professional. But that does not necessarily mean that America lacks in brainpower or dedicated scholars and scientists in all branches of knowledge. On the contrary, in every field of learning there can be found ideal men and women who are dedicated to the pursuit of knowledge for its own sake, and are more than able to preserve our cultural heritage and advance our scientific understanding of the world. But if it desires to advance basic scientific research and general scholarship, the community must demonstrate a love for wisdom and a high regard for the men who are engaged in its service. The discouragement of scientists in America was summed up a few years ago by the leading scientist of the century, the late Albert Einstein, when, if my memory serves me right, he said, "If I had to live my life over again I would become a carpenter."

Evidence of an increasing appreciation in the nonacademic world for the teacher, the scholar, and the scientist would have a most salutary impact on the behavior of students in the secondary schools. Youngsters who have no respect for their teachers or parents, and therefore the populace in general, are merely reflectors of community attitude toward learning and those who are in charge of perpetuating and spreading learning. We decry college students who seek out the easy courses in order to amass the credits necessary for their diplomas as painlessly as possible, who display no interest in deepening their understanding of the world into which they were born and of the people among whom they live. In truth, however, they are merely reflecting in the school the practical climate of our time, which permits little interest in knowledge per se, though the latter, in the long run, is the most useful and practical thing in the world.

Fortunately, in the last few months there is a noticeable reawakening among lay people and increasing signs of respect for the scientist and scholar. People are more concerned with the curriculums of our colleges and are becoming more cognizant of the value of knowledge. True, this respect for knowledge, particularly for science, is a result of the fear which swept the free world in the wake of sputnik. But a reverence for knowledge, though at the moment it springs from fear, must ultimately lead to a reverence which will blossom out of love. Above all, however, we must remember one thing: Only when human knowledge is integrated with a high moral purpose and spiritual ideal can knowledge become a blessing to society.

Flood Control Testimony of Samuel T. Sheard

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a timely, excellent statement recently made by my distinguished friend, Mr. Samuel T. Sheard, chairman of the executive committee of the Quinebaug-French River Manufacturers Association before the House Appropriations Committee.

Mr. Sheard and his business associates have made great contributions to flood control in flood-ravaged Massachusetts and Connecticut. Since he has been one of the outstanding leaders in the flood-control movement, his views are entitled to special consideration and weight.

I am in agreement with the various points he made before the committee, calling for speed to complete new flood-control projects in the area. His able views summarize the case for those who believe that we cannot afford to delay, but must press forward as rapidly as possible with essential flood-control projects, which he mentioned in his fine talk.

I want to commend and thank Mr. Sheard for his interest and splendid work, and particularly for coming to Washington to make such a persuasive argument before the committee. The fine public spirit manifested by Mr. Sheard and his associates and the fine contributions they have made are greatly appreciated by me and, I am sure, by all the people of our flood-stricken area. I heartily commend and thank Mr. Sheard and his association.

The statement follows:

My name is Samuel T. Sheard. I am assistant to the president of the American Optical Co. at Southbridge, Mass. I appear today as chairman of the executive committee of the Quinebaug-French River Manufacturers Association representing about 50 small business concerns in the Quinebaug and French River Valleys in southern Massachusetts and northern Connecticut. In effect, however, we speak for the entire population of those valleys, whose major centers are Southbridge and Webster, Mass., and Putnam, Conn.

The horrible flood, whipped up by the hurricane Diane, which swept down these valleys in August 1955, is still fresh in our minds; and the terrible resulting damage is still evident in spite of all the reconstruction and rehabilitation work. Some of we older citizens also recall 3 previous devastating floods in 1936 and 1938. This evidence, and the high water of this spring as a result of our heavy snowfall, makes the danger of flood ever apparent to all of us in this locality.

The Quinebaug-French River Manufacturers Association is basically sponsoring 1 project, even though it consists of 4 separate dams or reservoir areas; and the job must be completed in its entirety to make flood control successful in this area.

Wonderful progress has been made on our project as indicated by the recent completion of the Buffumville Dam, and the practical use of this dam became apparent when the dam was operated in connection with the recent high waters.

On the remaining three dams, bids have been requested or contracts have been let on the construction of the Hodges Village and East Brimfield Dams. On the Westville Dam, design studies have been initiated, and with additional funds it is expected that the design studies can be completed and plans and specifications are to be prepared for the construction of the dam.

We appreciate and respect the action of Congress in the allocation of funds to our project.

We are here today to urge you to approve appropriations asked by the Army engineers for our project, with its four inseparable flood-control dams consisting of East Brimfield and Westville on the Quinebaug River, with Hodges Village being the remaining dam on the French River, as the Buffumville Dam is completed.

In addition, we certainly hope that you can see your way clear to provide funds for land acquisition and the start of construction at Westville. We believe that the executive freeze on new projects is inapplicable in this case since, as I pointed out, Westville is just a part of one inseparable project. A circle 12 miles in diameter would enclose all 4 dams. In this connection I also would like to point out that 2 of the 3 principal towns in the area—Southbridge and Putnam—will lack adequate protection until Westville is completed.

The status of our project is as shown in the following table:

Project	Previously appropriated	1959 budget	Estimated total cost	Year of completion
Buffumville		0		Completed
East Brimfield	$2,550,000	$2,800,000	$7,300,000	1959
Hodges Village	2,340,000	2,700,000	5,300,000	1959
Westville	179,000	141,000	6,550,000	1960

There is also an allocation of another million dollars for the East Brimfield Dam under the increased expenditures for public works projects.

I am attaching to this report a consolidated map showing the project in its entirety with the area covered by this flood-control project.

Again, we would like to say that through the efficiency of the Army Corps of Engineers, the results to date on our project have been outstanding; and smart business judgment urges and warrants the completion of our project by an early date.

Thank you very much for giving us your time, and for the careful attention we know you will give our project when you go into executive session.

Herb Child Steps Down

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include a timely editorial in the Clinton Daily Item concerning the service of my valued

friend, Mr. Herbert S. Child, a public servant of great ability and distinction.

I also include as part of my remarks the contents of a letter I recently wrote to Mr. Child, commending and thanking him for his invaluable service.

The able editor of the Item, Mr. William Coulter, performed a distinct public service in acknowledging and praising Mr. Child's memorable contributions.

HERB CHILD STEPS DOWN

Herbert S. Child, Clinton's financial watchdog, will soon step down as the town's accountant for the past 13 years.

It is with considerable regret that we see this being done. Although he will turn 75 April 27, the town has reaped rich rewards because of his presence in townhall.

A stubborn believer in what he thinks best for his town, he has become the center of many a controversy over the years. His love of the principle of home rule prompted his recent remark, "The hell with the State" as to whether or not Clinton needed State financial aid for a new high school.

Born in Brockton, he came to Clinton to work as an accountant for the Shuman Mill where he remained until the depression forced it out of business. Several town accountants were broken in under Herb's guiding hand.

It was thanks to Herb that Clinton adjusted so easily to the Uniform System of Accounts then being adopted by every city and town in the State. Herb became accountant in 1945 and since that time has never faltered in his bid to help the townspeople gain a better understanding of the town's finances.

In 1950, Tax Commissioner Henry F. Long told Herb, "It is so obvious that it does not need repeating, but the way you have kept the finances of Clinton sound through the years is just marvelous * * * you are entitled to tremendous commendation from those in Clinton who would face a rather difficult situation were it not for the able way in which you have handled the finances of Clinton."

It was on Herb's recommendation in 1953 that the selectmen voted that each voucher for traveling expenses must show the exact number of miles used for business purposes by town officials.

In the 1957 town report the finance committee paid its annual tribute saying, "To our able and distinguished town accountant, Herbert S. Child, who has so materially and invaluably advised and assisted us we express deep gratitude."

Able he is, and distinguished too.

Herb's beliefs are summed up in one of his annual reports:

"My motto is there is no substitute for the right way of doing my duty, and the town is entitled to value received for money expended."

This was more than a motto for Herb Child. It was his way of life. The town has benefited indeed and we congratulate him for it.

PHILBIN LAUDS TOWN ACCOUNTANT HERBERT CHILD

Under date of May 2, Congressman PHILIP J. PHILBIN mailed a letter to Town Accountant Herbert S. Child, reading as follows:

"Let me state that we will all miss you in the public service of Clinton, where for so many years you have rendered such distinguished, outstanding service.

"Your honesty, efficiency, high competence and devotion to duty mark you indelibly as one of the greatest and finest public servants the town has ever had.

"You are also admired, and will long be remembered for your faithful performance and your forthright, candid expressions of what you deemed in the public interest.

"For the finance committee and myself, I tender you our sincere and profound thanks for your many notable services to our board throughout the years.

"The entire community owes you a very deep debt of gratitude, and it is sincerely felt by our fellow citizens.

"I hope and pray that you and Mrs. Child may enjoy many more happy years of devoted married life marked by good health and personal fulfillments.

"With usual good wishes to you both, I am,

"Sincerely yours,

"PHILIP J. PHILBIN,

"Chairman, Clinton Finance Committee."

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I wish to insert into the Appendix of the RECORD the remarks of the Honorable G. Mennen Williams, Governor of Michigan, on the occasion of Polish Constitution Day:

You honor me again by permitting me to share with you in the celebration of Polish Constitution Day.

How proper it is that we should gather here to celebrate that charter of freedom, adopted just 14 years after the signing of our own Declaration of Independence. The United States and Poland have always had, and will always have, the common bond of love of freedom, the common sharing of a deep, abiding faith in the brotherhood of man under the fatherhood of God.

The Polish nation and the Polish people have always treasured freedom. In the heart of every Pole burns the flame of determination that Poland shall some day again be free and take her rightful place in the company of the free nations of the world.

The cause of Poland is the cause of freedom. America must therefore never cease to espouse Poland's cause before the world. To do less than this is to betray our heritage, and the great principle of man's "unalienable right" to liberty, and to life, and to the orderly pursuit of happiness.

Until Poland is freed from the chains of tyranny, the work of the United States in seeking a just and lasting peace is not done.

The world cannot exist forever half free and half enslaved. I have no doubt what the ultimate outcome will be. Freedom will prevail because freedom alone can satisfy the deep hunger of mankind to walk upright in the full expression of individual dignity and human rights.

We should begin with a reaffirmation of the principle of self-determination so eloquently put forth by that great American, President Woodrow Wilson, in his justly famous Fourteen Points.

The world enjoyed a period of relative peace during the time when that principle was observed in European boundaries. When the iron might of Adolf Hitler, on September 1, 1939, violated that principle, the world was once again thrown into the turmoil of war.

At Yalta, the Soviet Union promised free elections for Poland, and then treacherously repudiated their promise, and that repudiation still stands as a black mark on the pages of history.

But we should not be deterred by the Soviet repudiation from constantly and consistently demanding free elections for Poland in all the forums of world opinion.

We should constantly and consistently reaffirm in the United Nations our goal of free elections for Poland and our intention to work for Poland's right to determine her own destiny by every means at our command.

We should insist that freedom for Poland be always in the minds of those whose responsibility it is to construct our foreign affairs.

We should assert to the Soviet Union over and over again our determination that Poland shall be free, and we should reflect that determination in our national policies of trade and assistance, expressed through programs which either help the Polish people, or make the Iron Curtain an increasingly costly barrier for the Soviets to maintain, or both.

We should encourage every possible personal contact with the Polish people to let them know that their cause has not been forgotten, that our people want them to be free, that the democratic ideals to which we both give allegiance are still vigorously alive.

We should seek in our trade policies and programs to reduce Poland's economic dependence on the Soviet Union by exploring any and all ways to increase Poland's economic ties with the Western World.

One such possibility is through the General Agreement on Tariffs and Trade.

This organization known as GATT by its initials, was formed 10 years ago to promote international trade among its member nations.

There are 37 nations working out trade programs under this General Agreement on Tariffs and Trade. Czechoslovakia is the only Iron Curtain country which belongs, and she was not under Communist domination when she participated in the organization of GATT.

Poland has now applied for membership, and this application will be formally considered in October at the next session of GATT.

Acceptance of Poland's application might draw Poland closer to the West. There are, however, obstacles in the way which require the most serious study.

The underlying principle of the General Agreement on Tariffs and Trade is that trade arrangements involving tariffs are—with some exceptions—extended to all member nations.

Under existing legislation, the United States cannot extend to Poland the favored treatment normally extended by GATT nations to each other. A review of this legislation might now be in order in view of the possibility of Poland becoming a member of the GATT organization.

The application to join GATT indicates the interest of Poland in taking further steps toward trade with the West. During the first 6 months of 1957, Polish trade with the West was about equally balanced with her trade within the Communist orbit. In previous years, the trade ratio was about 30 percent with the West and about 70 percent with the Communist orbit nations.

To maintain the 50–50 balance in Poland's trade between the free nations and the Communist world, Poland needs help toward increasing her western foreign exchange, her funds in western currencies with which to purchase western goods.

Here again the United States should be alert to every opportunity to give assistance. The $98 million in credits we extended last year was mostly in agricultural commodities. This relieved an immediate need of the Polish people but it did not provide enough to push Poland's economic dealings with the West to higher levels. During the

last half of 1957, the trade pattern showed a new increase in trade with the east because of a lack of foreign exchange.

Shortly before the Easter recess, a Republican Member of the United States Senate—Senator JENNER of Indiana—offered an amendment to the surplus commodities program which would have prevented our Government in the future from sending surplus agricultural products to Poland.

This amendment was bad enough but another Republican Senator—the chairman of the Republican policy committee, Senator BRIDGES of New Hampshire—added still another amendment which would have undercut United States aid to some 50 countries, and among these countries were many nations we have to win to the side of freedom in our worldwide struggle with the imperialistic communistic movement of the Soviet Union.

Twenty-two Republicans voted for this Jenner-Bridges attempt to deny help to our friends, and 41 Democratic Senators voted against it. Happily for this Nation the measure was resoundingly defeated.

This example shows that the fight to help expand freedom in the world by the example of American generosity toward people who need our help is not a fight to be waged solely in international assemblies.

We must also fight those forces in our own Nation who seek to return to isolationism and let the rest of the world go hang.

These isolationists do not believe that freedom is our business wherever freedom has been destroyed, or wherever a threat to freedom is underway.

We reject this view because we know that freedom is indivisible.

We reject this view because we know that we cannot be truly free as long as one person anywhere is denied freedom.

We reject this view because we know a just and lasting peace will not be attained until oppression and misery are banished, and this will never be achieved unless America fulfills the responsibility of world leadership which the course of history has reposed in our hands.

We will not betray the trust and hope of the Polish people and of people everywhere who are emerging from centuries of oppression and moving toward the hoped-for day of liberty, prosperity, and peace.

We want no part of any backward step toward isolationism. We want to go forward to where our duty calls us—to give leadership to the world in the cause of peace and freedom.

The courage and stamina of the Polish people have survived many attempts to impose the will of another nation upon them. Poland has gained independence from the tyrannies which from time to time over centuries of history have attempted to subjugate the spirit of Poland.

So it has been in the past, and so it will be in the future. Communism will never succeed in breaking the Polish love of freedom and independence. Other tyrannies have tried and failed, and history will repeat itself in the case of the Soviet Union.

And your gathering here today itself is one means of keeping alive the torch of Polish freedom. I salute your spirit and your determination. Poland will prevail.

Mr. Pelly Commended

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MACK of Washington. Mr. Speaker, one of the largest and most influential newspapers in western Washington has pointed up the outstanding efforts made by my colleague, THOMAS M. PELLY, in defense of the fishing industry incident to the Geneva Conference on the Law of the Sea.

Under unanimous consent, I would like to include an editorial from the Aberdeen World, as follows:

SEA LIMITS AND SPACE

Congressman TOM PELLY is right in saying that the United States is well out of the International Conference of the Law of the Sea that recently concluded its deliberations at Geneva. The Conference has been going on for many months, though all it was trying to do was to determine how far out at sea the jurisdiction of a nation extends.

The territorial limit has been 3 miles for several hundred years, but 86 countries represented at the Geneva meeting could not agree on proposals to extend the 3-mile limit to 6 miles or 10 miles or 12 miles. Any such extension would have changed the long-established fishing grounds to the detriment of fishermen.

What agreements were finally reached at Geneva have not been disclosed as yet, but so far as this country is concerned we take it that the limit remains at 3 miles. Mr. PELLY says that the State Department has announced that none of the agreements reached at Geneva will become valid until ratified by 22 of the 86 nations represented at Geneva. Mr. PELLY hints that ratification by 22 nations can give the force of law to all the nations of the world or to the 86 nations that participated in the Geneva conference.

At any rate, the 3-mile limit remains in effect, and probably will continue to do so even if 22 nations say otherwise.

But this Geneva affair raises wonder as to what will be the territorial limits of the nations in space. If we should get to the moon first, will we then own the moon? Would ownership of a planet belong to the nation that landed there first, or does or should outer space belong to any nation on the face of this earth? Of course, there may be nothing in space worth owning, but it's a good bet that Communist Russia will claim to outer space because they explored it first with a sputnik and also because they want the whole earth and everything else.

Secretary of Agriculture Benson Answers Questions

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows a radio report over station KRXK, of Rexburg, Idaho. I am sure readers of the CONGRESSIONAL RECORD will be interested in the questions reported by Gene Shumate of Rexburg and the answers by Secretary of Agriculture Ezra Taft Benson:

A few weeks ago I wrote a letter to Mr. Ezra Taft Benson, Secretary of Agriculture. This followed the Presidential veto of the attempt by Congress to retain farm price supports at the present level for the remainder of the year. In the letter I explained to Mr. Benson that distance prevented attendance at his regular news conferences and that in lieu of such attendance, I would like answers to seven specific questions. When the Secretary returned to Washington from a trip West, he answered the questions. I'm sure we all appreciate this consideration and I'm sure you will be interested in the questions and answers.

Mr. Benson wrote: "In reply to your questions in the order listed in your letter:

"Question. President Eisenhower commented, at the time he vetoed the latest farm legislation, that what the farmer needed was a 'thaw' and not a 'freeze.' Exactly what does this mean?

"Answer. The President was referring to the need for more freedom to farmers in determining their production and marketing plans to meet rapidly changing conditions and to more flexibility to the Secretary in establishing the national average support levels and acreage allotments. The thaw versus freeze concept is discussed in the concluding paragraph of the President's message."

Breaking away from the letter for just a moment, we will quote that last paragraph mentioned:

"To meet the rapidly changing conditions in agriculture, farmers must be able to make their own management decisions on their own farms. They must not have their production and prices frozen in an outmoded pattern. They must not be made the captives of a restricted history; they must be given freedom to build a brighter future. This can be done if farmers and those who serve them will team up in support of sound legislative and administrative action."

That was the President's last paragraph in his message to Congress when he returned the Senate resolution without his approval.

Now, back to Secretary Benson's letter:

"Question. Is it your opinion that the lowering of support prices will lead to higher market prices for farm products in time for the farmer to benefit this year?

"Answer. The President's program is a long-time program which is not scheduled to go into effect until the 1959 crop season. Hence, there could be no benefits from the President's program in the 1958 crop season. Incidentally, to be effective beginning with the 1959 crop year, the President's program should be approved by Congress this year.

"Question. Is the recent 4-percent rise in farm prices due to a general improvement in farm produce or is it primarily livestock price rises?

"Answer. Prices of all the various groups for which the Department compiles prices except wool and dairy products increased from mid-February to mid-March when farm prices in general advanced 4 percent. The most important increase was in the form of continued higher prices for meat animals. Higher prices for potatoes, fruit, and eggs also contributed substantially to the increase.

"Question. How much of the increase in beef prices is due to unfavorable weather in the Southeast?

"Answer. Recent unfavorable weather in the Southeast had practically no effect on beef prices. However, the current price is partly reflecting the drought 2 years ago in the Southeast.

Question. How much of the increase in beef prices is due to the withholding of cattle from the market by southwestern raisers as they try to build up herds depleted by the recent drought?

"Answer. Most of the increase in beef prices is due to the reduction in slaughter supplies which is general throughout the United States, and the strong demand.

"Question. Is there any estimate in your Department of what the market prices on small grains would be if all supports and acreage allotments were removed; on wheat, for instance?

"Answer. The President's program does not contemplate the discontinuance of price supports. On the contrary, the program recognizes that there is nothing wrong with a sound and realistic storage and loan program. Under these circumstances we have

not made any estimates as to what prices would be without supports.

"Question. Do you feel that in the future the farmer must accept the fact that open market prices on foods and fibers, as well as dairy products, will maintain a level below prevailing prices and that the answer to profitable farming is the elimination of smaller units in favor of larger, more-efficient units?

"Answer. There is no reason to believe that farm prices will decline under the President's program. Currently, prices of nonprice-supported commodities (such as livestock) are higher, relatively speaking, than prices of supported commodities. The level of farm prices in the future will be influenced to a large degree by the extent to which markets can be expanded. As far as future supports are concerned, the President has indicated that they will be set at levels as high as could be justified under the criteria specified by law. Incidentally, the basic objective of the President's program is higher net income which depends upon the volume sold as well as price per unit. While in recent years there has been a trend to larger land holdings and fewer farms, the family farm is holding its own. We believe the family farm will always continue to be the backbone of American agriculture."

And these have been the answers from Secretary of Agriculture Ezra Taft Benson to a recent letter in which I wrote him some specific questions.

Increasing Pay for Federal Employees

EXTENSION OF REMARKS

OF

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. COAD. Mr. Speaker, recently, many questions have been raised concerning the status of legislation increasing pay scales and benefits for various groups of Federal employees. I have conducted extensive research to find answers to these questions, a summary of which I have compiled for the following talk given to the Iowa State Federation of Federal Employees at Ames, Iowa, last Saturday.

AN ADDRESS BY MERWIN COAD, REPRESENTATIVE IN CONGRESS, SIXTH IOWA DISTRICT, BEFORE THE IOWA STATE FEDERATION OF FEDERAL EMPLOYEES, AMES, IOWA, MAY 10, 1958

Before I get into the main part of my talk, I want to express my thanks for this opportunity to be with you today. It is always gratifying, of course, to get back to Iowa, and the pleasure of returning home is made greater by occasions like this where one can see old friends and talk to the people one admires and respects.

As many of you know, this year, 1958, marks the 75th anniversary of the Civil Service Act. The merit system in the Federal Government really began when the Pendleton Act was signed by President Arthur on January 16, 1883. This law was the culmination of many years of increasing public disgust and indignation at the spoils system and growing demands for reform.

Through the years the idea of a civil service based upon merit has become stronger, and the merit system has been steadily expanded to the point that it now includes about 90 percent of all Government employees. The levels of efficiency and public service have grown and developed along with the merit system, and I believe that all thoughtful people would agree, in this diamond anniversary year, that the Civil Service Act of 1883 was one of the most significant pieces of legislation in American history.

I can say with all sincerity that I have always had a high regard for employees of the Government. Through the years they have given loyal and dedicated service, often in the face of criticism as widespread as it was unjust. Since I have been in Washington, I have seen no reason to change my long-held opinion on this matter; in fact, I am more than ever convinced that the American people are fortunate indeed to be served by Federal employees of such high caliber.

I would like to speak to you about some of the more important congressional legislation affecting you as Federal employees. In some ways this is a bit risky because anyone who tries to foresee just what Congress will do is really sticking his neck out. However, there are some solid facts to work on, and maybe we can make some intelligent guesses.

The biggest and most important item is, of course, the pay raise. I hope that all of you know where I stand on this matter. I have been in favor of an adequate pay raise ever since I got into Congress, and I expect to do everything in my power to bring about its early enactment. To me it is a shameful thing that the increase was not granted long ago. The trouble is that too often matters of this kind get so tangled up with a whole assortment of other issues that they no longer are considered and treated upon their own merits alone.

Please do not misunderstand me. I certainly do not mean to imply that there will be no pay increases. By all indications, quite the contrary is the case. I really believe that there almost surely will be an increase. I am simply saying that all the delay and apparent stalling have been very unfortunate and frustrating and, perhaps to some extent at least, inexcusable.

Of course, we should not forget that the first session of this Congress did pass both postal and classified pay bills. You will recall that the President vetoed them. The principal argument at the time was that the bills were inflationary. Now, with the country in a recession, some administration people say the bills would cost too much.

I must confess that this line of economic reasoning is too deep for me. First, it argues that no pay raise should be granted in good times because it would be inflationary; second, it argues that there should be no increase when times are not so good because it would cost too much.

As I said, this is a bit too much for me, and it may be rather difficult for you, or any other rational people, to understand.

The truth is that these arguments ignore the basic, critical facts about pay raises. They ignore the greatly increased cost of living which, so far at least, has not heard about our recession. They ignore the fact that there has been no pay raise since 1955. They ignore the fact that the pay of Federal employees has always lagged behind the pay in private business and industry, and is now even further behind than usual. In general, they ignore the fact that by any equitable standards of need and merit, an immediate and substantial pair raise is fully justified.

As you probably know from reading your newspapers, the fate of the pay bills is now tied in with the measure to increase the postal rates. This is not the place for a lengthy discussion of the postage rates as such, but because the final outcome of the pay bills seems to depend on the postal-rate legislation, a brief comment is necessary.

Some of you may be wondering what postal-rate increases have to do with your pay hikes. This is a good question, and one that defies any reasonable explanation as far as I am concerned. The administration has declared that the rate increase is needed, partly to help finance the Post Office Department and partly to help finance employees' pay raises.

I would like to say, parenthetically, that in my opinion the post office is a public-service organization. Delivering the mail is one of the most important services the Federal Government performs. And it must remain a service. The Post Office Department is not in business to make money. It is in business to deliver the mail. If it can be more or less self-financing, that is fine. But there is no possible justification for foisting unreasonable and exorbitant postage rates onto the public.

The linking together of postage rates and Federal employee pay scales is difficult to understand on the basis of doing what ought to be done in the easiest, fairest, and most practical way. If civil servants deserve a wage increase—and they most assuredly do—they deserve it regardless of how much it costs to mail a letter. There simply is not even the remotest connection between the two. The merits of one have nothing whatsoever to do with the merits of the other.

I repeat, I think you are going to get a pay raise in spite of the obstacles that have been placed in the way. Many of these obstacles have indeed already been overcome. Bills for both postal and classified pay increases have already moved a considerable distance along the legislative trail. Both the House and the Senate have passed bills for increases for classified workers. The bills are not the same, and the differences will have to be ironed out, but ultimate passage seems pretty well assured.

The pay raise may be the most significant issue affecting Federal employees, but it should not be allowed to obscure the fact that there are other important matters under consideration as well. As members of a Federal employees' association, you will be interested in learning about the progress that has been made toward gaining more official recognition of unions made up of civil servants.

Because of their very nature, unions of Government employees must be weaker than other unions. For example, one of the big differences is that members of a Government union have no right to strike. I think most of us agree that there should be no right to strike against the Government of the United States, but this does not mean that some of the other union activities should not be strengthened.

A subcommittee of the House Post Office and Civil Service Committee has recently held hearings on a bill that would increase the bargaining power of Federal unions. This measure officially recognizes the right of leaders of these unions to represent the membership in cases where there is a dispute or grievance with a Federal agency.

Under this bill these disputes would be referred to an impartial board of arbitration made up of a representative from the agency involved, from the employee union, and a representative appointed by the Secretary of Labor. The proposed law provides that the decision of the arbitration board would be final and conclusive.

If this bill becomes law, it probably won't solve all of the labor problems in the Federal service, but it should substantially increase the bargaining power of the unions. I am sure that all of you will be interested in future developments in this field.

With regard to retirement, you will recall that there were very sweeping amendments to the Retirement Act in 1956. Not much is in the legislative mill at the present time touching upon the retirement of currently active civil servants.

However, those of you who have friends who retired before October 1956 will be happy to learn that they have a very good chance of receiving a boost in their annuities in the near future. Legislation to increase these annuities by about 10 percent has passed both Houses of Congress and is now before

a conference committee which is working out differences in details.

This is essentially a cost of living increase, and certainly a much deserved one. Many annuitants who retired before the liberalizing amendments of 1956 have had a very difficult time making ends meet. This pending bill should be of considerable help to them.

Other significant legislation that Congress is now considering concerns your Government life insurance. The great majority of civil servants are covered by this program, and it is easy to understand why. This insurance is inexpensive to buy and simple in its operation, and it provides an extra means of protection for the family of each Federal worker who has taken advantage of it.

Under the present arrangement this insurance costs the employee 25 cents each pay period for every $1,000 of coverage. The Government now pays in just one-half of this amount, or 12½ cents per each $1,000 covering the employee.

The proposed legislation calls for increases to 32 cents and 16 cents respectively for the employee and the Government. In return the value of the policy would decline to a maximum of only 50 percent of its original value after the employee reaches age 65 instead of to 25 percent, as is now the case.

Another provision of this bill, designed to make the law more generous, changes the years-of-service requirement for continuing cost-free insurance coverage after retirement. At present, an employee must have completed at least 15 years in order to be eligible to keep his insurance. The pending bill changes this to 12 years.

There are several other matters of interest I would like to discuss with you if we had the time. I doubt if immediate action can be expected on many of these items, but I might mention a few of them very briefly in case you are interested.

For example, there is the question of hours of work. In some businesses and industries and in many State and local governments, employees have been working somewhat less than a 40-hour week for some time. There are stirrings of interest about changing the length of the Federal work week, but at present it is just something to file in the back of your head.

With regard to health insurance plans for civil servants, the administration has asked that any action be deferred until next year.

The Treasury Department has recently issued a ruling that may affect any of you who have taken extended leave for educational purposes. The Department has declared, retroactive to January 1, 1954, that these education expenses are deductible if the purpose of the schooling was primarily aimed at improving your skills and abilities for your job. Those of you who have taken such leave might check with your personnel people to see if you are eligible.

As employees of the Federal Government we are the ones charged with the responsibility of making democracy work in the every day relations of life. We have a great opportunity and we are faced with mighty challenges. Surely we would every one renew the dedication we hold in those principles of democracy. We would make strong this Nation by our diligent and responsible service to the people of the entire Nation.

As persons employed by the Government we would make the whole strong by strengthening the individual. Let us not grow weary in well doing, but let us resolve that we shall serve admirably in the light of the knowledge that each servant is worthy of his hire.

America has been made great by the efforts of devoted persons in positions of public responsibility. America will remain strong and continue to be great for those who serve her will give in devotion to the task ahead.

Passage of Klamath Reservation Purchase Bill

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senate Sees the Light," from the Oregonian of Portland, Oreg., of May 10, 1958. The editorial properly praises and heralds Members of this body for passage last week, by a unanimous verdict, of S. 3051 providing for orderly purchase of the natural resources and assets of the great Klamath Indian Reservation in southeastern Oregon.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE SEES THE LIGHT

Less than 2 months ago, it appeared unlikely that the United States Senate would even give a floor hearing to the Administration bill proposing Federal purchase of Klamath Reservation timberlands. Unanimous Senate passage of the bill Wednesday thus ranks as a remarkable achievement.

The Senate can take pride in this demonstration of its capacity for enlightened action on a complex issue which many Members understandably considered remote from their particular interests. The light was provided, as noted recently in these columns, by the bipartisan cloakroom teamwork of Senator RICHARD L. NEUBERGER and Assistant Secretary of Interior Hatfield Chilson. Great credit should also go to another Oregonian, Assistant Secretary of Agriculture Ervin L. Peterson, who had a big hand in drawing the compromise bill which changed the tide so spectacularly in the Senate.

There can be little question that the $90 million appropriation ceiling will provide ample payment for the 1,649 Klamaths who have elected to cash in their tribal shares. The sum falls about $3 million short of the required realization value, but this amount will surely be realized through sale of fringe timber lots or sustained yield units to private bidders, who have until January 1, 1961, to share in the liquidation of the tribal timberlands.

Nor can there be much doubt that the House will act favorably on the bill after such a convincing display of unanimity in the Senate, even though the lower Chamber has yet to hold a committee hearing on the issue.

There appears to be assurance, therefore, that the Klamath termination will proceed with full justice to the Indians involved and with adequate protection to the lumber economy of the Northwest.

A remaining complication is the question of the attitudes of the 74 Indians who cast ballots in favor of remaining in the tribe and the 405 who abstained from voting. Many of these are bound to be envious of the $6,000-plus withdrawal shares apparently assured for the majority of Klamaths. But this is a small problem compared to that which loomed just a few weeks ago, when it appeared that the reservation property would be forced into a hasty and ruinous liquidation.

The Need for Reorganizing the Pentagon

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. KEATING. Mr. Speaker, one of the most important challenges before us, and one which must be met without further delay, is that of reorganizing our defense establishment to meet the demands of modern warfare. For if we do not successfully revamp our national defense organization, we may not be able to deter any would-be aggressors, much less withstand their onslaughts, should war ever come.

The President presented his plan for reshuffling the Pentagon over a month ago. It is a hard-headed reasoned program, drawn up under the supervision of our Chief Executive, one of the great military authorities of our time.

The simple, logical premise of the President's plan is that intercontinental missiles, anti-missile missiles, and all other modern weapons of war have so changed our military needs that all branches must to a certain extent be unified. Since these instruments of war cut across all services and must be used by all services, the units of all 3 branches must be combined under a unified command to carry out specific strategic missions.

That is exactly what the plan the President has propbsed would do. That is why I am behind its overall objectives, although I feel some of the specifics may have to be ironed out.

Mr. Speaker, we must all face up to the simple truth that the dividing lines of land, sea, and air simply does not mean anything today. What we must have is unified commands with clear and instant lines of authority to fight any future war—and to deter the possibility of war.

The result of putting the President's program to work would be a less costly, more flexible, more realistic defense, attuned to the needs of our times. Unfortunately, the plan has run into stubborn, and often unthinking opposition. But I feel confident that if the President will stick to his guns as he has indicated it is his intention to do, he will win the approval of Congress for the substance of his proposals.

Tearful attachments to outmoded concepts will not do in this day of ICBM's and outer space conquest. Modern, hard-headed, open-minded thinking must be the order of the day. The challenges to the free world demand that we face up to the facts unflinchingly and squarely. If every Member of Congress will do that, I feel sure we will be able to

pass an effective reorganization of our Defense Establishment before this session ends.

A vigorous plea for the President's reorganization program was recently penned by Andrew Wolfe, the thoughtful and well-informed editor of three fine weekly newspapers in my district. His commonsense, realistic views reflect, I am sure, the thinking of many Americans who want to see our defenses brought up to date. He also raises a number of challenging problems which must be faced as we move toward a fully modernized defense organization.

Under leave previously granted, I insert Mr. Wolfe's fine editorial, as it appeared in the Brighton-Pittsford Post, the Penfield Republican, and the East Rochester Herald last week:

THE PENTAGON STRUGGLE

We wonder how much longer the long-suffering American taxpayer is going to stand for the shenanigans in Washington aimed at preventing the long-needed reorganization of the Defense Department.

It seems to us that nothing can be plainer than the fact that the Nation needs a better unified command setup for its military establishment.

At a time when a few hours' headstart could win a war for a potential enemy, our military is mired in a fantastic organizational nightmare which in many of its basic concepts dates back to Civil War days.

Whether some of the military likes to think of it in this manner or not, policymaking and positive action are handcuffed by awkward divisions of authority.

In the critical effort to launch the first earth satellites, the Nation's efforts were channeled through command systems in some ways better adapted to buying cavalry horses or gunboats in the 1880's than to coping with the intricacies of modern science and warfare.

Some of the proponents of the President's plan, perhaps with a political weather eye open, have been insisting that the program does not envision the eventual merger of the Army, Navy, and Air Force. But we wonder if that problem shouldn't be brought into the open.

We think people should be asking questions as to whether or not the oldtime groupings of military personnel and skills are the most efficient which can be developed. Mind you, the day for tradition and nostalgia in military matters disappeared at Hiroshima and Nagasaki, and all of our thinking must be examined in the fierce light of nuclear explosions.

Consider some of the anomalies of our present defense organization. We have an Army which operates a large fleet of service vessels on inland waters. And we have a Navy which operates its own army (the Marines), and the Marines in turn operate their own little air force, which is a part of the Navy's own air force which is separate from the United States Air Force.

In so vital an effort as the guided missile program, everybody got into the act—and the final result was to allow each service to do some work with the missiles, dividing their areas of work and experimentation on the highly arbitrary basis of the range of missiles.

Almost all evidence seems to indicate that this division of effort and resulting unhealthy competition greatly slowed the entire program.

We'd like to see some arguments as to why for example, the communications and signal arms of the various services couldn't be merged. We'd like to see arguments as to why the Marines couldn't retain their value and esprit de corps if they were made a specialized agency of the Defense Department instead of retaining the naval connection which dates to the days of wooden ships.

We'd like to hear arguments on how we can expect broad-gage leadership from men largely confined, from service academies onward, to the work done by one type of service.

And let's not be misled by talk about creating militarism and a general staff clique.

If the danger of an efficient military to democracy is so great, we'd better quit now and tell Khrushchev to send a commissar over as quickly as he can.

And one of the bitter things about this whole mess is the fact that these lessons all have been taught to us before.

Consider for example, the cavalry, alluded to above.

For many years the great military rivalry in the Nation was not Army-Navy, but infantry-cavalry. The cavalry bureau was an organization of great prominence and power.

But as soon as the machine gun was perfected, the cavalry became as obsolete as war chariots. Yet, it was 60 years before the last horse cavalry unit was disbanded.

The cavalry persisted when the worst military dangers were large-sized cannon. But today we are faced with dug-in thinking, which persists when the weapons of total destruction are at hand.

Just 16½ years ago the Nation experienced its worst military disaster at Pearl Harbor—in large measure because the Army and naval commanders in that area operated with almost total independence of one another.

With the memory of that disaster still fresh, everyone should be working to achieve the military unity so imperative in the world of today.

United States Economic Strategy

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. SPARKMAN. Mr. President, recently, the National Planning Association issued a joint statement on United States economic strategy in competitive coexistence. One does not need to agree with all the text of the statement to realize that it merits serious consideration.

I ask unanimous consent that the statement be printed in the Appendix of the RECORD, and I urge all Senators to read it.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NPA JOINT STATEMENT ON UNITED STATES ECONOMIC STRATEGY IN COMPETITIVE COEXISTENCE

Khrushchev's confident announcement that the Soviets are out to win the struggle for competitive coexistence and that they will bury the West cannot be dismissed as mere boasting comparable to Hitler's talk about the "thousand year Reich." The Soviets are waging the struggle with determination and skill, both on the domestic and the international fronts. They are trying to outperform the West in the development of superweapons, conventional armaments, and technological and economic achievements. A large part of their effort is designed to forge the political, military, and economic instruments for use in international strategy. They divert resources to these purposes even though a larger improvement in the level of living of the people at home would make the life of the Soviet dictator much easier.

American reaction to this broadening Russian strategy has been focused predominantly on the armaments race, especially on the superweapons. Important as it is that the United States and its allies do not fall behind in the development of these weapons, undue concentration on this aspect of the struggle would be a mistake. Each side claims that it is developing these superweapons as a deterrent to possible aggression by the other side. Mutual deterrence may at best create a stalemate which would not hinder the Soviet Union from pursuing its aggressive policy by other means, particularly political subversion and economic penetration. If the United States continues to neglect or underestimate the Soviet capacity for covert aggression, the result may be as catastrophic as though we were to be decisively beaten in the armaments race. The purpose of this policy statement is to outline the nature of the economic aspect of what the Soviets have euphemistically named "competitive coexistence" and its implications for United States foreign economic activities.

THE ECONOMIC ASPECT OF COMPETITIVE COEXISTENCE

Today, the old patterns of political and economic order inherited from the 19th century have either disintegrated or are in process of rapid change. The underdeveloped countries—many of them newly independent—are struggling to start or accelerate their economic growth to satisfy the needs of rapidly growing populations and the intensified desires of their people for living standards above mere subsistence. Older industrialized nations in western Europe are venturing on novel forms of unification which promise higher productivity and expanding levels of living. Everywhere, there are new expectations, new objectives, and new ambitions. And, everywhere, there are economic obstacles and problems of unprecedented magnitudes which have to be overcome.

This underlying world situation provides both the setting of, and the means for, the current struggle. The Soviets have one vision of how this global process of political, social and economic transformation should come out. They envisage the worldwide triumph of communism, which they believe is guaranteed both by the objective processes of history and by their own superior power and strategy. Having failed to hasten this outcome through the crude, rigid, and direct "cold war" tactics of the Stalin era, they have shifted to the subtle, flexible and long-term strategy of what they call "competitive coexistence." This Soviet name is itself part of their new strategy, for it has deceived many into believing that there is no longer anything more serious at stake between the Communist system and our own than winning a popularity contest. In fact, defeat would be fatal for us because the Soviets conceive of coexistence as a temporary arrangement and have by no means abandoned their goal of worldwide communism.

The United States and its allies and friends throughout the world also have a vision of what the outcome of the fundamental world transformation should be. They seek a system of world order under law which protects the freedom and self-determination of all countries and their citizens, and fosters the economic and social developments necessary for improving the welfare of people everywhere. We, too, have devised

a strategy for achieving this objective, but there is grave doubt as to whether it is adequate for its purpose, particularly in the new period of competitive coexistence.

The problems faced by countries seeking to accelerate their economic growth and improve their social conditions provide some of the most important opportunities for the Soviets and for the West to influence the outcome of the fundamental transformation now in process. Both sides furnish various types of nonmilitary aid to, and encourage trade with, the countries struggling with economic and social difficulties beyond the capacity of their own resources. These foreign economic activities are usually of direct and immediate benefit to the recipient countries. At the same time, they are important ways of orienting the direction of economic and social change either toward the goal of universal communism, as projected by the Soviets, or toward the peaceful, free and progressing world order envisaged by the West. Hence, each side must not only understand the basic problems, but must also comprehend the other's strategy and tactics and must be concerned to forestall or counteract them.

THE SOVIET ECONOMIC OFFENSIVE

The current Soviet economic offensive is, in a sense, a belated recognition on their part of the large measure of success and the fundamental soundness of American foreign economic activities, particularly during the earlier postwar period. The Soviet effort now consists of technical assistance, extension of low-interest long-term credits, and the export of industrial equipment to, and purchase of goods in surplus in, other countries. The amounts involved in these aid and trade programs are large. Indeed, as a percentage of total national production, the Soviet aid programs in the non-Communist countries have exceeded in recent years the nonmilitary activities financed by the United States.

Soviet aid in the form of low-interest loans and grants totaled almost $2 billion in the period 1955 through 1957, of which more than half was extended directly by the Soviet Union and the remainder by Red China and the east European satellites. Most of this aid has been concentrated in a few countries which are either the likeliest candidates for Soviet subversion or are prominent neutrals, whose goodwill the Communists are encouraging while at the same time undermining their regimes. The largest recipients have been Egypt, Yugoslavia, Syria, India, Afghanistan, and Indonesia.

Interest rates on Soviet loans range from 2 to 2½ percent, with 12 years for repayment, which may be in commodities or local currencies. Conditions attached to Soviet loans and grants are quite flexible. Imported goods and services required for programs financed by Soviet aid must usually be purchased in Soviet bloc countries. But, without sacrificing its aid, a recipient country may refuse to accept Soviet technicians or to have its own technicians trained in the Soviet Union. Nor do recipient countries seem to be required to justify in detail the programs and projects they desire to finance with Soviet aid. Political and military commitments are apparently not demanded of recipient countries; the Soviets evidently expecting such ties to follow in the fullness of time.

Equally important in the Soviet economic offensive is the trade between the Communist bloc and other countries. Khrushchev has stated that the Soviet Union values its foreign trade more for political purposes than for any other. In 1956, the imports and exports of the Communist countries to the rest of the world totalled about $18 billion. As all external trade is conducted by government agencies, the Soviets can manipulate their purchases and sales to achieve specific noncommercial objectives. The Soviets make a practice of offering to buy large quantities of raw materials—for example, rice and cotton—from underdeveloped countries which are having difficulties in marketing these products elsewhere. This tactic is particularly effective politically in cases where American agricultural policy may not only prevent imports of these commodities into the United States but may also compel the United States to dispose of surpluses abroad in competition with other producing countries. Such a situation enhances Soviet prestige, even though the Soviet Union may later try to reexport unneeded quantities of these imports.

These Soviet trade and aid arrangements are important assets in winning the good will of recipient countries. They help to substantiate the picture of the Soviet Union as a formerly underdeveloped country which, by its own efforts and in an incredibly short time, has not only mastered its own development problems but has also achieved sufficient wealth and skill to assist other nations now facing similar difficulties. It is this image of the Soviet Union which today attracts non-Communist countries. In the absence of adequate alternatives for trade and aid, these countries will wittingly or unwittingly find that their economies are becoming increasingly dependent upon relations with the Soviet bloc. Such growing economic dependence, combined with undercover penetration and subversion, would inevitably draw many of these nations closer and closer into the Soviet orbit. This trend, if long continued, would mean that the emerging new world order will be much closer to the Soviet dream of a worldwide Communist empire than to the peaceful, free, and progressing system which we envision.

UNITED STATES FOREIGN ECONOMIC ACTIVITIES

As yet, there has been too little understanding in the United States of the gravity of this Soviet challenge. For years, we underestimated the economic capabilities of the Soviet Union and pooh-poohed the possibility that it could provide aid in significant amounts to non-Communist countries, particularly in view of its already substantial commitments within the Communist bloc. Nor have we adequately grasped the implications for our own foreign economic activities of the flexible, subtle, and long-term strategy employed in the Soviet economic offensive. While the Soviets have been learning how to ape whatever was best in our original foreign-aid and trade programs, we have been allowing our own activities to lose much of their idealistic appeal and to bog down in bureaucratic and political restrictions. We are now trying to compete against a comprehensive, integrated, and far-sighted strategy with piecemeal, short-term, and routine expedients—a usually fatal, and in this case self-imposed, handicap.

The essential characteristic of the American aid and reciprocal-trade programs is mutual benefit. For the underdeveloped countries, the returns are comparatively immediate and tangible—more factories, farms, and public utilities, new skills and services, greater exports and imports. For the United States, the benefits are much longer term and largely intangible—the eventual evolution of a more effective and secure system of world economic and political order. This difference in the mutual benefits involved is largely responsible for many of the misunderstandings that have arisen on both sides, and for the current defects of our foreign economic activities.

If the underdeveloped countries are to obtain their part of the mutual advantages, the assistance they receive must be used wisely and efficiently. This means, for example, that mutually agreed and practicable programs for using aid must be worked out, and some supervision is required to insure that funds will actually be expended for those programed purposes. No one denies that a minimum of such conditions, procedures, and restrictions is necessary and desirable. But, over the past decade, they have multiplied and ossified to the point where underdeveloped countries are often justified in feeling that the terms and conditions of American assistance are too limiting, humiliating, and rigid, particularly when contrasted with the ease and flexibility of Soviet aid and trade.

At the same time, there has been a tendency for the Congress and the American people to become increasingly impatient with the long term and rather general character of the benefits derived by the United States from our overseas aid and trade relations. More and more groups and individuals in the United States have tended to believe that helping to build a better world order was all well and good, but that there should also be much more immediate and concrete returns for the funds expended and the import concessions granted. Again, we believe that there is some validity in this view. In consequence, the National Planning Association has urged on several occasions in recent years that as much American aid as possible be on a reimbursible basis. The NPA has also suggested that American tariff concessions should be granted not only in return for similar reductions by other countries but also in exchange for private investment guarantees and other economic measures which could actually improve the international flow of goods and capital.

Unfortunately, this legitimate American desire for a more immediate and tangible return has been pushed to unwarranted extremes in recent years. Our aid and reciprocal trade activities have been increasingly weighted down with various kinds of conditions, exceptions and expedients, whose primary and all too conspicuous purpose has often been to serve the direct and short-run advantage of particular interest groups or to satisfy certain doctrinaire economic and political preconceptions. This situation contrasts most unfavorably with the appearance of unselfishness and broadmindedness that the Soviets have deceptively given to their aid and trade activities.

Another major weakness of United States foreign economic activities in the period of competitive coexistence is our continued failure to recognize that they are likely to be an integral and ordinary feature of American foreign policy for as far ahead as we can now foresee. The economic and social difficulties they are designed to meet are deep seated, complex and not likely to be overcome for many years. Our Soviet opponents have already adopted a comprehensive, long-term strategy that sometimes yields them no immediately apparent advantage. Yet, in contrast both to the underlying problems and to the actions of our Soviet competitor, United States foreign economic activities are still regarded as temporary and extraordinary expedients and are authorized for short periods of time.

These and other defects of our current foreign economic activities have unfortunately tended to create a certain impression abroad which may well be more harmful than the shortcomings themselves. Our foreign economic activities have seemed begrudging, niggardly and petty-minded not only to the uncommitted nations but increasingly to our allies and friends as well. The recipient countries have been offended by our reiterated charges of waste and inefficiency; by our repeated complaints about giveaways and ratholes; by our ludicrous worries over the burdens under which the wealthiest Nation in human history is supposed to be laboring when it allocates less than a quarter of 1 percent of its gross national product to nonmilitary foreign aid. To them, we seem obsessed with quid-pro-quos and sound bank-

ing principles; too solicitous about placating domestic interest groups, often in advance of any complaints; and too timid about undertaking any action, however beneficial to the recipient countries, to which some influential American might object. They feel that we are preoccupied with a self-defeating concern about whether recipient countries are allies or neutrals; whether they are relying too much upon government enterprise; or whether they are also accepting aid from the Soviet Union or have virtuously rejected it. American actions abroad often seem petulant, suspicion-ridden, and overly self-interested to many noncommunist countries.

This superficially plausible picture of the spirit in which our foreign economic activities are conducted cannot simply be dismissed as the work of Communist propagandists and disgruntled nationalists in other countries. The tragedy is that our attitudes and actions have too often in recent years lent credence to this mistaken impression. At the same time, the Soviet Union has been increasingly successful at posing as the magnanimous, disinterested and trusting friend of all. We have largely ourselves to blame for this absurd reversal of the actual roles.

IMPROVING UNITED STATES FOREIGN ECONOMIC ACTIVITIES

It is not within the scope of this statement to review the many specific improvements which could be made in the conception and conduct of our foreign economic activities. But we do wish to emphasize our conviction that these improvements are not likely to be conceived and carried out unless there is a change in our basic attitude toward our foreign economic activities and in the spirit in which we administer them. Fundamentally, this means accepting the complexities and ambiguities of the period of competitive coexistence—not ignoring them or being overwhelmed by them. It means making clear to the rest of the world—not only by our words but more importantly by our deeds—that we have the maturity of understanding and the courage to forego immediate advantages, short-term expedients, and doctrinal purity for the sake of the basic human values and the long-range goals that are of such crucial importance not only to ourselves but to all mankind.

Such a revival of the original spirit of our foreign economic activities will be convincingly apparent when our current efforts are conducted in accordance with the following general principles and requirements:

1. The nonmilitary assistance of all types provided to other countries by the United States should be on a much larger scale than it now is, and should be extended in accordance with adequately planned and mutually agreed programs. It should be authorized and provided with funds by legislation separate from that concerned with military aid and mutual defense arrangements. It should be established as an integral and indefinitely continuing instrument of our foreign policy. This will make it possible to plan and administer aid on a long-term basis.

2. All existing statutory and administrative procedures, limitations, and exceptions should be reviewed, and either drastically reduced and simplified or abolished. This is not only desirable in itself. It will also provide the flexibility and speed of operation required for anticipating and countering Soviet attempts to exploit special situations and weaknesses that now exist abroad or are likely to arise in the future. In addition, it will help to attract competent personnel to the administration of the programs.

3. In principle, those countries should be eligible to receive American aid and trade concessions which are not actively unfriendly to the United States in various significant ways, including unjustified seizure and detention of American citizens and their property. With this exception, help should be ungrudgingly extended to any country desiring assistance regardless of whether it is an ally or a neutral.

4. Except in cases of disaster relief, American assistance provided in accordance with effective development programs should be on a reimbursable basis, with the terms, conditions and kinds of repayments suited to the particular needs and capabilities of each country. However, some grant funds will continue to be required to finance most technical assistance activities and to meet the special situations noted in 2 above.

5. Most underdeveloped countries lack the resources necessary to finance the transportation, communication, power, water, education, health and other basic facilities without which economic growth cannot occur. Hence, a large part of the increased aid should be allotted to these purposes.

6. More American support for economic and social development abroad should be channeled through appropriate international arrangements—U. N. agencies, regional and functional institutions, and other multinational organizations. Private business firms and nonprofit institutions should also be used to the maximum practicable extent.

7. The guiding principle of the reciprocal trade program should be that statutory and administrative import barriers should only be imposed in the comparatively few cases where the national interest is demonstrably at stake. Means alternative to import restrictions should be adopted to encourage and assist noncompetitive American producers to improve their productivity or shift to other lines of production.

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks I wish to include an editorial which appeared in the Bangor Daily News on May 10–11; which sets forth the typical Maine attitude toward Federal grants as the answer to every problem, foreign and domestic, and expresses the very general thought, in more appropriate terms, that work and thought solve more problems than gifts and gab:

[From the Bangor (Maine) Daily News of May 10–11, 1958]

CREDIT THE GOP WITH A PUBLIC SERVICE

The Republican majority of the 98th legislature displayed good judgment and a sense of public responsibility at the special session by rejecting proposals to extend the unemployment compensation act.

Democratic proponents failed to show the need for emergency alteration of the law—a law which the advisory council of the Maine Employment Security Commission declared only last week was meeting the test of the recession.

Tinkering with the law in the haste of an extra session could have been more harmful than beneficial—both to the State labor force and to industry. Placing jobless levies on 12,000 additional employers, as one measure proposed, or adding to the tax burden of employers now paying into the fund, would work against creation of jobs through industrial development. And jobs are the paramount need.

The Republican legislators were also wise in refusing to blindly accept Federal unemployment relief money before Congress had determined on what terms such money, if voted, would be offered to the States.

The special session was poorly timed for consideration of upward revision of jobless benefits. Summer jobs, including those provided by the multi-million-dollar highway and military projects, should improve the State's employment situation greatly in the months ahead. A new 26-week jobless compensation period started April 1.

It is unfortunate that the recession has been seized upon as a political football. The Republican solons earned the thanks of the citizens by refusing to join in the game. Like President Eisenhower at national level, they refused to be stampeded into hasty or extravagant action.

The antidote for a recession is jobs, not political oratory. The State's industrial development program should be pressed with redoubled vigor. The defeated proponents of the jobless measures should forget politics and join in constructive efforts to bring new jobs into the State. The money the State must now pay for the extra session, by the way, could no doubt have been profitably used in this direction by the State department of economic development.

Mineral Subsidies and the Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, conditions at home and abroad have forced the Congress and the executive branch to add vast sums to the budget which was submitted last January. Under these circumstances we should exercise great caution before embarking on new programs which will involve large expenditures.

There are apparently some individuals who are willing to pay any price to secure congressional approval of a further extension of the trade agreements program. On April 14, Mr. James Reston of the New York Times reported that:

The administration is deeply worried about the future of its foreign trade program—so much so that the State Department is now seriously considering a revision of two of this Government's pet economic doctrines.

These are its longstanding opposition to the principle of international commodity agreements, and its opposition to prolonged Government purchases of such things as domestic-produced lead and zinc.

Thus, to save the reciprocal trade agreement program in the Senate, State Department economic experts are urging a new Government-buying program of United States lead and zinc for stockpiling.

This statement was followed by Secretary Seaton's appearance before the Senate Interior and Insular Affairs Committee urging a 5-year Government price support program for 5 minerals. It is

readily apparent that this program was proposed as an alternative to tariff relief for lead and zinc producers. Secretary Seaton estimated the cost of this subsidy program at $161 million for the first year. I challenge his prediction that the cost will diminish as the economy resumes its long range growth. In my opinion a subsidy program will immediately encourage foreign producers to ship more of their products to the United States. This will further depress the market price of these minerals and thus require even greater subsidy payments. It is my understanding that the foreign producers do not favor this program, since it will tend to depress world market prices.

Instead of authorizing a new spending program, we should all remember that a tariff in addition to providing protection for domestic producers also provides revenue for the Federal Treasury. Any added revenue should make it easier for us to finance some of the additional expenditures we have authorized without further increasing the national debt.

It is quite obvious to all informed persons that this new subsidy plan was designed for only one purpose, namely, to assist in mobilizing congressional sentiment for the extension of the trade agreements program. The Wall Street Journal of April 29 carried this headline with reference to Secretary Seaton's program: "Administration Proposes 5-Year Price Support Plan for Five Minerals as Alternative to Tariff Hike, Quotas."

Mr. Speaker, I want to remind my friends who represent mining districts that the authorization of a subsidy program does not guarantee that the Congress will appropriate the necessary funds. Last year the Appropriations Committee was asked to provide funds for a mineral subsidy program authorized during the closing days of the 84th Congress. During the hearings on the urgent deficiency appropriation bill, the gentleman from Iowa [Mr. JENSEN] expressed the sentiments of many Members of the Congress. He made it quite clear that the authorization of a subsidy program by a Congress does not commit future Congresses to appropriate the funds to implement it. Mr. Speaker, under unanimous consent I include at this point excerpts from the hearings before the subcommittee of the Committee on Appropriations with reference to the urgent deficiency appropriations bill, 1957:

Mr. JENSEN. I have been sitting here listening to this colloquy among you, and one thing comes to my mind, as it always does when we talk about subsidies, subsiding anyone in America.

As I understand it, the reason for this subsidy to these mine operators is that they must be subsidized in order to meet foreign competition to at least some degree. Is that correct?

Mr. WORMSER. Correct.

Mr. JENSEN. Can you tell the committee what the ad valorem tax is on these different minerals involved?

Mr. WORMSER. Yes, sir. I think we have the rates here, and if we have them we can insert them in the record.

Mr. LIEBERT. Roughly 8 a unit. I don't have the specific ad valorem rates. I didn't anticipate this question.

Mr. JENSEN. Put the tariff for each one of these minerals in the record.

(The information follows:)

Tariff schedules for the four program commodities and antimony are as follows:

Tungsten, ore and concentrate (pound)	$0.50
Fluorspar, acid grade (short ton)	2.10
Asbestos, chrysotile	(1)
Columbium-tantalum, ore and concentrate	(1)
Antimony, ore, and concentrate	(1)
Regulus (pound)	.02

[1] Free.

Mr. JENSEN. The facts are that if we had a sufficient tariff to protect the domestic mine operators there would be no need for the expenditure of all this money which you have already spent and are here asking for $30 million more?

Mr. WORMSER. That is right.

Mr. JENSEN. This is a fair example of many other things where we have reduced our tariff walls to the point the country is being flooded by products from foreign countries, where labor costs are one-tenth to one-half of what our labor gets, and where the land is worth possibly only 5 cents an acre compared to $50 an acre here. Our land and labor is far higher than that, from twice as much to 10 times as much as mining labor in foreign countries.

It is wonderful to be bighearted. We have been so bighearted that I am afraid we will bust out at the seams one of these days, and the whole world will laugh at us and say, "Uncle Sam, it was wonderful, but you are sure a darn fool for spending money like a drunken billionaire."

I don't know whether the world will appreciate it in the long run or not.

I will make my speech very short and sweet. Just because Congress authorizes something, and just because someone got on the floor of the House or testified before a committee that they thought they needed $90 million to carry on this project, that doesn't mean this Appropriations Committee has to furnish the money. We don't.

Many times authorization bills go through, money is authorized, and the Appropriations Committee doesn't furnish one single dime to support that authorization.

If I vote for this this time, I promise you this much: It will be the last time I vote for money for this purpose. I will make you that promise, gentlemen, unless we put our tariffs up to protect the American worker and American industry to the point where we do not need at least this much money.

Reciprocal-trade treaties are wonderful, but it happens they are not reciprocal in too many places.

I will not promise you right now, gentlemen, that I will even vote for this, because I don't like the picture.

You have plenty of these materials for our defense program, and my guess is that most of these operators could live and possibly make a little money without this subsidy. I am not sure about that, but I do not like this kind of business. The quicker we get away from it, the better it will be for us and everybody else, I think, and also for industry, so they will know they cannot depend on Uncle Sam for such business as this.

That is the way it strikes me, gentlemen. I am just talking from my heart, and I don't want to be contrary.

But I sit here and listen to our chairman, who did a magnificent job in bringing out the facts, and I think you folks did a wonderful job in trying to answer as to the facts. I think you were honest. From the discussion I gather that Uncle Sam is being taken for a great big ride.

Do you have any answer to that little speech?

Mr. WORMSER. One short comment, Mr. JENSEN. The justification for it I see. I share your misgivings.

The tungsten mining industry deserves a bouquet. We didn't have a tungsten industry before. We had just a small industry. They did a fine war job and should be given a reasonable period to readjust themselves. I felt I could subscribe to this bill because it represented a transition period, and it also gave us a breathing spell to come out with some program which would enable that part of the tungsten industry to survive which could meet a competitive platform as delineated by whatever long-range program the administration and Congress adopts.

Mr. JENSEN. The big concerns that are in the tungsten business, certainly they can get along without this subsidy; can they not?

Mr. WORMSER. I am sure some of them can; yes, sir.

These remarks by the gentleman from Iowa should serve as a warning to any Member who believes that the authorization of a 5-year subsidy program would provide necessary stability for our domestic mining industry. Nothing could be farther from the truth.

Proponents of the mineral subsidy program are only interested in securing an extension of the trade agreements program. They seek to prevent the Congress from exercising its constitutional responsibility in accepting or rejecting the findings of the Tariff Commission. If they achieve their goals, I predict that the subsidy program will lapse and domestic minerals producers will have no relief.

When Secretary Seaton was asked whether the subsidy program had been offered as an offset to tariff legislation, he said:

I resent any implication that this is a slick political deal.

However, Secretary Dulles dispelled any doubt as to the purpose of this new program. He said:

It is the administration's hope and expectation that the subsidy program will avoid the necessity for higher tariffs or quotas. * * * Indeed, the subsidy is an alternative to higher tariffs or quotas. We don't need both.

Mr. Speaker, so that all the Members of the Congress may see through this obvious plan to secure the support of the mining districts at the taxpayer's expense, I include the New York Times article of April 15 and the Wall Street Journal article of April 29 which refer to relief for the mineral industry in lieu of a tariff may be included at this point:

[From the New York Times of April 15, 1958]

ADMINISTRATION MAPS MOVE TO SAVE ITS TRADE PROGRAM

(By James Reston)

WASHINGTON, April 14.—The administration is deeply worried about the future of its foreign trade program—so much so that the State Department is now seriously considering a revision of two of this Government's pet economic doctrines.

These are its long-standing opposition to the principle of international commodity agreements, and its opposition to prolonged Government purchases of such things as domestic-produced lead and zinc.

Thus, to save the reciprocal trade agreement program in the Senate, State Department economic experts are urging a new Government-buying program of United States lead and zinc for stockpiling.

UNIVERSITY OF MICHIGAN LIBRARIES

Coincidentally, these same experts are discussing the feasibility of an international coffee commodity agreement to avoid financial distress and political trouble, particularly in Brazil and Colombia.

The administration ended its zinc-buying program last month, and allocated no funds for Government purchases of lead after June 30, 1958. These decisions, coupled with the competition of foreign-produced lead and zinc, have caused widespread unemployment in United States lead and zinc mines, and have greatly increased the demand in the Senate for high tariffs against lead and zinc imports.

In short, the situation is as follows:

Lead and zinc: Senators from the lead and zinc States—New Mexico, Arizona, Colorado, Idaho, Utah, Montana, and to a lesser extent Wyoming—have served notice on the administration that they will not vote for the reciprocal trade agreements program unless the lead and zinc miners are given relief in one form or another.

This informal mining bloc, most of whose members have previously favored the reciprocal trade agreements program, is working closely with the Senate textile bloc and oil bloc, both of which also want protection againt foreign competition. And the combination has convinced the State Department economic experts that unless some concessions are made to the protectionists, the reciprocal trade agreements program will be severely crippled if not defeated.

Coffee: Brazil, Colombia and several other Latin American countries get 80 percent of their foreign exchange from the export of coffee, primarily to the United States and Europe. Their revenues from this country have been dropping steeply in the last 18 months.

COMPETITION FROM AFRICA

Meanwhile, competition from French and British African coffee has been hurting their market, particularly in Europe, and when the European common market agreements get into full operation, African coffee will enjoy a greater priority in the European market.

The question raised here, therefore, is whether to sit down with the Latin American coffee producers and discuss the problem, knowing that such a discussion would inevitably lead to proposals for an international coffee agreement similar to the sugar agreement now in operation.

In the past, the United States Government while feeling that the commodity agreement for sugar worked fairly well, has opposed the extension of this device to coffee. The idea here has been that the United States was the world's largest consumer of coffee and that it should buy coffee anywhere it could for the lowest possible price.

Accordingly, United States officials have refused to enter into international negotiations on a coffee commodity agreement. Now, however, they see serious trouble ahead for the Latin American nations—Guatemala and Costa Rica are involved as well as Brazil and Colombia—that depend primarily on this one crop for foreign exchange.

EXPORTS FROM BRAZIL

For example, Brazil's coffee exports to the United States dropped from $604,731,000 in 1956 to $528,402,000 in 1957—a decline of $76,329,000. Colombia's dropped in this same period by $24,638,000 and the estimates for the future are even more disturbing.

This is happening when the Soviet Union is in the midst of a major trade drive in Latin America. The State Department's argument is that it would undoubtedly be cheaper and safer in the long run to revise our theory about commodity agreements than to deal with the economic and political consequences of a financial crisis in the coffee-producing countries in the south.

There is, however, serious opposition to this line of thought within the administration. Some officials think the controversy over commodities agreements and stockpiling payments for lead and zinc will be the major issue within the executive branch of the Government in the next 3 months.

A QUESTION BY OPPONENTS

The opponents of commodity agreements ask why the administration should start down the road toward more commodity agreements when it has had so much trouble with trying to fix prices and agricultural quotas at home. The free market is the best market, these officials say. Therefore, they are opposed to the arguments being heard in the State Department.

Nevertheless, political considerations in both the lead and zinc and the coffee controversies are forcing a review of economic doctrine.

Even the State Department officials who are advocating a modification of present policies do not like commodity agreements or perpetual stockpiling programs, but they are faced with harsh alternatives and feel that the time has come to talk out the differences with the administration.

It is difficult to be precise about the Government purchases of lead and zinc in the past, for these are not published. Reliable estimates, however, put the cost at about $50 million a year.

The State Department argument is that this will be very little to pay if, as it believes, the future of the Trade Agreements Act depends on the votes of the mining bloc in the Senate.

State also argues that the Latin-American market for United States automobiles and other products will seriously decline unless some way is found to avoid a financial crisis in important parts of the hemisphere.

The Secretary of State, John Foster Dulles, dealt with the Latin-American commodity price problem in a speech at Pan American Day ceremonies here this afternoon.

He said that the United States Government had realized "the potential consequences of violent fluctuations in the prices fo Latin America's exports and is daily searching for ways and means to contribute toward a solution."

"I can assure you," he said, "that we are truly anxious to help within the limits of what is sound and within our governmental capabilities. And we are always ready to discuss with our neighbors these mutual problems in an effort to find practical and acceptable solutions."

[From the Wall Street Journal of April 29, 1958]

ADMINISTRATION PROPOSES 5-YEAR PRICE SUPPORT PLAN FOR FIVE MINERALS AS ALTERNATIVE TO TARIFF HIKE, QUOTAS—COPPER, LEAD, ZINC, FLUORSPAR, TUNGSTEN NAMED; LIMIT SET ON AMOUNT

WASHINGTON.—The administration proposed a 5-year Government price support program for 5 minerals, apparently as an alternative to tariff relief for lead and zinc producers.

Interior Secretary Seaton, who outlined the proposal to a Senate Interior Subcommittee, urged quick approval so Tariff Commission recommendations for higher duties and import quotas would become completely academic.

Declaring the price-support scheme does more for lead and zinc than the tariff proposals, the Secretary said the administration plan contemplates extending present tariffs. He seemed to be indicating President Eisenhower would reject, or at least tone down, the Commission's recommendations.

Mr. Seaton asserted the new proposal has the endorsement of the President, who believes it to be the best way of solving the problems which confront us.

The program calls for payments to make up the difference between the domestic market and a stabilization price, with annual limits on the quantity the Government would support.

MINERALS' PRICE AND LIMIT

The minerals, with their new stabilization price and yearly limit, would be: Copper, 27.5 cents a pound, 1 million tons; lead, 14.75 cents a pound, 350,000 tons; zinc, 12.75 cents a pound, 550,000 tons; fluorspar (acid grade), $48 a short ton, 180,000 tons; and tungsten, $36 a short ton unit, 375,000 short ton units.

Mr. Seaton offered the scheme as an economic bridge across the present and temporary valleys of low consumptive requirements.

Four of the five minerals are now selling at a market price below the Government support figure listed by Mr. Seaton. Committee aids furnished current approximate prices as: Copper, 25 cents a pound; lead 12 cents a pound; zinc, 10 cents a pound; fluorspar, $50 a short ton for acid grade; and tungsten about $20 a short ton unit.

Government-delivered fluorspar in the high quality acid grade is more expensive at $53 a short ton, officials said. Interior Department aides said they arrived at the $18 support price as a compromise effort to help producers reorient themselves to the competitive commercial market. The bulk of domestically produced fluorspar is being sold now to the Government, which pays the premium price. However, the Federal purchase plan expires December 31.

COALITION GROUP

Some 15 Western States Senators are reported to have formed a coalition with lawmakers from textile and oil-producing States in an effort to use opposition to the President's bid to extend the Reciprocal Trade Act as a lever for higher tariff protection. The administration's minerals plan appeared to have been drawn up in an effort to placate the western bloc, where unemployment has reached serious proportions in the mining industry.

Senator ANDERSON, Democrat, of New Mexico, and Senator MANSFIELD, Democrat, of Montana, both leaders in the mining State coalition, were surprised by the proposal. Mr. MANSFIELD remarked, "It looks to me like a Brannan plan now in effect for wool," and added "Off hand, the stabilization prices look too low and not realistic enough." Former Democratic Agriculture Secretary Charles F. Brannan once advocated direct subsidy payments similar to the minerals program for supporting farm commodities.

Mr. ANDERSON said he had not had time to study the minerals measure but commented "it may be something that will mean stability to the mining industry."

DISTRIBUTION SAFEGUARDS PLANNED

The 5-year plan will include safeguards to insure fair distribution of Government payments within each industry, Mr. Seaton promised. This specifically means limits upon each company to give both small and large producers a chance to participate, he said. The program would not require a new agency but would be administered by the Assistant Interior Secretary for mineral resources.

The support prices would be applied only to domestic new-mine production, and not to refinery operations. For 1957, the interior department estimates the following new mine production for the 5 minerals: Lead, 333,493 tons; zinc, 520,128 tons; copper, 1,076,922 tons; acid grade fluorspar, 192,000 short tons, and tungsten, 378,000 short-ton units. A short-ton unit, weighing 20 pounds, contains 15.862 pounds of tungsten.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. Seaton acknowledged that the current slump in demand for minerals has created grave problems both abroad and domestically. He said the 5-year scheme is aimed at insuring strategically sound domestic minerals production without disrupting economies of other nations.

The cost would be about $161 million the first year, he predicted, but would diminish as the economy resumes its long-range growth.

The minerals industry's financial woes have sparked various proposals for Government help. Last year, the administration backed lead and zinc and when these were not approved, urged quick action by the Tariff Commission on the industry's plea for relief.

Meanwhile, the problem has been complicated by completion of the Government stockpiling program for zinc, and the imminent end of Federal lead buying.

Now, however, the Tariff Commission has come up with a split decision recommending two types of relief. The 3 Democratic Members urged duties be raised to the Smoot-Hawley tariff levels passed in 1930: 1½ cents a pound on lead ore, 2⅛ cents a pound on lead pigs and bars, three-fifths of a cent a pound on zinc ores and 1¾ cents a pound on zinc blocks, pigs, or slabs.

Levels backed by the 3 Republicans were at the highest permissible mark of 50 percent above 1945's legal rates. These would be 1$\frac{9}{10}$ cents a pound on lead ores, 2$\frac{11}{20}$ cents on lead pigs and bars, 1$\frac{1}{5}$ cents on zinc ores and 2$\frac{1}{10}$ cents on zinc blocks, pigs and slabs. This trio also called for annual quotas on imports of lead ores of 82,700 tons and lead pigs and bars of 139,000 tons. They also recommended quotas of 237,400 tons on zinc ores and 88,200 tons on zinc blocks, pigs, and slabs.

The current tariff levels are three-fourths of a cent a pound on lead content of ore, 1$\frac{1}{16}$ cents a pound on lead and bars, three-fifths of a cent a pound on zinc ores and seven-tenths of a cent a pound on zinc blocks, pigs, or slabs. There are no quotas.

Whether mining State lawmakers would accept the price support scheme as an alternative to tariff relief was not clear. Senator WATKINS, Republican, of Utah, termed it a "fair compromise on the international situation."

He told reporters the plan isn't better than the quota and tariff urged by the Commission but is better than "just a straight tariff because we couldn't get one high enough to do the job."

WORST OF SLUMP OVER

The Senator specifically questioned whether the proposed support prices on zinc and lead would be high enough to stabilize the industry. "If we're going to keep the mines going, we will have to have reasonableness all around," he said. He warned that this applies to labor too, adding, "Consumers have a right to strike too, and apparently they've struck."

Senator ALLOTT, Republican, of Colorado, said he had information some mines were operating at a loss but were continuing to stay open in the hopes of a rise in prices. "They are in effect gambling against the future," he declared.

Mr. Seaton said it is the considered judgment of the administration that the worst of the current slump is over and that we may soon see an upturn. Many of the problems now plaguing the minerals industries should be alleviated when this occurs, Mr. Seaton said, adding that the administration, therefore, was recommending legislation to enable the Government to help private enterprise in long-range explorations of mineral resources.

He warned that one of the most serious aspects of the current slump is its impact upon exploration, an activity which is the first to be cut back and the last to be put again in operation.

Under present law expenditures for exploration may be treated as an operating expense for tax purposes up to a maximum of $100,000 a year for 4 years. Mr. Seaton said his Department has been discussing with the Treasury the possibility of raising this limitation. No decision has been reached, he stated.

Postal Pay

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. SPARKMAN. Mr. President, I am sure that the great majority of the Senate hopes for early and affirmative action on the postal pay raise proposal. Adequate salary for postal and indeed all Government employees is long overdue.

This fact is very forcibly driven home by a letter called to my attention by Mr. Roy Hallbeck, legislative director, National Federation of Post Office Clerks. The letter was written by an Alabama wife of a postal employee.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD immediately following my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

House payment	$60.00
Groceries	100.00
Milk	10.00
Lights, water, gas	25.00
Insurance	16.12
Blue Cross	7.95
Telephone	5.06
School lunches	11.00
Gasoline (by stretching)	20.00
Monthly expenses	255.13
Bring home pay:	
Per 2 weeks	$130.00
Per month	260.00
Expenses (per month)	255.13
Balance left	4.87

509 WEST DUNCAN AVENUE,
Florence, Ala., May 9, 1958.

DEAR SIRS: This topic must be pretty old to you by now, but I thought I would try again, through you, to get our plight across to the right people. The topic I refer to is the postal raise. I know this is an odd way to start a letetr, but what better way to come to the point. As you can see by my figures, I have only the main things that have to come before anything else. The amount that is left ($4.87 per month) is what we have to buy badly-needed clothes, drugs, and so forth. Our medical expenses include a diabetic son. His insulin and other needs are not included in my list, but they must come above all else. We are expecting our third child in September. How can we meet such bills on $4.87 per month?

We have heard that the postal pay raise has all but been shelved. I guess we—those employed by the post office—are the only ones that even remember that there was such a bill. I remember the last raise we got. The whole time was spent in arguing about whether to color oleo or not. The other day I heard oleo mentioned again. If something isn't done soon, we won't be able to buy oleo, yellow or white.

Our trouble is very much like a friend with the toothache. If you don't have the toothache also, you hardly know how to sympathize with your friend. So, the ones who have the power to give the postal workers a raise can't possibly know what it is to live on so little.

I think the postal worker should be counted as a skilled workman, just as a boilermaker, ironworker, officeworker, or any of the other so-called skilled trades. After they learn their trade—about 4 years—they are through studying, but with the postal worker their studying goes on as long as they work for the post office. But unlike other skilled trades, what they learn isn't worth a darn away from the post office. How many stop to think how much time and effort is spent in studying for these exams? Do you think it is easy or even fun to learn over 1,000 post offices in the State of Alabama, and the right route to send the mail? Out of 100 cards you are allowed to miss 5. You won't take the same exam the next time. You study another State. How can anyone not class a postal clerk as a skilled worker? And if they do, how can they not pay him according to his and other skills? The skills I have mentioned before, make in 1 week what it takes my husband 2 weeks to make. Knowing this, how can they be expected to put their best foot forward?

I don't mean to bring our personal troubles to you. I want only to bring to your attention that we are only one in many thousands with the same trouble. Anywhere in the country you will find the same thing. My husband makes $130 every 2 weeks. That is his bring-home pay. Even before deductions this paycheck would hardly do what it should over a 2-week period. This every week would just about bring it up to the other skilled trades. But this we could never hope for. At one time the post office was a job to be looked up to. Now it is at the bottom of the list. This should not be.

You know by your own expenses that what I have listed does not cover near all that the average family has. These are only the bare necessities. I should have stopped this letter pages ago, but there is so much to be said. A book could be written on the raw deal the postal workers are getting.

I would like to thank you for your previous efforts in our behalf and hope and pray that it has not been all in vain.

Sincerely yours,
MRS. JUANITA ANDERSON.

Digest of Business Conditions and Probabilities

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. MUMMA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following digest on business conditions and probabilities.

WE ARE IN SERIOUS TROUBLE

Our goals of economic progress and national safety should be more goods and more jobs combined with stable buying power for our dollars.

There are dangers which threaten the attainment of these goals.

One danger is that we may not maintain the superiority of our industrial and

economic progress over that of the Soviet Union; the other is that continual erosion of the purchasing power of our money may injure most Americans, and in the end curtail our individual liberties and destroy our system of free competitive enterprise.

More Americans should understand these related dangers.

WILL WE WIN THE PRODUCTION BATTLE?

McCann-Erickson, Inc., in an advertisement under the above title said:

Khrushchev has just put this challenge to the American industrial system: Can it match and finally top the pace of Russia's global military-economic offensive without destroying its own freedom in the effort?

Hedley Donovan, editor of Fortune, reported Khrushchev as having said in his interview with the three American observers of the recent Russian election:

Our rates and tempos of growth are three and four times those of your country.* * * We are all convinced that we will overtake you, and this is not a matter of theory, but of fact.

The startling fact for is is that our rate of growth in physical output of goods and in productivity per man-hour worked has slackened, while Russia's has increased. And now we are in a serious recession in production and employment, yet with our prices of goods and services still rising.

We cannot hope to maintain our present economic superiority over Russia by working shorter hours, by feather-bedding, by increasing the cost of everything we produce, or by calling upon Government to subsidize a large part of our population.

There appears to be little if any willingness among the leaders of industry, labor, farmers, and governments to consent to the adjustments that would correct these conditions.

Arthur Krock, in the New York Times of December 12, mentioned 11 evidences of this attitude, among them the following:

1. Illegal and unjustified strikes and violence.

2. Opposition by labor union leaders to even mild legislative reforms to protect union members from abuses by their officials, and their condemnation of a congressional committee's statement of facts about labor racketeering.

3. Labor union demand for more leisure, higher wages, increased fringe benefits, unemployment insurance, Government spending, etc.

4. Agreements between employers and unions that make holding jobs contingent on union membership.

It would be unrealistic and unfair, in our opinion, to infer that no business managers are among those who are unwilling to accept the sacrifices and to consent to the adjustments imposed by the grim reality mentioned by Mr. Krock.

THE EROSION OF OUR MONEY VALUE

The American dollar has today a buying power less than half its buying power in 1940. It is about 3.5 percent less than a year ago, and 6.7 percent less than 2 years ago. It is still declining.

Each 1-percent increase in the Consumer Price Index of the Bureau of Labor Statistics reduces total individual purchasing power about $3 billion.

The Argus Research Corp, commenting on this fact, said:

We talk about lowering taxes by, let us say, $6 billion; we could get the same effect if adamant labor-management attitude would permit a 2-percent cut in the cost of living.

It also would have the great advantage of not adding to inflationary pressure or Government debt. All consumers—not just some—could buy more goods and services.

Richard Gray, president of the building and construction trades department, AFL–CIO, said last December:

It will do us little good to achieve military superiority (to the Russians) if the cost and the ever-increasing inflation eventually result in widespread unemployment and a depression.

His proposal of a 1-year wage freeze in the construction industry was denounced by other labor leaders.

It would seem that labor leaders do not realize that inflation is the enemy of wage earners, not their friend; that it reduces the purchasing power of their incomes, savings, life insurance, and pension benefits; and that it is curbing the demand for their products to the point where per capita growth in unit consumption of goods has been stopped.

We do not intend to discuss the subject of inflation technically, or to mention the various factors affecting it. We hope to throw some light upon the controversial question of the causes of rising prices and of unemployment, and some possible means of correction.

The welfare of all Americans, including managers and owners of businesses and wage earners, also our national welfare, depend upon understanding the facts, and upon the adoption of wise policies to correct the dangerous trend.

As is well known, union leaders claim that unnecessarily high prices and profits and inadequate purchasing power are to blame for our present inflation and our business recession. They say that wages are too low; and they are pressing for higher wages, shorter hours, expanding fringe benefits, increased unemployment benefits, Government expenditures and reduced tax rates on low incomes.

Businessmen say that increases in wages and other labor costs not matched by increased productivity per man-hour, together with the actions of labor unions, which are made possible by their monopoly power and by our full employment act, are responsible for both conditions.

WHAT CREATES PURCHASING POWER?

Purchasing power comes entirely from output, in one way or another.

It may be consumers' purchasing power in the form of income, current or past, or borrowed money.

It may be business-purchasing power in the form of sales revenues, or profit after taxes, current or past, or borrowed money.

It may be Government purchasing power obtained from taxes or from borrowed money.

The current business recession was not caused by inadequate purchasing power. The total of disposable personal incomes and liquid savings and the funds available to corporations for capital expenditures were at the highest level ever reached.

Disposable personal incomes in 1957 totaled $300.6 billion—4.7 percent larger than in 1956, 11 percent larger than in 1955, 46 percent larger than in 1950. Most corporations had, or were able to obtain, funds for capital expenditures.

Average hourly earnings in manufacturing in 1957, $2.07, were 4.5 percent higher than in 1956, 10 percent higher than in 1955, 41 percent higher than in 1950.

Total compensation of employees was $254 billion in 1957, 5.4 percent more than in 1956, 14 percent more than in 1955, 65 percent more than in 1950.

The share of national income received by wage earners was 71.1 percent in 1957, the largest ever recorded except in 1932–33. It was 68.8 percent in 1955; 64.3 percent in 1950; 63.6 percent in 1948.

Declining demand was due mainly to five causes:

First. Consumer resistance to high prices.

Second. Some consumer markets temporarily saturated.

Third. Curtailed business investment in new plants and equipment because of weakened incentives, declining profits, the exorbitant demands of labor unions, and excessive capacity in some industries.

Fourth. Curtailed purchases for inventories.

Fifth. Curtailed defense purchases by Government.

It has been in the heavy goods' industries, which depend on investment and business spending, and in the automobile and steel industries, where wages are at the highest level, that unemployment has been the most seyere.

Business profits are not unreasonably large, except perhaps in a few cases.

Corporate profits, after taxes, $20 billion in 1957, were less than in 1956, 1955 or 1950. As a percentage of national income, they were 5.6 in 1957, 6.1 in 1956, 6.5 in 1955, 7.2 in 1950 and 9.2 in 1948. As a percent of sales, they were 5.2, 10 years ago, 3.5 recently, with the value of the dollar now 70 percent of what it was 10 years ago.

Obviously, handing a part of reduced profits over to wage earners would check improvement of equipment and plans to expand, and thus restirct job opportunity and ability to increase wages and worker benefits. A fact that every employee should understand is that business profits are the working man's best friend. The dynamic factor of the economy is the expectation of profits. Employees should resist any proposal that would result in reducing profits to a level that would lessen the employer's ability or incentive to invest in improved equipment or methods, or to expand.

The need for capital for new plants and equipment is going to increase greatly during the next seven years. A widespread reduction of business earnings below levels which afford a reasonable return on risk capital would seriously hamper the accumulation of adequate capital.

UNIVERSITY OF MICHIGAN LIBRARIES

THE "NEW" INFLATION, BY WHICH WE MEAN RISING PRICES

That something new has come to the United States is evident from the record of wages, productivity and prices.

Inflation is characteristic of wartime; it is unusual in peacetime. Usually, prices in the United States have declined after every major war. Between 1945 and 1951 the level of wholesale prices rose by 67 percent. During the next 3 years, the index of industrial prices stayed fairly stable. Since 1955, it has risen by 7.3 percent.

Another unusual feature of the present inflation is that both the Wholesale Price Index and the Consumer Price Index have risen in the midst of a recession. In past recessions, except 1953–54, prices moved downward. The wholesale and the consumer price indexes are now at their all-time high.

Never before has industrial production dropped 14 percent in a year while the BLS indexes of wholesale and consumer prices rose 2 percent and 3.5 percent respectively, and average hourly earnings of production workers in durable goods' manufacturing rose 2.8 percent, and in building construction, 5 percent.

A further general rise in prices would have the effect of further curtailing consumer buying and business investment in inventories, plans, and equipment.

WHAT IS CAUSING THE PRICE RISE?

Wages are the principal cost of production. Pay increases by industry leaders spread throughout the economy, and raise the prices of all commodities and services. Employee compensation accounts for 78 percent of the income generated in manufacturing—and in corporate business as a whole.

When money wages rise while output per man-hour rises more slowly, or not at all, unit labor costs must rise. Increased revenue from price increases is the only possible source of that part of the additional wage payments that is not offset by greater productivity, unless it can be taken from profits.

The impossibility of covering the increases in labor compensation in recent years by having employers accept smaller profits seems obvious, since profits before taxes of all corporations were $40 billion in 1950 and $41 billion in 1957, while the compensation of the working force in 1957, $254.4 billion, was $100 billion more than in 1950. If the net profits of recent years had been substantially less than they were, the effect upon capital investment would have been damaging to the Nation—and especially to labor.

A recent study by Fortune showed that since the end of the Korean war the 100 largest American industrial corporations had declines in earnings before taxes per dollar of sales of 16.3 percent; in earnings per dollar of net worth of 14.9 percent.

Ewan Clague, Commissioner of Labor Statistics, Department of Labor, said in a Monthly Labor Review:

In the long run, after all temporary fluctuations have worked themselves out, productivity determines the real wages of workers. Wages may shoot skyward at great speed, but they are only worth what the productivity of industry yields in goods.

According to a BLS report, in the private sector of the economy, between 1947–56; (a) Money wages of employees, plus employer supplementary payments, increased 61 percent; (b) output per man-hour increased 26 percent; (c) per unit labor cost of production increased 28 percent; (d) per unit nonlabor cost increased 27 percent; (e) consumer prices increased 21.7 percent.

A disturbing fact is that output per man-hour in manufacturing, as estimated by the BLS, rose in 1956 and 1957 less than 1 percent yearly, as constrasted with an average of 3.5 percent in the 7 preceding years. As average hourly earnings have risen since 1950 more than output per man-hour, wage costs per unit of production have steadily increased. This has caused an upward pressure on prices.

It is obvious that the power of labor unions, largely the result of their exemptions from laws which apply to all other citizens, has put a continual upward pressure on prices. Their power is greater than even our largest corporations have.

Business monopoly is prohibited by law, and enforcement of antitrust laws has been vigorous in recent years, but there has been no restraint upon the actions of unions which had the effect of pushing prices up.

Labor union pressure is not the only cause of rising prices, but is the most important one.

We believe that neither unions nor employers should have the power to impose their arbitrary will on the other party in collective bargaining.

Management has a responsibility to keep its prices at a level that will stimulate its sales to an extent that will be beneficial to the company, its employees and the public.

Edward L. Dale said in a Times article:

In 1953, 1954, 1955 and much of 1956, consumer prices were stable, but money wages rose by 8 percent and real labor cost, after allowing for the rise in productivity, rose by 6 percent.

An essential of a dynamic industrial system and a stable currency is to pass to consumers the benefits of technological progress by price reductions that are commensurate with declines in real costs.

If labor and management continue to push up wage and price levels they will price themselves out of markets, both domestic and foreign. Unemployment would increase.

It is a responsibility of management to resist strongly union demands which will necessitate price increases.

It is a joint responsibility of management and labor to release to the fullest possible extent the potential strength of our economy.

This is a time for vision and patriotism.

Practical—Cum Laude

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. HILLINGS. Mr. Speaker, I wish to call to your attention and that of my colleagues, an interesting editorial which has been widely reprinted throughout the country and which explains in a down-to-earth manner, the values of the independent business school. The editorial has appeared recently in many newspapers among them the Times Star of Alameda, Calif.

The editorial follows:

PRACTICAL—CUM LAUDE

In all the current commotion over higher education, our crying need for double-dome scientists we haven't got, we think it's high time somebody gave a thought to the kids—hundreds of thousands of them across the Nation—who do not go to college, and who will not be going to college, no matter what the inducements.

These are the youngsters who must shoulder responsibilities at a tender age, who must prepare themselves quickly to help out at home; the girls who want to be secretaries, the boys who want to be accountants but who may have to get their education via the night school route; still others who are frankly not students, but require some special grooming to prepare for the battle of life at a modest level. For these, a Government program that would force them into college would be both heartless and futile—just as it is tragic today to see young people in our colleges who are there because their parents insist upon it and can pay the bills.

And let us recognize, too, that no group of our citizenry contributes more to the Nation's economic and civil welfare, to keep the wheels turning in business and industry and our Government functioning at the national, State and local levels than these business school careerists. Without them, we should be in a bad way—but quick. In fact, we can think of nothing more chaotic and generally insufferable than a world of doubledomes.

Actually, so far as we can see, any institution to which high school graduates go in further preparation to deal with the world, whether a university or a business school, is in simple fact a college, and should be so established in the public mind.

It is encouraging, therefor, to note that this attitude is beginning to evolve. While it is not practical for youngsters of the Horatio Alger persuasion to devote time and money to football, the primrose path to acclaim, there is such a thing as school spirit in these specialized educational facilities.

In many business schools there are social functions and alumni organizations that keep memories green and contacts alive. More and more of these schools, we learn from E. R. Moore in Chicago, now conduct formal and impressive graduation exercises, complete with peroration, prayers and patriotism and even to caps and gowns. In fact, the Moore people have gotten out a booklet for business schools that spells out just how appropriate commencement exercises are arranged and conducted.

There is, in other words, growing recognition of the fact that it makes just as much sense to live for good old Spivis commercial as to die for dear old Harvard law.

Visits of State

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. PHILBIN. Mr. Speaker, the Members of this House have great esteem and affection for the distinguished Vice President, our former colleague, Hon. RICHARD M. NIXON.

Many people have been impressed by the obviously favorable impressions of the previous state visits, which our esteemed colleague has made. However, thousands of Americans are distressed by the reactions of his present tour of South America. In almost every country that he has visited, organized and unorganized protests of his presence have occurred. We have had the unhappy and very shocking spectacle of a Vice President of the United States being openly hissed, jeered and stoned in the streets and public places of some of our South American cities.

I appreciate that these demonstrations have come to large extent as the result of organized Communist propaganda and action. However, in some places, the news reports indicate, that many of the general public have approved of this discourteous treatment of our Vice President and joined in the cry that is taken up in many places of the world, "Go home Yanks" and "Down with Yankee imperialism," "Yankee Dog" and the like.

Like many Members of the House and many of the American people, I greatly deplore these insults and discourtesies to the esteemed Vice President of the United States while he is engaged in discharging his duty as a goodwill ambassador. I seriously doubt, considering the current experiences, that much good will is being developed as the result of his visit to South American countries. To the contrary, I think that bad will is being developed and the outbreaks occurring are simply giving opportunities to Communists and disgruntled elements to stage anti-American demonstrations, which are played up by the Communist and pro-Communist press and spread to all corners of the world.

Visits of state may well have their place in our foreign relations, but where they occasion derogatory outbursts and demands that distinguished visitors get out and other discourtesies, I doubt very much that any contribution is being made to bettering the relationships between our own Nation and our South American friends.

Perhaps there are more facets to the situation than meet the eye. For years we have known of the planned operations of the Communist conspiracy in many countries directed against this Nation and all friendly nations, indeed directed against democracy and freedom.

This question is for the executive department to decide, but I do not believe that the visit of any American dignitary to a foreign country should be the occasion for insults, vituperations, physical attacks and public disorder. Unless it can be assured in advance that our distinguished visitors are to be welcome and will receive respectful and courteous treatment, I believe that we should discontinue the practice of so-called state visits because, under the circumstances, there is reason for believing that they are currently doing more harm than good and causing humiliation, gratuitous insult and personal danger to some of our highest and most distinguished American leaders. We do not have to take that from any nation. We should not take it.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Daily Digest

HIGHLIGHTS

Both Houses cleared for White House bill carrying urgent deficiency appropriations.

Senate passed by 46 to 36 bill on area redevelopment.

House worked on mutual security authorization bill.

Senate

Chamber Action

Routine Proceedings, pages 7602–7623

Bills Introduced: 13 bills and 2 resolutions were introduced, as follows: S. 3789–3801; S. J. Res. 173; and S. Con. Res. 87. Page 7603

Bills Reported: Reports were made as follows:

S. 3500, to require the full and fair disclosure of certain information in connection with the distribution of new automobiles in commerce, with amendments (S. Rept. 1555); and

S. 3502, to extend the Federal Airport Act through fiscal year 1963, with amendments (S. Rept. 1556). Page 7603

Bill Re-referred: S. 3710, extending certain provisions of Veterans Readjustment Assistance Act to veterans who entered active service after January 31, 1955, was re-referred to Committee on Armed Services after Committee on Finance was discharged from its further consideration. Page 7605

Urgent Deficiency Appropriations: Conference report on H. R. 12326, urgent deficiency appropriations for fiscal year 1958, was adopted. This action cleared the bill for the President. Page 7639

Veterans' Widows Pensions: Senate concurred in House amendment to and cleared for President H. R. 358, to increase benefits to widows of Spanish-American, Indian, Mexican, and Civil War veterans. Page 7639

Area Redevelopment: By 46 yeas to 36 nays, Senate passed without amendment S. 3683, Area Redevelopment Act, after rejecting, by voice vote, modified Cotton amendment barring designation as a redevelopment area of any area where special tax inducements are offered to engage in industrial or commercial activities; and, by 26 yeas to 59 nays, Bush amendment to prohibit any loan to assist in the relocation of an industry from one area to another.

Motion to reconsider passage of bill was tabled.

Pages 7623–7636, 7643–7644, 7659–7674

Veterans' Hospitalization: Senate made its unfinished business H. R. 6908, relating to hospitalization of veterans in the Philippines. Page 7674

Legislative Program: In addition to the program for the week as announced by majority leader yesterday, page D403 of DAILY DIGEST, it was announced that it is planned for Senate to consider H. R. 6908, veterans' hospitalization—Philippines, and S. 3468, construction of roads on Navajo and Hopi Indian Reservations. Page 7602

Confirmations: Four nominations to Tax Court of U. S. were confirmed, along with 1 other civilian nomination; and 1 Army, 1 Air Force, 2 Navy, and 2 Marine Corps nominations. Page 7685

Nominations: Nomination of Ira A. Dixon, to be member of the Federal Home Loan Bank Board, and numerous Navy nominations were received. Pages 7682–7685

Program for Wednesday: Senate adjourned at 7:45 p. m. until noon Wednesday, May 14, when at conclusion of morning business, it will consider for confirmation the nomination of Gordon MacLean Tiffany, of New Hampshire, to be Staff Director for Commission on Civil Rights, probably to be followed by S. 3500, auto pricing, and S. 3502, Federal Airport Act. Pages 7481–7482, 7526, 7601, 7602, 7682

Committee Meetings

APPROPRIATIONS—INDEPENDENT OFFICES

Committee on Appropriations: Subcommittee continued its hearings on H. R. 11574, fiscal 1959 appropriations for independent offices, with testimony in behalf of funds for their respective Departments from the follow-

Appendix

Address by Hon. Estes Kefauver Before the Tennessee Municipal League

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered yesterday to the Tennessee Municipal League, at Nashville.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR ESTES KEFAUVER TO TENNESSEE MUNICIPAL LEAGUE, NASHVILLE, TENN., MAY 13, 1958

It is a privilege for me to meet with you here today to discuss some of the interrelated economic and political problems that confront us as public officials. I believe the theme for your convention, Economic Survival for Tennessee, is well chosen and indicative of the crucial decisions that need to be made. It is indicative that we realize troublesome economic conditions disappear only after decided effort and that the best treatment for declining economic activity is preventive treatment designed to stop the decline and reverse it.

It is refreshing to be among you municipal public officials. When one goes to Washington, it is possible to lose perspective on problems and to lose the sense of immediacy which comes to those who actually operate programs that affect our everyday lives. For this reason I take every opportunity afforded me to return to Tennessee and learn what you are thinking here. I am certain that I will learn as much or more from listening to you discuss your problems and aspirations than you will from hearing me.

I want to assure you that many of us in Washington are acutely aware of the growing problems of the States and municipalities. We have been striving against some opposition by the administration to take steps to counter the recession. As you know, the President vetoed the rivers and harbors bill recently and thus eliminated the chance of starting on many worthy and necessary flood-control and harbors projects. I would like to think otherwise, but I doubt very much that Congress will be able to override his veto. The Senate recently passed the community facilities bill, which I cosponsored, to expand the lending facilities for local public agencies and at lower interest in order that they might expand their efforts to improve physical conditions in their areas. The House has yet to act on this measure, but I am confident that it will pass. We have passed measures to speed up the highway program and the housing program. The Democratic Members and some Republicans are ready to take all necessary action to assist the economy in regaining its stability.

I think that we are at a critical period in this country's history. Of course, every period is critical in some ways, but I think that this one is especially important because of the changing nature of our society. Not too many decades ago we were primarily a rural people with a majority of our people on farms. Recent studies have revealed that no more than 12 percent of our population now live on farms and that the future holds further decreases. As you well know, this means that many of the people now living on farms will leave them to come to the city, and most of our children will find their livelihood there.

I have heard eminent students of municipal problems state that the biggest national, and I emphasize national, problem for the future will be that involving large concentrations of population. As our people gather even closer together, using up some of our most fertile farmland, overtaking our highways, crowding our parks, requiring increasing amounts of electricity, gas, and other natural resources, we are going to have to face the fundamental political, economic, and social problems that such concentrations of population bring. We have not faced these problems adequately as yet and there are few signs that we will. It is a lamentable fact that we so frequently recognize our problems only when they reach scandalous proportions. The National Government should be planning to assist the States and the localities in providing for the necessary adjustments and expansion of facilities because these metropolitan areas far exceed the ability of any single community and often even any State to support. In many instances, the metropolitan region itself crosses State boundaries.

Your organization is one of the most important instruments in the improvement of community conditions. Your members have the experience and firsthand knowledge of municipal problems. You know what it means when you talk about substandard housing, crowded streets, inadequate water supplies, poor zoning and planning, air and water pollution and the myriad other conditions that people in urban areas experience. I believe that it is your responsibility to come up with ideas for meeting our problems. The Federal and State Governments may be effective instruments for assisting in projects beyond the financial resources of the local governments but they have no monopoly on ideas. Your leadership, your guidance, and perhaps even more important, your goading and pressure can make things happen and make them happen in such a way that they actually lead to suitable solutions to your problems.

I have dwelled on these general conditions at length because I feel it is necessary to take the long view in considering our resources—human, industrial, and natural. We cannot plan our utilization of resources in traditional ways because the traditional society no longer exists. That is what some of our standpat friends refuse to recognize. They would have us treat a kitten and tiger the same way because they are of the same family. I would suggest that the cat and the tiger are essentially different from each other, whatever their similarities, and that handling of them must be somewhat different. In the same way, large numbers of people living in a small area need essentially different kinds of programs or handling than they do when they are spread over an extensive area, in spite of the fact that they remain people. And we must keep in our minds the one fact that perhaps outweighs all others, and that is rapid increase in population. Present estimates indicate that the population of the United States will reach 212 million by 1975. And most of these new souls will be crammed, stuffed, squeezed, herded, and polluted in cities unless we make the necessary efforts and, although it is painful to everyone to mention it, the necessary expenditures.

We have had in the Tennessee Valley one of the most farsighted resource programs that any nation or region has ever undertaken. The dream of the late George Norris, brought into being by the imaginative Franklin D. Roosevelt, the program is now 25 years old. It has virtually altered the face of the earth and certainly has altered the nature of our economy and our way of living. I do not have to tell you what the Tennessee Valley Authority has meant to all of us here and to the United States as a whole. But I am going to tell you anyway just so the record is clear in our minds. The TVA tamed a savage and unpredictable river that threatened every community, its property and citizens every year. It made this river a thing to be used for the betterment of the people of the valley in countless ways. Instead of wreaking havoc, the waters of the river became a broad liquid highway to transport our goods to and from the markets of the Nation. Our citizens no longer feared the river but used it as a place for recreation and relaxation. And, in cooperation with the Corps of Engineers, much the same thing has been done with the Cumberland River.

Certainly not the least important product of the TVA was the power produced at its dams. This relatively inexpensive power altered the economic system both on the farm and in the city. Where only 3 percent of our farms received electricity before TVA, now 95 percent of the farms receive it. New industry was attracted by our lower power rates and the burgeoning population of our cities was served with electrical energy. We are familiar, of course, with the extensive defense industrial development that was created owing to TVA power.

These direct benefits are enlarged immeasurably when one considers the collateral effects of TVA—the reforestation, the soil conservation, the advances in health, and other programs undertaken by the TVA in cooperation with the local and State governments. In sum, they constitute one of the greatest achievements in the history of the United States and provide a prototype for other regions which are beset with similar problems.

At the risk of the belaboring the obvious, which is always the privilege of a speaker, I want to point out some other well-known facts. The Tennessee Valley Authority is unique in that it is a Federal agency not operated from Washington. Its headquarters are located in the valley, close to the going operations and the people who benefited from its work. Thus, it was responsive to the needs of the communities and purposely set out to cooperate in a joint effort to alleviate suffering and improve economic and social conditions.

Secondly, the TVA takes unified approach to the natural resource question. While other areas continue to suffer from jurisdictional disputes and differences in opinion regarding policies, the TVA resolves whatever differences there are within itself and approaches all of its resources programs on a unified basis. Here is a clear recognition of the fact that resources, soil, water, tree,

UNIVERSITY OF MICHIGAN LIBRARIES

and human, are interrelated and that they must be approached with a recognition of their interaction.

Admittedly the TVA has run into obstacles that have prevented it from realizing the full measure of its being. This has been particularly true during the past 5 years under a relatively unfriendly administration and an extremely unfriendly Bureau of the Budget. I think that it is fair to say that the President is unfavorable toward TVA when his chief aid, Sherman Adams, and the Bureau of the Budget use every devious method possible to restrict the TVA from fulfilling its potential service to the Tennessee Valley. This administration has cut the budget for the Authority and has prevented it thus far from expanding its power producing facilities to meet the growing needs of the area.

As a result of these obstacles, some people are urging other alternatives for carrying forward the programs formerly expected of the TVA, particularly in relation to the production of power. Some are proposing that municipalities, States and power districts take on the responsibility. I feel this will be ultimately self-defeating because it destroys the very assumptions on which the TVA has operated and takes too short a view of human affairs. I am convinced, and I am sure many of you share the conviction and surely the hope, that the political climate in Washington will not always be as negative toward TVA as it is at present. This is an election year and an opportunity to bring to Congress persons who are aware of the needs of our valley and sympathetic with the cause of river basin development. In 1960 we will have an opportunity to bring in an administration that will not only give support to our basin but will recognize the national needs in soil and water conservation. I say these things not from a sense of deep-seated partisanship since some of our best supporters are Republicans, such as JOHN SHERMAN COOPER of Kentucky, and 1 or 2 Tennessee Republican Congressmen. I only want to remind you that this period of relative uncertainty may be and can be followed by a vigorous resumption of developmental work if we take the necessary steps.

The more serious question relates to the effect on unified basin development if we accept some of the schemes that have been proposed. As I stated before, the TVA and its programs has recognized the essential unity of all the elements of the basin—human and natural. The entire valley's resources were managed to provide for a maximization of man's benefit. While protecting the resource base, the TVA had a clear understanding that a variety of man's needs required satisfaction. Here was balance of resources management because of the integrated approach.

Why was the TVA able to accomplish this? I do not think that we can find the answer in either the kind of men who staffed the TVA or the form of organization alone, although these contributed heavily to its success. The essential fact was that the TVA was and is a national instrumentality reaching into many States affecting the lives of millions of people. TVA thus took a broad view rather than a narrowly parochial view concerning the development of resources. The valley and its people constituted its realm and no arbitrary boundaries or special localities determined its decisions. And I think we have all benefited from this point of view.

Other alternatives invariably involve the assumption of responsibility by a locally constituted organization representative of the major political and economic units receiving benefit from the TVA system. And usually such alternatives center their attention on power, without consideration of the other facets of TVA's program. I would like to ask one or two questions about such schemes.

First, what would become of the broad viewpoint I have discussed here? Let me tell you from many years of experience in legislative bodies that the ultimate result would be a splintering of the unity that has so characterized our efforts heretofore. Each unit represented would consider first—what is in it for me—rather than, will this proposal meet the needs of people throughout the valley? There would be a tendency, not necessarily out of selfishness but more out of unfamiliarity with the problems of others, to be concerned about local interests rather than the public interest. One power district or REA or municipality claiming that it is not receiving its share of power. The power interests claiming that the river was being managed for navigation to the detriment of power production. The shipping companies claiming that there was insufficient recognition of their needs.

Conflicts of this sort have arisen in the past of course. But they have been settled because the public interest was always kept in the foreground and the local and private interests were required to meet the standards which the public interest imposed. I am extremely fearful that we will be giving up this public spirit that has so stimulated our efforts in this valley. For contrast, one need only see what has happened in other major river valleys where there has been less than the public interest in view. The States of the upper basin and lower basin of the Colorado and States within the two basins are constantly in conflict over the terms of the Colorado River compact. The various interests along the Missouri, alined with their governmental spokesman, are never in agreement on Missouri River development programs. Other instances could be cited. I do not think we want to endanger our future by adoption of such programs which invite dissension.

Another important aspect of the problem relates to the ultimate fate of the Tennessee Valley Authority itself. If its power functions are stripped away, will the Authority continue its work in flood control, soil conservation, reforestation, navigation and other activities? I have my doubts. The elimination of its power functions would be the first step in the dismemberment of TVA and its eventual destruction—a goal long sought by its enemies these many years. Power rates themselves would go up-up-up. Strong pressures would be created to return to the piece-meal approach to resource development and many of the existing programs would be reduced or eliminated entirely. The States of the valley would be required to undertake a much larger share of responsibility for resource development than is presently the case.

As you all know, all the valley Senators and Representatives, have sponsored what we consider to be the better way: self-financing for the TVA. The self-financing bill is now before the House of Representatives after having passed the Senate last year. I have every hope that such a bill will pass the House and be enacted into law. This bill would allow the TVA to issue revenue bonds for the construction of added power installations. Such a plan would allow the TVA to support its own expansion without having to obtain appropriations from Congress with all of its attendant difficulty. And certainly expansion is needed in view of the projected power needs of the valley. The TVA would remain intact as an organization and would continue to perform its many integrated programs. With appropriations, for its other related activities, we could expect a bright future for the valley.

We all recognize that the Tennessee Valley Authority and other agencies of the Federal Government cannot insure prosperity of our State. They can and have contributed heavily to our well-being, but in the long run our economic security lies in our own hands through the full development of our human and natural resources. We have perhaps done less than is possible to develop our resources and take adequate measures to meet our growing problems.

This meeting is evidence that there is a reawakening and desire to make up for lost time. I note that there has been considerable discussion of State and community planning and development programs at these sessions.

I note also that the Tennessee Municipal League has gone on record supporting larger appropriation for the department of economic development, the establishment of a Tennessee industrial building financing plan, and creation of a Tennessee dock authority. These activities are badly needed.

We have many serious economic problems in Tennessee. With coal mining and agriculture declining in economic importance, it is imperative that we find industrial outlets for our working population. We have a rapidly growing population, with many young people who are in need of opportunity here in Tennessee. It is a lamentable fact that so many of them are finding it necessary to leave the State in order to make a living. All of the States of the Union are in competition to obtain industry and we must take steps to insure that we are not deprived of our share of industrial expansion.

In conclusion, I would like to encourage you in your efforts to use your government at all levels to stimulate and expand your economic base. We have a tendency in this country to feel that governmental activity is somehow evil or a last resort. I think we should recognize that our governments have been instrumental in developing this Nation throughout our history: The railroads, atomic energy, technical assistance in agriculture, airlines, and many others. We should use our governments today to assist private enterprise in fulfilling its basic responsibility—always maintaining sufficient safeguards to prevent abuse—to provide the means of support for our expanding population and for higher standards of living. If our State government and the cities will develop the means to consult, to finance and administer cooperative programs, there is no reason why we cannot look to the future with confidence. You may be sure that if the States and municipalities do their share, the Federal Government will be forced to do what is necessary to supplement their efforts. I will certainly do all within my power to assist you from Washington.

Congressman James P. Devereux, of Maryland, a Man To Remember

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. FULTON. Mr. Speaker, we in Congress are proud of the accomplishments of our Members. It is with real pleasure I have come upon the fascinating story of our good, friendly Congressman JIM DEVEREUX, of Maryland, that began on Wake Island on December 8, 1941, where he was the commanding officer of the United States Marines holding this American outpost for our good country.

Knowing that Congress and the American people would like to have the thrill-

ing episode of our United States history placed in the CONGRESSIONAL RECORD, I am submitting the article from the Reader's Digest of April 1942, condensed from the American Legion magazine. It is written by Donald Wilhelm, who gives a unique account of the heroic defense of Wake Island drawn not only from official sources but also from personal reporting.

Mr. Wilhelm talked with the officers and men who fought under Maj. JIM DEVEREUX; with Pan American and Marine Corps personnel from top to bottom; with generals, flight officers, and privates. During World War I Donald Wilhelm was an assistant to Herbert Hoover and after the war in that capacity traveled extensively in Europe on United States missions.

The article follows:

WHAT HAPPENED AT WAKE

(By Donald Wilhelm)

In his tent on Heel Point, Wake Island, Maj. JAMES PATRICK SINNOTT DEVEREUX awoke to reveille at 4:45. Sunday, December 7, at Pearl Harbor was Monday, December 8, here, for Wake is just west of the international date line.

Having shaved, with due regard for his small mustache, he strapped on his .45-caliber Colt and headed for the officers' mess. A wiry little man with the bulging brow of a student, he was quiet, slow to anger, slow to speak. He glanced at the sky and its sickly last-quarter moon: a good day for flying. His dawn patrol was already out over the Pacific.

The major was in his element. Son of an Army medical officer, he was born in Cuba, the fourth child of a famous Army-Navy-Marine family of 10 children. He had enlisted as a marine when 19. Though quiet, he was a fighter when roused, says one who saw action with him in Nicaragua, where he earned 1 of his 3 medals. He loved the life of a marine.

Wake is 2,004 miles west of Pearl Harbor, but only 352 miles from Taong, and 700 from the Marshall Islands where, he knew, the Japanese had strong air bases. The desolate coral atoll that is Wake had been built up on the rim of a sunken volcano, the crater forming a shallow lagoon 4 miles long by about a mile and a half wide. A coral reef hemmed in its northwest end, and the rest of it was surrounded by three islets that almost touched: Wilkes, the smallest; Peale, with its Pan-American Airways station; and Wake. Nowhere was the land more than a mile wide and the highest point on these treeless sandspits dotted with low green scrub growth was not 10 feet above high tide.

Beautiful, but what a place to defend.

When Pan-American Airways first planned to land on Wake, in 1935, it was uninhabited; lest we offend Japan, our Government had made it a bird sanctuary. Just a few months ago, the first construction workers and marines were sent out to strengthen Wake's defenses. DEVEREUX and the main body of marines had been there only a few weeks. He now had 25 officers and 418 men.

As DEVEREUX approached the officers' mess he saw the Philippine Clipper, in from Pearl Harbor at sundown the day before. At three minutes before seven, the big ship taxied to the far end of the lagoon, took off, and soared away toward Guam and Manila.

Less than half an hour later a marine came running excitedly from the radio shack, handed DEVEREUX a decoded radio message:

PEARL HARBOR HAS BEEN BOMBED

The little Major thanked the messenger—Jimmy, say his old messmates, was always scrupulously polite—and gave orders for the bugler to sound the call to arms.

At 7:30 the Clipper returned. The last man except one who saw much of DEVEREUX and escaped from Wake was her captain, J. H. Hamilton. Hamilton had received orders from San Francisco to return to Wake and report to DEVEREUX for instructions. He says he found the Major anything but excited. While steadily receiving reports and giving orders by phone and runner, DEVEREUX discussed the situation quietly and in detail. He wanted Captain Hamilton to take out the Pan-American personnel. He already had a thousand civilian workers to feed and care for. They had volunteered for fighting, but he had equipment for only a few. There was one other thing—would the Captain undertake a long-range reconnaissance? DEVEREUX's pursuit planes had but limited range.

As soon as the patrol areas were agreed on, Hamilton hurried back to the Pan-American hotel to summon his crew. He had scarcely reached it when he heard the drone of many motors, and saw a squadron of 12 planes approaching from the south. For a moment he hoped they were American planes. But then he saw flashes, heard explosions, saw black smoke rising—and knew the Japanese had struck. A second flight of 12 planes was now coming straight at him. For half an hour Hamilton and his crew experienced a little of what the men on Wake were to know for 2 weeks.

Crouching in the sand, with enemy machine guns blazing at them, they were so helpless that rage replaced fear. Chief Mechanic Earle was knocked flat by bomb concussion, got to his feet, was knocked flat again, once more struggled up and was struck by flying debris, but ran on to the Clipper. A section of the Clipper's side had been blown away. With a roar and flaming blast Pan American's hotel was torn apart. The machine shop was turned into a bonfire. The office building and employees' quarters were leveled. But by a miracle all the Clipper's crew escaped death. The ship itself had 26 bullet holes in her, but was in flying shape.

Spitting mad, some of the crew refused to leave. But at last, with 29 passengers and a crew of 10, the ship took off. Past Midway and the flaming marine barracks, it flew the 2,004 miles to Hawaii. Immediately Hamilton and his crew volunteered to take off again, to fly anywhere, bring anyone back to Hawaii.

At Wake the Jap planes had flown away southward and it was time for the major to take reckoning. Twenty-five marines had been killed and seven wounded, including Maj. Paul A. Putnam, commander of Wake's tiny Air Force. Eight of the twelve fighting planes that had been flown in from a carrier only a few days before had been caught on the ground. Seven were destroyed, another badly damaged. When the other 4 came in from patrol and landed, 1 struck debris and bent its propeller.

Four small fighting planes against all the planes and warships Japan could send.

For the rest, the marines had only pistols and rifles, six 5-inch Navy guns, 12 anti-aircraft guns, 18 machine guns of .50 caliber and 30 smaller ones. Altogether, not much more than the fire-power of a single destroyer.

The 10 miles of beach made it probable that the Japanese would try to land at several points simultaneously. To use his machine-gun crossfire most effectively, the major would have to split his little force, and he and his men would have to go out to meet the Japs without cover, against all the firepower of their warships and planes.

On the credit side of the ledger stood 400 marines, fighting mad.

Next day, at noon, 27 bombers came over to concentrate on the Wake hospital, where they knew the wounded would be. One of their planes was shot down. On the third day 27 again came over.

But the next day, December 11—when Tokyo announced a landing on Wake—was the little major's day. Putnam's planes reported 12 enemy ships were coming up over the horizon. There was a transport, a supply ship, several gunboats and destroyers, and a cruiser. This made DEVEREUX feel better. As a young officer he had been a coast artilleryman; his gun crews were handpicked.

DEVEREUX's biggest guns were 5-inch, while even a light cruiser would have 6-inch, perhaps 8-inch guns. Says a marine officer, once DEVEREUX's superior when they were together in China, "What Jimmy did was to play doggo. I can just see that little man with his binocs trained on that cruiser, praying: 'O, Lord, please give me a crack at her.'"

He ordered the gun captains to hold their fire until he gave the word. The fleet drew closer. Its biggest guns opened fire. Getting no answer, the cruiser drove down on the atoll with all her guns firing. Destroyers and gunboats also opened up as they came within range. The marines were getting the smell of exploding TNT; flying sand and debris showered over them, and the air was filled with the roar of Japanese planes. All of Putnam's planes—four—were in the air. "They made a total of 10 attacks," he said in his report. "Though greatly overloaded they performed splendidly. We claim the sinking of one ship and serious damage to another." Also, they brought down two bombers.

Meanwhile, DEVEREUX was still waiting. And still the cruiser came on.

"Ten thousand yards." • • • "Eight thousand." • • • "Six thousand."

Still our quiet little major held his fire, knowing that his men, straining to fight back, were growling, "What the hell's he waiting for."

Not until the cruiser stood at 4,700 yards and the enemy destroyers and gunboats were still closer did he give the word, "Fire."

Then the sweating and begrimed gun crews worked hard and fast. The 5-inch projectiles weigh 50 pounds. A smart crew fires 4 or 5 of these a minute, and up to 30 a minute of the 15-pound 3-inch shells. They converged their fire on that cruiser, and they sank her, a blazing wreck. Then they turned their guns on the other ships. Yes, they sank the Jap cruiser. And, two destroyers. And one gunboat.

Far from landing troops on Wake, as the Tokyo radio was announcing, what was left of the Japanese fleet made off. And the marines suffered not a single casualty. Honolulu reported that when DEVEREUX was asked by radio if he wanted anything, his reply was, "Send us more Japs."

But again it was time for him to take stock.

The enemy now knew he had 5-inch guns and where they were. They wouldn't risk his gunnery again, or Putnam's planes, without first working over the place with their bombers. They would try to pulverize every vital foot of Wake. And unless DEVEREUX used his guns, which were devouring precious ammunition, they would swoop progressively lower and machinegun more accurately.

The next day, December 12, 27 bombers rained explosives from 22,000 feet on Wake. On the 14th they concentrated 32 on the remnants of the airdrome. Though they lost 1 plane, they shot down 1 of ours and destroyed another on the ground, leaving 2. On the 15th day they sent 31 bombers and lost 3. Next day, 41 bombers concentrated all they had on the field guns and headquarters. On the 17th they sent 32 planes to fly very low and finish the job. They lost one.

Now it was their turn to take reckoning. On the 18th a single reconnaissance plane flew over to take photographs. Whatever these showed, they would not show why the

UNIVERSITY OF MICHIGAN LIBRARIES

American planes when shot down soon came up again.

Trained by service in remote places where parts are not available, marine ground crews know how to make much from little. Here at Wake, their shop ruined, tools scattered, 1st Lt. John Franklin Kinney, T. Sgt. W. J. Hamilton, and their men performed miracles to keep planes in the air.

"Parts and assemblies have been traded back and forth until no airplane can be identified," Major Putnam reported. "Engines have been switched, planes have been junked, stripped, rebuilt, all but created." At one time, his hastily penciled notes of the 20th say, "Only one serviceable plane was left. But the mechanics created another."

DEVEREUX knew he could not hold out much longer. The Navy knew it, too. On the night of December 19, a lone American flying boat settled on the lagoon. It had risked coming to bring out Maj. Walter L. J. Bayler, an air officer who had built the airdrome and who carried in his pocket Major Putnam's hurriedly written but invaluable report on air operations. He was the last officer who served with DEVEREUX and Putnam and escaped. The plane brought out the casualty list to the 20th. Among other mail it brought out a letter from DEVEREUX to his wife, who was in New York with their 8-year-old son.

It brought also such letters as this from Lt. Comdr. Elmer B. Greey to his wife in New Jersey: "Too much praise cannot be given to the Marines. Heroes have been made hourly here, and many will go unsung. But the Stars and Stripes are still at the top of the mast."

The men on Wake saw the big flying boat leave. They stayed. They weren't through yet. On the 22d the Stars and Stripes still flew and they still had their two planes, though one was barely able to stay up. That day a second lieutenant and a captain took them up against 60 Jap planes. The captain was shot down, wounded. The lieutenant did not return.

On December 23 the Navy reported: "Wake Island sustained another strong air attack on the 22d. An enemy force effected a landing on Wake the morning of the 23d."

On December 24 it reported: "Radio communication with Wake has been severed. Two enemy destroyers were lost in the final landing operations."

The curtain drops. Behind it, save for fragmentary reports from prisoners over the Japanese radio, there is only silence. As this is written, no one but the Japanese knows the fate of Major DEVEREUX. The Navy, as of February 20, "presumes" that he is a prisoner.

In his citation of Majors DEVEREUX and Putnam and their men, President Roosevelt wrote: "The courageous conduct of the men who defended Wake Island against overwhelming enemy forces from December 8 to December 22, 1941, has been noted with admiration by their fellow countrymen and the civilized world. It will not be forgotten as long as gallantry and heroism are respected."

The Monahans Sandhills of Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a portion of an address delivered by J. Conrad Dunagan, of Monahans, Tex., president of the Monahans Sandhills Park Association, before the Fort Stockton, Tex., Historical Society.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

ADDRESS BY J. CONRAD DUNAGAN, PRESIDENT, MONAHANS SANDHILLS PARK ASSOCIATION, MARCH 21, 1958

Mr. Chairman, members of the Fort Stockton Historical Society, guests, you probably realize that the Monahans Sandhills State Park and Museum are close to my heart, and you probably know that I'm going to have to watch my time to keep from getting carried away with enthusiasm for this development and speaking too long.

Because I might get carried away and forget to say it, I want to say a couple of things about Fort Stockton before I begin on the Monahans Sandhills.

One thing which I admire about your community and your people is the evidence of intellectual and cultural maturity of which your very organization—the historical society—is a most prominent example. I've heard of few communities in our part of the country which have developed an organization such as you have here. It seems to me a sign of civic maturity.

In many of our west Texas communities, there is historical material which could be preserved and kept for the instruction of future generations, but I'm sorry to say that much of this material is gradually being lost. Perhaps the most perishable are the memories of the old timers. Unless their recollections are written down, it will be all too soon that they are lost forever. There must be thousands of fading photographs and letters—and papers—lying forgotten in back-room closets which could be preserved to give those who come after us a true picture of many aspects of life in this part of the world in pioneer days. I commend you for the work which your organization is doing along these lines.

Another thing upon which I would like to compliment you people of Fort Stockton is your awareness of the economic value of the tourist industry. The company to which I devote most of my time has the privilege of serving some 15 west Texas counties with soft drinks and I don't think there is a single community which has shown as much appreciation for the value of the visitors and a willingness to do something to interest them, as has Fort Stockton. The consrtuction of your tourist center, the decisive action which you took in preserving the Comanche Springs swimming pool, are among the visible manifestations of this spirit of appreciation for the visitor.

I hope that other nearby communities will follow your lead in developing facilities to attract the tourist. It is an obvious fact that tourists seldom come to a popular area to visit just one attraction—they like to visit an area which has many attractions. Look at southern California for example—or northern New Mexico—and Colorado. Each of our west Texas communities has some particular feature which can be developed into an interesting and different type of recreational facility. You have more than most: Old Fort Stockton, Comanche Springs, Rooney Park, the Riggs Museum, and, no doubt, others. McCamey has the Mendoza Trails Museum, Castle Gap, and the King Mountain. Alpine has the Big Bend Memorial Museum; near Fort Davis is the Davis Mountains State Park; there is Balmorhea State Park and Big Bend National Park. Odessa has a potentially great attraction in the Meteor Crater, a few miles west of town; right here between Pecos County and Crane County lies the famous Horsehead Crossing; and Monahans has the Sandhills.

Friendly rivalry between these communities in our area to see which can develop the most attractive points of interest can do nothing but good for all of our communities. The more that each community in this area helps itself, the more the entire group is helped to capture a share of this neglected gold mine of tourist dollars.

But, of course, we develop these facilities for more reasons than simply to gather in a harvest of tourist dollars. We develop them so that our own local and area citizens can enjoy and appreciate what nature—and man—have provided for us in this part of the world.

However, oftentimes it takes somebody from outside our own area to point out to us what we have that is unusual or interesting. I must admit that such was the case with me. Several years ago a banker friend of ours who is a vice president of the California Bank in Los Angeles, stopped at our house one Friday afternoon on his way to a banker's meeting in Dallas. We knew that the banker's convention didn't start until Sunday and we asked if he were going down early. "No," he said, "I've read and heard of Old Fort Stockton, and I just want to go down there and look at what remains of it. I've been fascinated by its history." He then asked me what sort of shape the fort was in, and I was ashamed to say that I had just never had the curiosity to go and see for myself.

The Monahans Sandhills was no exception. The first time I heard a man say he was going to take his family out and spend a day in the sandhills, I thought he was "nuts." I'd spent my boyhood in a part of that same strip of sand which extends northward for about a hundred miles into Gaines County. As a kid I rode horses through a lot of sand—helping on roundups and herding goats, in the days before we had any goat-proof fences. Sandhills meant nothing to me except just a stubborn obstacle to locomotion. I'd helped push our old Model "T" out of many a sandbed. The idea that anyone would deliberately choose to go spend a day in the sandhills just didn't make sense to me.

I was living in Midland in about 1931, when that "foolish man" proposed to hike through the sand, and with a year or so Kitty and I married and moved to Monahans, and I went out to the sandhills with a group of Boy Scouts. I began to realize certain recreational aspects of the sandhills. A couple of years later, my wife, Kitty, and I went back to the University of Texas and I chose the sandhills as a subject for a paper which I wrote in an English competition class.

However, it was not until more than 12 years later that we realized what we had in the sandhills. It came about in this way. Kitty had a program for the Wednesday Study Club. Her assignment was to speak on some local area subject. Another member of her club, Mrs. E. W. Sampson, while browsing through the Cokesbury Book Store in Dallas, had noticed a book which had a chapter in it on the Monahans sandhills. The book was Adventure With a Texas Naturalist, by Dr. Roy Bedichek, of the University of Texas. Kitty read the book and was quite enthusiastic about it, especially the part about the Monahans sandhills. I read it and became very enthusiastic, too. I want to read you 1 or 2 paragraphs from this book on the Sandhills:

"I found myself in the midst of a miniature forest of oak and mesquite. Each dune is crowned by an oak tree, 10 to 24 inches tall, loaded with acorns. Interspersed among the oaks and towering above them is scrub mesquite, heavy with clusters of long, yellowish beans hanging nearly to the ground.

"I venture the statement, without research, that in no other forested section, the Amazon Valley not excepted, is there to be

found a higher proportion of fruit to wood than in this Lilliputian jungle in the northern portion of Ward County. Vegetatively considered, it is as much a natural curiosity as the Painted Desert or the wonder areas of Yellowstone. This hummocky expanse of stunted growths, or an ample sample of it, should be reserved and protected as a State or national park.

"Dr. B. C. Tharp informs me that the little oak (Quercus havardii) is confined to the sandy south plains of Texas and of eastern New Mexico. Rarely reaching to a height of 30 inches, its slender stems arise from a thick rootstock buried 4 to 8 inches below the surface. It bears a fat acorn nearly an inch long and more than half an inch thick. Thus the old proverb, 'Great oaks from little acorns grow,' is reversed in this topsy-turvy land where only miniature oaks from giant acorns grow."

Dr. Bedicheck's words sounded wonderful and gave us an appreciation of a phase of the sandhills which we had not had before. However, we were at that time having postwar growing pains in our business and in our preoccupation with the daily details, it never occurred to us that probably nobody would ever develop the sand hills into a park unless we did it.

The years wore on, and finally, in 1951, we had occasion to visit in Washington, D. C., and through our Congressman, Ken Regan, we set up an appointment with the National Park Service. The national park people were very cooperative, but when they found that practically all the land in our area was under lease for oil and gas, they advised us to go to the State park route, because national parks must own their minerals and, obviously, the lands upon which the park could be developed were too valuable to acquire for park purposes, if the minerals were included.

Thereafter, we did get in touch with the Texas State Parks Board and they requested the National Park Service to make a survey to determine the feasibility of establishing a park in the area. This was done and I want to read to you a couple of excerpts from the National Park Service report:

"Investigation of the recreation resources of west Texas indicates that the Odessa-Monahans-Pecos area lacks adequate park facilities.

"The Monahans Sands is attractive in terrain, plant life, and archeological and historical significance, and is located so as to provide a useful and centrally located State park for this area.

"The local communities are interested in establishing a park in this part of the State and probably will be willing to acquire a site and present it to the State."

I will not try to tell you the story of how we worked and tried for years before we made our dream come true. Any of you who have spearheaded a drive to create something new and different for your community, knows of the many obstacles which prevent themselves and which must be overcome, one by one, before you can realize the goal. Some of the things which we had to overcome were:

1. The oil company lessee didn't want us to put the park on their lease; they were uneasy at the prospects of visitors, especially children, who might damage or be hurt by oil producing and drilling equipment.

2. The prominent rancher who had the grass lease was strongly opposed to giving up any ground and violently opposed having people in there who might chouse his cattle.

3. The owners of the land refused to sell.

4. The city had no way to acquire the land five miles from the city limits, and the county's park tax assessment had been raised to the maximum in the building of four community center buildings. Besides that, any funds which our county has are always divided into four parts (unless it's something like a courthouse, where you can't have one in each precinct), and usually each commissioner gets in the neighborhood of one-fourth of the total.

5. The land which was by all odds the most desirable for the park lay in two counties. Even if Ward County had the money, and the land was for sale, Ward County couldn't be expended for land in Winkler County. Winkler County was in no mood to put up money for a park which would benefit Monahans.

6. Ninety-five percent of the voters in our county had no conception of what the sand hills were like—they had been fenced off for years—and had little interest in the project.

7. We were going through a school scrap, where the board replaced the superintendent and the head football coach, and our town was divided into two bitter factions over this issue.

* * * * *

Perhaps you can understand that, with these things and other small troubles, it took us years to bring the park into reality. But we did finally make a dream come true and, after a long search we found a man to run our park and museum. A little later on in the program, Mr. Bob Larson is going to show you what we have.

Address by the Secretary of State on Minnesota's 100th Anniversary of Statehood

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. WILEY. Mr. President, on May 11, the distinguished senior Senator from Minnesota [Mr. THYE] introduced the Secretary of State, John Foster Dulles, when he delivered an address, in Minneapolis, in commemoration of Minnesota's 100th anniversary of statehood.

I am happy to comply with the request of the Senator from Minnesota, by asking unanimous consent that the full text of the address by the Secretary of State be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Morning Tribune of May 12, 1958]

WE LIVE IN A WORLD OF CHANGE

Governor Freeman, your royal highnesses, your excellencies, and citizens of Minnesota, I am delighted to share in this tribute to the people and State of Minnesota and to salute here the distinguished visitors who have traveled no little distance to join in the celebrations of your 100th anniversary.

I, myself have just returned this morning from Europe where I attended, at Copenhagen, a meeting of the foreign ministers of the North Atlantic Treaty Organization. That beautiful city of tradition and culture is a vivid reminder of the high ideals and vigorous endeavors by which Europe enriched our American heritage. From that city, I went on to Berlin.

Minnesota bears the imprint of Scandinavia. One finds here the Viking zest for adventure, industry, thriftiness, devotion to the rights of the individual and love of liberty.

One of the outstanding characteristics of the Scandinavian people has been that, on the one hand, they are stubborn when it comes to fundamental virtues and on the other hand they readily changed the political framework within which those virtues made themselves manifest.

For example, 3 of the 5 Scandinavian countries as we know them today assumed their present national independence only within this century—Norway (1905), Finland (1917) and Iceland (1944). But within a somewhat kaleidoscopic political scene, they have ever maintained spiritual and cultural solidarity.

That is the theme I would emphasize today. We live in a world of change. Indeed change is the law of life and vitality is often measured by change.

CHANGE MUST BE GOOD

That, however, does not mean everything changes. There are basic truths which are enduring and to which we must hold fast if change is to be orderly and conducive to good.

Sometimes rigidity and flexibility are posed as concepts that are mutually exclusive. Actually, they can go hand in hand. Enduring concepts of justice and right provide the dynamism that assures both the fact of change and the character of change.

The United States has sought to play worthily its part in a world where change is inevitable, and where change can be made benign if it reflects fundamental concepts as to the proper relation of man to God and of man to man.

Our Nation was founded by men of faith who were seeking not just to build a secure home for themselves but to conduct a great experiment in human liberty, the impact of which they hoped would be felt throughout the world. They were imbued with a sense of mission.

When our Nation was small, at its beginning, we conceived that our ability to change the world would be primarily through the influence of our conduct and example. We built here a society of extraordinary political, economic, and spiritual vigor. It did, indeed, attract attention all around the world and thus influenced the course of world events. We grew, because sharing was a central theme. We welcomed here those from other lands to partake equally the advantages and opportunities of the founders. The Original Thirteen States did not make of themselves a closed preserve. Their union was open to adherence by others and the original States on the Atlantic seaboard thus became 48 spanning a continent.

As our Nation has grown, the whole world has shrunk under the impact of new means and speeds of travel and communication. It is relatively much smaller now than was our continent 100 years ago. Under these changed conditions we continue to seek to propagate the enduring concepts of our founders.

WE CAN'T STAND ALONE

Our States here could not have survived in peaceful prosperity had each asserted total independence and rejected interdependence. Likewise, in the world today, nations cannot survive in peaceful prosperity if each emphasizes only independence and neglects interdependence.

Those Americans whose spirit faithfully reproduces the spirit of our past must seek to apply on a worldwide basis this principle of interdependence.

The United Nations represents such an effort. It exerts a great influence throughout the world. But we have to recognize that it fails to satisfy all of the needs of the world today. Its security council can be rendered impotent by the veto of any one

UNIVERSITY OF MICHIGAN LIBRARIES

of the five permanent members. Nine days ago the Soviet Union cast its 83d veto and thereby struck a grave blow to the good neighborliness and harmony which the charter prescribes.

The General Assembly of the U. N. exerts a great influence—makes recommendations; but it cannot act. Its influence is great with countries which have what our Declaration of Independence calls a decent respect for the opinions of mankind.

But it is otherwise with nations which lack such respect. Unhappily, the General Assembly resolutions with regard to Korea have been ignored to this day by the Soviet Union and by Communist China and its resolutions with respect to Hungary have been defied by the Soviet Union.

The United States does its best to help make the U. N. a strong, vigorous institution. But, for the reason I have indicated ,it has been necessary to supplement the United Nations by other security measures. These have taken the form, principally, of collective defense associations, which are specifically authorized by the United Nations Charter.

One of these collective security arrangements is established by the North Atlantic Treaty. The Foreign Ministers of the 15 NATO countries have just been meeting in Copenhagen. That meeting has provided a good demonstration of consultation and coordination without the sacrifices of independence.

FACTS ARE NEEDED

There are, of course, other such associations. There is the Southeast Asia Treaty Organization, the Baghdad Pact, and the oldest of all, the Pan-American Union, now known as the Organization of American States.

By our participation in such regional and defensive groupings, the Nation supplements the United Nations where it is weak.

A further expression of the principle of interdependence is our mutual-security program—sometimes called foreign aid. We have been conducting this program in various forms now for 10 years since the first such major program—the Marshall plan—was adopted. That plan was designed to bring economic recovery to a Europe that had been dislocated and devastated by war.

The nations which originally benefited from the European recovery plan happily no longer need economic aid. Their economies flourish, and they have become important trade customers of the United States, contributing greatly to our own economic welfare. They have also contributed significantly to the collective military establishment of NATO. Our 1948 investment in Europe has paid off many times over.

Today our mutual-security programs serve primarily to provide military assistance, and in a few cases financial assistance, to equip and maintain armed forces needed to protect areas which are vitally important to the free world, including the United States.

To take an example, the cooperating countries have ground forces of about 5,600,000 men. But less than 1 million of these are Americans. Nearly 5 million are from other lands. They are to some extent equipped and otherwise helped out by our mutual-security program.

I can assure you it is far cheaper to get security that way than for the United States alone to raise and maintain the additional military forces that we would need if we stood alone.

We are providing a certain amount of economic assistance, principally in the form of loans—not gifts—to the less-developed countries, and particularly the newly independent countries. They are desperately eager to improve the lot of their people. They want to do this in freedom; but if they cannot find the way in freedom, they will be under strong compulsion to accept the assistance of the Soviet Union in building a materialistic totalitarian society.

RUSS OFFER AID, TOO

These Soviet offers are alluring on their face. But they are motivated—and conditioned—by a desire to subvert the genuine independence of the countries which accept them. That would be tragic for them, and for us. Our Nation wants and needs an environment of freedom. We dare not sit idly by to be more and more closely encircled by a hostile despotism which seeks to strangle us.

But even these collective measures cannot suffice to serve our ideals. The independence and prosperity of Nations must also be served and enriched by trading the products of their labors. In the modern world, trade is inevitably a part of the whole complex of a Nation's international relations, and indeed of its security.

In the United States we have given recognition and expression to this fact through our reciprocal trade agreements program. That program was originated 24 years ago and since then has been extended 10 times by Congress. It provides our farmers and our industrial workers with assured markets throughout the world. Since the program was inaugurated our foreign trade has expanded nearly tenfold.

The program is not just one of tariff reduction; it realistically takes account of the needs of some segments of our economy by providing restraints on foreign competition where protection is justified by the totality of our national interest.

Our reciprocal trade program not only contributes to the economic welfare of our Nation; it also contributes to our political and military security. To see this one need only recall the period of the early 1930's. We then sought relief from economic depression by raising our tariffs and devaluing our currency, without regard to the effect on others who were largely dependent on international trade.

What was the result? We did not get the relief we expected at home. But worse than that was the fact that our example was taken by others, notably Germany and Japan, as justification for policies of extreme nationalism, and of expansion, on the theory that economic livelihood was no longer attainable by normal methods of peaceful trade.

We cannot afford to risk today repetition of the disaster that followed that period. The renewal of the reciprocal trade agreements legislation is necessary both for our economic welfare and for our peace.

Now we are trying also to apply the principle of interdependence to the fields newly opened by science and exploration.

ATOMS FOR PEACE

Take the vast new area of physical power that is now made possible by the splitting of the atom—possibilities that are immeasurable. There we seek such international controls and safeguards as will assure atoms for peace, and, as President Eisenhower put it, "find the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life.

"Take outer space—now for the first time becoming accessible to the devices of man, and soon to man himself. We seek that the new world beyond the limits of our earthly sphere shall be used only for peaceful purposes, and not for purposes of war.

The continent of Antarctica possesses natural posibilities which are now being intensively explored by the scientists of many countries cooperating in the Geophysical Year. We propose to establish in Antarctica an international regime which will prevent the monopolizing of any part of this new continent for the military purposes of any nation, but assure an open door for the peaceful pursuits of all mankind.

We see now arteries of travel opening up over north polar regions. We want to see established in that neighborhood an international system of inspection so that none need fear that these new polar routes will be traveled by bombers or by missiles unleashing surprise attack. We want only peaceful travel along these new paths, such as is developed by our Scandinavian friends to bring our nations closer.

In such ways as this, we seek to carry forward in this fore-shortened world the dynamic concepts of our founders. The spirit is the same—the spirit of the Viking, the spirit of the American frontiersman, constantly seeing new horizons, facing new challenges and responding to them.

These responses manifest our recognition of the fact that change is inevitable, that it is the law of life and that those who do not adapt themselves to change, who only oppose it blindly, not only lose the thrill of adventure and the joy of creation, but are themselves destroyed by change.

MEN HAVE RIGHTS

As we thus partake of change, we strive that change shall reflect certain values that are timeless and unchanging. We hold to the basic truths expressed by all the great religions that man is spiritual, having his origin and his destiny in God. We hold to certain political applications of these truths, proclaimed in the Magna-Carta, the Declaration of the Rights of Man, and our own Declaration of Independence.

We continue to believe men are indeed endowed by their Creator with certain inalienable rights including the right of life, liberty, and the pursuit of happiness, and that just government derives its powers from the consent of the governed.

And we believe, as Abraham Lincoln said of our Declaration of Independence, that its principles mean "liberty not only to the people of this country but hope for the world for all future time. It was that which gave promise that in due time the weights should be lifted from the shoulders of all men."

These are principles that are challenged today by the adherents of materialistic atheism. In the face of that challenge we do not stubbornly stand still. We continue to pursue the path of change. But we do not change our principles. In that respect we are unchanging, steadfast and uncompromising. Only thus can we be true to the ideals brought to this nation from so many lands by God-fearing people, who consolidated here a new Nation, who began here a great new experiment, and who bring a new and dynamic approach to the problems of an ever-changing world.

Lake Texoma Represents Sound Investment of Federal Funds

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 14, 1958

Mr. JOHNSON of Texas. Mr. President, Lake Texoma, located in Texas and our neighboring State of Oklahoma, is the largest body of water between the Great Lakes and the Gulf of Mexico.

This great lake was created when Denison Dam was built across the Red River, during World War II, as a flood-control project. It is a project of the

type included in the rivers and harbors bill recently passed by Congress and recently vetoed by the President.

Mr. President, a comprehensive story on Lake Texoma was published in the March issue of the magazine Popular Boating. This story gives an excellent account of the recreational features of this tremendously attractive playground. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Lake Texoma has to be big because it's in Texas. It has to be wonderful because it's in Oklahoma, too.

With more than 1,200 miles of irregular shoreline, Texoma is the largest body of water between the Great Lakes and the Gulf of Mexico. Otherwise known as the Denison Reservoir, and administered by the United States Army Corps of Engineers, Lake Texoma embraces many still-primitive areas with small tributaries and places that bear Indian names like Tishomingo and Washita. Texoma fans, however, boast with good reason that their lake provides some of the most modern boating facilities in the world.

This great lake is described in a local brochure as a huge-sprawling body of water that is sometimes as blue as a summer sky, and again as green as the eyes of a tawny, red-haired beauty." It has more visitors, annually, than almost any other national attraction, including the Yellowstone National Park and the Washington Monument.

Over 7,000 boats, ranging from skiffs to $100,000 cabin cruisers, are permanently berthed on the lake. Sometimes that many more are trailered in for weekend boat rides or fishing trips. There's plenty of room for all these craft, for the lake covers an area of 223 square miles. It was created when the Denison Dam was built across the Red River during World War II as a flood control measure. Its impounded flood waters are used to generate electricity for several hundred square miles of Texas and Oklahoma.

Texoma lies 65 percent in Oklahoma, 35 percent in Texas. A network of fine, paved highways makes it easily accessible to the several million people who live within a radius of 200 miles. It is estimated that more than 8 million persons visited the lake in 1957, compared with 4,079,000 registered in 1950. At least 10 million is the estimate for 1958.

Residents claim Texoma's tourist accomomations rival those in Florida and California. This is particularly true on the Oklahoma side, where the State planning and resources board has developed park facilities. At one of the most beautiful locations on the lake the board has erected the Lake Texoma Lodge, offering 300 air-conditioned rooms with ultramodern decor. Scores of modern cabins with kitchen facilities are also available.

Many other privately financed lodges around the lake provide ample accomodations for summer or winter visitors. And hundreds of privately owned cottages are found around the lake.

The Lake Texoma Association, an organization made up of residents and businessmen on both States, has its offices at the Denison, Tex., Chamber of Commerce. Charle Bowlby, Jr., of Durant, Okla., manager of the Willow Springs Lodge, is secretary of the organization. "Through this association," he reports, "we are able to get the fullest cooperation of people of both States. We are continually seeking to better our facilities, to promote safety and health measures. Because of the immense size of the lake, we must be a cohesive organization so that we can be most effective."

This group carries on an active publicity campaign, distributing thousands of pieces of literature each year, and takes a lead in promoting such water events as boat races, ski contests, and fishing rodeos.

Also active in lake promotion, and source of information for boaters, are the chambers of commerce in Denison, Gainesville, and Sherman, Tex., and Durant, Madill, and Ardmore, Okla.

Lake Texoma has been famous for its bass and crappie fishing since it was first built. It is kept well stocked and regulated by both the Texas Game and Fish Commission and the Oklahoma Department of Wildlife Conservation. In the beginning, most of the boats on the lake were strictly fishing craft. Because of the immense size of the lake, safety prescribed larger boats and motors. With the appearance of bigger, faster boats, pleasure cruising has become prevalent. This type of boating, however, is generally confined to the large water. Coves are still reserved for fishermen.

A more picturesque spot for such a lake would be hard to find. The Red River, a part of the boundary between Texas and Oklahoma, has played its part in history. Fifty years ago, when Oklahoma was known as the Indian Territory, both Indians and whites found the fertile Red River Valley an ideal place in which to build their homes. Gainesville, just a few miles south of the river, became one of the important trading centers of north Texas and the southern part of the Indian Territory.

Indian names still are prevalent. For example, the Tishomingo River flows into the Washita, which becomes one of the important branches of Lake Texoma. Pioneer memories are also reflected in the names that dot maps of the area: Widow Moore Creek, Platter Flats, Butcher Pen Creek, Ignorant Hill School, and Prison Point are among them.

On the Texas side of the lake are the Big and Little Mineral Arms, the Eisenhower State Park, the Perrin Air Force Base, Island View and numerous creeks with names like Rock and Sandy.

Lake Texoma actually begins a short distance after the Red River passes under the bridge on Highway U. S. 77, connecting Gainesville and Ardmore. In this upper reach is found some of the best sand bass fishing and duck shooting in the whole lake area. Here the Red River becomes Delaware Bend and begins to spread out into Hickory Creek, reaching almost to Lake Murray, south of Ardmore.

The lake continues to widen as it floods over flats and covers the south bank of the Red River, the historic boundary line between the two States of Texas and Oklahoma.

Proximity to large centers of population like Dallas, Fort Worth, Tulsa, and Oklahoma City has had much to do with the intensive growth of recreational facilities on the lake. Dallas and Fort Worth are just 90 minutes away, over multilane highways, with Oklahoma City only a little more than 2 hours away.

There is probably no lake in the country that can compete with Texoma for varied entertainment. The increase in water ski activities is putting it on a par with top skiing waters of the Nation; launching ramps and parking areas around the lake have made is easier for boatowners to launch their rigs at any place they wish. Use of most of these ramps is free. In some, free gasoline has even been offered to attract customers.

Spacious sandy beaches have made Texoma a favorite spot for bathing beauty contests. And many industries of the Fort Worth-Dallas area maintain employee cabins around the lake. Some stage their own boat races and other special activities.

Prices around Lake Texoma have been held at a reasonable level. True, there are $50 per day suits available, but plenty of accommodations well within the range of the average fisherman can also be found. Numerous trailer courts make the lake an ideal place for the tourist who brings his home along, or likes to camp out. Public restrooms and shower stalls have been placed at frequent intervals around the lake.

There is fun available for every member of the family at Lake Texoma. Enclosed fishing barges, air conditioned in summer and heated in winter, make for comfortable year-around fishing. Playgrounds provide rides for the youngsters; dance halls liven things up for the young at heart. And just plain fishing is there for everyone.

Although fishing guides are not necessary on the lake, there are a few experts like Max Eggleston on the Texas side, and Tag Anderson in Oklahoma. They take parties out to where the big old lunkers hide, or where the sand bass are known to be running.

Sand bass have made Texoma famous for its fishing. They hit almost any day. Introduced into the lake by both the Texas and Oklahoma departments, they have increased so rapidly there is no catch limit on the Oklahoma side. Texas allows 25 per day, but since most area fishermen have licenses for both States, it would be rather hard to get a conviction for catching over the limit in Texas. A license, either resident or nonresident, costs $2.25 per year in Texas. The resident annual license in Oklahoma is $5. The State has a 10-day nonresident license for $2.25.

Lake Texoma also abounds in catfish and bream for the benefit of trotline and pole fishermen. Trolling is one of the more popular fishing methods, and these boatmen set out in fast craft to find where the gulls are feeding on shad. They know sand bass have sent the shad to the top. They troll with such rigs as deep-diving Bomber and Helldiver lures, and come away with tremendous strings of sand bass, plus some very large black bass as well.

There are rough fish, too, and carp fishermen have plenty of fun with dough bait. Skin divers can take carp, buffalo, and gar with gigs or bows and arrows; this will be a new sport on Texoma this year.

The lake has contributed heavily to the economy of the area. The Yellow Jacket Boat Co., at Denison; Texas Boat Co., at Lewisville, and Lone Star and Sports Kraft at Grand Prairie have found ready markets at Lake Texoma. There is the Bomber Bait Co., at Gainesville, and the Whopperstopper at Sherman, all pulling their business from Texoma.

Other boat manufacturers, repair shops, trailer manufacturers, and accessory makers also furnish employment to hundreds of persons as a direct result of the proximity of the lake.

The Denison Reservoir area and its 195,326 acres of federally owned land are officially administered by the Corps of Engineers. They are responsible for the administration, development, and maintenance of both the land and the lake, including facilities for boating, fishing, and camping. The engineers also issue boat permits, supervise public concessions, and issue leases for commercial and homesite development.

Constant records of the number and kind of visitors show that most boatmen come between April and October, but the area is used extensively throughout the entire year.

There are some 500 large inboard cruisers on the lake. More than 1,500 rental boats and motors are available at the different concessions. The large party boat, *Idle Time*, which once operated in the Ozark lakes, was moved down the Mississippi and up the Red River to Denison Dam. It was then hoisted over the dam with winches, to provide for festive excursions on the lake.

But a big boat is not required for fun. With so many facilities, there appears to be room on Texoma for many more visiting boatmen for many more years to come.

L. A. WILKE.

Address by Postmaster General Summerfield

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered in Arlington, Va., by the distinguished Postmaster General, the Honorable Arthur E. Summerfield.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY POSTMASTER GENERAL ARTHUR E. SUMMERFIELD, ARLINGTON, VA., MAY 11, 1958

It is with a deep feeling of humility that I accept this award from the American War Mothers on behalf of the 530,000 men and women of the United States Postal Service.

To receive this award here in this hallowed national shrine—with its concentration of memories of unselfish heroism and its reflections on the glorious past, lends an especial dignity to this occasion.

And, of course, there is the mystical, and often heart-breaking role that you, the dedicated mothers of heroic sons and daughters, have played in the preservation of all that we hold sacred, which gives any award you might bestow a significance beyond the scope of words to describe.

As your Postmaster General it gives me a sense of great accomplishment today to know that you have seen fit to honor the postal establishment—in the language of the award—"for the manner in which it has carried words from home to soldiers, sailors, marines, and aviators the world over."

The most satisfying of the services which the Post Office Department renders is the transmittal of messages and packages from home to our American boys and girls who are serving in the defense of our liberties in every corner of the free world.

To satisfactorily met this fundamental human need in times of peace or of war, the Department of Defense and the Post Office Department exercise a standing agreement which assures daily continuous liaison on the countless details pertaining to the regular and certain exchange of the mails between military personnel and their families and friends.

There is an extraordinary significance to this occasion, for the freedom which your sons and daughters are defending is especially symbolized and typified by the postal service which we are inclined so often to take for granted.

The postal service—that unique system of efficient, uncensored and intimate communication which you have honored today—is not only essential to human liberty, it is capable of existence only where liberty is a very special thing, something deep in the blood of men, imbedded in the soil, immovable as mountains.

Over half the world's surface, in those darkened areas behind the Iron and the Bamboo Curtains, a postal system such as ours is not only impossible, it is anathema. In those unhappy lands, opinion must be smuggled out of the brain like contraband. Communication between men is more circumscribed than it was in the darkest Middle Ages.

The crisis we Americans face today is second to none in our history. It takes its place with Valley Forge and Saratoga, with Gettysburg and Manassas, with the Argonne and with Midway and Normandy Beach, and with all the other periods of grave national peril.

Across half the world a materialistic, godless antagonist lies crouching, prepared to spring at the least sign of weakness on our part. The philosophy which motivates the leaders of our opposition is founded on a repudiation of the Divine purpose—a denial that man, created in the image of his Maker, should everywhere be free in spirit and free in person.

We have survived every other peril that has threatened to engulf us and I am certain that we shall survive the danger that we now face.

I believe too fervently in the tough and sturdy qualities of our people, to think otherwise.

I could never entertain doubts about the spiritual strength that flows from the courage, the eager competitive genius, the proud self-reliance, the instinctive confidence which characterize this generation of Americans just as much as they characterized those generations which preceded us.

I could never waver in my conviction that the deep religious faith, which is accountable for our political system and for the concepts immortalized by our Founding Fathers, would ever be defeated by the materialistic tyranny of Marxism.

But we must never allow this quiet confidence to degenerate into complacency. We enjoy no Divine exemption from the lessons of history. We must never be seduced into thinking that, just because we are right in our belief in God and the dignity of man, that we are therefore immune to the foul contagion of materialism which surrounds us.

We must constantly be on the alert that collectivistic socializing influences, which for years have been at large in our great country, shall never gain complete ascendency and destroy the individualistic virtues which are our principal strength.

We must constantly resist any monopoly of power by any economic groups—whether it be the leaders of labor or the leaders of industry—so that the rights of others can be disregarded or abused.

We must forever be on guard against the constant and growing tendency to make of our elective system a catspaw of the lowest common denominator of human character.

This is an obligation we owe to the millions of our youth who died before their time so that we could inherit the fruits of their generosity—life, liberty, the pursuit of happiness.

Your sons and daughters have been most generous.

We must always strive to be worthy of their generosity; to be worthy of the liberty we have received from their hands.

We must be willing to sacrifice—of ourselves and of our substance—in order to preserve our way of life.

The cost of keeping ahead of our antagonist is enormous. We pay the cost in taxes; we pay the cost in the disruption of the careers of our young men and women. Thankfully, because of the leadership of a great President, we are no longer paying the cost in human lives.

The monetary cost of preparedness has amounted to $200 billion during the last 5 years. In a time of total peace those $200 billion would have bought highways and hospitals and schools and hydroelectric dams sufficient to supply our needs for many years to come. Those $200 billion would have performed miracles in the alleviation of human suffering, the relief of human misery, but they had to be diverted for the cause of survival.

The price has been enormous—but whatever it is, whatever it may be in the future—we can afford it—because any alternative is so much worse. A free America will always be willing and able to afford the cost of survival.

I know you are aware of these things. As American War Mothers you have contributed much and you are still making a notable contribution to the perpetuation of peace.

As mothers of our human bulwarks against enslavement, you provide a source of spiritual strength which no evil can subdue.

You know full well, from the rich but sometimes bitter experience of your own lives, that freedom is not something that can be won or lost in a day—it is not bought in the market place or rented for a weekend. It is something that must be owned outright by those who have fought to preserve it and who have earned the right to pass it on to their children.

There are trials yet to come. There will be strategems against our safety and our future.

But if we as a Nation show the same talent for sacrifice, the same willingness to stand our ground against a malignant fate as you have shown, then we shall remain free and powerful, a benign influence in a world no longer troubled by incipient hostilities.

With you help and your inspiration we shall together accomplish this.

May God Almighty bless your efforts and grant them success.

Thank you very much.

Tribute To Former President Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. ERVIN. Mr. President, on May 5, 1958, Mrs. J. Allen Frear, Jr., the accomplished wife of the able and distinguished junior Senator from Delaware, made an eloquent address at the wreath-laying ceremonies at the tomb of Woodrow Wilson, in the Washington Cathedral. This address merits the attention of all who revere the memory of Woodrow Wilson. For this reason, I ask unanimous consent that Mrs. Frear's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRIBUTE TO PRESIDENT WOODROW WILSON AT THE NATIONAL CATHEDRAL, WASHINGTON, D. C., MAY 5, 1958, DELIVERED BY MRS. J. ALLEN FREAR, JR., PRESIDENT, WOMAN'S NATIONAL DEMOCRATIC CLUB

SANCTUARY

I like to go into a place
When only God is there,
And bending low upon my knees
I bow my head in prayer.

UNIVERSITY OF MICHIGAN LIBRARIES

No doubt or fear can touch me there
My spirit is at rest,
For I am in my Father's house
A loved and sheltered guest.

And when I must go forth again
Where men indifferent plod,
I am the better for the time
That I have spent with God.

Thirty-four years ago the voice of a great Democrat, and a greater American, was stilled. Few men have left a more honorable estate than did this man, or so great a multitude of beneficiaries. For his heirs number all the peoples of the earth; and their inheritance—although it cannot be measured in dollars or cents, or in worldly goods—was magnificent.

The legacy that Woodrow Wilson left behind was an ideal, an ideal of peace and a kinship of nations; a kinship that asks no nation to abandon its right to individual action or opinion, but only that all nations abandon the age-old premise that might makes right.

As in all the course of human events, here was a prophet less honored among his own, than those standing enough distant to gain a truer perspective. The years—and the lessons they have taught—have gradually begun to bring the never-finished canvas of history into clearer focus, so that the brush strokes of its greatest artists can be better appreciated.

The patterns of the canvas of this 20th century, and its creators such as Woodrow Wilson, as viewed today, are more sharply defined, or at least we are more aware of them than in the past. Perhaps it is because so much history has been crowding onto the canvas that its impact has become inescapable. Perhaps it is because the old kaleidoscope of colors on the mixing palette has given away to a single color—to the scarlet of two world wars and of many smaller, but no less menacing conflicts, convulsing the outposts of nationalism, and to the scarlet of th flames encompassing the launching platforms of space-age rockets.

More and more, as I think of Woodrow Wilson, I associate him with a second man—a second advocate of American neutrality as a stabilizing force in a turbulent world, a second fighter in times of adversity. In many ways the scholarly, reserved Woodrow Wilson and Franklin Delano Roosevelt, the master politician and strategist, were spiritual brothers. Both strove to maintain American neutrality in the midst of chaos. Both found that the pen and the ploughshare were poor protection against the forces of evil. Both, in the end, must have felt that they were drinking of the bitter cup when they put pen to paper to declare that ploughshares must become weapons of war. For the one, the bitter cup was drunk at Eastertide. For the other, at the beginning of the Christmas season. For each, the entrance of the United States into the war was both an end and a beginning—the end of a dream, and the beginning of a new Christian crusade.

Franklin Delano Roosevelt lived long enough to know that the crusade would eventually succeed, that right would indeed conquer might. He died too early to learn that the world he left behind would yet know little of peace, and much of war. Woodrow Wilson, in a sense was less fortunate. True, he lived to see the end of one war. But he lived to drink of still another bitter cup, as angry debate in the Halls of Congress presaged the defeat of his hope that the United States would associate itself with the League of Nations—an ideal brought into reality through his own dedicated determination that the world must find peace, or else destroy itself. Wodrow Wilson must surely have felt that he had failed in all, when he did not succeed in persuading his own people to embrace an idea so readily accepted by nations more stricken than his own. He must have foreseen, too, that without the prestige of the United States, the League of Nations could not long endure.

Yet, who are we to say that Woodrow Wilson did not live to see his own country embrace his ideal of a world forum, or that he does not live to see that body—the United Nations—faltering, though it sometimes seems to be, yet struggling to become the guiding force for permanent peace.

And so, can we not have the faith, then to believe that the spirit of Woodrow Wilson is ever present in the assembly halls of the tall edifice on the river front of the world's greatest city—unseen, but speaking with a sure voice to his heirs—to the men and women of 67 nations—counseling with them to believe that might can never make right, that peace in their time can indeed by their heritage, a heritage which they, in turn, can pass on to those who come after.

As Longfellow has so well expressed:

"Lives of great men all remind us
We may make our lives sublime
And, departing leave behind us
Footprints on the sands of time."

The Late Alvan T. Fuller, Former Governor of Massachusetts

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Boston Herald of May 2 concerning the late Alvan T. Fuller, ex-Governor of the Commonwealth of Massachusetts. During his 80 years, Governor Fuller made many important contributions to the people of the Commonwealth of Massachusetts, and his service as Governor was exemplary. He contributed to the business success of the State, and was a noted philanthropist. I believe that this editorial well sums up the service of the late Alvan T. Fuller.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Boston Herald of May 2, 1958]

ALVAN T. FULLER

"In his 4 years of service he has faced tasks which would have broken a man of less physical and intellectual stamina. He has borne his heaviest burdens in silence * * * with a full realization that he was performing thankless tasks for which his only reward would be the approval of his own conscience. No braver man has ever been Governor."

On January 2, 1929, when we wrote these words in the Herald, Alvan T. Fuller, an ex-Governor, faced the long and lonely walk down the steps of the statehouse into private life. Behind him lay four of the stormiest years in the history of the Commonwealth, years that demanded a Governor of extraordinary resolution. Ahead lay, presumably, the benign years of retirement.

But an individual like Alvan Fuller could never be satisfied with inactivity. Even in the dusk of his life span he was a force. The habit of service to the State and to the numerous charities that he sustained from an anonymous position was too ingrained. He sought the background yet he was still an impressive and vibrant part of the Massachusetts he cherished.

Governor Fuller's life was a success story; but it was also, more importantly, a symbol of Emerson's dictum that the only ultimate triumph is the triumph of ideals. Typical of the man was the fact that he never accepted a salary or allowance or expense in any public office he held. He kept faith in the ideals of business, which had brought him personal success, and applied those ideals to government.

Nowadays, it is rather fashionable to believe that business is incompatible with good government; that they are two different orders of administration. But rectitude is not exclusive to business; nor sound economy; nor loyalty; nor discipline; nor the refusal to dilute one's standards for the passing moment.

The Sacco-Vanzetti case was the most controversial incident of Governor Fuller's political career, and it was unparalleled for the bitterness and high feeling engendered, which ripples even today. The Governor acted in accordance with his conscience. The terrible pressures of that time did not sway his judgment; and he took the course compatible with his belief after dispassionately examining the evidence. He could not do otherwise.

The acrid debates that have swirled over Sacco-Vanzetti too often have obscured the courage of the Fuller position, the anguished humanity that went into its finality, and the very real achievements of his administration. That his was a distinguished term even his most outspoken foes acknowledge. The valedictory we wrote in 1929 withstands the test of time.

Alvan Fuller contributed to Massachusetts on many levels. As a businessman he showed acumen, nerve, and imagination. As a public figure he served selflessly. As a philanthropist he contributed generously and wisely. He was the prototype of the unselfish success; and his ultimate triumph was Emersonian and enduring.

Tenth Anniversary of the State of Israel

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in one of New Hampshire's leading daily newspapers, the Concord Daily Monitor, on Saturday, April 26. This fine editorial, entitled "Israel's 10 Years," relates to the 10th anniversary of the State of Israel.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ISRAEL'S 10 YEARS

A tiny new state entered the family of sovereign nations in the spring of 1948 in the midst of crashing turmoil and beleaguerement by hostile armies. Since that time Israel has had to fight for survival from the moment of its birth.

In spite of tremendous handicaps, Israel not only has survived through the decade just past, but it has steadily gained in economic and industrial strength, in its population and in its cultural and military resources. For centuries a cherished dream

has been a Jewish homeland. In a measure almost beyond belief, courage and resourcefulness have made this dream a reality.

Israel has had more than its share of travail. To build a refuge for immigrants, to maintain a firm economic status and to hold off antagonistic neighbors who would throttle the nation, if they could, has been a tremendous task.

A cardinal tenet of Israeli policy has been peaceful relations with its neighbors. The Israel Government has never stopped trying to negotiate a peace settlement with the Arab States because they know cooperation between them and the Arabs would be the best thing for everyone in the Middle East. But if their offers of amity continue to be repulsed, they will not give up what they have.

The conflict between the Arabs and Israel is of long standing. It started from the moment the United Nations endorsed an independent Israeli State in Palestine, together with a separate Arab State. The Arabs refused to accept the United Nations decree, and they set out to nullify it with arms before the Israelis could form the state allowed them by the United Nations partition plan. Arab armies spilled into Palestine from all directions in a frantic effort to drive the Israeli defenders into the sea.

That these and subsequent attacks have been repulsed is a tribute to the ability of Israel to hold its own against repeated raids across its boundary. There is still an armed truce facing Israel. There is still the haunting problem of what to do with Arab refugees.

Looking back, Israel can point to progress under great stress. Looking ahead, Israel can be hopeful that tensions will ease, that the economic situation will be even brighter and that it will be able to maintain its position as a stronghold of democracy in the Middle East.

The Bronx Has Everything

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. BUCKLEY. Mr. Speaker, with equal justice the Bronx might be known as the "Borough of Universities" or the "Borough of Parks." Its schools and colleges, including Fordham, New York University, Manhattan, Mt. St. Vincent, New York State Maritime College, the Salvation Army College, and Hunter, are numerous and outstanding and more than one-fifth of its total area is devoted to its park system.

Jonas Bronck, who purchased a 500-acre estate in 1641, was the first settler. Neighbors spoke of visiting "the Broncks" and in time the name was applied to the whole region.

City Island, in Long Island Sound off the Bronx shore, is a leading pleasure boating center.

The story of the growth of the Bronx and its outlook for the future has been compiled by the Bronx Chamber of Commerce, which is set forth below:

THE BRONX HAS EVERYTHING

The Bronx is the borough of the future. Overcrowded, overburdened Manhattan has burst its seams. Industry is marching northward.

The population is well over the one and a half million mark (estimated to be 1,700,000). It is larger than the cities of Boston, Baltimore, Pittsburgh, Cleveland, or St. Louis. In 1900, the population was 200,507.

The borough has an area of 42.75 square miles or 27,365 acres. Its greater length is 8.1 miles and its greatest width is 9.2 miles. It is the only borough on the mainland. All of the water surrounding 3 sides of the Bronx is navigable, and there are 3 navigable streams in the borough: (1) Eastchester Creek or Hutchinson River, navigable through Pelham Bay Park to Mount Vernon; (2) Westchester Creek, navigable from East River to Tremont Avenue near Westchester Square; and (3) Bronx River, formerly navigable from the East River to West Farms, but under Commissioner Moses' highway improvement plans now navigable only to a turning basin at 172d Street.

A network of super highways ribbon through its boundaries—Major Deegan Expressway—the southern terminus of the New England Thruway into Bruckner Boulevard—Cross Bronx Expressway, and so forth.

The highest natural elevation in the Bronx is Riverdale Hill, 284.5 feet above sea level at 250th Street and Iselin Avenue. Even at the Concurse and 199th Street it is 148.64 feet. The Bronx, known as the Borough of Universities has 8 large colleges of which 3 have football teams; Fordham, New York University, and Manhattan. The other five are Hunter College, Mount St. Vincent, State University Maritime College, Albert Einstein College of Medicine, and the Salvation Army College. Other educational facilities include 9 public high schools, over 100 public schools, all kinds of parochial and private schools as well as excellent business schools.

The Bronx has the largest park area for a community of its size in any city of the United States, 5,755 acres—Pelham Bay Park—the city's largest—Van Cortlandt Park, Bronx Park, and a score of smaller ones. Bronx Zoo houses approximately 2,600 specimens in 252 acres.

The Bronx has 200 churches of every denomination and 99 theaters including 1 open air drive-in-theater.

A new 63-acre municipal hospital center has been constructed in the East Bronx. Units include Jacobi Hospital, Van Etten Hospital, and the new $1 million Einstein College of Medicine. Eight-million-dollar Misericordia Hospital is under construction in the North Bronx. There are 75 banks and banking institutions in the Bronx.

Industrial expansion has been strong these past 5 years. Hunts Point industrial development—iron, steelworking plants, gypsum and cement factories—known locally as Little Pittsburgh. Diverse manufacturing includes electrical equipment, rotary presses, printer's ink, machinery, hardware, paper products, furniture, foreign currency, postal and revenue stamps, securities, glassware, ceramics, upholstery, paints, varnishes, woodworking, boats and marine equipment. The Bronx is the plywood center for the lumber industry, and boasts of the largest haulage company east of the Mississippi. The postwar years have seen strong development of the plastics industry.

Huge residential areas cater locally to neighborhood needs, groceries, meats, dairy products, men's and women's apparel, cleaning and dyeing, drugs, confections, and automobile repairing. The borough does more than $500 million worth of retail trade annually.

The Bronx is served by 5 railroads, only 2 of which, however, carry passengers here. The city tax department lists 797 Bronx structures as factory buildings. There are 2,444 store buildings and 2,062 garages. Many of the latter have been converted to manufacturing use. Commercial type buildings in the Bronx includes 219 warehouses, 70 loft buildings, 71 office buildings, and 2,450 miscellaneous types. Although there are 8 cemeteries, only 2 of them, Woodlawn and St. Raymond's, are now in use. With its healthful climate, the Bronx doesn't need any more. Ours is the lowest death rate in the city of New York.

The Bronx lies in the heart of the most densely populated area in the United States. It is the natural geographic hub of the entire metropolitan area, adjacent to New Jersey, Westchester County, upper New York State, and New England, Queens, Brooklyn and Manhattan. It is the ideal depot for the manufacturer and distributor of national products.

Bronx Terminal Market, 151st and Exterior Streets, covering about 37 acres, is the most complete market in the metropolitan area. The location is ideal for the distribution of all types of food; delivery can be made to the entire New York area, Westchester, Long Island, and a good part of New Jersey, without passing through congested traffic. There are approximately 100 wholesale merchants; the cold storage warehouse has a 3.5 million cubic foot capacity; refrigerating plant has a capacity of approximately 1,000 tons, there are 3 miles of railroad tracks with a 300-car capacity.

The Bronx provides an excellent labor market. Its huge population consists mostly of wage earners. Its residents are small homeowners and apartment dwellings; 91 percent of the people pay rent. There are 22,294 one-family dwellings—20,775 two-family dwellings and 19,988 multi-family buildings. Apartment housebuilding has jumped—over 200 new apartment buildings in the last 5 years. Riverdale abounds in new luxury apartments. Throg's Neck, Baychester, Pelham Bay areas have had extensive single home development. Public housing—18 projects are in full operation with 20,972 families—cost $253,722,258; 10 new projects buildings—will house 9,579 families. Located in the west central part of the Bronx is the Fordham Road district, its largest and most important shopping area. Serving the consumer cross-section that shops here are department stores, many chain and independent specialty shops and variety stores. Developing earlier than Fordham Road as a shopping district, 149th Street and Third Avenue still serves much of the east Bronx. Most stores run a bargain operation and offer merchandise with feature plans for easy credit terms.

Parkchester, a huge, privately owned housing development, in the Unionport section of the Bronx (266 acres—40,000 persons—greatest single apartment community in the world), has a modern and complete shopping district. One of the first branches of any downtown department store opened here nearly a decade ago. The Parkchester shopping district has many of the features of the modern shopping center as well as those of a district.

The Mallory Case

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "Mallory Critics" from the Washington Evening Star of May 10.

The editorial points out some facts that should be brought to the attention of every Member of Congress in considering the legislation to modify the Supreme Court's ruling in the Mallory case.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of May 10, 1958]

MALLORY CRITICS

The decision of the Judicial Conference to indorse the Keating-Willis bill, which would modify the Supreme Court's Mallory ruling, ought to carry much weight with Congress. For it is especially significant that all of the judges who participated in the voting cast their ballots in favor of the pending legislation.

It is true that some of the judges abstained from voting. We do not know the precise division among these judges. But it certainly is true that some of them favor the modification while others oppose it.

The effect of the Mallory ruling is to invalidate voluntary confessions and any other evidence given by a suspect to police unless the former has been arraigned without unnecessary delay. This is the interpretation which the Supreme Court has put on rule 5 (a) of the Federal Rules of Criminal Procedure.

There are 2 things to remember. One is that the Court's decision purports to reflect the will of Congress in approving the rules. The other is that the Supreme Court Advisory Committee, which drafted the rules, expressly rejected a proposal to invalidate confessions obtained under circumstances comparable to those in the Mallory case. For years the courts here adhered to the view of the advisory committee.

The point of this is that Congress unquestionably has the right, if it sees fit, to modify the Mallory rule, and the modification proposed in the pending bill would not entail any drastic or revolutionary change in the law which had prevailed here for many, many years. Criminal suspects still would be protected against third-degree tactics and corced confessions. But if they voluntarily confess, then their confessions would not be thrown out merely because of some delay in arraignment.

We believe that adoption of the Keating-Willis bill, or something like it, is essential if there is to be reasonably adequate law enforcement in the Nation's Capital. It was difficult enough, prior to Mallory, to obtain convictions. Now, as a result of Mallory, this becomes virtually impossible in many types of crimes. And it is the public which suffers.

Representative McCormack's Remarks Commemorating the 10th Anniversary of the State of Israel

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. FRIEDEL. Mr. Speaker, it is indeed a privilege and a pleasure for me to take this opportunity to call to the attention of this body the very forceful and inspiring words spoken by one of our most able and distinguished colleagues, the Honorable JOHN W. MCCORMACK, of Massachusetts. These words were delivered in Baltimore on the occasion of our city's commemoration of the 10th anniversary of the founding of the state of Israel.

I am indeed honored, and I feel that the people of Baltimore were extremely fortunate, in that the gentleman from Massachusetts took time from his extremely busy schedule to join our celebration. This celebration was held in the Lyric Theater in Baltimore on April 24, 1958, and in attendance were more than 1,500 persons including the Governor of Maryland, the mayor of the city of Baltimore, other Members of this body, and other distinguished guests.

Because of the importance of this message, I include in the RECORD the principal address delivered by our distinguished and respected majority leader, the Honorable JOHN W. MCCORMACK:

Mr. Toastmaster, Reverend Clergy, Your Excellency Governor McKeldin, the distinguished visitors from Israel, my close friends and distinguished colleagues, Congressman SAMUEL FRIEDEL and Congressman GEORGE FALLON, distinguished and invited guests, ladies and gentlemen, I am very happy to be with you tonight as a result of the invitation extended by you to me through my valued friend, Congressman FRIEDEL. When I received the invitation from Congressman FRIEDEL, I was in Boston over the Easter holidays. My favorable response was immediate. I could not say "No" to my good friend, SAM FRIEDEL. There is no Member of Congress who enjoys the confidence and respect of his colleagues more than does Congressman FRIEDEL, and this also applies to Congressman FALLON. In paying my respects to one, I also pay my respects to the other, because they are both indivisible, as they are both outstanding Members of Congress and highly respected by Democratic and Republican Members thereof. The people of the districts represented by Congressman FRIEDEL and Congressman FALLON are justified in feeling proud of them.

Ten years ago there came into the council of the nations of the world a new nation, comprised of people of proud and ancient lineage, the new nation of Israel.

Established under the most trying circumstances, its people with the desire and will for independence and freedom, have made history during the past 10 years that is remarkable and outstanding.

The United States, through former President Truman, was one of the first countries to recognize the new nation—an act of great importance—giving early strength and dignity to the new nation, as well as hope and confidence to her people.

Instead of being treated with friendship by her neighbors, they have treated Israel and her people with hatred and with determination to destroy her.

While Israel has prospered and advanced during the past 10 years, the implacable hatred of her neighbors still exists.

As a result, Israel has a staggering military defense burden involving one-sixth (officially) to one-half (unofficially) of her national budget.

Prime Minister Ben-Gurion, one of the ablest statesmen and leaders of this trying period of history, has evidenced clearly the desire and willingness of Israel to negotiate peace in the Middle East, but to no avail due to the hatred of Israel that exists in her neighbors.

In addition, Israel has a chronic trade deficit and last year it was nearly $300 million.

As long as present conditions exist, it is imperative for Israel to be strong from a military angle.

It is therefore necessary for friends of Israel throughout the world to continue financial assistance in order that Israel might survive, and for her brave people to prosper.

On the governmental level our Government should manifest its friendship for Israel in concrete form.

It is in the national interest of our country to see that a friendly and independent Israel exists.

The people of Israel with their democratic government are dedicated to liberty and to the inherent rights of man. They stand for a government of law and not of men. They believe in the same fundamental ideals and principles of government as we of America do.

The form of government may be different, but the substance of government is the same.

There is no nation in the Middle East, and even further, there is no nation in the world, whose friendship we can rely upon more than we can that of Israel.

And in our dealings with other nations, by all means we should not forget or ignore our friends, and this applies with particular emphasis to brave Israel.

I make this statement because our present administration seems to be undergoing a change toward Nasser.

We hear of an intention to remove restrictions imposed on Egypt as a result of Nasser's nationalization of the Suez Canal in 1956, and in particular, to unfreeze Egyptian assets in the United States amounting to about $30 million.

There is also under consideration administrative action to furnish United States Army dredges to improve the Suez Canal—to deepen and enlarge the canal—and also to add the united Arab Republic to be eligible for United States economic grants and loans.

We are aware that the World Bank within the past few weeks has announced that it would help plan Egyptian expansion of the Suez Canal.

Under no conditions should any change toward Nasser be to the disadvantage of Israel.

These are times when he who is not with us is against us and one thing is certain, Israel has always been with us.

The cause of the unrest in the Middle East is mainly due to Nasser; to his intense ambitions and to his hatred of Israel and her people.

Any policy on our part should have a complete regard for the best interests of our friends throughout the world. And in the Middle East this should in particular apply to Israel.

Speaking as I am as an American to Americans, and seeing the relationship that exists between our country and Israel, and from the angle of the best interests of America, it is in our best interest to see that Israel retains her independence and that her people advance and prosper. For Israel is the one nation in the Middle East area upon whom we can depend. Her friendship for us is not superficial. It is real, significant and lasting.

And in the light of the intense interest of the Soviet Union in helping Nasser, and in cooperating with those who are bent on destroying Israel, our country might well announce, as it properly did in the case of Turkey, that an attack on Israel would be considered as an offensive act to us and contrary to our national interests. There are other steps that we can and should do, but such an announcement is of paramount importance and would have a most beneficial effect, not only in connection with Israel, but in connection with our entire interest in the Middle East area.

While the main cause of tensions in the Middle East is the dictatorial ambitions of Nasser and his hatred of Israel, the main

source of his strength is the military and economic assistance he receives from the Soviet Union.

In connection with this it must be borne in mind that Khrushchev, and those associated with him in the Communist Party, and those in the Soviet Union, are anti-Semites.

It is very apparent that Khrushchev is complete master of the Soviet Union. It is strange to read the erroneous impression conveyed to the Western World about changes that have recently taken place in the Communist Party and in the Soviet Government itself by the elevation of Khrushchev as both leader of the party, and Prime Minister of the Soviet Union.

While Khrushchev is the master at the present time, he is more the expression of an entire new team taking over than as yet the sole power. As he consolidates his control, he will then tend to become another Stalin. He may use different methods, but the end will be the same.

Let us take a look at the new team.

For example, the first deputy prime minister is one Kozlov. He is a strong Khrushchev man. He is anti-Semitic—bitterly so.

Another top team member is Poliansky. Under Khrushchev his rise has been rapid. He is also bitterly anti-Semitic.

I could mention others, but the interesting thing to note is that with Khrushchev the head of the party, and also the actual head of the state, he has selected as top officials of the Soviet Union men who are pronouncedly, or bitterly, anti-Semitic.

And this fact must be evaluated properly in connection with the Soviet policy in the middle east, and particularly in connection with Israel.

And this makes it all the more imperative that the United States should affirmatively and definitely state its position, serving notice that the national interest of the United States, and the national interest of Israel are consisent with each other, that any attempt to destroy Israel as a nation will be considered as an offensive act by the United States.

Let us view briefly the remarkable record made by Israel during the past 10 years. For example, its population has increased from 650,000 to 2 million souls. During this period 450 villages have been built, farming land has been more than doubled—industry has increased sevenfold. Under the leadership of Ben-Gurion, Israel and her people are looking forward to the future building of a network of farms, factories, and mines in the Negev Desert, reclaiming the desert for useful purposes. Little Israel looks forward to the development of its commerce.

Its defense consists of a highly trained army plus a ready reserve that includes almost every able-bodied man and woman, but this constitutes a great financial burden. It is absolutely necessary for little and brave Israel to maintain such defenses. Without the aid of the Soviet Union, the combined forces of the Arab nations, even if concentrated on little Israel, would be unable to bring about its destruction. For the people of Israel have the fight and they will fight if attacked.

Under the leadership of Ben-Gurion, every honorable effort has been made with her neighbors to bring about peace in the Middle East. All of these offers have been rejected. We read in the papers of Nasser's statement of the aggressive intent of Israel. The very facts show the hypocrisy of his statement about any aggressive intent on the part of Israel. For Israel is a nation of only 8,050 square miles, while the 7 Arab States have an area of 1,675,234 square miles. The population of the Arab States is 47,797,000, while the population of Israel is a little under 2 million. The exact population of Israel as of December 31, 1956 was 1,677,455. During the next 10 years with its broad immigration policy to help persecuted Jews throughout the world, and the normal increase of population under peaceful conditions, the population of Israel will not exceed 4 million persons.

The history of Israel and its progress during the past 10 years is one of the most remarkable in history.

While we honor and congratulate this brave little country and her people on their 10th anniversary, and while Israel is much stronger than it was 10 years ago, danger still exists in the person of Nasser and what he represents, backed up by the support of the Soviet Union. All that Israel wants is peace with her neighbors and in that peace to not only advance herself, but to make her contributions, if desired, toward the advancement of her neighbors and their peoples.

The Vice President's Goodwill Tour

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Constantine Brown which was published in the Washington Evening Star of May 12, 1958.

I commend this article to my colleagues and the public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISDOM OF NIXON TRIP QUESTIONED—HISTORY OF JAUNTS SINCE WILSON'S TIME SHOWS STAY-AT-HOME POLICY PREFERABLE

(By Constantine Brown)

Was it necessary to expose Vice President NIXON, the second highest elected official of the United States, to insults and physical assaults such as he suffered at the hands of Communist-led students and crowds in Latin America?

Is the idea well founded that state visits by American Presidents, Vice Presidents, and other high-ranking officials to foreign countries stimulate good will toward the United States?

These are questions which many foreign political observers are asking after Mr. NIXON's grueling receptions not only in Peru and Argentina but, to a lesser degree, in other Latin American Republics.

Nobody in Buenos Aires appeared to have found it necessary to apologize for the traffic jam which prevented Mr. NIXON, who was the official representative of the United States at the inauguration of the Argentine President, from attending the swearing-in ceremonies. Yet this was the official purpose of the visit.

Was not the old practice of the American President and Vice President tending to their knitting at home a better one? The old saying that familiarity breeds contempt could well be applied to the good-will traipsings of the highest American officials all over the world.

Until the end of World War I there was what might be described as an unwritten law that the Chief Executive and his first lieutenant never leave American shores. President Wilson broke the tradition and went to the Paris Conference in 1919. Hindsight taught us that this country and for that matter the rest of the world would have been much better off today had he remained in Washington and insisted from afar that his 14 points be accepted.

Hindsight also shows us that President Roosevelt's two meetings with Stalin and Churchill at Teheran and Yalta helped plunge the world into the present turmoil, which might have been avoided had he stayed at home and directed diplomacy from the White House on the basis of the sound principles of the Atlantic Charter established with Churchill at Argentia on August 19, 1941.

President Truman did not do particularly well at the Potsdam Conference. He realized this and refused thereafter all tempting invitations to cross the Atlantic again. President Eisenhower burned his fingers at the summit conference at Geneva in 1955 but still feels inclined to cross the Atlantic again if given a chance for another top-level parley.

For good-will trips, Mr. Eisenhower deputizes his second in command, Vice President NIXON, to represent him and the powerful United States. This is an entirely new departure in our established diplomacy. Its wisdom is being questioned by many observers who are aware of the Communist infiltrations all over the world. They wonder whether the dignity of our country would not be better served if our Chief Executive and his heir presumptive were spared insults and physical assaults by staying home.

Experts on Latin American affairs point out that the ardent Latin students and crowds who displayed much more than a lack of courtesy to Mr. NIXON were urged on in their actions by Communist agents and fellow traveling students and jeer leaders. This is unquestionably true, and we may have to take some blame for it. The administrations during and soon after the war rammed the Soviet regime down the throats of the South American Governments by pressuring them to give diplomatic recognition to the Reds for the sake of good neighborliness. We thus naively helped establish in South America centers of Communist infection which are now mushrooming everywhere.

The governments such as in Peru and Argentina have excellent police forces well accustomed to handling demonstrations and and demonstrators. But they felt that in Mr. NIXON'S case it was preferable not to use the strong arm.

Withdrawal of Federal Troops From Little Rock High School

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. THURMOND. Mr. President, the Nashville Banner of Nashville, Tenn., has been one of the leading publications in voicing the protests of supporters of constitutional law against the action of the Federal Government at Central High School in Little Rock, Ark. The Banner has been an eloquent spokesman for constitutional government.

I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the May 8 edition of the Banner entitled "The Lesson to Uncle Sam: Never Again," in which the Banner expresses its reaction to the or-

dered withdrawal of Federal troops from the Little Rock school.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LESSON TO UNCLE SAM: NEVER AGAIN

With the ordered withdrawal of all Federal troops from Little Rock's Central High School, a stupid, tragic blunder will wend its way into history. A Nation of conscience, concerned for the fundamentals of constitutional law, trusts it never will be repeated.

By that affront, Little Rock became an occupied city in violation of bedrock principle. The Federal Government was in an untenable position, unrelieved by the obvious fact that it was on a spot of its own making, and unredeemed by repentance at leisure of a bungle contrived in haste.

Unquestionably the President was pushed into that insufferable action by advisory forces of reckless irresponsibility. That is no excuse for military invasion of a sovereign State, remindful of reconstruction and prejudicial to the very cause of orderly government and balanced authority, American style.

That this withdrawal coincides with the end of the school year is, of course, significant. It at least indicates, however, that the Army does not intend to chaperon these eight or so children through the vacation periods.

It is a safe wager that Federal authorities have had an ample lesson in this experience, dissuading them from notions of armed encroachment—or bayonet rule—in the future. The difficulty of graceful extrication speaks for itself. The high dive of dudgeon busted several necks, including that of the erstwhile Attorney General, Herbert Brownell, Jr., who nudged Uncle Sam out onto that tricky limb.

Wounds can heal—whatever the scar they leave—if treated intelligently. The Little Rock blunder inflicted that wound. It provides a perpetual lesson of how not to treat a case or an issue which is, under the law, for local or State amelioration.

It is an inglorious chapter thus concluded.

The departure of these troops will be 9 months late.

They should never have been sent.

Let this be the end of an experience that affronted decency and could have erupted into major tragedy for the Nation.

Purebred Dairy Cattle Month Proclaimed in Michigan

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. POTTER. Mr. President, in my State of Michigan, the month of May has been proclaimed as Purebred Dairy Cattle Month in recognition of the great progress which has been made in the dairy industry through the combined efforts of various organizations interested in the farmer and all of our citizens.

It is fitting that such recognition be given the purebred dairy cattle industry. I therefore ask unanimous consent to have printed in the Appendix of the RECORD, the words of this proclamation, which are most appropriate.

There being no objection, the excerpt from the proclamation was ordered to be printed in the RECORD, as follows:

Much of the credit for the vast progress that has been made in breeding and developing the dairy cattle of this land should be given to the purebred dairy cattle associations, the research and service work done by State and national departments of agriculture, the extension staff of our colleges of agriculture, and the master breeders of the Nation. The able and energetic men who are concerned with bettering our dairy herds never cease to strive for better animals which will provide greater production.

All dairymen profit from the program of the purebred dairy cattle associations, thus providing more and better dairy products more economically. The cow is the production unit that is the key to an industry giving employment to one-seventh of our population and furnishing about one-fourth of our food supply. Dairy products provide nature's most nearly perfect food which is the basis for building young strong bodies for a greater America.

Leadership of American Women

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. WILEY. Mr. President, yesterday, in the spirit of Mother's Day which we celebrated last Sunday, I pointed out the splendid work of the United Nations Commission on the status of women.

I pointed out then that we of the United States have rightly taken the lead in helping to improve the position of women throughout the world; particularly in the underdeveloped world, where, after long centuries, women are at least coming into their own.

Perhaps the finest of all ways, however, by which we are helping the cause of women's equality throughout the globe—legal, political, economic, social, psychological equality, is by example.

Whose example? The example set by inspiring American women leaders, themselves—single women and married women.

Every time a woman rises to high position in the United States, in the halls of the United States Congress, in the executive branch of the Government, in the judiciary; every time a woman rises to high position in private fields of endeavor; by her very rise, she enheartens women throughout the world.

INSPIRATION FROM THE FAMOUS AND THE UNKNOWN

And a woman need not be famous to set a shining example.

In millions of American homes, there are relatively unknown women who inspire us all by their patient, devoted work—as homemakers, as mothers, as wives, yes, too, as members of the P. T. A. and of neighborhood councils and of women's clubs.

Of course, a particular source of inspiration is the woman of fame like Mrs. Anna Eleanor Roosevelt, Helen Keller, Senator Margaret Chase Smith, Dr. Katherine Oettinger, Mrs. Alice Leopold, Clare Luce, Ann Morrow Lindbergh, Helen Hayes, Oveta Culp Hobby, and countless others.

CONQUERING ANY SENSE OF LIMITATION

Every such famous woman demonstrates by dynamic example to women in the United States and abroad that no one should have a sense of personal limitation.

The basic fact that a potential leader is a woman, or that a potential leader had origins in some particular class or economic condition or geographic area, or race or creed, this or any other irrelevant circumstance of birth, should not serve to prevent any natural-born leader from rising to the highest position, attainable by dint of his or her native ability.

In looking around our land, one finds a great many fine women—similar to those whom I have mentioned—who can well serve as illustrations of the point I have just made as sources of inspiration to women everywhere.

NO SELF-IMPOSED BONDS

And the reason I say everywhere is because we need to have women here in our own United States break whatever bonds are upon them—self-imposed bonds, like personal feelings of inadequacy, or bonds imposed by unthinking men; bonds which limit their growth and prevent them from making their fullest contribution to society.

I could cite many other symbols of women who have long since proven that every human being should be considered on his or her own merits and not on the basis of his or her sex.

I cite, now, two such women in related fields.

One is in Government life. One is in private life; but is active in so many public causes that one might almost consider her in public life, as well.

DEDICATED PUBLIC SERVICE BY MISS SWITZER

The first is the director of the Office of Vocational Rehabilitation, Miss Mary Elizabeth Switzer; an esteemed civil servant since 1921 who has made immeasurable contributions to the cause of rehabilitating the handicapped. This latter is a subject which I have brought to the attention of my colleagues on many occasions, particularly in connection with last week's meeting of the President's Committee on Employment of the Physically Handicapped.

Among the many honors Miss Switzer has received is a doctorate of law from Adelphi College, Long Island, N. Y.—a fine educational institution which emphasizes, as she does, the serving professions.

PRIVATE CIVIC LEADERSHIP BY MRS. LASKER

The second is the famous Mrs. Albert D. Lasker, a great woman in her own right who has deep roots in my own State. Mrs. Lasker has generously and selflessly written worthy chapters in the annals of civic and humanitarian achievement of this country, chapters which take their place alongside the fine pages written by her late husband, dean of the American advertising world.

I ask unanimous consent that two biographical summaries of these fine women be printed in the Appendix of the RECORD.

The first from the Milwaukee Journal dates back to an appearance at Marquette University in 1956 by Miss Switzer, but the article is still timely.

The second is from the May 2 issue of the New York Herald Tribune, at the time Mrs. Roosevelt presented the 9th annual Albert Lasker Medical Journalism awards, in the presence of Mrs. Lasker and other distinguished Americans.

There being no objection, the biographies were ordered to be printed in the RECORD, as follows:

GOVERNMENT'S FAVORITE AUNT

Most people think of Government officials as a strange strata, hands tied with red tape, hearts buried somewhere beneath a barrel of statistics, and a half dozen secretaries away from any caller.

But Miss Mary Elizabeth Switzer quietly disproves the legend. Director of the Office of Vocational Rehabilitation of the Health, Education, and Welfare Department, she visited Milwaukee to attend the Marquette University conference on international cooperation for the improvement of our health and welfare.

In the last three and a half decades Miss Switzer's days have been filled with the famous, and much of her time has been spent on policies which have shaped and governed the country. She has helped lay the groundwork for many important health and rehabilitation services, cancer and heart foundations, war-research-center legislation. Adviser to cabinet members and presidents, assistant to the high Government officials, researcher, consultant, Miss Switzer has probably organized, expedited, revamped, researched, guided, overseen, bossed, and shouldered responsibilities for more projects, organizations, committees, programs, services, and legislation than any other woman in Washington since the day in 1921 when the Treasury Department hired her as an economist and she began to inspect factories and small businesses in the District of Columbia for the Minimum Wage Board.

LIKE A FAVORITE AUNT

The 1955 Who's Who in America summarizes Miss Switzer in 3⅝ inches of closely set type, outlining 35 years of impressive positions in her Government career. But the concise compendium tells nothing of the ups and downs, the warmth and courage of this pioneer, nor how her eyes crinkle when she smiles. Last week, gray haired, sweet-faced, a sparkling peacock on her shoulder, and not a secretary nor a snip of redtape in sight, she was as approachable and good humored as a favorite aunt, and, indeed, looked quite like one.

All through the years, she admitted, she has found that shrewd judgment and talent must be tempered with emotions.

MUST INVEST EMOTIONS

"Of course, I'm much better at my job because I'm a woman," she nodded energetically. "Being a woman, I know I bring to it something no man can bring. That's our greatest trouble in this field. We need more women. I wish I could interest women's colleges; I wish I could get more young women interested. We need an emotional investment that only women can put into it. I think, for instance, the fact that I'm a woman has made it possible for me to see and do a great many things in my present job that have never been done before."

Where does such a women begin the long climb to head one of the most important administrative job's in today's government?

Quite simply, Miss Switzer pointed out, at the bottom.

FEW WOMEN WORKING

A long-legged, pretty girl, brought up in the mill town district of Newton, Mass., she waited on tables and took care of kids to work her way through Radcliffe. When she got her diploma in 1921, she was the first undergraduate in the history of the college to major in international law, and she has been drawing heavily ever since on that background.

In Washington, by chance because she was an admirer of Elizabeth Brandeis, Mary Elizabeth Switzer found herself one of the first women in the then relatively small Government bureaucracy.

"There were a few in child labor and home economics, but for a long time I was the only college educated woman you could see in the Treasury Department," she recalled.

The late Tracy Copp, Green Bay, who organized the vocational rehabilitation work she now heads, was her first friend in Washington, Miss Switzer recalled. "She was my ideal. It was her conduct and demeanor as a public servant that I tried to imitate, not always with too great success. But I suppose that was because she was not as emotional as I."

The young civil servant found she had to put her talented hands to everything, including mimeographing.

* * * * *

In the years that followed she served as assistant to the assistant secretary of the Treasury in charge of public health, a member of the committee to coordinate health and welfare, and finally, as assistant to Paul McNutt, head of the Federal Security Agency.

SHOULDERED RESPONSIBILITIES

"It was in that position I came to a kind of maturity," Miss Switzer reflected. "I was just the right age. And when I look back now and realize the responsibilities I took during the war years, it makes me shudder."

To this woman fell the job of drafting the revolutionary 1943 bill to expand vocational rehabilitation, the task of organizing the war research center and many other jobs, including procurement of medical personnel for the War Manpower Commission. She helped draft the charter for the UN. World Health Organization, has represented the United States at several international health conferences, and among scores of other affiliations served as a member of the board of visitors at St. Elizabeths Hospital, Washington, and the board of trustees of the Menninger Foundation.

Finally in 1950 she was asked to head the vocational rehabilitation office.

"I was flabbergasted," she exclaimed. "All these years I'd been a staff person with tremendous responsibilities, of course, but always in someone else's name. Suddenly I was at the top of the pyramid, and I had to say "Yes" and "No" myself. I've turned out to be kind of an unconventional administrator, I guess."

WOMAN'S INFLUENCE

In 5 years, under this unconventional administrator, the office's appropriations have almost doubled; there are new, even broader legislations. Scores of grants for schools and individuals are helping increase trained personnel in the field.

"I want to put the emphasis on the importance of the human aspects and symbols. It's a kind of 'You do this for the least of these and you do it for me' idea." Moreover, Miss Switzer has set about to get private and public organizations to work together, and wants desperately to begin weeding out those people "at the bottom of the heap who are dependent and willing to do anything to remain dependent."

The Government's certificate of merit, 1 of 2 nonprofessional honorary memberships in the American Psychiatric Association, and several honorary degrees have been heaped on the executive.

EMOTIONAL OBJECTIVE

Perhaps she was most pleased with a citation from Tufts University last year which singled her out as a woman who had combined subjective emotional and personal drive and deep feeling with the ability to administer objectively, proving once and for all that the two could be combined successfully. "And I suppose that's exactly what I have been trying to do all these years," she mused.

Although there have been temptations to leave Government service through the years, Miss Switzer, strangely enough, has turned them all down.

"I like the Government for several reasons," she said candidly. "First of all because of my background. I don't demand a large reimbursement for my services. I think I'm being adequately compensated for my work. And I like the anonymity of the Government as an employer. It's a great deal different than having your destiny tied up with 1 person or 1 firm. You can be yourself inside and still do a good job for the Government."

LEARNED TO LOVE

Two things, she admits, have brought her a rare peace and contentment. First of all she likes what she's doing.

Second, she said, "I think I'm well adjusted because I haven't too many desires beyond my capacity."

* * * * * *

"You should have the courage to love," she said thoughtfully. "And if you have the courage to love, you'll get love in return. Love your fellowman, your country, and your job. That is the keystone, I think."

Although she spends many hours in her offices and traveling about the world, Miss Switzer likes nothing so much as to be at home in the big house in Alexandria, Va., which she shares with Miss Isabella Diamond, a Treasury librarian, puttering about cooking or reading.

"Yes," she mused, "I'm blessed with health, with security, and a wonderful companion. I love people and there are people who love me—here, there, and yonder. So I think I'm pretty lucky."

MRS. LASKER—PATRON OF MEDICINE

When the Albert Lasker Medical Journalism Awards were presented yesterday, Mrs. Franklin D. Roosevelt remarked that the outstanding characteristic of Mrs. Albert D. Lasker is her imagination.

"Not only can she grasp an idea quickly when it is presented to her," Mrs. Roosevelt said, "but she sees where you can go with it."

This ability has carried Mrs. Lasker, president and founder of the Albert and Mary Lasker Foundation, into a variety of enterprises that have left her unmistable mark on a large segment of the American scene.

The foundation is dedicated to medical research. It underwrites pilot projects in basic research related to the major illnesses—now principally heart diseases, cancer, and mental illness—and also fosters dissemination of public information on the needs of medical research.

Mrs. Lasker's activity in supporting science, however, goes beyond the work of the foundation. She is a board member of the New York City Board of Hospitals, the Citizen Advisory Councils of the United States Public Health Service, the American Heart Association, and the American Cancer Society. She is a vice president of the Planned Parenthood Federation and secretary of the Health Insurance Plan of Greater New York.

But the imagination that sparks Mrs. Lasker's works sees more than science. Her early training in fine art at the University of Wisconsin and at Radcliffe College has not left her. She owns one of the finest private collections of modern and French impressionist paintings, and her bent for sharing her assets with the world has led her to publishing a book of color reproductions of her paintings, which she has distributed to colleges around the country.

Mrs. Lasker's love of beauty has led her into yet another activity which affects the

life of almost every citizen of New York. She is personally, and quietly, responsible for twice-yearly plantings of large beds of colorful flowers in public places around town.

These are dedicated to her mother, the late Mrs. Sara J. Woodard, who helped found 2 of the 3 public parks in Watertown, Wis., where Mrs. Lasker was born. As with her support of medical projects, Mrs. Lasker hopes these plantings will sparkplug a movement that others will carry on.

For all her projects, Mrs. Lasker still has time for a family life. She visits regularly with the three children by a previous marriage of Mr. Lasker, an advertising executive who died in 1952, and with their children. She maintains a town house at 29 Beekman Place and a farm house at Amenia, N. Y., where she indulges her love of flowers and greenery.

Are Americans Aware?

EXTENSION OF REMARKS
OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following speech by GORDON H. SCHERER at rally sponsored by Aware, Inc., at Hunter College in New York City on Wednesday evening, May 7, 1958:

ARE AMERICANS AWARE?

What has been said here tonight should be applauded by every red-blooded American. Unfortunately, however, it will bring wide and varied reactions. They will range from approbation by our fast-waning patriotic societies to contempt and hatred by the Communist conspirators within our American community. The ill will of the latter, our sworn enemies and would-be destroyers, we expect. They are the challenge we must face in our time.

There is also that fast-growing, cynical segment of the populace which scorns and scoffs at any mention of patriotism. To them Americanism is not even secondary to one-worldism. To them the American heritage and basic constitutional rights should be chipped away and even surrendered when political expediency—treaty by Executive agreement—demands.

Then last there is that group of self-styled loyal citizens to whom the word "Americanism" is distasteful although they do not admit it. They are the extreme leftwing, who for one reason or another have lost faith in the American system. They are the people who through the years, wittingly and unwittingly, have given their names, money, and prestige to innumerable Communist-front organizations and causes. Among them are those who are the foolish and naive puppets of the Communist agents within.

These are the people to whom Georgi Dimitrov, one of the top world Communists, referred when he said:

"As Soviet power grows, there will be greater aversion to Communist parties everywhere. So we must practice the techniques of withdrawal. Never appear in the foreground: Let our friends do the work."

Dimitrov continues, and listen to this:

"We must always remember that one sympathizer is generally worth more than a dozen militant Communists. A university professor, who without being a party member lends himself to the interests of the Soviet Union, is worth more than a hundred men with party cards."

If Dimitrov were making that statement tonight, he could well include the industrialist Cyrus Eaton who made a tremendous contribution to the Soviet cause this last Sunday night when over a nationwide hookup he made his vicious attack upon the Federal Bureau of Investigation and the security agencies of this Nation. Do you know who paid for that program—the Fund for the Republic.

Eaton is part of an epidemic of color blindness which has affected certain segments of America. The victim cannot see the gory Red record of mass murder and subversion which the international Communist apparatus is writing daily. Eaton's scurrilous attack on the FBI and our security system climaxes a series of his public utterances which are being beamed by the Soviet propaganda machine to the four corners of the earth.

It is more than coincidence that in December of 1955 the official Russian governmental organ Izvestia hailed Cyrus S. Eaton for his expressions on peaceful coexistence; that another organ of the Communist international apparatus New Times in October 1957 contains an article by Eaton in which he rapturously extols the virtues of the Soviet Union and states that he "has achieved a better firsthand understanding" by the contact he has had with Soviet representatives in the United States.

It is likewise more than coincidence that in addition to attacking the Federal Bureau of Investigation, Eaton has repeatedly attacked what he has characterized as the "anti-Russian belligerence" of the United States.

Can he not see that the international Communist apparatus, now controlling one-third of the population of this earth, with a fifth column 25 million strong permeating the world, is now at war with the 1 nation which stands in the way of its world domination?

Can he not see that the Federal Bureau of Investigation—far from being a "Hitler-like gestapo" as he describes it—is the principal bulwark of our liberties and the chief weapon of the Nation against internal subversion?

In the March 1958 issue of the periodical, the Progressive, Eaton states "I am firmly convinced that the Russians want peace." Can he not see that the only peace which the international Communist apparatus wants is a peace in which freedom is forever subdued by the forces of tyranny?

In the light of Eaton's conduct, listen to how significant are the concluding words of Georgi Dimitrov:

"Every man has his value, his merit. The writer who, without being a party member, defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members."

Yes, ladies and gentlemen, industrialist Cyrus Eaton who is not a Communist but who defends, as Dimitrov said, Soviet international policy is worth more than a thousand party members.

The Cyrus Eatons are the people who will ridicule and condemn what has been said here tonight, what this great organization of Aware is trying to accomplish, what the FBI and the investigating committees of Congress are doing. And why?

The answer is simple. These are the forces which have turned back the cover and shown how these gentlemen were foolishly and carelessly sleeping in the same beds with the agents of the Kremlin. They did not like the exposé and ever since have been attempting to discredit those who put the spotlight on the naked truth of Communist-front subversion within the United States.

The tragedy of this hour is that, in spite of all that has been revealed, so few Americans—in fact, only a hnadful—really understand the Communist mind and are aware of the strategy being used by the Soviets to reach their goal of world domination.

Such lack of knowledge is understandable when even the Supreme Court of the United States, by a series of disheartening decisions, has demonstrated that it, too, has failed to grasp the modus operandi of at least one phase of the total offensive now being waged against the free world by the Kremlin.

As long as the Supreme Court has violated all precedent by going beyond the record and consulting the dubious writings of foreign socialists as authority for its decisions, may I suggest that the High Court take a look at a book written by E. H. Cookridge, an authority on the Communist conspiratorial apparatus.

The Court might eventually learn that the Communist Party is not a political party as we know political parties in the United States—that we are not dealing with or investigating an economic or political philosophy, as the Court's recent decisions suggest.

It might at long last find out, as Cookridge says:

"We are dealing with the sordid story of theft of atomic and NATO secrets, of arson, sabotage, poisoning, assassination, infiltration, and subversion, plotted in Moscow and carried out all over the world."

As you know, it was the investigating committees of the Congress which finally brought to light the penetration of this fifth column in the United States. They recommended law after law to deal with this threat from within.

With one fell swoop last year, the Supreme Court seriously weakened, if not destroyed, most of the weapons that have been available to deal effectively with this fifth column.

Our committee was commencing hearings in San Francisco on the day the Supreme Court handed down the Watkins decision, dealing with congressional investigations of Communists, and the Yates case freeing the convicted California Communists. On that day—Red Monday—a former chairman of the Communist Party in California rejoicingly exclaimed:

"It was the greatest victory the Communist Party has ever received." She continued, "It will mark a rejuvenation of the party in America. We have lost some of our members in the last few years, but now we are on our way."

The committee saw and felt that rejuvenation at the San Francisco hearing. During the last few years, the Communist hangers-on at such hearings had diminished. Their enthusiasm had been dampened. The hostile witnesses exhibited less confidence in the ultimate triumph of the Communist cause.

All this was changed in San Francisco. The Communists filled the large hearing room and overflowed into the corridors. Their snide and vituperative remarks to committee members as they passed through the halls were again in evidence. The witnesses and the lawyers were jubilant as well as arrogant. The delaying tactics, the evasiveness, and the long Communist propaganda speeches returned.

Yes, it was a great day for the Kremlin but an ominous one for the people of the United States.

It was these decisions of the Supreme Court which inspired the Emergency Civil Liberties Committee to begin its current campaign to subvert our security agencies. Do I hear someone say that no one pays any attention to this Communist-front Emergency Civil Liberties Committee and its cohorts?

Listen to how a newspaper in the Nation's Capital has been brainwashed (and I am being charitable when I say "brainwashed"). The Washington Post, in an editorial designed to influence Congress against voting

for the appropriation to the Committee on Un-American Activities this year, said:

"For 20 years the committee has been disclosing and reporting on the pattern of Communist infiltration of American life; this part of its function has long since been completed, and the pattern of the past no longer has much application to the present."

The editorial then continued with a plea to strangle the committee.

If time permitted, I could give you example after example of subversive activities being brought to the cold light of common day by the committee—activities revealing a diabolical pattern not of the past but of the present. Let's take a look at just one case which is as current as today's newspaper.

We have been worried about sputniks in outer space. The committee uncovered a sputnik right in the Congress of the United States—not 5 years ago, not 2 years ago, not 1 year ago, but just a few months ago.

The Communist record of one Wilfred Lumer was recently brought to light. Now who is Wilfred Lumer? He is the man who was doing research for Members of the House and for at least two committees of this Congress. The results of his handiwork found their way into reports on legislation that is being considered by this present Congress.

Let me quote just two questions and answers from his testimony which will clearly illustrate my point.

"Mr. ARENS (counsel for the committee). Have you reported your activities on the Hill, on Capitol Hill, over the course of the last several years to a person known by you to be a Communist?

"Mr. LUMER. I must decline to answer that question on the grounds of the first and fifth amendments.

"Mr. ARENS. We have information, and I want to be absolutely frank with you, Mr. Lumer—we have information that in the recent past you have been in contact with, and under discipline of, Sam Abbott, a ranking Communist in the District of Columbia. We want to give you an opportunity now while under oath to deny it.

"Mr. LUMER. I must decline to answer that on the grounds of the first and fifth amendments."

Today the Soviets are holding out the olive branch. A worldwide peace offensive is now in progress. According to our friends in left field, all we have to do is sit down at summit conferences and enter into a few executive agreements with the gangsters of the Kremlin—the slaughterers of the Hungarian freedom-fighters, and we will be on our way toward peace. But the kind of peace, I assure you, that we would buy at a price.

I need not remind you that the United States has already had 19 top level conferences with the schemers of the Kremlin.

Forty agreements resulted; only three, which the Soviets felt were to their advantage, have been kept. In all, the butchers of the Kremlin, in the short span of their 40-year history, have entered into nearly 1,000 treaties, nonaggression pacts, and agreements with other countries. In every single instance when it served the interest of the Soviet Union to do so, these pacts were flagrantly violated in its drive toward world domination.

Another compelling objection to continued dealings with the masters of the Kremlin is the effect such meetings have on the people inside the Soviet orbit—the great majority of whom are anti-Communist. Eugene Lyons, in his book entitled "Our Secret Allies," dramatically points out that, if we are ever to win this conflict, we will need these secret allies—the people behind the Iron Curtain.

We have just given $225 million to neutralist India, yet Nehru, among other things, tells the world that Russia's occupation of Hungary is no different from our position in Japan.

A short time ago we sent $63 million in farm surpluses to Communist Yugoslavia after we cut off military aid to Tito at his request because such contributions were embarrassing both to him and his bed-partner Khrushchev.

Of the $193 million doled out to Communist Poland in less than a year, $98 million was given as late as February. It did not go to the Polish people in their fight for freedom but to Gomulka. As Senator STYLES BRIDGES said:

"We merely made it possible for Gomulka to quiet the natural unrest in opposition to his Communist regime. Far from helping free people along the road to self-determination, we are actually forging stronger chains for their bondage."

What has become of the honor of this Nation when we attempt to bribe our sworn enemies and betray those whom they hold in bondage? Is this the price we must pay for so-called peace?

The recognition of Red China and its admission to the United Nations—for which, I am sorry to say, there is a growing sentiment—would mean the death knell of anti-Communist resistance on the part of some 500 million Chinese who, historically and traditionally, have been friendly to this country. So few have been able to see through the Communist line—parrotted by dupes and soft heads—namely, that recognition of the Red clique in Peiping was the same as recognition of the millions whom they have enslaved.

Before Americans are seduced by the current Communist peace offensive, they should reflect upon a statement by Dimitri Z. Manuilsky, made in 1931 when he was instructor in the Lenin school of political warfare in Moscow. He said:

"War to the hilt between communism and capitalism is inevitable.

"To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep, so we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions."

Friends, does this have a familiar ring today?

Manuilsky continued: "The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

And now listen to J. Edgar Hoover, the greatest authority on internal subversion, in his latest Independence Day warning to the American people. He said:

"Public apathy is the sure way to national suicide, to death of individual freedom. It allowed the Communists to penetrate and make satellites of once-free countries, and it is presently enabling them to honeycomb and weaken the structures of the remaining countries, and there is today a terrifying apathy on the part of Americans toward the deadliest danger which this country has ever faced. Some of that apathy is deliberately induced."

Hoover continued: "The Communist Party in the United States is not out of business; it is not dead; it is not even dormant. It is, however, well on its way to achieving its current objective, which is to make you believe that it is shattered, ineffective, and dying. When it has fully achieved this first objective, it will then proceed inflexibly toward its final goal.

"Those who try to minimize its danger are either uninformed or they have a deadly ax to grind."

Today there are those who still think of war only in terms of military aggression, of planes, guided missiles, and nuclear projectiles.

So few understand that firepower—destructive force—is only one of the weapons, one phase of the total offensive being waged by the Soviets against the West.

Here is the appraisal of Gen. Albert Wedemeyer who, you will recall, served as chief of our World War II planning operations. Testifying recently before the Committee on Un American Activities, the General said:

"The Soviets are obtaining their objectives without the use of military force. If I were the senior planner in the Soviet hierarchy, I would advise Khrushchev to continue to do exactly what he is doing now."

Russia has apparently abandoned the centuries-old concept of war. She does not want to destroy the cities of the United States or of any other country of the free world if she can possibly avoid it.

Mr. Edward Hunter, one of the great authorities on Communist psychological warfare, a newspaper correspondent, author, lecturer, and a former officer in the OSS, who spent more than 31 years in countries under various forms of Communist pressure and attack, testified in closed session before the Committee on Un-American Activities a few weeks ago.

Mr. Hunter testified out of the wealth of his experience and first-hand knowledge:

"War has changed its form. The Communists have discovered that a man killed by a bullet is useless. He can dig no coal. They have discovered that a demolished city is useless. Its mills produce no cloth. The objective of modern warfare is to capture intact the minds of the people and their possessions so that they can be put to use.

"This is the modern conception of salvery, that puts all others into the kindergarten age."

Hunter continued: "The United States is the main battlefield in this war. I mean specifically the people and the soil and the resources of the United States. They seek to conquer the United States in a manner so that it voluntarily falls into the Red orbit. If we have to be conquered by destructive nuclear-age weapons, it will be considered a setback by the Kremlin. Their objective is to make the same use of the American people as they make of the Czechs in the uranium mines in Czechoslovakia and as they make of the Chinese in the mills of China.

"We are to become the subjects of a new world order for the benefit of a mad little knot of deposits in the Kremlin. We are losing so fast that, unless we put a very drastic end to it, the question of who is winning will be academic in a decade."

Hunter concluded: "I have been watching developments under communism in other parts of the world for more than 30 years, and now I see exactly the same developments back here in America. I see primarily as part of this softening-up process in America the liquidation of what we used to recognize as right and wrong, what we used to accept as absolute moral standards."

Khrushchev, just 3 weeks ago tonight, in a speech to diplomats, including the United States Ambassador, said:

"We will beat the capitalists, but that does not mean killing anybody.

"When we win in this competition, we will also reeducate you. We Bolsheviks are a ravenous people. What we achieved in the past is very little. We want more and more."

Just a few weeks ago the Washington Star, in headlining the latest statement of Allen Dulles Chief of our Central Intelligence Agency, printed: "Subversion, Not Arms, is Chief Red Weapon."

All of the credible evidence indicates that the firepower and destructive force of the East and the West are fairly well balanced. The Russians are not dumb. They know that an all-out nuclear war will mean the total destruction of their cities—that today the United States in all probability would win such a conflict. Consequently, we are not going to have a nuclear showdown in the foreseeable future.

The Kremlin is not going to sign its own death warrant—and why should it? So few understand that in the last decade the Communists have been incredibly successful in expanding the Soviet empire by the use of a weapon far more effective than sputniks or nuclear missiles and certainly less costly.

So few are aware that the insidious and diabolical weapon of infiltration and subversion has done the job of taking approximately one-third of the earth's surface and one-third of its people into the Communist orbit and that another one-third, in the so-called neutral bloc, is fast drifting toward Russian satelliteism.

So few are aware that, while the near equality of firepower between the East and West creates the present military stalemate, the effective weapon of infiltration and subversion is the deadly cancer at work on the institutions and governments of free men everywhere.

We are not engaged in a popularity contest with a competing economic system. We are not merely faced with certain annoying adjustments which should be made so that we may coexist with a different system of government. We are now in a death grip with an enemy the likes of which for debasement and inhumanity the world has never before experienced, an enemy whom we can ignore, appease, negotiate with, only at the expense of our survival.

This is the challenge of our day to all patriots of this Republic. We must accept this challenge. We shall either dedicate ourselves to it or face slavery and destruction.

The Role of the Army

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. TALMADGE. Mr. President, I should like to invite the attention of the Senate to the June edition of the Army Information Digest.

The lead article entitled "Limited War: The Prospects and Possibilities," is a most scholarly and authoritative presentation which treats the subject in a most understandable and direct manner.

In views the question of whether limited war is, in fact, a possibility and a probability, as contrasted with the probability of general war or a war of nuclear devastation. The premises are set forth in a completely realistic fashion, and lead to the conclusion that not only is limited war possible, but also that there is a valid distinction between unlimited and limited military operations.

Mr. President, I commend the article as a timely and definitive treatise for the reading of the Members of the Senate. Notwithstanding the fact that I am advised by the Public Printer that it will require approximately 3¼ pages, at a cost of $263.25, to publish the article in the RECORD, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIMITED WAR: THE PROSPECTS AND POSSIBILITIES

THE SOVIETS TRY BLACKMAIL

The Soviets are trying to blackmail the West into inaction by insisting in their propaganda that any local or limited war will inevitably expand into all-out fighting; yet, concurrently, they are strengthening their own capabilities for limited war. The grave danger here is that they may conclude they can get away with limited adventures, on the theory that the West fears to intervene, lest it bring on the atomic holocaust. To accept this Soviet speculative premise would mean that their blackmail has worked. The West would be inviting disaster if it even seemed to hesitate because of this potential miscalculation by the Soviets.

There is no inexorable logic that makes it inevitable that henceforth any war will become total war. Most wars have had limited objectives, and have been limited wars. This was notably true of the Korean war, and it can continue to be true. But there is an essential precondition in sustaining limited operations: maintenance of the strategic reserve. Behind the capability to fight limited war, there must be the capability of fighting total war with every weapon. That's the grim persuader against reckless expansion of objectives and methods.

The choice the West has is not between absolute safety, and grave risks. The choice is between degrees of risk; and the smallest risk the West can take is to be prepared for any kind of war, anywhere, any time, which clearly means that limited wars must be considered possible, if not likely.

The greatest danger is that a little war will get out of control, and may expand into all-out war. The likelihood of this increases with the length of the conflict. Long continued fighting may cause the political issues at stake to assume expanded, exaggerated significance, and almost certainly will result in whipped up emotional furies. That is the background that gives urgent meaning to General Taylor's statement: "If we are forced to fight a limited war, it is essential that we react promptly and decisively."

It is generally accepted that with the power of modern weapons, a war between the United States and the Soviet Union, if waged to its utmost limits, would bring down disaster upon mankind. The growth of nuclear stockpiles, and the development of means for delivering them, have produced a situation in which the deliberate initiation of unlimited hostilities represents an unacceptable course of action for both sides in the prevailing East-West struggle.

However, this has in no way mitigated the character of the conflict. On the contrary, the Soviets give every indication of utilizing their nuclear striking power as a screen behind which to intensify the cold war. There is every reason to expect that the Communist will continue to seek opportunities for expansion.

In this protracted struggle, the takeover by subversion and coup d' etat will probably remain the preferred tactic. Failing this, the Communists will not hesitate to employ military power in the attainment of any objective which they consider significant in advancing their objective of world domination.

With no abatement of the cold war in prospect, and because of the disastrous consequences of an unlimited war, the West is faced with a fateful problem. How can Communist expansion, whether by military or nonmilitary means, be thwarted without incurring unacceptable risks?

In many ways, the problem of forestalling Communist expansion by so-called peaceful political and economic penetration is the most difficult challenge facing the free world. It will require a high degree of ingenuity and skill to outmatch the Soviets in this contest. Fortunately, this is an area where the West possesses unrivalled spiritual and material resources. The principal need is a recognition of the character of the challenge and a determination to beat the Communists at their own game.

The threat of Communist expansion by nonmilitary means is not unrelated to the military threat. The Communist takeover in much of Eastern Europe was made possible and is preserved only by the presence of military power. Similarly, a western strategy to counter further Communist penetration must be reinforced by military power which neutralizes the Soviet bloc military threat. Western influence among many of the uncommitted nations, for example, is not likely to prosper unless there is also security against Communist military encroachment.

The relationship between military and nonmilitary programs becomes even more meaningful in terms of long-term objectives. The containment of Communist expansion is important, but it is not a sufficient strategy. Our ultimate objective is a cessation in the cold war itself.

The minimum precondition for inducing the Soviet bloc nations to abandon the goal of world conquest is the denial of further opportunity for military expansion. With a military equilibrium, there can be some hope that evolutionary changes will occur in the bloc regimes so that they will no longer constitute a threat to free nations.

In the light of these general considerations, the military problem resolves itself down into one fundamental question. How can military power be used as a rational and effective instrument for supporting national policy objectives?

Only limited war can serve a coherent purpose. An all-out war would be a political disaster, a senseless thing without an object.

Because war is a political act, and must serve a political purpose, the controlling principle in war is the principle of the objective. It is not possible to conceive of any rational purpose that would be served by an unrestricted nuclear war. The most basic United States objective, therefore, is to avert such a disaster.

At the same time the United States recognizes that its own security is bound up with the security of free peoples everywhere. Even the United States, with all its strengths, could not survive a state of siege in a Communist-dominated world. Accordingly, this Nation has rejected isolationism in favor of a forward strategy.

So that there should be no misunderstanding of United States intentions, a series of multilateral and bilateral treaties have been negotiated as a sort of a diplomatic warning system. And to make the deterrent effect of this warning system doubly meaningful, the United States has deployed its own forces in support of these treaty arrangements, and has strengthened allied forces through various military assistance programs.

The purpose of these regional security arrangements can be stated very simply. The object is to deter aggression by making it unmistakably clear to any would-be aggressor that aggression will not succeed. The free nations of the world are determined that they will not be picked off one by one. Thus, the treaties provide that an attack against one will be considered either an attack against all, or a threat to the security of all. And lest there be any room for ambiguous interpretation in certain areas,

these treaty arrangements have been further reinforced by the Taiwan resolution and the American doctrine.

These regional security arrangements constitute, in effect, a political deterrent. The free world has witnessed how, even at a time when the United States had a near atomic monopoly, the Communists did not hesitate to employ their military resources in areas which did not involve a direct challenge to the United States. The Communists miscalculated with respect to our political intentions in the case of Korea. The system of free world alliances is intended to remove this cause for miscalculation.

Now the free world is faced with a new danger—a new source of possible miscalculation. The Soviets may conclude that they can get away with limited adventures because the West will not risk intervention for fear of precipitating all-out hostilities. Communist propaganda has played heavily on this theme during the past 2 years, insisting that any local war would inevitably expand. Yet concurrently the Soviets have strengthened their own capabilities for limited war.

The obviously calculated purpose of this propaganda is to blackmail the free world into inaction. The effects of tihs propaganda are reinforced to the degree that the free world is unprepared to meet a limited challenge with other than an all-out response.

The deterrent to the all-out war is not likely to deter limited or disguised aggression because the Soviets are likely to believe that their own nuclear delivery capabilities will deter the West from an all-out response to anything less than a direct challenge. The Soviets may miscalculate that they can get away with it.

The danger is that if the only courses of military action open to the West would involve grave risk of expanding hostilities, then the Soviet calculation might prove correct. If the Soviets calculate correctly, the West has been blackmailed into inaction; if the Soviets miscalculate, the West is faced with the all-out war it sought to deter.

The only way out of this dilemma—for the alternatives are unacceptable—is to insure that the free world can muster the forces necessary to defeat aggression wherever it may occur without resort to courses of action which would be likely to bring about all-out war. In other words, the West must be able to deal effectively with limited challenges, employing limited means. The balance of forces required to defeat limited aggression are significantly different in many respects from the forces which are needed to deter or wage all-out war.

TYPES OF WARFARE

Modern war may be visualized as a continuum, ranging in violence from a low extreme of guerrilla warfare at one end to the opposite extreme of all-out or unrestricted warfare at the other. However, the distinctive thing about this continuum is that, at the extreme of violence, the continuum tends to break off, with all-out war being not merely different in degree but different in kind from other warfare.

The forces required to wage an unlimited war and the priority of tasks will be significantly different from forces and tasks for limited warfare. Thus, the distinction between all-out or total war and warfare which is less than total provides a useful and meaningful framework for planning.

Warfare which is less than total is commonly characterized as limited war. While this term is subject to possible misinterpretation, it has become generally accepted as descriptive of any conflict which is not unlimited from the point of view of the United States.

Limited wars have limited objectives. In a contest between unmatched powers, however, a war which may appear as limited for one side may very well be an unlimited conflict for the other. An unlimited war, on the other hand, visualizes the complete overthrow of the enemy. In modern war, this would normally require the destruction of the government of the opposing nation.

Probably the most basic truth about war in modern times is that limited war has been the norm, whereas total war has been the aberration. Considering the disastrous character of World Wars I and II, it is essential to ask: Is there some inexorable logic in human events which makes it inevitable that henceforth any major war will be a total war? On the answer to this question may well rest the fate of civilization.

Clausewitz considered that limited wars are likely under two sets of circumstances. The first case is where the political tensions or aims are small. The second case is where the military means are such that the overthrow of the enemy either cannot be visualized at all or can only be approached indirectly.

In the past, whenever the political objective was not the overthrow of the enemy nation, wars tended to be limited. Also, whenever the military means were insufficient to accomplish the overthrow of the enemy, wars have been limited.

The ultimate political aim of the U. S. S. R. is essentially unlimited. The Soviets contemplate the progressive and complete subordination of independent nations to a Communist hegemony. The free nations, on their part, are equally determined to secure their liberty. These disparate, essentially unlimited objectives give rise to great political tensions. In this situation, any war may assume totality.

Balancing this tendency is the other case posited by Clausewitz wherein limited war is likely because the military means are such that the overthrow of the enemy cannot be visualized at all. While this dictum was premised on the insufficiency of the means, it is no less valid when the means may be sufficient to overthrow the enemy but would also produce universal disaster. A victory robbed of its meaning is no victory at all.

Thus, the Soviets are forced to seek the accomplishment of their objective by indirect means. They realize that the United States cannot be defeated directly. This objective must be approached indirectly, by sapping the energy of the free world, and by neutralizing the United States. By this calculation, the prize plum will be ripe for picking once the balance of power has swung in favor of the Soviets so that further resistance would be futile. This is what the Soviets mean when they talk about competitive coexistence. This is their preferred battleground.

By the same logic, the United States appreciates that its own security is dependent upon preventing such a swing in the world balance of power so that the issue in any war would pose the issue of national survival. This Nation also recognizes that it must live with the threat a long time. It is not possible to conceive of destroying the source of the threat militarily without at the same time destroying the values and institutions we are striving to secure.

These, then, are some of the fundamental reasons why limited war is the most likely threat so long as both United States and the U. S. S. R. are powerfully restrained from the deliberate initiation of all-out war.

While the all-out assault against the United States is certainly the greatest danger, it is the piecemeal loss of the free world to limited and camouflaged aggression that constitutes the greatest long-term threat to the Nation's security. A most basic national objective, therefore, is to insure that the United States security position shall not be so eroded. The Nation must be prepared to employ its Armed Forces as necessary, in support of this objective.

DOCTRINE FOR LIMITED WAR

An important element in preparedness for limited war is well-defined doctrine. This doctrinal requirement demands not only thoroughly developed military doctrine, but also the integration of military concepts with doctrine for exploiting other elements of national power such as diplomacy, the domestic economy, psychological operations, and the like. What might be termed a national doctrine for limited war is required.

Any consideration of doctrine for limited war must begin by answering the question whether limited war is possible in the atomic age. From the foregoing discussion, it is evident that this question must be answered in the affirmative. Both recent history and considerations of logic dictate this conclusion. Therefore, the first element of doctrine for limited war is that limited war is possible.

Quite apart from logic and historical experience, there are also important psychological factors involved in this element of doctrine. If, for example, the free world were induced to believe that limited wars are not possible, the Communists would find a readymade climate for atomic blackmail. Also, if the West becomes convinced that any war will inevitably expand into an all-out war, and the Soviets are similarly persuaded, then there is a danger that the thought will become father to the reality. Then in a war brought on by accident or miscalculation, both sides might feel constrained to expand the conflict rather than be put at an operational disadvantage.

If, on the other hand, the presumption is that limited wars are possible, then there is some hope of keeping a war from expanding once it has broken out. The only sound basis for planning, therefore, is to assume that warfare can be limited. Without this premise there is no basis for further development of doctrine for limited war. Moreover, this premise is crucial to the deterrence of all-out war in a conflict which might have begun accidentally or by miscalculation.

The second element of doctrine for limited war is that it is possible to make a valid distinction between limited vs. unlimited operations. The significant difference for the purposes of developing doctrine for limited war is that unlimited operations will involve attacks against the basic strengths of the contending parties, whereas limited operations are directed against enemy military forces.

In a limited war, the basic strengths of the contending parties must remain essentially immune to attack. There will also be restrictions on operations against enemy military forces whenever such operations are likely to threaten the strategic balance of power. This subject will be explored more fully when examining the various techniques of limitation.

The third and most basic doctrinal element in limited war is the principle of the objective. This is the most decisive limitation in limited war. By definition, a limited war is fought for a limited objective. Any idea of a limited war producing unconditional surrender is a contradiction in terms.

The elements of doctrine considered thus far constitute the essential framework for examining what Dr. Max Millikan of Massachussets Institute of Technology has called the techniques of limitation in warfare. This is the fourth element of limited war doctrine. And it is in this area that the critical doctrinal problems emerge.

The basic problem, however, can be stated quite simply, and it is this: All operations in a limited war must be clearly in consonance with a limited objective. Any techniques for limiting hostilities must satisfy

this prerequisite. An important aspect of this requirement is that there must be no cause for the enemy to misinterpret intentions. This problem is posed by Dr. Millikan in these terms: "Our signals must be persuasive."

The basic principle of war involved in devising techniques of limitation is economy of force. The force employed should be sufficient to gain the objective—and no more—and should be applied with discrimination to insure that there is no cause for misunderstanding as to the objective.

While it is a relatively simple matter to recognize that there will be operational limitations in a limited war, it is much more difficult to validate the techniques of limitation. Indeed, the difficulties involved are so formidable that many analysts have been led to conclude that it is not possible to define limitations which will stand up in the crucible of war. One must concede that this conclusion may be correct.

But here again we are faced, in part, with a psychological problem. If it is conceded that no limitations on military operations can be sustained, then it would logically follow that there is no utility in attempting to devise ground rules. Yet without tacit acceptance of such limitations, all hope of limiting warfare is forfeited. On the other hand, if one proceeds on the assumption that the mutual acceptance of restrictions is possible, it is imperative that the free world develop tactical concepts for such limited operations.

The absolute precondition for validating any techniques of limitation is that both sides must remain convinced that it is in this own interests to avoid an expansion of hostilities. In other words, the deterrent to all-out war is important not only to deter the deliberate launching of unlimited hostilities, but also as a deterrent to an expansion of hostilities in limited war.

The essential precondition, therefore, in sustaining limited operations is the maintenance of the strategic deterrent. This is the fifth element of doctrine for limited war.

Barring the act of a madman, it must be assumed that the Soviets will be deterred from the deliberate initiation of all-out war so long a they remain convinced that under any and all circumstances, the consequences of such an act would be unacceptable. The maintenance of this conviction is a first charge upon the Military Establishment.

The determination of what would be unacceptable to the Soviets in a total war involves a calculation of many variables, some of which probably cannot be discerned at all or evaluated with any accuracy by the western mind. It is important, however, that such a calculation be made, utilizing the best intelligence available, and then adding a margin for error to insure that the U. S. S. a margin for error to insure that the U. S. S. R. realizes, beyond peradventure, that all-out war would work its own destruction.

This is not the occasion to attempt such a calculation in quantitative terms. However, these are some of the factors which must be considered:

(1) The offensive capability of the free world to retaliate, under all conditions. This capability is dependent, in part, on the ability of the free world to defend its offensive weapons systems by both active and passive means.

(2) The net damage to the United States and the U. S. S. R. to be expected in a nuclear exchange. The threshold of acceptability for the Soviets may depend in considerable degree on their estimate of comparative damage. A major factor in this assessment is the comparative ability of the United States and the U. S. S. R. to defend themselves from nuclear attack.

(3) Finally and related to (2), the estimated residual capabilities of both sides. Here again, the Soviets might be prepared to accept heavier casualties and damage than otherwise if it were calculated that the balance of residual capabilities was favorable to the attainment of Communist objectives.

It is because of this residual capabilities factor that the effectiveness of a deterrent to all-out war cannot be judged solely in terms of the net capabilities of the United States and the U. S. S. R. in a strategic nuclear exchange. While the first phase of such a conflict would undoubtedly consist principally of what might be termed survival operations, the issue might still have to be decided by subsequent operations in which the climactic act would be performed by the man on the ground, physically capable of imposing his will to the degree necessary to secure the objective.

TECHNIQUES OF LIMITATION

Assuming the maintenance of the strategic deterrent as the absolute precondition for limited war, what are some of the techniques of limitation? Broadly speaking, the limitations will involve such matters as the area of the conflict, the targets to be attacked, and the weapons to be employed.

It is not possible, with respect to any one of these limitations, to devise one set of criteria for limiting military operations that is necessarily any more valid than any other set. But, as indicated earlier, it is important that there be some "ground rules," and that these rules should be such that the enemy is persuaded that operations are in keeping with a limited objective.

The matter of area limitation is self-explanatory. This is probably the limitation which is most easily sustained. In the Korean War, for example, the United Nations forces limited operations to the Korean Peninsula. Accordingly there was no difficulty in maintaining a correlation between military operations and the limited objective sought.

The Communist limitation was of a somewhat different character. In addition to limiting operation to the Korean Peninsula, the Communists also refrained from all but relatively minor air attacks on United Nations forces, and from efforts to sever sea or air lines of communications.

United Nations forces, on the other hand, conducted virtually unrestricted air operations within the confines of the Korean Peninsula. The West, of course, did not utilize atomic weapons. However, there is no reason to conclude that the use of atomic firepower in the Korean War would in itself have necessarily led to an expansion of hostilities.

The significant thing about the Korean War experience is that both sides used quite different criteria for limiting operations. Nonetheless, the limitations were sustained because both sides judged it in their interests not to expand hostilities to a higher level of violence by committing additional resources. Both sides were, in effect, prepared to accept an outcome which fell short of the desired objective rather than risk expansion of the war.

The willingness to settle for a limited defeat or the frustration of an objective is inherent in any doctrine for limited war. It is equally important that diplomatic channels be kept open and that the opportunity for graceful retreat not be foreclosed.

While an area limitation, as in Korea, is probably the most easily validated, it is at the same time the one which is hardest to define in advance. There is no yardstick by which to calculate a normal zone for military operations. In one area of the world, military operations might extend over a vast expanse. In another area, operations in a limited war might have to be very carefully circumscribed geographically. It becomes necessary to fall back on the general rule that operations should not extend beyond that area which very clearly has a direct impact on the ability to conduct operations, as necessary to attain the objective.

With respect to target limitations, it is only possible to generalize as to what those limitations might be. In certain situations, there might be no limitations on the targets that could be attacked within the limited area of the conflict. More typically, however, it could be expected that some target limitations would apply.

As already indicated, as a minimum it would be necessary to forego attacks on the basic strengths of the contending parties. Attacks on certain types of targets would undoubtedly be interpreted by the opposing forces as threatening the strategic balance. For example, attacks on targets which resulted in the attrition of elements of the strategic deterrent might force an opponent to resort to all-out attack in desperation, rather than permit such a deterioration in the strategic balance. By the same token, both sides must avoid operations which would dissipate their own strategic deterrent in limited operations.

Approaching the problem more positively, there is no reason why attacks cannot be made within the prescribed area of operations on all those targets which have a direct effect on the operations of the tactical forces. This would include attacks on the opposing ground forces, field depots, supply installations, and other support facilities, the interdiction of lines of communications which directly support tactical operations, neutralization of enemy air and missile forces engaged in direct support of tactical operations, and the like. Again, the primary requirement is that the targets under attack bear an evident relationship to the declared objective of the operations.

The final technique of limitation is that of weapons limitation. It is in this area that the most difficult doctrinal problem arises—namely, the use of atomic weapons. The basic question is usually put in these terms: How is it possible to limit the use of atomic weapons?

Does not the employment of atomic weapons mark the dividing line between limited and all-out war?

If one side uses a small atomic weapon, will not the opponent retaliate with a larger one, and so on, until the war has expanded into unlimited war?

Once nuclear weapons are used, is there any logical point at which to stop?

There can be no categorical, all-inclusive answer to this question. The truth probably is that there is no logical place to stop, and yet either or both sides may, in fact, restrict themselves in the use of nuclear weapons. For there is no reason to believe that, so long as both sides desire to limit hostilities, the use of atomic fire will in itself lead to all-out war.

Inherent in all of these techniques of limitation is the presumption that each side must make a new calculation of its risks whenever it expands the conflict in area, in the targets attacked, or in the weapons employed. These risks must be weighed against the worth of the objective.

The conduct of military operations under these conditions will require cool heads and steady nerves. And the side that possesses military capabilities which are militarily effective in accomplishing the objective and yet do not require the deliberate expansion of hostilities has a tremendous advantage in this war of nerves.

The essence of the strategic problem, therefore, is to be able to conduct military operations effectively despite area, target, and weapons limitations. There is no reason why the West need preclude itself from the use of atomic weapons in limited war, for fear of expanding hostilities. However, it must be recognized that limited war operations will generally involve coming to the

aid of an ally. Thus a Western decision to initiate the use of atomic weapons must have the approval of the ally on whose territory the war is being fought. Soviet propaganda is attempting to convince the free world that any use of atomic weapons means total war. It is therefore important to both ourselves and our allies that the use of atomic weapons in a limited war be carefully circumscribed and related to a limited objective.

If these techniques of limitation are to be sustained, it is of the utmost importance that aggression be resisted promptly and successfully. The greatest danger of all-out war is to be found in the little war getting out of control. The likelihood of this happening is increased as the political issues at stake assume an expanded significance. The tensions involved are likely to be in direct proportion to the value of the prize to be won or lost.

The sixth element of doctrine for limited war, therefore, is rapid counteraction. The ability to intervene quickly and to repel an aggression is of basic importance in limited war and, in turn, to the deterrence of all-out war. Once territory is lost, it is extremely difficult to regain without a major effort. In this situation there may be a tendency to rely on threats of punishment in an effort to force the withdrawal of the aggressor. This may well precipitate a series of ultimatums and counter ultimatums until the positions of both sides have become frozen and can no longer be accommodated short of one side or the other either withdrawing or making good on its threat.

On the other hand, if significant military power can be deployed quickly to the area of the aggression, can stop the enemy advance promptly, and then restore the status quo, the risks of intervention are greatly reduced.

It is sometimes argued that the free world cannot muster sufficient forces at any point on the periphery of the Sino-Soviet bloc to defend successfully because the Soviets can operate on interior lines. Yet, insofar as peripheral actions are concerned, the advantage of operating on interior lines vanishes when the land area in question is hemispheric in extent. There is no reason why the West cannot outmatch the Soviets in strategic mobility if adequate sea and air lift is available.

It is imperative that this strategic factor be exploited fully. The prospects for limiting hostilities are greatly enhanced by a capability for rapid counteraction.

The seventh and final element of doctrine for limited war is so evident that it requires no extensive elaboration—mutual support. Very obviously all of the Armed Forces, operating as a tri-dimensional team, are required for the conduct of limited war operations, just as they are needed in event of all-out war.

The Army is, of courses, dependent upon the Air Force—and in some cases the Navy also—for tactical air support. Also, the attainment of the necessary strategic mobility to make rapid counteraction possible requires suitable airlift and high-speed sealift; the Army is dependent upon the Air Force and Navy respectively for this support. It is only by exploiting the full capabilities of all the services in mutually supporting operations that limited war—or all-out war—can be fought succesfully.

These, then, are the principal elements of limited war doctrine:

1. Limited war is possible.

2. There is a valid distinction between unlimited and limited operations.

3. Maintenance of the objective.

4. In limited wars, limitations will be placed upon area of conflict, targets subject to attack, and weapons employed.

5. The absolute precondition for limited war is the maintenance of the strategic deterrent.

6. Rapid and effective counteraction is the single most important operational capability for limited war.

7. Mutual support.

Army programs are designed to support this doctrine, as well as to meet the requirements for deterring all-out war. These are among the Army's first priority objectives.

With limited war the most likely threat to the Nation's security, and with the expansion of a limited war the most likely source of an all-out conflict, the capability to wage limited war effectively is the surest guaranty of the Nation's security. The deterrent to the all-out war is not enough, for it cannot assurdly deter limited war, and it is not designed for the conduct of limited operations.

The tactical forces necessary for limited war are no less important to the Nation's security than maintenance of the strategic deterrent. There must be options open to the free world in resisting Communist aggression—options which lie between inaction on the one hand and actions carrying undue risk of all-out war on the other. In preparing to meet the most overwhelming danger, the lesser danger but more likely threat cannot be neglected. There must be no chink in the armor of deferrence.

Address of Hon. Edith Nourse Rogers, Archbishop Cushing Benefit Dinner for New College of the Oblates of Mary Immaculate, Boston, Mass., May 11, 1958

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address:

ADDRESS OF EDITH NOURSE ROGERS, MEMBER OF CONGRESS—ARCHBISHOP CUSHING BENEFIT DINNER FOR NEW COLLEGE OF THE OBLATES OF MARY IMMACULATE, SUNDAY, MAY 11, 1958, BOSTON, MASS.

His Excellency, Archbishop Cushing, the Very Reverend Father Richard, distinguished clergy, Father Morissette, the toastmaster, Mr. Goguen, and the countless friends of the oblate fathers of Mary Immaculate:

It is an honor to be here this evening and to be invited to this important dinner event of Archbishop Cushing in the interest of a new Oblate college for this vicinity. Everyone who is associated with the efforts to secure the funds for the construction of this greatly needed new College of the Oblates of Mary Immaculate is confident of success.

Our eminent archbishop of Boston, besides being one of the world's great spiritual leaders, is a constant inspiration to his fellow men for the successful accomplishment of all things that are good and right. The power of his distinguished leadership and the force of his seemingly limitless energy and physical strength, combined with his friendliness, understanding, and kindness, command a respect that towers high above mortal men. Because of his being among us, our lives are richer and our communities are finer. Having his blessing, and the power of his inspiration and leadership, this new Oblate college will come into being and within a very short time the power of its Christian influences, through its graduate missionaries, will extend to many parts of the world.

As we meet here tonight, the need for education is great. In almost every field of human endeavor, there is a great need for the wider and wider expansion of educational facilities. Not only is this true here in the United States where our population has increased to 180 million people, but it is also a fact in so many other countries in the world.

With our civilization standing on the threshold of adventures into limitless space, there is a tremendous call for men and women trained in the physical sciences, in engineering, and chemistry. In not only our country, but in every other land, there is an urgent need for more doctors, more nurses, and more persons devoted to research to care for the physical ills and diseases of mankind.

In the years just ahead, many of our young men and women must realize this need and must take advantage of this opportunity to train themselves for this service to humanity.

As demanding as these needs are, however, they are not as pressing as the need for dedicated young men and women trained, very carefully trained, in serving the spiritual requirements of expanding populations of people all over the earth. The primary, basic, necessary requirement for world peace at this time and in the future, is a knowledge of, and a faith in God. It is a fact that any nation today whose people believe in and fear God, whose government leaders are God-fearing and strong in their faith, that such a nation is not only a peaceful nation, but one which strives to find peaceful solutions to all controversies.

Never has there been a greater call for vastly expanding facilities in which more and more brilliant young men can receive the necessary training to find themselves and dedicate themselves to God, to serve and feed the human spirit, to bring men in all parts of the world into the pathways of knowledge, faith, trust, and right.

It is at institutions such as this planned new College of the Oblates of Mary Immaculate that young men are prepared and trained for the priesthood. A large percentage of these young men go to foreign missions to such places as the Arctic Circle beyond the tree line or DEW line. This area is considered so difficult that construction companies on the DEW line found that only 2 percent of the men who signed up for the regular term of 2 years remained for the allotted time, and this despite the salary of a thousand dollars a month for unskilled labor. But the intrepid Oblate missionaries remain for life.

They go to such places at Haiti, one of the Latin American countries and the only Negro republic in the Americas. They go to the ricefields of Japan, to the tropical countries of Africa and South America. They can be found on every continent in the world.

This Oblate College is deserving of your support, not only because it brings the gospel of Christ and the message of Christ spelled out by long and lonely vigils, but because it brings the message of America to people that wish to be free.

These young men will be very effective American ambassadors for the American way of life. The will be effective not because they will grace the parlors of the rich and the wealthy and the mighty but they will bring the message of America down to the poor, the needy, the outcast. They will take it to the factory, to the farm, to the jungle,

to the disease-ridden countries such as Laos. They will not only talk the American way of life, they will live according to the best principles and traditions of the American way of life.

In supporting the education, training, and work of these missionaries, the people of America will be supporting the first line of offense against the errors and evils of communism. They would bring the message of Christ and the peace of Christ in opposition to the creed of hate and tyranny over the minds of men that is so well propagated by the Communists. These men are filled with the love of Christ and are loyal, strong Americans because their country, yours and mine, has been founded on the principle of the fatherhood of God and the brotherhood of man. Wherever there is suffering, wherever there is disease, wherever there is evil, the Oblates are ready to meet the challenge.

In their dedicated labors these Oblates are not looking for 1 red penny for themselves. They are God's ambassadors, they are America's ambassadors, they are your ambassadors. Where else in the wide world could you find such effective ambassadors whose pay is the native food they eat and the cassock that covers them. This is truly a noble calling; it is a royal vocation; it is a work of love; it is the work of God on this earth. This is the Oblates of Mary Immaculate.

The preparation that these young men receive is according to the strict regulations of the code of canon law. The church wants her priests to have an education second to no other system in the world. These young men will spend 3 years pursuing the study of philosophy and the social sciences. This is done after a 2-year college course elsewhere in the humanities. They then study theology for 5 years. The Oblates not only want holy men; they want learned men. They work on the principle that God's instruments should be well educated and equal to the education gained in any other profession. The Oblates realize that in this day and age their priests must not only be content to fight hatred with love, but falsehood with truth. This is why it takes so long to prepare a young man for the Oblate priesthood This is why this new college and others like it of the Oblates of Mary Immaculate are so greatly needed at this time.

This is a noble cause we are thinking about tonight. It is a holy cause, and it is of tremendous necessity. This new college for the Oblates of Mary Immaculate, and others like it in other places, must soon be a reality. From its classrooms will come dedicated men, strong in their faith, convinced in their mission, and relentless in their efforts to prevail over evil, showing mankind the pointless absurdity of evil, and the fact that evil can never prevail over right. These are the dedicated men who will hold godless communism at bay, who will stand as the bulwark in preventing the evil forces of communism from infiltrating not only our own country but other lands on this earth. These are the men who, through spiritual enlightenment and faith, will force godless communism to its knees; and, on its knees, communism will disappear from this earth.

This is the gigantic crisis of this civilization. It is my belief, my confident belief, that our civilization as we know it can be saved. It may be destroyed by the scientific missiles of destruction known today, but it can be saved by missionaries of the faith, by dedicated men bringing mankind in all nations to the realization their spirit belongs to God. Man must know, wherever he may be, that without faith there is no meaning to life.

This, then, is the crisis. Here, then, is the need for this new college, this new institution to train men who in their efforts combined with others can save our civilization and the life to come. Here is the need for this new College of the Oblates of Mary Immaculate. I am confident that with the strength and inspiration of his excellency, the archbishop, and with such determined effort and work of the Very Reverend Father Richard, and Father Morissete, the funds for the construction of this new college will be provided, and that in the very near future it will be in operation.

Here in America we have been blessed to have such giants of spiritual leadership as the eminent archbishop of Boston. May this blessing long continue to be ours. We haveg reatly and deeply benefited from the labors and constant help of energetic and tireless priests such as Father Richard and Father Morrisette. They have done so much for so many—so well.

They need and must have the necessary support to build and operate this new College of the Oblates of Mary Immaculate. We know they will succeed.

Thank you—you have given me wonderful attention.

The Donable Surplus Property Program

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a release from the Department of Health, Education, and Welfare indicating that our educational, health, and civil defense institutions received Federal surplus property valued at $81,919,998 during the quarter January through March 1958.

It is gratifying to me to call to the attention of the Congress and to the American people that every State in the Union and Alaska, District of Columbia, Hawaii, and Puerto Rico received surplus property in considerable amounts during this period.

By far, the bulk of the surplus property comes from the military agencies and the donation of the property to education, health, and civil defense is an excellent way at the present time to dispose of the surplus property. Experience has shown that when the property is put up for sale it yields but 6 or 7 percent of its acquisition value to the taxpayers.

I have been convinced for some time that more effective management of the numerous supply and service systems of the Department of Defense would greatly reduce the volume of surplus property, and as I indicated in my remarks on May 5, 1958, I am hopeful that the Armed Services Committee will report a reorganization bill which will permit the development of a much more efficient supply and service system in the Department of Defense. In the meantime, however, the best possible use that can be made of surplus property is to donate it to these institutions which have the highest priority in the minds of the American people.

The release follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Personal property made available for distribution to public health and educational institutions and civil-defense organizations and real property disposed of to public health and educational institutions Jan. 1 through Mar. 31, 1958 (acquisition cost)

[In accordance with sec. 203 (o), Public Law 152, 81st Cong., as amended]

States	Personal property	Real property	Total
Total	$78,775,277	$3,144,721	$81,919,998
Alabama	2,398,298		2,398,298
Arizona	660,377	15,860	676,237
Arkansas	426,913	14,049	440,962

Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. DORN of South Carolina. Mr. Speaker, the Honorable Robert T. Stevens has had many years of experience with one of the greatest corporations in America. He gained additional knowledge in the field of business, trade and world affairs as a very distinguished Secretary of the Army in this administration. Mr. Stevens is a great American, patriotic, and is tremendously interested in preserving our free-enterprise system as the greatest bulwark the free world has against Communist imperialism. Secretary Stevens realizes the importance of trade. He advocates truly mutually advantageous reciprocal

trade. He does not believe that the sacrifice of some of our greatest industries to low-wage foreign imports can possibly strengthen this country or the free world.

While this House is considering this important issue, it might be well for us all to study carefully this great speech by an outstanding American. The following is the major portion of Mr. Stevens' speech as recently delivered in the great State of Montana:

While we are on the subject of competition, I would like to turn now to another matter which is of great importance to the continuance of a strong and vital America. It is a subject which involves unreasonable competition. It could impair the dynamic, American economy, which we all agree is so essential to the security of our country.

I refer to something that could not only tear down much that you here in this room have erected but much that you dream of bettering. This subject has been described by the use of catch phrases like "trade, not aid" and, in mathematical terms it sounds like 2 plus 2 equal 4, but, in actual operation it is more like 2 minus 2, which equals nothing. I am speaking of the proposed legislation before Congress right now, known as the Reciprocal Trade Agreements Act. It is up for renewal for another 5 years and the plan would authorize substantial additional tariff cutting powers. Many of the top level men of our Government have spoken for the program. These are friends of mine. I differ honestly with them on this measure but that does not lessen my regard for them as public servants or as personal friends. Their voices and pens are, however, diligently at work to keep this amazing world trade anachronism intact. Free trade proponents from commerce and industry are fighting side by side with my friends in Government to extend this ill-advised legislation.

An enormous number of well-intentioned and fine people really believe that these so-called reciprocal trade agreements are actually "reciprocal." Nothing could be further from the truth. This legislation was enacted originally in 1934 as an "emergency" measure to aid the country during depression times and was frankly called "an emergency measure for emergency conditions." It has been renewed 10 times for varying periods and the emergency never ends, in spite of the fact that since Pearl Harbor, in 1941, our country has experienced greater economic growth than ever known by any nation since time began. Instead of being an "emergency" measure, today its friends now call it an "anti-recession" measure. They move with the times and always have an opportunistic reason for renewal.

This emergency measure has kept growing like a blight: wider, more complex, and more dangerous, at the expense of many American workers and many American businesses. While textiles and other soft goods were hit hard at first, today the whirlwind of cheap imports is affecting many kinds of goods and machinery. Our people divide sharply on this subject and the Congress itself breaks up into large blocs of those who are for and those who are against, or those who lean toward or those who lean against. Many of our people have tranquilized their own convictions by repeating a little sing-song that deserves some comment. The sing-song goes something like this: "Free trade means no conflict between nations and that means no wars and that in the end means that our sons will not go forth to battle." Who among us has the courage to take issue with such sentimental reasoning? It is a strong America that will deter war, not an America with holes in its military and economic armor.

The shocking fact is that many American markets and American jobs are just as easy for foreigners to take as stealing a baby's candy. Let's consider these salient points:

1. Wages paid to workers abroad, making all kinds of goods that we buy, range from 35 or 40 cents an hour down to about 8 cents per hour. By comparison I'm sure it is unnecessary for me to cite the hourly rates of the average worker in the United States.

2. In 1934 when the tariff cutting spree began, the average tariff levels protecting our industries were 46.7 percent—now they are 11.7 percent. The so-called protection is three-quarters gone. And there will be more of the same if the act is renewed as proposed.

This has been mercilessly destructive to the basic foundations of American jobs. You, as engineers, know full well that no amount of technological improvement in processing can compensate for those wage differentials, in the light of what you know about present day equipment here and abroad. As a matter of fact, many foreign countries have very modern, new equipment that was partly paid for by you and by me, as American taxpayers. How can we as a Nation give money, know-how and lowered tariffs to our friends abroad and not have trouble at home. We can't eat our cake and have it too.

Now what about the reciprocity in our trade agreements? Well, in the first place, as these successive trade agreements were made with various countries, all the benefits were passed around to all the other trade agreement countries. As you know, this is called the most favored nation clause. It is not surprising that the country with the lowest wages and the required skills gets the business. Obviously, again, because our wages are 5 to 10 times greater than those of other countries we didn't get the business, we got the "bizness."

The whole thing reduces itself to very understandable elements if we take a look at the facts and forget the much touted slogans. For most items, wages are the deciding factor in measuring what country will make which product, depending upon where the necessary skills and materials can be made available. For example, England controlled the wool goods export market for centuries. In recent years the Italians, with lower wages and excellent skills, have chased the British woolen goods off many trade routes. And now the Japanese are invading the wool goods export market in a big way. Japanese goods made of wool are seriously affecting the already stricken woolen manufacturing industry of the United States. This is bad for the wool growing industry in which Montana is so vitally interested, as well as being bad for the American worker.

With our generous showering of goods, services, and money upon so many lands, in addition to having cut our average tariff rates by three-quarters and with foreign wages so far below ours, what did our foreign friends do? How did they reciprocate? The facts show that the 89 trading nations, other than the United States, have developed no less than 36 different ingenious practices, restrictive to international trade and investment. As examples:

Sixty-two countries require import licenses to get goods into the countries, and skullduggery is rampant in this area.

Forty-six require export licenses, sometimes tied up with stringent currency controls.

Twenty-six have restrictions on outgoing capital movements.

Twenty-eight have restrictions on incoming capital movements.

Thirty-three have exchange licenses.

Twenty-three have multiple exchange rates.

Nine have import quotas, but the import licenses operating in 62 countries are, in effect, just the same as quotas.

The problem is the same whether it be in Rhode Island, Ohio, Georgia, or Montana. Only the names of the products involved are different. The blight is on a vast variety of items—textiles, machinery, machine and hand tools, chemicals, metals, cameras, appliances, and countless others. The great State of Montana is probably first in the Nation in zinc, third in copper, and fifth in lead production in the United States. As you know, the price structure is not only disheartening but is ruinous to many American mining companies. It is tough on many Montanans who depend so greatly upon these metals for their livelihood. We get the same end result whenever low-cost imports shut down plants and mines and people are put out of jobs.

Probably one of the least understood phases of the market place, and certainly the phase misunderstood by most of the proponents of free trade, is the psychological effect of the sale of a small quantity of really cheap and unrestricted imported goods on the basic price level of the rest of the domestic supply. The result is dramatic, immediate, and destructive. The price of all the rest of the goods, no matter how high the wages, rent, heat, light, taxes, and other items of cost that went into them, will grind inexorably downward with the sureness of the pull of gravity.

Unrestricted imports encourage the disintegration of price levels based upon American costs. There may be a temporary advantage to consumers but, if uncontrolled, it will wreak havoc on employment in America. The result is decreased purchasing power, hardship, relief, and a lower standard of living. American jobs must be preserved for American workers.

What advantage is there to the American worker and his family if we permit the further liberalization of these foreign trade laws? The gains that have been made in the fields of minimum wages, overtime pay, social security, industrial safety, health and welfare could be seriously affected. Any manufacturer can now escape American labor legislation and most American taxes simply by locating his plant abroad. The laws governing interstate commerce should not discriminate against goods produced in the United States.

Why should two identical garments, one manufactured in the United States and the other manufactured in Japan run into different rules at our State borders? If, as is true, we have legislated costs on the United States product, is it fair or reasonable that foreign goods should move in interstate commerce entirely exempt from the rules that apply to American manufacturers?

In my judgment, the American people are to fair minded to approve this type of unfair competition if they understood it. The point is that our laws should take into account the high costs of American manufacture when evaluating the entry of foreign goods into our country. Tariffs, quotas, or a combination of both are necessary if we are to preserve our American standard of living. And let us not forget that American industry has twice been the arsenal of democracy in world wars. Is it wise, in the nuclear age, to decimate, under the halo of reciprocal trade, industries which were essential to allied victories in World War I and II?

Ladies and gentlemen, it is fantastic to many American businessmen to speak of this idea of international trade as reciprocity. Almost alone, we have done all the giving and yielding and losing. It was all the American Government's idea in the first

place, 24 years ago, and we sold it all over the world. The act took the tariff control out of the hands of Congress and gave it to the executive branch. The control of American international trade should go back into the hands of Congress, where it belongs. This is the point at which local conditions register promptly and accurately.

Two bills are now in the House Ways and Means Committee and will shortly be acted upon. One is the Dorn bill—H. R. 11250 and the other is the Simpson bill—H. R. 11462.

Both bills return the determination of when American industry, and thus, our country is injured to the Congress, through the medium of the Tariff Commission, by whatever name it may be called. Under these bills economists in the State Department could no longer use global politics, sputniks, or other convenient reasons to overrule the true facts when our industries and mines are actually hurt, as is now the case.

I urge all of you connected in one way or another with American free enterprise to give serious thought to this vital and current subject and to advise your Congressmen and Senators how you feel. There isn't too much time. I have opposed the encroachment upon American jobs of these misleading trade agreements since their inception and I shall continue to do so until some form of equitable relief, based upon the American standard of living, is available.

The danger is clear and present. No one can deny that we must stop being complacent about our technical educational system. By the same token, we cannot be complacent over the fact that our country has actually become the battlefield for cheaply made imported manufactured goods. The American standard of living is under attack from overseas. Many countries who are attacking us in this way are our friends. They rely on our economic strength and our aid. Personally I believe most of them would understand our problem if our representatives at the international bargaining table would present our situation effectively and fearlessly. Let us join together to remind our government of the necessity of defending our hard won high standards of living. I thank you.

Milwaukee County Board of Supervisors Suggests Federal Legislation for Public Assistance

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a copy of a resolution adopted on April 29 by the Milwaukee County Board of Supervisors, suggesting Federal legislation for public assistance.

A memorandum from Mr. John W. Rankin, director of the Milwaukee County Institutions and Departments, relating to this subject, is also enclosed.

The Board of Supervisors of Milwaukee County notes the problems faced by persons needing public assistance who do not meet State residence requirements for such aid, and recommends the enactment of Federal legislation to provide Federal assistance for such persons.

In accordance with the wishes expressed by the board, I include the resolution in the RECORD, and commend it to the attention of the membership of this body:

Be it resolved, That the following resolution as submitted by Supervisor Duffey be and the same is hereby adopted as recommended by the legislative committee after appearances by Charles O'Neill, executive director of the St. Vincent de Paul Society, and J. T. Petska, secretary of the Milwaukee County Property Owners Association, and due consideration and deliberation having been held by said committee on the subject matter:

"Whereas the Milwaukee County Board of Supervisors was the primary sponsor of the so-called relief residency requirement bill which was introduced and enacted into law at the 1957 session of the Wisconsin Legislature as chapter 190 of the Laws of Wisconsin of 1957; and

"Whereas since the enactment of this legislation and its practical application to various unforeseen factual situations, deficiencies in the law have glaringly been brought to light; and

"Whereas conflicting interpretations have been applied to the term 'continuous residence,' some interpretations so strictly construed that Wisconsin residents having all the other prerogatives of citizenship in this State may be denied relief because of temporary absence from the State; and

"Whereas it was not the intention of this body when sponsoring this bill that it give rise to any inequities or unjust hardships to those of our citizenry who have met with financial reversals; and

"Whereas our country is now in the midst of a financial recession with more than 5 million persons unemployed; and

"Whereas the current unemployment situation in this community has caused a sharp rise in the number of persons requiring public financial assistance; and

"Whereas since the 16th day of June 1957 persons without continuous residence in the State of Wisconsin for a period of at least 1 year have been refused such assistance by reason of the provisions of chapter 190 of the Laws of Wisconsin of 1957; and

"Whereas those nonresident persons who are in actual need of financial assistance from the community have had, since the enactment of this law, no place to turn for assistance except to a few private charitable agencies, which agencies have strained their limited resources in an attempt to meet the emergency needs of these unfortunate and destitute people; and

"Whereas a great many of such persons have now become stateless persons, although they are bona fide citizens of the United States of America, because they are unable in the time of their need to establish the required minimum legal term of residence in any State for the purpose of receiving public aid; and further, because all the States of the Nation, with the exception of the State of New York, have laws specifying that such residence is a condition precedent to the granting of public aid: Now, therefore, be it

"*Resolved by the Milwaukee County Board of Supervisors*, That the Congress of the United States be respectfully requested to promptly consider and enact, not only as an antirecession measure but as a means of meeting serious social problems, enabling legislation to provide Federal aids which will meet the most urgent needs of these stateless persons; and be it further

"*Resolved*, That authenticated copies of this resolution be transmitted to the Governor of the State of Wisconsin for his presentation to the proper committee at the governors' conference to be held at Miami, Fla., May 18 to May 21, 1958, as well as to the Wisconsin Members of the Congress of the United States; and be it further

"*Resolved*, That such Wisconsin Members of Congress be requested to jointly take proper action to insure that this resolution be spread upon the CONGRESSIONAL RECORD for the purpose of making known the contents thereof to all Members of the Congress of the United States."

MILWAUKEE COUNTY INSTITUTIONS AND DEPARTMENTS,
Milwaukee, Wis., April 25, 1958.

From: John W. Rankin, director, Milwaukee County Institutions and Departments.

Subject: Suggested Federal legislation for public assistance.

Many proposals are being discussed which would provide that the Federal Government assist local communities in the granting of assistance to needy persons during this time of recession. Since the Honorable Vernon W. Thompson, Governor of Wisconsin, will shortly attend the conference of governors where such legislation will be discussed, it is proposed that the Governor should have some indication from the Milwaukee County Board of Public Welfare of its feeling inasmuch as this is the largest metropolitan community in the State of Wisconsin.

It is recommended therefore that your honorable body approve of the board of public welfare forwarding to the Governor the following letter which outlines the board's position:

"Knowing that you are concerned about general assistance problems in the State of Wisconsin and plan to propose certain remedies at the forthcoming conference of governors, we would like to make certain recommendations.

"We, as members of the Milwaukee County Board of Public Welfare, have had considerable experience in dealing with applicants for general assistance, both those who have lived in Wisconsin for many years and those who have more lately migrated here. We have witnessed the migration of people to work in Milwaukee industries during 1941–46 and again in 1951 through 1953. We have also seen the increase in assistance applications that occurred in 1949 and 1950, in 1953 and 1954, and at the present time. We believe that the remedy is an amendment to the Social Security Act which provides reimbursement as follows:

"(*a*) A formula of 50–50 between the Federal Government and the States and localities for all assistance applicants who have lived in Wisconsin for more than 1 year; and

"(*b*) A 100-percent Federal reimbursement for assistance applicants who have lived in Wisconsin for less than 1 year.

"The reasons for these recommendations will be discussed in turn:

"A. FEDERAL REIMBURSEMENT FOR GENERAL ASSISTANCE

"At the present time, the whole country is in the midst of a recession. If spending for general assistance cases continues throughout the year at the March level, Milwaukee County will face a deficit of over $3 million.

"The Federal Government now helps with the financing of other forms of public assistance and should do the same for general assistance. Originally, it was believed unemployment in a local community could be solved by the local community and, therefore, the burden of financing should fall on its members. Today, it is generally recognized that our economy is very closely interlocked throughout the whole of our Nation and when a recession hits one part of it or one major industry, it is very quickly felt by all the other parts and most of the other industries. This suggests strongly that the burden of paying the costs of providing relief to the unemployed should be shifted in part at least to a Federal tax base. It is suggested that this burden be shared

on a 50–50 basis between the Federal Government and the several States.

"B. 100 PERCENT REIMBURSEMENT FOR MIGRANTS

"Each State now has its own residence laws which determine eligibility for assistance to migrants. A wide variety of patterns exist throughout the country. As a result, a fairly large number of citizens have become stateless. They are the responsibility of no State or community. They have been written out of the statutes and their difficulties result in endless bickering between the States where the migrant finds himself unemployed and the States where he formerly lived. Their number naturally increases in periods of economic recession.

"It is possible that a uniform residence law might be developed and adopted by all the States. This would take considerable time and there is no assurance that all State legislatures would adopt it. An alternative would be to have the Federal Government assume responsibility for 100 percent of the costs involved in providing assistance to stateless people. This could be done by an amendment to the Social Security Act providing for administration of the program by the States and localities and reimbursement by the Federal Social Security Administration.

"Migrants are human beings in interstate commerce. The Federal Government constitutionally and traditionally has had jurisdiction over things which move in interstate commerce. The plight of migrants is an acute social problem throughout the Nation affecting farm workers, as well as nonresidents in large cities when they find themselves thrown out of work.

"Most population forecasters see migration between States and localities increasing in the next 20 years. As our economy expands, as new industries and occupations develop, there will be continually reoccurring demand for large numbers of people to move to new localities. If recessions occur before they have established roots in the new communities, the cost of their assistance needs should not fall on the new community but on the Nation as a whole which has profited by their migration."

JOHN W. RANKIN, *Director.*

Japanese Editors Visit Troy—Greatly Impressed

EXTENSION OF REMARKS

OF

HON. ALVIN R. BUSH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. BUSH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Troy Gazette-Register on May 8, 1958. It so happens that Troy is in Bradford County, the third largest county in the State of Pennsylvania. It is one of the 8 counties comprising the 17th Congressional District of Pennsylvania, which I have the honor and privilege of representing.

JAPANESE EDITORS VISIT TROY—GREATLY IMPRESSED

TROY.—Two Japanese editors were visitors in Troy this week.

They are Shimpei Ikejima and Shozo Ogiya. Both are from Tokyo, the metropolitan capital of Japan.

These prominent editors, one of a weekly magazine section of a daily newspaper of 1,500,000 circulation, and the other, an editor of a monthly publication of 700,000, came to Troy as guests of C. Dixxon Avery, editor of the Troy Gazette-Register.

Flying in from Japan, Mr. Ikejima and Mr. Ogiya first stopped for 4 days in Hawaii's Honolulu, then at San Francisco, next at Washington, all by air.

They arrived in Troy Sunday night after a flight from Boston to Newark, N. J., and then by train to Elmira, N. Y. They departed Wednesday morning for Detroit, to resume their tour of the United States which will end after a 2 months' stay.

Governmental Institute of Washington, D. C., a branch of the State Department, are the sponsors. Manaku Fukuda, a native Californian of Japanese ancestry, is their interpreter. Mr. Ikejima, a traveler of some renown, speaks English well enough to get along. Mr. Ogiya can express himself, but needs some assistance of the interpretive expression of Mr. Fukuda.

Both editors are graduates of the University of Tokyo. They are vitally interested in behind-the-scenes activities of social and economic import.

Troy is the only small town they are visiting during their trip around the United States. And they have expressed their pleasure in being able to talk to the grassroots people of America, although they did not say so in so many words, probably because the American expression, "grassroots," is unknown in their country, and, therefore, in their language of expression.

What they endeavored to convey, was that it was good to talk to the people of a community like Troy, official and unofficial, in order to feel the pulse of America.

Troy has been designated as a must place of visit for Japanese journalists by the Governmental Affairs Institute, because it so wonderfully well exemplifies small community life.

Three years ago two editors from Japan came to Troy. Last year another editor made the visit. This year, two others.

How it all started, explains the editor of the Troy Gazette-Register, is when Chojiro Kitagawa and Shigemitsu Okazaki asked Governmental Affairs to make it possible for them to visit Mr. Avery (the editor) in Troy, Pa.

The editor of your paper had been in Japan during the administration of General MacArthur, first as a political analyst in MacArthur's headquarters, and later, as Chief of Information for a region administered by military government.

As Information Chief, Mr. Avery made numerous acquaintances, and several of these learning of the impending visit of the two Japanese editors, proffered overtures that they contact Mr. Avery. And so it started. Mr. Avery expressed delight that these international contacts persist, and that Troy is so honored by the must on the American tour.

Arriving in Troy on Sunday night, the two visiting editors and their interpreter registered at the Troy Hotel. Monday morning they spent some time inspecting the operation of the Troy Gazette-Register and in talking with visitors who happened to call at the newspaper office. They met several political figures in the county at this time.

A visit was paid to the W. R. Croman elementary school where they visited the 5th and 6th grades of Mrs. Mary Van Keuren's class. Here they spoke in English and Japanese to the students, answering many questions and illustrating Japanese writing. They dined at the school's cafeteria and signed many autographs for the children.

In the afternoon they paid a visit to the Towanda Daily Review as guests of David Turner, copublisher of the paper. Mr. Turner is not only president of the Pennsylvania Newspaper Publishers Association, but is also secretary of the Republican party of Bradford County.

En route back from Towanda to Troy, the Japanese editors paid a visit to Robert Weldy, postmaster of Burlington, as well as owner and operator of Weldy's store in the borough.

A dinner at the home of Mr. and Mrs. Avery in Troy concluded the day's activities.

The next day they visited the milk receiving plant of Troy Dairy at Columbia Cross Roads. This was followed with a visit to the milk-bottling plant of Edgewood Dairy in Troy.

The afternoon marked a visit to Troy Community Hospital where Fred Pomeroy, Jr., acted as guide and host. The remainder of the time was spent in talking to various persons in the town, as they happened to meet.

Mr. Ikejima and Mr. Ogiya, together with their interpreter, departed for Elmira at 9:45 a. m., Wednesday. They enplaned for Buffalo, to resume their tour of the United States.

Before departing the two Japanese editors issued statements. These follow:

"When I was in the fifth grade in a Tokyo school, a visitor from Siam talked to us and I became very interested in Siam, as a result. In fact, I was impressed with what I heard that I resolved I would visit Siam one day. And that has come about," Mr. Ikejima said.

"Last Monday, I visited the Croman School's fifth and sixth grades and I was given the opportunity of talking to the students about Japan.

"I hope that some of them, one day, will be able to visit Japan."

Mr. Ikejima then mentioned Troy's beauty. He had this to say: "Troy is a very beautiful place. In Japan there are, too, many beautiful places and I am sure that any Trojan who will have the pleasure of visiting Japan will be pleased with similar beauty.

"It is important that people travel and they should include Japan in their travels. Our children in Japan would certainly welcome the children of Troy."

Mr. Ogiya went into greater detail when asked about his reactions to a visit in Troy.

"While I was in Washington, D. C., during the preparation of our schedule of visits in America, Mr. Bergheim (director with Governmental Affairs Institute) highly recommended a visit to Troy," he said.

"I felt that Troy had something very romantic and alluring and gladly consented to make the visit. I have been pleased greatly.

"Mr. Bergheim also said that the reason Troy was recommended for a visit was that a visit to New York City would not give a true picture of American life. New York is peculiar in itself, very cosmopolitan, but in a small community you will find something real of American living.

"After spending 2 days in Troy I feel that what Mr. Bergheim said is true, and for the following reasons:

"1. In New York City my camera was stolen from a hotel room. Here in Troy, I left a tip for the maid the first day I was at the Troy Hotel, but she would not accept it. I insisted on the second day that she take it, saying that she had well earned it, but she still refused, giving a reason. That reason was that she was paid to do her work and that was why she did her work so well.

"2. Troy, with its small population, has everything a large city has. In fact, it is a miniature small city.

"For instance, Mr. Avery (the local newspaper publisher), runs a newspaper that is a miniature New York Times—with everything excepting the New York Times circulation. I believe that the New York Times had no less an auspicious history than the Troy Gazette-Register.

"I also believe that Benjamin Franklin's first newspaper had similar beginning. Mr. Franklin stressed personal news, national

happenings, local news of economic nature, school news, conditions of schools, and so forth. All of this, being basic to worthwhile newspapers all over the world.

"3. After my visit to the Troy Community Hospital, all I can say, briefly, is 'simply wonderful.' I feel that its equipment and conveniences are superior to anything we now have in Japan.

"I would like to pay my respects to the people of Troy who have made it possible to have such a wonderful hospital."

In conclusion of the interview with this newspaper Mr. Ogiya said that if he had remained 3 days longer in Troy he would have met at least a third of the people here.

He expressed his deep feeling that children everywhere are the truly likeable people of the world.

Asked by the editor of this paper, "What is the most impressive thing you experienced in Troy?" the two editors had this to say:

"I was most impressed with your fine community hospital," said Mr. Ikejima.

"I was greatly impressed by the friendliness of all the people I met, officially and informally," said Mr. Ogiya.

Aerial Battle

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. DOLLINGER. Mr. Speaker, those of us who have flown in and out of Miami's busy International Airport have been impressed with the number of foreign airlines operating to and from the United States through the Miami gateway.

This has been particularly impressive to those of us fortunate enough to serve on the Interstate and Foreign Commerce Committee. Many times in hearings before our committee we have been told of the serious problems United States air carriers face in competing with foreign lines.

Through these hearings we have learned, for instance, that it is not unusual for foreign carriers to pay their personnel—flight and ground crews—only half as much in salaries and wages as are paid by our own carriers. We have learned also that, more often than not, the national lines of other countries are either owned outright or substantially controlled by their governments. This strong foreign competition, Mr. Speaker, is not without considerable financing nor is it without the best in modern equipment and when jets begin operating in Latin America within another year there is no guarantee that a United States airline will be the first in the field with new jet service.

This inequitable arrangement, Mr. Speaker, whereby foreign lines outnumber United States international carriers serving Miami by almost 10 to 1 is not isolated nor would it be possible without the cooperation of our own Government. We all know that Air France was providing nonstop service between New York and Mexico City long before the Civil Aeronautics Board even held hearings for the purpose of certificating an American carrier over the same route. We were shocked to learn, several months ago, that Qantas, the commercial air arm of the Australian Government, was given Australia-San Francisco-New York-London rights by our Government which still denies a transcontinental route to the only United States carrier which can hope to compete with Quantas, BOAC, KLM, Air France, and SAS in round-the-world operations.

It may already be too late, Mr. Speaker, but it is my hope that our State Department and our Civil Aeronautics Board will take a long hard look at any further negotiations with foreign governments which would continue to endanger the survival of our own independently owned air carriers. Subsidy payments to our international carriers have diminished to the point of being negligible. The easiest way to get our international airlines back on subsidy is to continue to hand out lush routes in the United States to their foreign competitors on an indiscriminate basis.

Mr. Speaker, under leave to revise and extend my remarks, I ask unanimous consent to have published in the RECORD a most informative article published in the May 5 issue of Time, entitled "Aerial Battle":

AERIAL BATTLE

International airline operations in Latin America, only 13 years ago the virtually unchallenged preserve of Pan American World Airways and Panagra, have become the world's hottest commercial aerial battle. Fifty-six international lines, including 37 fast comers incorporated in Latin America, now fight for passengers.

The newcomers are grabbing business mostly by making themselves the "discount houses of the air." Brazil's big Real-Aerovias charges only $432 for the round-trip excursion flight between Miami and Buenos Aires, as compared with the $779 asked by International Air Transport Association members such as Pan American. Panama's Aerovias flies from Panama to Miami for $55, versus the standard $94—and serves Scotch highballs on the house. Last week, grimly preparing to meet the competition, Panagra got set to introduce an excursion fare of its own that will undercut IATA rates by 30 percent.[1]

	Panagra excursion	IATA tourist
New York-Lima	$428.40	$567.00
New York-Santiago	576.80	771.60
New York-Buenos Aires	638.40	872.60

ON THE CHEAP

Latin American airlines make rate-cutting work by an assortment of economies. Many fly aerial jitneys, such as war-surplus C–46's converted from United States Air Force freighters into lumbering passenger planes. Chile's thriving Cinta line paints its four-engined airliners Panagra yellow and green, and calls one flight El Latinamericano in cousinly association to Panagra's crack El Inter Americano—but not even dubbing the plane Super DC–4B makes it anything but an unpressurized, 230-mile-per-hour DC–4.

Other lines save enough on wages and low taxes to use up-to-the-minute equipment. To fly fine 325-mile-per-hour Super-H Constellations, Real's chief pilots get $900 a month, only about half what a United States captain makes for the same job. Nicaragua's tiny Lanica line recently put a pair of turboprop Viscounts on its Miami-Lima service.

CHAMPAGNE FARE

But many Latin American airlines in the international runs have not had to cut rates to get business. Chile's Linea Aérea Nacional, for example, is subsidized by the Government, does a sedate business at IATA rates by appealing to national pride. Others offer special services, such as the direct European flights of Panair do Brasil, Cubana Airlines and Colombia's 38-year-old Avianca.

Varig of Brazil offers champagne-and-lobster catering. The turboprop Britannias of Aeronaves de Mexico feature speed; they have cut the New York-Mexico City flight to 6½ hours. Safety standards are generally high because international airlines must meet the requirements of the strictest country they land in, which in the case of 26 Latin American airlines is the United States.

FAIR PROSPECTS

"Sure there's plenty of international competition," says Real-Aerovias President Linneu Gomes, "but we can beat it. We offer speed, service, safety, and new planes." Real has built its fleet to 120 (v. Panagra's 19), and most of the other lines have big expansion plans. The state-owned Argentine Airline is wrapping up a $28 million deal for 6 de Havilland Comet 4 pure jets to start 13-hour service between Buenos Aires and New York (almost a year before Panagra gets DC–8 jets on the same run). Varig has ordered French Caravelle jets; Real has bought four Convair jet 880's, will fly a route to Tokyo. An Antarctic route from Chile to New Zealand seems a live possibility, cutting the present 14,400-mile flight via Honolulu down to 5,400 miles via McMurdo Sound.

The effect is bound to be a tighter squeeze on United States carriers. Braniff Airways, which began flying to Buenos Aires in 1948 and still gets a United States subsidy ($550,000 in the first half of 1957), may have to ask for more. Pan American's Latin American division, which in 1956 went off a subsidy that had been averaging $11 million a year, and Panagra, which went off subsidy at the end of 1954, may have to appeal again for aid from the United States.

[1] Sample round-trip fares:

The Tamassee DAR School

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. DORN of South Carolina. Mr. Speaker, during the recent Continental Congress of the National Society, Daughters of the American Revolution, a splendid address concerning the Tamassee DAR School was delivered by Mrs. Zora Butts Barnett, a graduate of this fine school. Tamassee DAR School is located in the district it is my pleasure to represent in Congress and I am personally proud of my friendship with Dr. Ralph H. Cain, superintendent of the school. This speech is a tribute to the patriotism and generosity of all those who have made this educational institution such a successful reality and I commend it to the attention of the Members of this House:

THE TAMASSEE DAR SCHOOL

(By Mrs. Zora Butts Barnett)

My dear DAR ladies (that's what we called you at Tamassee), it is a great privilege to have this opportunity of finding some words to express the feelings from my heart to you personally. It's breathtaking to witness your great organization in action for the first time. I'm really scared, for my knees are shaking.

First, I wish to bring love and devotion from each alumnus in our Tamassee Alumni Association. It is composed of all students who have attended Tamassee since its founding.

Each year Tamassee invites us back with our families for the annual banquet—and what a grand affair.

Someone once asked me what Tamassee had meant to me. I promptly replied, "Everything," for without Tamassee I would not be standing before you today. In all probability, I'd still be plowing oxen on the Rocky hillsides of Oconee County, S. C. Perhaps I wouldn't know how to feed my family the right foods. I'm sure that I wouldn't be able to teach, as I do today, the young married ladies' Sunday school class in our local Presbyterian church. The size of my family did not permit many luxuries, and I realized early in life that there were more valuable things than just guiding that plow.

I loved school so much that I spent 2 years in the seventh grade. During this time I was teaching a Sunday school class of young people my own age. Perhaps it was this experience and the years spent in the open that I gained a vision of what lay beyond those mountains, and I resolved to find out.

My first opportunity came when I won a 2 months' scholarship to Dr. Wil Lou Gray's Opportunity School for 2 consecutive summers.

I was elated then when Mrs. Carl Whitmire, a teacher in our community, asked if I would like to attend high school. My joy knew no bounds.

It was then that I met Dr. Cain for the first time and learned of your Tamassee. In response to a letter, he made us a visit. He found me working alongside my brothers in the torrid heat. After taking pictures, he asked me if I would go to Tamassee if I were given an opportunity. My quick reply was "Yes." In September I went to the school with a 2-bushel hamper filled with beans and a bushel of potatoes with which to pay for my uniforms and shoes. I began as a freshman in high school at 20 years of age with a great determination to learn and discover myself.

During summer vacations, I went back to my home community bursting with dreams and more determination. There were many places that I could put into practice what I was learning at Tamassee. The mothers of undernourished children needed to know what made them that way. Sally, a neighbor, wanted help in cutting and making a dress. Then there was the family canning to do besides canning some fruit for Tamassee to help pay for shoes and uniforms.

Wasn't it our own past State regent who called Tamassee a many-splendored thing. That spirit of Tamassee helps an individual organize himself and all his component forces. It is a builder of human souls, that is, it begins with and in the total person, intellectually, physically, socially emotionally, and spiritually. Tamassee, which is an instrument of God, cooperates in every way to make its students aware of their need to grow and excel in character and achievement. At Tamassee students are taught to rise above and against the winds of their unfinished environment which threatens to smash them into the sinkholes of drudgery. It teaches them to rise above themselves and grow toward higher attainments. Perhaps, the following incidents will illustrate what I mean.

At the beginning of each school year, Dr. Cain would say "Our Tamassee students are too fine to mar or deface any part of our lovely buildings." Always letting us know that the highest type of behavior was expected of us. Another time he might say, "I saw a piece of paper on such and such a walk, as I came to chapel." We wouldn't dare let him see another piece of paper on our beautiful campus. That's the Tamassee spirit which each student has caught.

Tamassee and Dr. Cain are synonymous terms to those who love Tamassee and Dr. Cain. He has given to many a new way of thinking. He has helped to create an institution comparable to any. His past accomplishments for your fine school is a preface to its future. His great integrity and gift of inspiring others has lighted the way for hundreds of boys and girls whose lives would otherwise have been drab and colorless. He inspires confidence in one's self. I must say that Dr. Cain and Tamassee lead students out of themselves onto the road of learning.

I look with awe upon the great DAR organization, for the power it possesses to change and shape the lives of the less fortunate. Time does not permit, but I could go into great details here about such qualities of character as loyalty, and patriotism, but the most important things I learned, were to live, appreciate beauty, and to get along with others. Tamassee stimulated my ambition and awakened in me a desire to serve others with a greater determination.

After completing the 4-year high-school course in 3 years, I was graduated in 1939. During that summer I worked as a maid for a wealthy family on Lake George in New York and earned $75. That September I entered Berea College as a freshman, where I worked and paid my way, with the exception of a $75 scholarship in home economics, the first year. Then during the third and fourth years I borrowed $125 from the DAR scholarship loan fund and spent each summer at the college in order to remain a full-time student.

In June 1943, I received a Bachelor of Science degree and since that time I have taught in the schools of Oconee County. With the first money I received I returned the borrowed money.

When I left Tamassee, I went with a vision in my eyes, my diploma in my hand, a voice in my ears, a song in my heart, and a prayer on my lips. The vision has never faded. I have dared to travel the star-blazed road—dared to follow the vision until now I have a master's degree from Clemson College. Thank you—thank you, again for letting me live.

May God continue his blessings on the DAR, Dr. Cain, and Tamassee that they may be spared to carry the educational torch for the mountain boys and girls of the future.

NATO Gets a New Vitality

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

NATO GETS A NEW VITALITY

(By Edgar Ansel Mowrer)

Soviet arrogance and the persistence of John Foster Dulles have given NATO, our chief military alliance, a new vitality.

Soviet negotiators seem to have overreached themselves in their demands for a summit conference strictly on their own terms. Encouraged, apparently by western citizens who have been insisting that the United States must thenceforth treat the Communist bloc as an equal, the Soviets have sought to transform this equality into fact.

They have insisted that at any summit conference the U. S. S. R. should be flanked by Poland and Czechoslovakia just as the United States would be by Britain and France.

This, of course, in addition to the fact that the U. S. S. R. has flatly refused to discuss either of the 2 issues most important to the West, the liberation of the Kremlin's European satellites and the reunification of Germany by free elections—as the U. S. S. R. promised at the summit meeting in 1955.

REDS CONTRIBUTED

Such Soviet intransigence played into the hands of the American Secretary of State. For, almost alone among western statesmen, Mr. Dulles has kept his head in the face of unceasing clamor for immediate negotiation by pacifists, scientists, politicians, and nervous citizens.

Despite all the talk about the (doubtless real) threat to civilization and the human race, the American Secretary of State has insisted that the threat was just as real to Russians as to Americans.

Therefore, it was no argument for accepting any sort of settlement that would pave the way for future communization of the world. He has insisted that while the West would like a reasonable settlement, it has no need to cringe or whine or beg for it.

At the NATO meeting in Paris last December, the Secretary's position was unpopular. Our allies, properly dismayed by the evidence of Soviet superiority in the development of rockets, then made American acceptance of a new summit meeting with the Russians a condition for their acceptance of our request to install on their territories launching sites for American intermediate range missiles—the best we have. Secretary Dulles consented.

Had the U. S. S. R. then showed itself reasonable, a summit meeting would now be sure. But the propaganda success of the sputniks went to Moscow's head. It raised its voice considerably—and its conditions for a meeting. Mr. Dulles set about making clear to our allies that the new Soviet conditions for a meeting were unreasonable. He answered patiently each of Moscow's numerous diplomatic epistles and its loudly brayed claims. But he refused to yield.

MODIFICATIONS NEEDED

Now at Copenhagen our NATO allies have accepted the American position that there will be no summit meeting until the Soviets modify their demands. This is a triumph for Mr. Dulles and for commonsense.

To be sure, the conference also agreed that the members will not "be discouraged or give up their attachment to the principle of negotiations" with the U. S. S. R. (however futile they believe such negotiations to be). They welcome further technical negotiations "on detailed measures of control over disarmament."

These are propaganda concessions. There is still a danger that the Western nations will be dragged to an ill-prepared disarmament or summit conference and there compelled by public opinion to make dangerous and quite unnecessary concessions to the U. S. S. R. But the danger is smaller.

Meanwhile the Copenhagen conference got down to the serious business of strengthening NATO. The Foreign Ministers noted progress toward coordination of policy among the members, a necessity if NATO is to endure.

Furthermore, they formally recognized that economic cooperation is also essential among the members of the alliance. This

is a salutary, if long overdue, attempt to implement article 2 of the NATO treaty. If it succeeds, the prospects for the West will brighten considerably.

Onions Should Be Removed From Futures Trading

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mrs. KNUTSON. Mr. Speaker, the Senate will soon act upon the important and long-overdue bill to eliminate onions from futures trading, H. R. 376. I urge favorable consideration and passage of this bill and commend to general attention the following points:

First. This legislation has no quarrel with the principle of futures trading or futures trading as it is conducted in the stable, large-volume commodities that are raw products essential to manufacturing processes. This legislation calls for the elimination of a serious misapplication of the practice of futures trading. Futures trading in onions, because of the very small volume and perishable nature of the crop, has become, not an economic tool, but a gambling device for use by professional speculators.

Second. The higher onion income in Texas in 1957 was quite largely due to an excellent crop on large new acreage planted in the northern panhandle section of Texas, an area that was not a heavy onion producer in the past. This northern Texas crop came on in late spring and summer during the season when the depressing effect of the futures market was no longer felt.

Third. Futures trading in the more stable commodities essential to manufacturing processes renders a real economic service in that it enables both supplier and manufacturer to hedge his transactions. According to the last CEA report of October 31, 1957, only 10.4 percent of futures trading in onions can be classed as hedging. Of this 10.4 percent more than one-half are transactions by brokers on onions which they have financed and thus also become speculative, even though actual onions are involved. Based on the figures in this neutral report, less than 5 percent of all futures trading can be classed as legitimate hedging.

Fourth. The bills introduced in 1956 to eliminate futures trading in perishables and the present bills calling for the elimination of futures trading in onions are the only bills in the history of the Congress that have dealt specifically with the elimination of a perishable commodity from organized futures trading. Other bills down through history that were designed to eliminate futures trading in more stable commodities failed to pass because Congress recognized that trading in these commodities rendered a vital service. Futures trading in onions on the contrary renders no service, is detrimental to onion growers and shippers throughout the country and has developed such an unsavory reputation that it is discrediting the practice of futures trading in all commodities in the eyes of the public.

Fifth. Regulation of futures trading has been attempted for several years and the very serious maneuvered breaks in the market in February and December 1957 have been evidence that regulation was ineffective.

Sixth. In testimony before the House Agriculture Committee and the Senate Agriculture Committee, CEA witnesses stated that short-term fluctuations in onion prices had been greater since the advent of futures trading.

Seventh. Futures trading in onions was instituted by the Mercantile Exchange about 15 years ago over strenuous objections from the onion industry both growers and shippers.

Eighth. Futures trading in onions has a decidedly depressing effect on the cash markets for the crop. During the past several years with the exception of 2 very short periods, onion futures prices have consistently been 20 cents to 30 cents per 50-pound bag lower than prevailing cash markets. In 1 instance, in 1956, the futures market was driven down to a low of 10 cents per 50-pound bag. In 1957, the market was broken from $2.20 down to 87 cents in a period of 3 weeks' time, in spite of a small supply of onions on hand.

Belmont Abbey College Looks to the Future

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. WHITENER. Mr. Speaker, the Charlotte Observer, Charlotte, N. C., carried on May 11, 1958, two very interesting articles on Belmont Abbey College at Belmont, N. C. These articles entitled "Belmont Abbey College Looks to the Future," and "Citizens Lend Helping Hand," describe the history of this unique institution of higher learning and its mission for the future.

Belmont Abbey College was founded by members of the Benedictine Order of the Catholic Church in 1878, and since that time it has made an outstanding contribution to the educational life of North Carolina. The college is in the midst of an expansion program, and friends of the institution, Protestant and Catholic, are contributing of their time and resources to assist in its development.

Mr. Speaker, I commend these articles to the attention of the Members of the House and under unanimous consent include them in the Appendix of the RECORD:

[From the Charlotte (N. C.) Observer of May 11, 1958]

BELMONT ABBEY COLLEGE LOOKS TO THE FUTURE

BELMONT.—Priests with taproots sunk in the sixth century are adapting to the educational age of guided missiles and commuting college students.

But they're not only changing with the time, they're helping change it. Through a unique program, the Mecklenburg-Gaston communities are being educated about the type institution Belmont Abbey College is.

For 82 years it's been a little-understood neighbor.

In a heavily protestant section, inevitably a lot of misinformation has existed about a college run by Catholic priests in the midst of a 900-acre tract.

Their monastic life since coming here in 1876 tended to restrict contact with the public and heighten the mystery.

After three-quarters of a century, a better understanding was overdue.

THIRTY-SIX TOP SALESMEN AT WORK

To do the job, the abbey has enlisted 36 of the best salesmen around, men who are leading citizens in their communities' affairs. They're called the board of advisors and although the advice they give is worth thousands, they aren't paid a cent.

They have no real authority, yet their influence is already remarkably evident after a year and a half of existence.

It is paradoxical that the things being stressed by the board might be regarded as new. They aren't. The college is not doing anything it hasn't done over the past decades.

Its basic commitment still is to turn out an educated man, without regard to his religious affiliation.

World War II started events leading to the creation of the board of advisors, for in those postwar days, a flood of students came, mostly by automobile.

COMMUTING STUDENT BODY

Belmont Abbey College's complexion changed. What had been a predominantly boarding population from throughout the United States and overseas, became a commuting student body.

Thus, the geographic emphasis became focussed on Gaston and Mecklenburg Counties, from which two-thirds of today's students are drawn.

Obviously, the college officials reasoned, the abbey should begin to tailor itself to the new situation. Having become a senior college in 1952 (with degrees offered in eight majors) and later gaining full accreditation, it was in an unusual position to help the community take giant steps of progress.

FORM BOARD OF ADVISERS

In December 1956, the board of advisers was formed. It was not 36 men strong to begin with. Several leaders of the area were picked as a nucleus and they chose the others.

No attention was paid to religion in their choices. In fact, only six of them are Catholics.

The 44-member faculty of the college itself has six Protestants on it and one of them is a Methodist minister.

It will surprise some to know that while Catholics make up 40 percent of the abbey's student body, there are more Baptists attending the college than Catholics.

This is one of the points the advisers are trying to stress: Although Belmont Abbey College is a Catholic institution, it is not a denominational college in the usual sense that it derives support from the church or any church organization.

It is really a private, independent college, relying on the work of its members alone for

organization, administration, and financial support.

All property belongs to the Belmont St. Benedictine Order. Members of the order choose their own head (abbot) who appoints the college president from the order's members. Decisions within the group usually are on a simple majority vote.

No religion courses are required for the students (except for the Catholics) and no chapel programs are held.

"The policy of the abbey is to respect the conscience and religious belief of its students who are not Catholic," says the Very Reverend Cuthbert E. Allen, president. "It is our purpose to train informed and educated individuals."

BENEDICTINES EARN MONEY

All money comes from the work of the 95 men who comprise the Benedictines in Belmont, member of the oldest order of religious in the Catholic Church and having its antecedents in the sixth century.

Each Benedictine abbey, however, is separate and autonomous, related to the others by the Benedictine rule, traditions and descent.

Members earn money on private projects such as gardening, architecture, writing and the like. Their work for the abbey is dedicated work, of course.

All they earn outside is paid into the order's common treasury and each receives the modest amount his own needs require.

Even to the community leaders chosen as advisers, much of this was new information. It changed their perspectives. They weren't content to advise, they wanted to do.

DO FAST JOB ON BIG PROJECT

In only one year, they have completed a major project.

March 1957 was the beginning date, as the college talked to the advisors about physical expansion. A library was their most needed building, the priests said (their volumes are the sixth largest college collection in the State). But how should they go about a $400,000 capital expansion?

The board of advisors suggested that since the priests had never solicited money, that the board be allowed to do it. A committee took it on.

In a year's time, they quietly raised $350,000—and $150,000 was from Gaston County alone. The remaining funds were obtained by the college. The building is already underway.

Educational institutions everywhere can choose their students how. Even with some of the highest academic standards in the State, so great is the number of applicants that the Abbey turns away twice as many as it admits.

Its student body of 550 is at the quantitative limit set by the priests. They believe a larger number would break down the intimacy of a small college, lead to bigger classes and a more impersonal administrative control.

So, the college knows pretty much what its building needs will be.

Not so many new structures are expected as the remodeling of old ones. The facilities for the 152 boarding students are overcrowded, for instance, and need enlarging.

SERVICE: THAT'S THE MOTTO

The board of advisors, of course, will fill a role beyond that of financial advisor and procurer. Their goal, and in this they already are succeeding, is to interpret Belmont Abbey College to the people it seeks to serve. Says Board Chairman R. Grady Rankin of Gastonia:

"The board realized what a wonderful thing this college was doing for our local people in two counties * * * It is developing into a real college of the community. We are going to gradually become an urban college and the plan is not to become a campus college but a college of the community."

And Father Cuthbert adds: "We plan to become a commuting college because it will fit more into our tradition as Benedictines. We are independent and distinct from any other Benedictine College, of which there are about 14 in the United States. We are part of North Carolina and whoever comes here as a member of our community becomes a North Carolinian.

"We are a local college and in that tradition we are developing our program in that direction."

CITIZENS LEND HELPING HAND

Members of the board of advisers of Belmont Abbey College are:

Chairman, R. Grady Rankin, textile industrialist, Gastonia.

Vice chairman: J. Harold Lineberger, secretary-treasurer, Lineberger Textile interests, Belmont.

Claude H. Allard, manager, Nagautuck Chemical Division, United States Rubber Co., Gastonia; Ben E. Atkins, editor, the Gastonia Gazette, Gastonia; James D. Barbee, vice president, Cramerton division, Burlington Industries, Inc., Cramerton; W. O. Barrett, editor Mount Holly News and Belmont Banner; Col. Francis J. Beatty, president, Standard Bonded Warehouse Co., Charlotte.

Lewis E. Chittum, treasurer, American and Efird Mills, Inc., Mount Holly; Charles H. Crutchfield, executive vice president, Jefferson Standard Broadcasting Co., Charlotte; Rush S. Dickson, president, American and Efird Mills, Inc., Charlotte; Bernard J. Doris, partner, Doris Jewelers, Augusta Ga.; John E. Eck, Sr., and John E. Eck, Jr., partners, John E. Eck, certified public accountants, Gastonia.

Louis H. Feldman, president, Danville Dairy Products Co., Belmont; J. Paul Ford, cashier-treasurer, Bank of Belmont; Harley B. Gaston, Sr., attorney at law, Gastonia; Edward F. Gallagher, president, Good Will Publishing Co., Gastonia; Charles D. Gray, Sr., president, Gray and Daniel, Inc., Gastonia.

Leo F. Henebry, president, Henebry Jewelry Co., Roanoke, Va.; Hobart H. Joost, vice president, H. C. Hare Insurance Co., Jacksonville, Fla.; R. Emmet Kerr, senior vice president, American Trust Co., Charlotte; C. A. McKnight, editor, the Charlotte Observer, Charlotte; Dr. Charles B. Norris, physician, Charlotte; Cecil C. Prince, editor, the Charlotte News, Charlotte; J. G. Reading, president, National Bank of Commerce, Gastonia.

Dr. Harry D. Riddle, physician, Gastonia; J. C. Roberts, president, Textiles, Inc., Gastonia; Leon Schneider, mayor, city of Gastonia; Edward A. Sheehan, president, A. B. Beveridge Co., Augusta, Ga.; Julian C. Sipple, Jr., attorney at law, Savannah, Ga.; Frederick T. Stant, Jr., attorney at law, Norfolk, Va.; Edward A. Stumpf, Jr., industrialist, Richmond, Va.; Basil L. Whitener, United States Representative, 11th District of North Carolina, Gastonia; Charles A. Williams, Jr., president, Williams & Shelton Co., Charlotte.

An Editor's Appraisal

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. NEAL. Mr. Speaker, apropos of the propriety of assuming a recurring obligation to extend military and economic aid to foreign nations, I submit an editorial carried in the Parkersburg News of May 13. The editorial follows:

SOVIETS STRIVE FOR A DOUBTFUL ASSET

The time has come in world affairs where, if the National Planning Association has the situation sized up correctly, we must bid against Soviet Russia for the favor of the so-called underdeveloped countries.

Pointing out that the Soviets are proffering aid with far fewer strings than are attached to our own, the association calls for a loosening up of our foreign-aid policy, and adds:

"The recipient countries have been offended by our reiterated charges of waste and inefficiency; by our repeated complaints about giveaways and ratholes; by our ludicrous worries over the burdens under which the wealthiest nation in human history is supposed to be laboring when it allocates less than a quarter of 1 percent of its gross national product to nonmilitary foreign aid."

The inference here seems to be that these people are entitled and that if we fail to provide it with proper regard for the sensibilities of the recipients they will take their business elsewhere. If all we have succeeded in doing thus far is to offend the people we have been helping, and if, as also seems to be the inference, a state of dependence is to be their perpetual lot, it would seem both that our foreign aid has done very little good and that the Soviets will be receiving a doubtful asset if they take over for us.

It may be that foreign aid represents but a trivial portion of our gross national product, but whatever percentage it is, the burden is not something to be laughed off when the Government is some $280 billion in debt despite a tax burden that is straining the resources of the economy.

Most of the world got along for centuries without economic assistance from either the United States or Russia. It is an open question whether or not they are any better off now that there is competition for the privilege of helping them.

One wonders if American aid to neutral nations in Asia and Africa is not just an open invitation to Russia to infiltrate these countries with Communist propaganda under the guise of economic assistance.

One wonders, too, if not tempted to pit one source of economic aid against another, these so-styled neutrals would not be exceedingly wary of Communist influence.

Knowing Communist policy as we do, are we not encouraging rather than preventing them from extending their sphere of influence?

Sixteenth Anniversary of the Women's Army Corps

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mrs. ROGERS of Massachusetts. Mr. Speaker, today, May 14, 1958, marks the 16th anniversary of the establishment of the Women's Army Corps of our United States Army. I feel a special interest and pride in this splendid organization, for it was I who, on May 28, 1941, intro-

duced a bill in the House of Representatives to establish a Women's Army Auxiliary Corps for service with the Army of the United States.

There were two basic reasons why I—together with many others—was so vitally interested in the establishment of a women's service in our Army. The first was to alleviate the acute shortage of manpower. The second was to answer an undeniable demand from American women that they be permitted to serve their country, together with the men of America, to protect and defend their cherished freedoms and democratic principles and ideals.

During the past 16 years, the thousands of women who have served and who are now serving in the Women's Army Corps have more than justified the creation of that organization. Their outstanding performance of duty during World War II resulted in the passage by Congress in June 1948, of legislation making the Women's Army Corps a permanent and integrated part of the Regular Army and of the Army Reserve.

Their primary mission is to constitute a nucleus of trained military women upon which expansion of the Corps would be based in time of national emergency. They also contribute voluntarily the womanpower needed to help meet military manpower requirements.

During the Korean war, they accomplished their primary mission in a superior manner. Many WAC reservists were called to active duty and served with distinction. Enlistments of women were increased, and the increased training requirement was efficiently met.

Now, in peacetime, a well-trained nucleus is being maintained. Members of the Corps are contributing to the Army each day their voluntary services in the occupational skills required in the modern Army. They are adding to the splendid record of dedicated and loyal service which began 16 years ago.

I am proud of the Women's Army Corps. I am proud of the part I played in bringing it into existence.

FACT SHEET, UNITED STATES WOMEN'S ARMY CORPS

MISSION

The primary mission of the United States Women's Army Corps is the same as that of the other components of the Army—the defense of the United States of America. The WAC carries out its mission within the Army by making available to the Army the special skills of its members who volunteer for noncombatant duties, and by constituting a nucleus of trained military women upon which the rapid expansion of the Corps would be based in time of national emergency.

HISTORY

A shortage of manpower developed early in World War II. The Army's need for the administrative and technical skills of women led Congress to enact a law on May 14, 1942, establishing the Women's Army Auxiliary Corps. By a subsequent act of Congress, the Women's Army Auxiliary Corps, on September 1, 1943, became the Women's Army Corps, a component of the Army of the United States.

During World War II more than 150,000 women served in the WAC in the United States, Europe, Africa, the Southwest Pacific, China, India, Hawaii, the Philippines, and Alaska. At the end of the war, the Army, faced with the loss of its women soldiers, asked Congress to make the WAC a permanent part of the Military Establishment. The law making the WAC a component of the Regular Army of the United States and a part of the Army Reserve was signed by the President on June 12, 1948.

On the occasion of the 15th anniversary of the Women's Army Corps, May 14, 1957, Gen. Maxwell D. Taylor, Chief of Staff, United States Army, in his congratulatory message stated:

"Over the past 15 years and through 2 wars the women soldiers of the Corps have displayed a high degree of professionalism in a variety of military skills. By its dignity, discipline, and duties performed, the Women's Army Corps has established itself as an essential part of the Army."

Today there are approximately 8,000 WAC's Regular Army and Reserve, on active duty. They are serving throughout the United States and in France, Germany, Italy, Formosa, Hawaii, Japan, Korea, and Okinawa. Approximately 2,000 WAC officers and enlisted women are serving in the Army Reserve not on active duty.

Director of the WAC today is Col. Mary Louise Milligan.

ELIGIBILITY REQUIREMENTS

1. Enlisted: Single women, with no dependents, from 18 to 34 years of age inclusive, who have a high-school diploma or its equivalent and who are United States citizens (or who have declared their intentions to become citizens) may apply for enlistment. Applicants under the age of 21 years must have the written consent of parents or guardians. High mental, physical, and moral standards must be met. Terms of enlistment are from 2 to 6 years. Women meeting these requirements may also enlist for assignment to vacancies in Army Reserve units. WAC reservists participate in weekly drills and summer training and may apply for periods of extended active duty in the Army. They are eligible to attend service schools and enroll in Army extension courses. Term of enlistment in the Army Reserve is normally 3 years.

2. Officer: (a) The direct commission program constitutes the major source of WAC officers. The requirements are a baccalaureate degree from an accredited college or university, age 20 through 32 years, United States citizenship (or declaration of intention to become a citizen), single or married but no dependents or legal responsibility for persons under 18, satisfactory completion of required mental tests and personal interviews, and satisfactory security clearance. High mental, moral, and physical standards must be met. Individuals are commissioned as second or first lieutenants in the Reserve and are called to active duty for a minimum of 2 years.

(b) Officers are also obtained from well-qualified enlisted women between the ages of 20 and 28 through the Officer Candidate School program. Highly qualified non-commissioned officers and warrant officers, not over 29 years of age, may also be appointed as second lieutenants in the Reserve. Regulations governing these programs are the same for both male and female personnel of the Army.

(c) Qualified women who are juniors in accredited colleges or universities may enlist in the Army Reserve for the purpose of attending a 4-weeks' officer summer training course at Fort McClellan. Upon satisfactory completion of the course and graduation from college, they may apply for a commission as a second lieutenant in the Reserve and concurrent active duty. They will then complete their training at Fort McClellan before being assigned to Army duty.

(d) Qualified women may apply for commissions in the Army Reserve for assignment to Reserve units where appropriate vacancies exist. They participate in weekly drills and summer training and may be called to active duty. Also WO's and enlisted women of the Army Reserve not on active duty who meet the eligibility requirements may apply to attend OCS in an active duty status.

TRAINING AND ASSIGNMENT

1. Training: (a) Army training for enlisted women is accomplished by two methods: attendance at specialiazed Army schools and on-the-job training. Upon completing 8 weeks of basic training at the United States Women's Army Corps Center, Fort McClellan, Ala., enlisted women attend Army schools throughout the country to train for the work for which they have shown special aptitude in scientifically designed tests. As they progress in their Army careers, Army advanced courses are also open to enlisted women. Army schools include Finance, Signal, Adjutant General, Information, Intelligence, Quartermaster, Engineer, Medical, Chemical, and Food Service.

(b) Newly appointed WAC officers attend a 20-weeks' WAC officer basic course at Fort McClellan. Later, they may be selected to attend the WAC officer advanced course and/or various high-level Army schools open to both men and women officers. These schools include Adjutant General, Information, Finance, Signal, Quartermaster, Psychological Warfare, Foreign Area Specialist Training, Strategic Intelligence, Foreign Language, Transportation, Command and General Staff College, and the Industrial College of the Armed Forces. Officers selected on a best-qualified basis are trained at civilian institutions at both the undergraduate and graduate levels. Selected officers may also enroll in civilian colleges in a final semester plan for the purpose of acquiring a baccalaureate degree. In addition, off-duty college courses granting credit toward a degree are conducted by civilian universities at most Army installations for the benefit of Army personnel.

2. Utilization: (a) Enlisted women are utilized in 7 of the 10 occupational fields established to furnish a career pattern: Army antiaircraft and artillery static units, electronics, precision maintenance, military crafts, motor, clerical, graphics, general technical and special assignments fields. They are assigned in administration, communications, finance, information, machine accounting, supply, medical, food service, security, electronics, coding, and as control-tower and link-trainer operators at Army aviation installations.

(b) WAC officers are assigned in 115 military occupational specialties. They are utilized in staff and operational assignments at all levels of command and staff in the Army. They are assigned in the following career areas: personnel and administration, intelligence, training and instruction, logistics, comptrollership, information, troop education, civil affairs and military government, legal and legislative, communications, special service and recruiting. WAC officers are also assigned in administrative and training positions within the Women's Army Corps in command of WAC detachments.

BENEFITS

Army women receive the same pay and benefits as Army men and are eligible for the same promotions as Army men through the rank of lieutenant colonel. The WAC has one colonel, the director. All Army personnel while on active duty receive medical and dental care and are included in social-security benefits. Enlisted members of the Army are also eligible for retirement pay after a minimum of 20 years' service; officers may retire after 20 to 30 years' service, depending upon their age, grade, and status.

WHERE TO APPLY

Application for enlistment in the United States Women's Army Corps should be made

at the nearest Army recruiting office. Further information may also be obtained by writing to the nearest Army headquarters, or to The Adjutant General, Washington, D. C. The Army headquarters are: Headquarters First United States Army, Governors Island, New York 4, N. Y.; Headquarters Second United States Army, Fort George G. Meade, Md.; Headquarters Third United States Army, Fort McPherson, Ga.; Headquarters Fourth United States Army, Fort Sam Houston, Tex.; Headquarters Fifth United States Army, 1660 East Hyde Park Boulevard, Chicago 15, Ill.; Headquarters Sixth United States Army, Presidio of San Francisco, Calif.; Headquarters MDW, United States Army, room 1537, Building T-7, Gravelly Point, Va.

HISTORY OF WOMEN'S ARMY CORPS BY CALENDAR DATES

May 14, 1942: Congress approved Public Law 554, creating the Women's Army Auxiliary Corps. The bill was introduced by Congresswoman EDITH NOURSE ROGERS, of Massachusetts.

May 14, 1942: President Roosevelt signed the bill.

May 14, 1942: Oveta Culp Hobby, of Houston, Tex., was sworn in as Director, with rank of colonel.

July 20, 1942: Four hundred and forty officer candidates and three hundred and thirty enlisted women began training at Fort Des Moines, Iowa.

November 2, 1942: First officer candidate class made up entirely of enlisted women began training at Fort Des Moines. (Eighty-eight percent of the WAC officers were from the ranks.)

January 27, 1943: First contingent of enlisted women to serve outside the continental limits of the United States arrived at allied headquarters at Algiers.

May 14, 1943: First anniversary—60,000 members of WAAC on duty at 100 military installations in United States and overseas.

July 1, 1943: Public Law 110, making the Women's Army Auxiliary Corps a component of the Army of the United States, rather than an auxiliary, was signed by the President. From this date it was known as the Women's Army Corps.

July 5, 1943: Director Hobby took the oath of office as a colonel, Army of the United States, thus becoming the first woman to be admitted to the new component of the Army (WAC).

July 20, 1943: Large contingent arrived in England for duty with the 8th Air Force.

October 15, 1943: Vanguard, consisting of 1 WAC officer and 2 WAC sergeants, arrived in India for duty with China-Burma-India headquarters.

November 15, 1943: First detachment of Wacs arrived in Italy. (Some of these women had been in Africa with NATOUSA.)

December 20, 1943: First detachments arrived at Cairo, Egypt, for duty with headquarters, United States Army Forces in the Middle East.

January 28, 1944: The first Wacs to be sent to the Pacific Area arrived in New Caledonia.

March 15, 1944: Five officers arrived in Australia, forerunner to several large WAC contingents.

March 17, 1944: First detachments arrived in Hawaii.

May 16, 1944: First detachments arrived in New Guinea.

July 16, 1944: Large contingent left for Normany, France. This group later went on to Paris.

September 13, 1944: Air Transport Command detachment arrived at Casablanca, North Africa.

November 15, 1944: First two WAC officers arrived in Chungking, China.

November 26, 1944: Vanguard arrived on Leyte, Philippine Islands.

January 1, 1945: Colonel Hobby awarded the Distinguished Service Medal.

March 7, 1945: First Wacs arrived in Manila.

April 14, 1945: First Wacs arrived at Ladd Field, Alaska.

July 12, 1945: Colonel Hobby retired to inactive duty status. Lt. Col. Westray Battle Boyce became director of WAC with rank of colonel.

August 3, 1945: First contingent of Wacs arrived in Chungking, China.

August 29, 1945: Enlistments in the Women's Army Corps were closed.

September 1945: Colonel Boyce made worldwide inspection of WAC units overseas.

November 17, 1945: Sixtieth and final class of officers commissioned at Fort Des Moines, Iowa.

December 15, 1945: Fort Des Moines, Iowa, closed.

July 26, 1946: First bill providing for WAC in RA and ORC introduced into Congress.

August 10, 1946: Two hundred enlisted women transferred to Yokohama to work with Eighth Army Headquarters.

November 1946: Colonel Boyce inspected all WAC installations in Europe.

March 5, 1947: Colonel Boyce retired by reason of physical disability. Lt. Col. Mary A. Hallaren appointed acting director.

April 16, 1947: Legislation providing for the inclusion of WAC in Regular Army and Organized Reserve Corps presented to Congress.

May 7, 1947: Lt. Col. Mary A. Hallaren became director, WAC with rank of colonel.

May 14, 1947: Fifth anniversary—9,517 Wacs on duty in the United States, Germany, Austria, Italy, Panama, Japan, and China; 3,009 overseas.

July 2, 1947: First hearing of WAC-WAVE legislation (S. 1641) was held in Senate Armed Services Subcommittee.

July 16, 1947: S. 1641 was approved by Senate Armed Services Committee.

July 23, 1947: S. 1641 unanimously approved on Senate floor. First hearing held in House Armed Services Subcommittee.

August 5, 1947: Lt. Col. Mary L. Milligan appointed deputy director, WAC.

September 30, 1947: WAC reentry program terminated.

March 24, 1948: Amended form of S. 1641 reported favorably out of House Armed Services Committee by vote of 26 to 1. The amended bill provides for enlistment and appointment of women in Organized Reserve and extends WAC, AUS for 1 year.

April 1, 1948: Twenty WAC officers and 70 enlisted women reported for recruiters' instructors course at Camp Lee, Va.

May 19, 1948: Joint Senate-House Conference Committee reported out an amended form of S. 1641 which authorized women in Regular and Reserve forces but which placed restrictions on the number of Regular officers and enlisted women who could be on duty during the 2-year period immediately following passage of legislation.

May 26, 1948: Senate by voice vote approved report of Senate-House Conference Committee.

May 26, 1948: First WAC officers and enlisted women graduated from TAG recruiters' instructors course at Camp Lee, Va.

June 2, 1948: House vote 206 to 133 approved report of Senate-House Conference Committee.

June 12, 1948: The President (Harry S. Truman) signed the Women's Armed Services Integration Act, Public Law 625, 80th Congress.

June 15, 1948: GO No. 43, D/A established WAC training center at Camp Lee, Va., with Lt. Col. Elizabeth C. Smith as commanding officer.

June 16–18, 1948: WAC Staff Advisors Conference.

July 5–September 30, 1948: Screening centers for WAC officers in operation.

July 8, 1948: First Wacs enlisted in Regular Army.

July 13, 1948: Maj. Irene O. Galloway appointed WAC staff adviser, EUCOM.

September 27, 1948: First enlistments in WAC Regular Army from civilian life.

October 4, 1948: First basic class and first officer candidate class (Regular Army) began training at WAC training center, Camp Lee, Va.

December 3, 1948: Colonel Hallaren sworn in WAC, Regular Army, and made director, WAC.

December 10, 1948: First WAC, Regular Army, basic trainees graduated at Camp Lee, Va. Press day held.

December 18, 1948: President signed list of 199 appointments in WAC, Regular Army.

April 1, 1949: First WAC Regular Army officer candidate class graduated—37 members, with Gen. Omar Bradley as speaker.

April 1, 1949: President signed list of 93 appointments in WAC, Regular Army.

April 28, 1949: Eleven offered appointments as warrant officers, Regular Army.

April 12, 1949: Colonel Hallaren left for 2-months' inspection tour of EUCOM.

June 10, 1949: Army accepted design of women's uniform (taupe) as recommended by Miss Shaver's committee and as designed by Hattie Carnegie.

June 12, 1949: End of WAC (AUS).

July 15, 1949: Two 2-weeks' summer training programs for WAC personnel in the ORC initiated at Camp Lee, Va., with Secretary of the Army Gordon Gray attending the opening.

July 15, 1949: First WAC officers went on competitive tour.

July 22, 1949: President signed third increment of WAC officers—40 officers selected.

September 12–16, 1949: WAC staff advisers conference.

January 4, 1950: Maj. Robin Elliott appointed WAC staff adviser, Fourth Army.

January 1950: Lt. Col. F. Marie Clark appointed WAC staff adviser, AFFE, replacing Lt. Col. Mary K. Moynahan.

February 3, 1950: First promotions of WAC Regular Army officers.

August 16, 1957: Senate Committee on Armed Services approved a substitute bill for S. 2305 and ordered it reported to the Senate.

August 20, 1957: Senate-approved substitute bill for S. 2305.

Report of New York County Lawyers' Association on H. R. 8361

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. MULTER. Mr. Speaker, the committee on the Federal courts of the New York County Lawyers' Association adopted, on April 28, 1958, a report disapproving the provisions of H. R. 8361 relating to writs of habeas corpus.

The report of the committee is as follows:

Report of committee on the Federal courts on H. R. 8361 which seeks to amend section 2254 of title 28 of the United States Code, in relation to application for a writ of habeas corpus:

Recommendation: Disapproval.

This bill is an attempt to reduce litigation in the Federal courts. However, under section 3 of the amendment, a multiplicity of actions in the State courts would be required before a Federal writ of habeas corpus could be issued. This multiplicity of actions would effect a bar to an indigent defendant in State custody to seeking his possible Federal remedies. For those defendants who would not be entirely barred, it would work an undue hardship.

Respectfully submitted,

COMMITTEE ON THE FEDERAL COURTS.

The Council To Improve the Health Care of the Aged—Sound Approach to a Serious Problem

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. CURTIS of Missouri. Mr. Speaker, during the past 20 years nursing homes have become a significant part of the Nation's medical care facilities. They have increased very rapidly and the public is becoming more aware of nursing homes and the role they play in the community in caring for the chronically ill and aged. There are many circumstances that have influenced the rapid growth of nursing homes, for example, the expansion of the life span; large increases in our aged population; significant advances in medicine-public health services; the fact that many of our family dwellings and homes are too small to accommodate a family and the aging parent, together with the fact that quite often both husband and wife find it necessary to work and therefore there is no one at home to care for the aged; the tremendous growth of insurance and pensions systems. Because of this expansion there has been a great deal of concern about the standards in these homes and the realization of the significant contribution nursing homes are making and should be making to our older citizens.

I was quite happy to learn that recently the American Medical Association together with the American Nursing Homes Association, the American Hospital Association, and the American Dental Association announced the formation of the Council To Improve the Health Care of the Aged. I am quite sure that this good news was well received by all of us who are interested in solving the problems of providing good health care at reasonable prices for our elder citizens. I am very much convinced of the need for expanding our financing facilities to encourage the construction and development of all types of nursing homes. Consonant with this belief, I intend to testify before the Housing Subcommittee of the Banking and Currency Committee on May 19.

Under leave to extend my remarks in the RECORD I include the following editorial which appeared in the May 11 edition of the St. Louis Post-Dispatch. I would but reaffirm the writer's conclusion that "the new professional organization has raised hopes which we trust its dedication and hard, practical work will help bring to realization":

NEW HELP FOR THE ELDERLY

The joining together of medical, hospital, nursing, and dental associations in a Joint Council To Improve the Health Care of the Aged is an encouraging development in a field in which encouragements are never too numerous. Its objectives of more and better nursing homes throughout the country,

and "more medical facilities with costs tailored to the limited means of the aged," are of almost desperate importance in Missouri, as everywhere in the Nation.

Money needs to be made available for the construction of nursing homes. Many present operators of nursing homes need to be better trained and, still further, persons capable of becoming skilled operators need to be brought into the picture. Our older citizens need to be enabled to bridge the gap between the most they can afford to pay and the least at which adequate nursing-home facilities can be offered.

The new professional organization has raised hopes which we trust its dedication and hard, practical work will help bring to realization.

Galloping Collectivitis

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 14, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Galloping Collectivitis," by Anthony Harrigan, from the May 9 issue of U. S. A.

Mr. Harrigan, the editorial writer for the Charleston News and Courier, of Charleston, S. C., is one of the leading and able young writers of my State. In this article, he has summed up in masterful fashion the threat to individual liberty which is inherent in the movement to destroy State and local governments.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GALLOPING COLLECTIVITIS

(By Anthony Harrigan)

"The fate of every democracy, of every government based on the sovereignty of the people, depends on the choice it makes between these opposite principles, absolute power on the one hand, and on the other the restraints of legality and the authority of tradition. * * * In a demoracy the power is already in the hands of those who seek to subvert and abolish the law. The process of subversion is consequently irresistible, and far more rapid."

This is the view held by Lord Acton, the great 19th century English historian, on the issue of States rights in the American Republic—the issue which underlies all the major questions that have agitated our country and form the substance of the constitutional history of the United States.

Today the thoughts of American conservatives turn to Acton's penetrating analysis of the great issue confronting us. Today there is recognition of the antagonism between believes in States rights and the advocates of a totalitarian "liberal" democracy. There is an awareness of the real and present danger that the principle of local self-rule or States rights may pass from the life of the Republic.

To be sure, principles do not disappear completely from the heart of a nation, though they may pass temporarily from law and the practices of government. There always is the possibility that weakened sinews of a nation conceived in the spirit of liberty may regain former strength and enjoy a restoration of their libertarian vigor.

Twenty years ago, Charles A. Beard, the American historian, gave in an essay "The Constitution and States Rights" a preview of the anti-States rights philosophy that has gained widespread acceptance in our time.

"The ideas," wrote Beard, "originally associated with that instrument [our Constitution] and the rights of States under it cannot be effectively applied to the changed configuration of interests. * * * The time approaches when, if the processes of history continue, positive definition and formulation will come. Happy will be the Nation if clear and flexible intelligence resolve the consequent dilemma by the operation of flexible institutions."

In short, Beard argued that the end of the States is ordained, should be so, and that new units of government must be considered in the United States.

In the light of recent Supreme Court decisions that strike at the heritage of States rights, Americans would do well to review why these rights are not enjoying support.

DREAD DISEASE

Let us consider these questions: What is the intellectual disease that has been destroying States rights? Is it possible for Americans to do anything to arrest its deathly work?

There is no real difficulty in defining the disease. It is galloping collectivitis, a rampant form of mania for assaults upon people's local associations and local liberties. The disease is spread in epidemic proportion by carriers using educational instruction and propaganda to enforce uniformity of opinion.

Under the influence of galloping collectivitis, people suffer from the delusion that attacks against a plurality of jurisdiction and power are defenses of human rights. Yet it will be found, upon studying the matter, that many so-called defenses of human rights and protestations of the Federal Government's right to enforce uniformity are—with false assumptions laid bare—attacks upon liberty itself.

"Collectivitis" is the desire, in the word of Russell Kirk, that individuals be mere specks in a tapioca-pudding society.

Advocates of big government and a bloc society, seek a world without honorifics, cut down by the leveling winds of utilitarianism, committed to the notion of easy materialistic living as the best possible style of life, conditioned to the idea of the central government guaranteeing livelihood and economic security to the masses, and dominated by so-called property-less bureaucrats.

MAIN SYMPTOM

The chief symptom of collectivitis is lust for making over the world in a single image. This making over entails the introduction of uniformity and conformity as democratic principles, and the portrayal of a social nirvana wherein every citizen thinks and acts like every other.

Without a doubt, the forces of constitutional liberty in America have been weakened by another disease, a creeping paralysis. This disease restrains their own efforts to immunize our country against galloping collectivitis.

VANITY, ALL IS VANITY

It seems that too many Americans have lost their ability to think clearly about the nature of sovereignty and the proper checks on popular power. Demos is god, and the American people and many of their political leaders are forbidden by the collectivists to show a trace of political agnosticism. Louis XIV, the Russian Czars, Caesar himself were not more hedged-around, more protected from criticism and censure than are the American people today in exercising their so-called democracy. Self-flattery on the part of the people, their flattery by the office-holding industry, the self-flattery of demagogic politicians, of some secular-minded clergy and of other persons who ought to know better, are betraying our Republic. The crowd is king and brooks no criticism.

It is ironical that the supposed age of freedom has been most productive of devices which check liberty. What monarchy failed to achieve, totalitarian democracy is achieving, and rapidly.

Moderns, save in rare instances, will not give allegiance to absolute monarchies, but they will give it to absolute democracies. They will not accept the notion that kings can do no wrong, but they will accept the idea that democratic majorities can do no wrong. There is the root of the trouble.

As D. W. Brogan points out, "* * * if the people is always right and the people is the state, then there can be no danger in surrendering into the hands of its mandatories complete, uncontrolled and irrecoverable power. But, as all sensible men know, majorities are capable of grievous wrongs and stupendous follies. Even more readily than kings will they conscript the population, despoil wealth, institute inquisitorial procedures, regiment persons and opinion, and rely on policy procedures in times of stress."

Modern democracies, then, have witnessed the transfer into the hands of the supposed representatives of the people what Bertrand de Jouvenel has termed "the whole complex of rights, duties, and resources which had been built up during the monarchy for the behoof of the king."

The fact that the power has passed into the hands of representatives is proof of the fact that the rule of the people is a polite fiction. It is said the people rule, whereas the fiction of popular participation in the rule of society is merely a device whereby each individual feels the weight of the alleged general interest incarnate in itself which regards every act of private particular interest as an antisocial act. Hence the crowd is personified and endowed with vast powers, and the individual is lost and deprived of freedom. The general will, interpreted by official interpreters (the bureaucrats) "falls with all the weight of an irresistible force on those very wills which have joined in the formation of it."

DEMOCRATIC ABSOLUTISM

What does this mean in terms of States' rights and the law?

It means that democratic absolutism has destroyed the old concept of immutable principles in law, resulting in a breakdown of States rights.

Formerly, change came about in the law through the long processes of time, the gradual development of customs and traditions, the slow work of history. (There had to be an almost universal acceptance of the unwritten law before it was written, codified.) With the advent of democratic absolutism—the tyranny of the majorities—law has become a creature of elections and electioneering. Law has become, in the words of Bertrand de Jouvenel, a "function of opinion." And so it is that the most important questions of social life in the American Republic have become questions of political court action.

Today Americans know in their hearts that there is scarcely a single rule of existence, political and cultural, which does not hang on political court action tied to elections and the competition for votes. Law is no longer a majestic expression of the rights and aspirations of the people, but an expression of the political passions reigning at the moment.

It is tragic but true that the highroad to political advancement in America today is participation in the seduction of the people with the words they wish to hear. The

majority of men in politics have to take part in the enormous bamboozling attempt. Only a handful of political leaders, mostly veterans of the House of Representatives and the Senate who have attained that seniority and security in office which puts away fear of reprisal, are in a position to speak the truth and present the facts uncolored by flattery.

American is in need of leaders who speak out early as well as late in life, who are unafraid. But the political climate is not productive of a Cato. Pressure groups daily increase their harassment of elected officials. The demands for "correct" opinions are unceasing.

The United States Supreme Court is "packed" to represent the forces of majority supremacy. The doctrine of limited Government and local autonomy, a doctrine as old as the Republic, is virtually without a representative on the Court.

SOCIAL SCIENCE REIGNS SUPREME

What is the liberty under law in which the Supreme Court professes itself interested? It seems to be freedom to have proper governmental objective determined by courts which rely more on the advice of psychologists and social scientists than on precedent and established practice. It seems to be freedom from fear of every sort of government except the Federal Government.

Those persons who are afflicted with galloping collectivitis propose to use the processes of government to achieve the obectives of tyrannical governments, the obectives of complete, uncontrolled, and irrecoverable power. How can this be achieved? The only way is by destruction of the bulwarks of liberty, the rights of the States. The all-embracing Federal Government, greedy for power, relies on legislation, indoctrination, and federally directed economic activities to achieve its ends. These are the means of subversion to wreck a republican government.

The contest between those who would expand the powers of Federal Government and those who would retain strong checks on Federal activity has been carried on in the courts. It has been an unequal contest. The advocates of Federal control have won most of the major decisions to date.

A century ago, John C. Calhoun observed, "The end of the contest would be the subversion of the Constitution, whether by the undermining process of construction * * * or by the substituting in practice of what is called party usage. By one or the other, the restrictions (on the Federal power) would ultimately be ended, and the Government converted into one of unlimited powers."

It is essential to bear in mind that a government of unlimited power—whether it be controlled by 1 man, by 1 party, or by 1 section, or 1 powerful majority—is a tyranny with all the evil features the word suggests.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. REECE of Tennessee. Mr. Speaker, Mr. Andrew Gahagan, of New York, and a member of the board of directors of Kenmetal, Inc., Latrobe, Pa., had an interesting and informative article in the Kenmetals house organ, which I feel holds sufficient interest that I am presenting it in the RECORD that it may be available for a wider reading than otherwise. Mr. Gahagan has worked effectively, and without fatigue, over the years in the interests of our system of enterprise of free management and free labor. He has made many fine contributions in this important field:

OUR FOREIGN POLICY

(By Andrew Gahagan)

Twenty-five dollars taken away from each of 40 million families in the United States would amount to one billion dollars.

When our Government people in Washington talk about $3½ billion for foreign aid in 1 year, they are thus talking about a sum of money equal to almost $90 for every family in the United States. Three and one-half billion dollars is also about the amount of taxpayers' dollars it took to pay for all of the expenses of running the Federal Government each year just prior to the year 1932.

We ask, "How have we gotten to the point where our Government people take such vast sums of money away from American families and distribute it to peoples in other countries all over the globe?"

Some of these countries have as many natural resources, or raw materials, as we have here in the United States. And their people are just as strong, just as intelligent, and just as industrious as the workers in the United States.

Why is it, then, that we here in America have the highest standard of living, with more and better food, clothing and homes, and more automobiles, telephones, and other goods and services than any other people in the world?

It is because in America we have a lot of tools and horsepower to help Americans convert raw materials into goods and services. We can think of horsepower as mechanical workers who do not get tired, do not have to sleep every night, and consume things only when they are working. We feed them fuel oil, waterpower, and things that human workers do not consume. These mechanical workers supply about 95 percent of all of the energy required to convert raw materials into goods and services.

In fact, it is estimated that the horsepower in the United States in the form of steam and diesel plants, railway locomotives, tractors, trucks, etc., is equivalent to the energy that could be exerted by 3 billion human workers. There are only about 2½ billion men, women, and children in all of the world.

Why is it, then, that Americans have more mechanical helpers than there are men, women, and children in all of the world, including the United States?

The answer to this question is that it is due entirely to our system of government which is based on protection for private property and the limitation which our Constitution and the Bill of Rights has placed on the power of the Government, including its power to make new laws and rules and regulations to restrict the liberties of the citizens. Our republican form of government is still the newest thing in government in the last 5,000 years.

Under the American private-property system, a man can take his savings and know-how and go into the production of tungsten carbides, or into the production of any other goods and services he desires, without first getting permission from His Majesty the King, or some dictator or government bureaucrat. His only boss has been the customer who decides whether he wants the goods and services produced and whether he is agreeable to paying the prices asked. If the producer fails to satisfy customers, he eventually goes out of business. If he satisfies customers, he continues to grow and hence, have the opportunity to serve more customers with more and better products.

Now, if other countries want our standard of living, they too can have it, not as a gift from the American taxpayers, but by protecting private property in their own countries against confiscation by government bureaucrats, gangsters and dictators operating through force or through taxes or hidden inflation taxes due to the permanent high prices caused by governments creating and spending inflation money.

The American Government's foreign policy should say to the other countries:

"It is none of our business what kind of Government you wish to have in your country. If you want to have a communistic, socialistic or dictatorial government, that is all right with us.

"But we here in America believe in the private property system because it has given Americans more goods and services for more people and more freedom than any other system yet devised by man. We will not, therefore, take American taxpayers hard-earned money and use it to support socialism, communism or any other government property system at home or abroad.

"We are, therefore, only interested in helping people who have our same philosophy of protection for private property. We will make this help available through the Export-Import Bank, or other agency as long-term loans, or guaranties of long-term loans, to private individuals or companies. We will expect your governments to agree that as long as these loans are outstanding, such industries will not be nationalized or taken over and called government property.

"If at any time American taxpayers' dollars are used to buy food and clothing for people in foreign lands, it will be distributed by American Red Cross workers as gifts from Americans instead of as gifts from socialistic or dictatorial governments, wherever they be.

"In short, our foreign policy will be to protect the private property system throughout the world as we believe this to be the best system for mankind."

And then our Government should also add:

"We will stop confiscating the people's property here in the United States through the Karl Marxian device of robbing successful people by means of the graduated income tax, and we will also return to the citizens their complete right to an honest convertible gold coin money system."

Proposed Reorganization of the Department of Defense

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. VINSON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I insert a letter I have received from Mr. Ferdinand Eberstadt with respect to the proposed reorganization of the Department of Defense.

Mr. Eberstadt is one of the outstanding authorities in America on defense organization. He was Chairman of the Committee on National Security Organization, the task force of the Hoover

Commission, which conducted under his leadership what is generally recognized as one of the most thorough, objective, and constructive examinations of our defense organization ever made. During World War II he was Chairman of the Army and Navy Munitions Board and Vice Chairman of the War Production Board. Later, at the request of Mr. James Forrestal, then Secretary of the Navy, he conducted an extensive study of defense organization. This study, officially entitled "Unification of the War and Navy Departments and Postwar Organization for National Security," but widely known as the Eberstadt report, provided much of the basis for unification in the Defense Establishment.

I know of no civilian in the United States better qualified to comment on the proposed reorganization of the Department of Defense. The letter which follows is, in my opinion, the most searching analysis and the clearest explanation I have seen regarding the problems and issues confronting Congress as a result of the President's defense reorganization proposals. I urge every Member of the House to read this letter very carefully. It is worthy of the highest consideration:

F. EBERSTADT & CO.,
New York, N. Y., May 12, 1958.

The Honorable CARL VINSON,
Chairman, Committee on Armed Services,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: In response to your request, I have studied the bill (H. R. 11958) and the testimony on it given before your committee, and take the liberty of setting forth my views below.

It is not difficult to state the objectives of our Defense Department, or even the principles applicable to sound departmental organization. Nowhere have these objectives and principles been better stated than in various speeches and messages of our President. The application, however, of these principles to the huge and complex conglomeration of men and materials constituting the Defense Department is neither simple nor easy. Persons of high patriotic purpose and competence differ widely on these matters. Almost every question is closely balanced with pros and cons. Thus, while it is dangerous in the extreme to establish a rigid form of defense organization unresponsive to the appalling speed, scope, and magnitude of the modern weapons that are the fruits of the increasing acceleration of scientific discovery, on the other hand, an institution of this magnitude to be manageable and effective must have a solid foundation and a strong framework.

And so, the answer to these complex questions can only be found in the sort of thoughtful, deliberate, and careful exploring and weighing of their various conflicting aspects in the pattern set by your committee. The more careful and scrutinizing the study, the more likely a sound solution.

Those who have observed these matters over the past devade or so know that whenever things go wrong in the military field in one way or another, the conventional culprits are "the organization of the Defense Department" and "interservice rivalries." Little attention is paid to whether the troubles might possibly be the natural consequences of decisions and policies—or lack of them. The prescription to cure such military ills is almost always the same—more and more power and authority for the Secretary of Defense and more and more concentration of authority over strategic planning.

And so each successive amendment to the original act of 1947 has aimed at clarifying and strengthening the authority of the Secretary of Defense over the operations of the Department to a point where I doubt that there remain any words in the English language whereby Congress could possibly convey to the Secretary of Defense more or clearer power and authority to run his Department beyond what he now possesses. I take the liberty, however, of pointing out that nothing tarnishes and corrodes faster than unused authority. To quote Poor Richard, "the used key stays bright." It is thus pertinent to inquire whether, over the past years, the Secretaries of Defense have, as a matter of fact, always fully employed the power and authority at their disposal.

For my part, any doubts as to the adequacy of the Secretary's authority to manage the Department became academic after Secretary Louis Johnson terminated construction on the aircraft carrier *Forrestal* and his decision stuck. Whether or not the decision was a sound one, particularly in the light of hindsight, is beside the point. The real point is that, undeterred by any concern for "fuzzy language," "sand in the gearbox," or "gray areas," Secretary Johnson grasped his authority firmly and used it. Furthermore, I know of no instance since the act of 1947 was passed where the Secretary's power and authority have been seriously challenged.

And still the requests for further power for the Secretary of Defense continue. However, in the bill before you, the request for additional power for the Secretary in one important respect is of a somewhat different nature than that sought heretofore. The power there requested relates not primarily to the determination of policies, etc., but involves the right to rearrange or abolish basic functions of the military departments.

This raises a serious constitutional question on which it may be difficult to draw a clear and sharp line. Certainly, it would not seem to be consistent with the constitutional obligations of the Congress to grant the Secretary unlimited and undefined authority in this field. Where, in our time, legislatures have surrendered their constitutional powers, the result has usually not been good. The nub of the question then is, How far can (or should) Congress go in assigning powers of this sort to the Secretary of Defense without abdicating its constitutional function and without jeopardizing our national security, bearing in mind that we may not always be so fortunate, as we are at the moment, in having a distinguished military men in the White House and a competent Secretary in the Pentagon?

Solution to the problem is rendered more difficult by the fact that although such sweeping authority is sought, no clear plan or program for its intended use has been presented either in the President's message, the bill, or the testimony before your committee by witnesses supporting the bill. One is thus left with the impression that such authority cannot be urgently or immediately needed since no clear plan for its use exists. Failure to present such plans and programs fortifies the conclusion that the troubles may reside more in decisions and policies than in organization and service rivalries.

It seemed reasonable to assume that the changes requested with respect to the Joint staff must be tied into some definite plan but witnesses deny its existence. How can it be that such drastic powers over roles and missions are sought and still no plan for its use exists? That's what the Secretary has said so it must be correct. Would it not therefore be wiser to defer drastic action until reasonable definite justification is presented?

Obviously, Congress should be willing to make proper changes in the law where the need is convincingly presented and substantiated, but, quite apart from any Constitutional question, there's a real question as to whether Congress should give the Defense Department authority to make changes of so vital a sort where the Defense Department itself doesn't seem to know specifically why they are needed and how they will be used. If important changes are necessary, they should not be delayed for an instant, but simply conferring such broad authority to meet unstated needs would not seem to solve anything.

Among the specific changes in the present law requested in the bill is the abolition of words which provide for the separate administration of the military departments. The original conception of the function of the Secretary of Defense was that he would determine major policies and not become involved in details of administration. His job is too big to handle in any other way. To the extent that that conception has been departed from, the effectiveness of the Secretary has been impaired and the organization of the Department weakened. Theoretically, the Department could best be administered by the Secretary operating through the Armed Forces Policy Council, consisting of the three departmental Secretaries on the civilian side, and the Joint Chiefs of Staff on the military side, plus the sound suggestion that the man responsible for the research and engineering be included. Of course, this is too extreme. The practical answer lies somewhere between that theoretical setup and the present one where the Office of the Secretary now contains around 3,000 persons.

Today the Secretary does not administer too little—he probably administers too much. I have been advised that from this office have issued orders concerning the disposal of garbage and the mowing of vegetative areas, a phrase which is probably the high point of bureaucratic gobbledygook. Certainly there are more worthy matters for secretarial attention.

I favor retention of the present separately administered arrangement, not on the grounds of tradition, service prerogatives, or even on the more important one of morale, but because I know of no better form of administrative organization. If the three military departments did not exist, they or other alternative administrative units would have to be created and it seems much sounder and safer to retain and work with what exists than to attempt something entirely new.

Certain witnesses before your committee, while admitting the Secretary's clear and adequate authority to administer the departments, have suggested elimination of the words "separately administered" on the grounds that they constituted a psychological barrier. My opinion is that a few clear and firm decisions in this field by the Secretary might be more effective even than legislative enactment in removing any psychological inhibitions that subordinates might entertain with respect to the Secretary's authority.

I believe that the effectiveness of the Department would be greatly increased if it were streamlined by reducing the size of the Secretary's office by a couple of thousand people so that the Secretary, heavily weighed down with burdens and duties, could occupy himself only with matters of primary importance.

To sum up, my feeling is that the main difficulty with respect to secretarial authority is not lack of legal authority or the present organizational structure. It resides in the need for clear, firm, and prompt decision. The question is not more authority, but more use of what now exists.

In the matter of strategic planning there have been wide differences of opinion. Some favor concentration of authority in a single military Chief of Staff supported by a General Staff, following the type of military structure prevalent on the continent of Europe. Others prefer the broader-based Joint

UNIVERSITY OF MICHIGAN LIBRARIES

Chiefs of Staff system, modeled more along British lines, the type used and developed by us during the Second World War. My own objections to the Single Chief of Staff system as a means of strategic planning are based on its tendency to create a single rigid military line or dogma. This is dangerous at all times but, in the rapidly changing circumstances in which we live, where flexibility and speed are essential, it could well be fatal. The bill before you does not go that far, but it tends in that direction. The Joint Chiefs are to be whittled down on both sides of the ledger. Their responsibility and authority with respect to their respective services is to be diminished, and their relationship to the Joint Staff diluted—in neither instance perhaps to a dangerous degree. I mention this simply to indicate a continuance of this trend, which, if it goes on, must logically and eventually result in the appointment of a single Chief of Staff, presiding over a large general staff.

The essence of the Joint Chiefs of Staff type of planning is that those responsible for the conception of the strategic plans should also be responsible for their execution. They should freely, and without hindrance or restraint, be in a position to discuss and criticize strategic plans and programs and to present and advocate the employment of the fullest capacity of their respective services. As a matter of fact, the testimony before your committee indicates that the Joint Chiefs of Staff system seems to be working well. None of the Joint Chiefs who testified suggested any major change in that institution. I believe that impairment of that magnificent military machine—the Joint Chiefs of Staff system—would seriously jeopardize our national security.

The elimination of the right of service chiefs and departmental secretaries to lay their grievances before Congress, the elimination of reports by the departmental secretaries, the reduction of the Secretary's report from a semi-annual to an annual basis the addition of prerequisites to the Chairman of the Joint Chiefs of Staff, the whittling away of the rights of the department commanders, both with respect to their departments and with respect to other functions of the Joint Chiefs of Staff, an unlimited increase in the size of the Joint Staff—all tend in the same direction though neither singly nor in the aggregate, do they go the full distance in setting up a Chief of Staff supported by a conventional general staff. Future requests of the same sort, however, may have that result, so that while attention should certainly be paid to those aspects of these requests which seem constructive, care should be exercised with respect to the statutory language employed so as not, inadvertently, to open the door to the creation in fact, if not in form, of a Chief of Staff and a General Staff.

Experience indicates the wisdom of setting a reasonable limit to the size of the Joint Staff. The changes requested with respect to the status of the Chairman of the Joint Chiefs of Staff and its director do not seem unduly drastic. However, in view of the continuing tendencies noted above, proper provisions should be inserted to protect the sound functioning of the Joint Chiefs of Staff and the Joint Staff.

Another important matter dealt with in this bill relates to unified commands. Unified commands are important for many reasons, amongst others because they offer a promising, practical and flexible means of enabling our combatant forces, in an orderly manner, to effect those transitions in doctrine and practice necessary to keep pace with the rapidly changing weapons technology. The authority of the unified commanders over their forces should, of course, be clear and definite and, to whatever extent present laws and regulations obstruct that, they should be amended. Similarly, the line of authority from the President to the commander of joint or unified forces should be clear and rapid. I believe that this is principally a matter of internal regulation but, to the extent that there are legal obstacles, they should be removed.

There remains the question of how best to deal with research within the Defense Department in such manner that both in strategic plans and in weapons we may remain in the forefront. During the Second World War there existed an Office of Research and Development outside of the military departments, but in close relation with them. The arrangement was extremely productive. The most conspicuous scientific development, of course, was in the atomic field. Following the war, the Atomic Energy Commission was created—a civilian body, but with a continuous and intimate relationship to the military. That is a pattern which, it seems to me, has proven sound and fruitful.

In the original National Security Act, a Research and Development Board was provided for, headed by a Chairman who derived his authority from the Secretary. Experience convinced some people that the Chairman's authority was not definite enough, and it was clarified in the amendments of 1949. The Reorganization Plan No. 6 favored bureaucrats over boards. Thus an Assistant Secretary of Defense in charge of Research and Development replaced the Board and its Chairman. There seems to be a feeling that none of these expedients worked out and it is now suggested that the Secretary's power in that field be more specifically delegated, under his supervision, to a Director of Research and Engineering, who will also have certain power in the field of contracts and procurement.

There is now apparently an office of missiles under Mr. Holaday, a unit in charge of space developments under Mr. Johnson, both of whom I am sure are competent people. These matters are so closely related to the jurisdiction of the proposed new Director of Research that, at the very least, it would seem advisable to combine them into one unit under his direction. My own feeling is that, where basic research is concerned, it is better done outside than within the Department, and that, so far as applied research is concerned, it can be handled better by the military departments under the strong direction of the Director than whitin the Secretary's office itself. However, it seems to me that, subject to the avoidance of duplication and the creation of clear lines of authority from the Secretary to the new Director, to the various operating units, as suggested above, the proposal is in substance worthy of adoption, at least on a trial basis.

I hope you will not feel that by this long letter I have imposed unduly on your heavily burdened time. You realize, I know, the magnitude and complexity of this subject.

In closing, may I state that, in my opinion, the Nation owes you, Mr. Chairman, and the members of your committee, a great debt of gratitude for your patient, scrutinizing, and constructive study of this matter which goes to the very heart of our national survival.

With best regards,

Sincerely,

F. EBERSTADT.

Israelis Pleaded With Arabs To Stay

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. MULTER. Mr. Speaker, we read and hear much about the Arab refugees still homeless after the Arab-Israeli conflict of 1948. The following story, written by the noted journalist, Leo Heiman, is an accurate account of how and why the Arabs left Israel. Mr. Heiman's story appeared in The American Zionist, April–May 1958 issue.

ISRAELIS PLEADED WITH ARABS TO STAY

(By Leo Heiman)

HAIFA.—The problem of the Arab refugees has been festering since the establishment of the Jewish state. It is being exploited by the Arab rulers and the enemies of Israel everywhere as a means of undermining and maligning the young state. If this problem could be settled, peace between Israel and the Arabs would be within easier reach. But although most people today are aware of the Arab refugee problem's importance, only a few senior Israeli officers knew how this problem started.

The secrets of the Arab refugee problem were revealed for the first time by Brig. Gen. Moshe Carmel, Israel Minister of Transport, who commanded the Israeli forces in Haifa during the 1948 war of independence.

Writing in the Israel Army paper, Bamahaneh, General Carmel discloses how his forces liberated Haifa 10 years ago, on April 22, 1948. Haifa's 65,000 Jews were almost completely surrounded by the city's 75,000 Arabs, who dominated all main routes of communication by virtue of living in city-edge slums and other outlaying districts.

Street battles between Israeli and Arab forces raged for 3 months, when the British commanding general of Haifa, Major General Stockwell (who commanded British forces in the 1956 Suez Expedition), decided suddenly to pull out and concentrate all British troops in the harbor, pending their final evacuation from Palestine.

As soon as Stockwell's decision became known, both Jews and Arabs rushed to grab the abandoned British Army camps, forts and other military installations whose possession meant the difference between victory and defeat.

The Jews won and, after a bitter 56-hour battle, broke all Arab resistance by skillful application of modern psychological warfare methods. When the Arabs were sufficiently softened up by 7 hours of continuous explosions, Carmel sent dozens of jeeps, and hired taxicabs with powerful loudspeakers, up and down all battlelines. Wild moans of sirens, Arab funeral music and panic-spreading declarations tape-recorded by Arab prisoners were broadcast continuously. They proved to be the straw which broke the proverbial camel's back.

"A few minutes before noon (April 22, 1948) a special messenger from Mayor Shabtai Levy (the Jewish mayor of Haifa) arrived at our headquarters (hidden in the basement of a Kupat Holim clinic on 9 Geulah Street) with an urgent message from General Stockwell. The Haifa Arab Committee contacted the general, requesting that he arrange the cease-fire. The General requested my presence, but I answered that urgent business kept me at headquarters and sent my chief of operations, Modecai Makleff (later promoted to major general, as Chief of Israeli General Staff, preceding General Dayan) to attend the meeting." General Carmel revealed in the Bamahaneh article.

Stockwell and other British generals of his staff arrived in full dress uniform, with ceremonial swords, ribbons and medals. The six Arab representatives wore formal suits. Makleff arrived wearing an old pair of soiled khaki shorts, and a torn khaki blouse. He returned from the fighting lines and had no time to change. Nor did he care about the impression his clothes made. His troops impressed both the British and the Arabs in a sufficient degree.

The Arab millionaire businessman and industrial tycoon, Victor Khayatt, who owned most of Arab Haifa and who headed the Haifa Arab Committee, asked Makleff if he agreed to a cease-fire. At that time, Israeli forces advanced on all sectors, capturing the final Arab line of resistance and linking up to surround the city and start mopping-up operations.

Therefore, Makleff smiled and said that he could accept only unconditional surrender. However, he hastened to add, since the Jews wanted to continue living in peace with their Arab neighbors, he was authorized to offer general amnesty to all Haifa Arab soldiers, irregulars and guerrillas on three conditions:

That they turn in all their arms, ammunition and equipment and pledge to never fight again in opposition to the Jewish state.

That they surrender, for detention in prisoner stockades, all foreign mercenaries and volunteers, including the German, British, Iraqi, and Yugoslav officers who commanded the Arab forces in Haifa.

That they remain in their homes and go about their business as usual.

In return, Makleff guaranteed fullest personal safety and equality for all Arab inhabitants of Haifa, including those who fought against Jews. He also offered autonomous self-rule in Haifa's Arab districts, including Arab police and administration under overall Jewish supervision.

Makleff concluded by saying that all Arabs who refused to pledge the end of armed resistance would go to prisoner stockades for the duration of hostilities, while all Arabs who broke their pledge will be shot. General Stockwell remarked that these terms were more than generous, for had it been the other way around, the Arabs would have driven all Jews into the sea, amidst unprecedented butchery and slaughter.

"The six Arab representatives agreed that our terms were acceptable," General Carmel continues, "but before signing the act of unconditional surrender, Mr. Khayatt stated that he had to consult with the High Arab Committee for Palestine. At half past 7 in the evening, the Arab representatives reappeared, walking slowly with their heads bent, as if they were being led to their execution. Tears glistened in their eyes, as Mr. Khayatt declared in a broken voice that they could not accept our terms of surrender. Nor, for that matter, were they prepared to negotiate with us at all. Arab resistance will continue till the end, Mr. Khayatt stated, while Haifa's Arab population would be evacuated to the Lebanon."

General Stockwell jumped up from his seat. "Are you crazy?" he shouted, "have you gone out of your minds? How can you reject such generous terms? Are you people contemplating national suicide?"

"That's what it amounts to," Khayatt agreed, "we got in radio contact with Haj. Amin el Husseini (the former pro-Nazi Mufti of Jerusalem, who headed the High Arab Committee) and were ordered to break off all negotiations. The High Arab Committee forbade any dealings with the Jews and threatened to brand as traitor and execute any Arab who negotiated with the Jews, pledged to cease resistance or accept any other form of Jewish rule."

Mayor Shabtai Levy wept as he begged his Arab colleagues to follow sound reason and remain in Haifa. "We shall be brothers again," he cried. Khayatt shook his head sadly. "We can never be brothers again as long as we live," he explained quietly, "the High Arab Committee guaranteed all Arab refugees a triumphant return to Haifa, within 6 weeks, in the wake of victorious Arab armies, scheduled to invade Palestine from Egypt, Iraq, Syria, Lebanon and Trans-Jordan on May 15, 1948. Any Arab who accepted Jewish rule would be shot for treason, while all refugees were promised twice as much property as they left behind, when all that belongs to the Jews will be theirs upon the impending conquest of Palestine by the regular Arab armies."

"Khayatt and his delegation left the building, dragging their feet and wiping the tears which gathered in their eyes," Carmel write, "but as soon as I learned of their crazy decision, I ordered thousands of leaflets to be printed and distributed among the Arab inhabitants of Haifa. We guaranteed their safety and equal rights, we begged them to remain in their homes, we explained how they were being cheated and misled by their fanatical leaders. We sent our loudspeaker jeeps and cabs into all Arab districts to broadcast my personal appeal to the Arabs in which we asked them to remain and live in peace with their Jewish neighbors. To no avail.

"Only about four thousand Haifa Arabs risked being branded as traitors and shot upon the promised return of Arab forces to Haifa. Over seventy thousand Arabs were blinded by false promises or terrorized by armed nationalist agents into leaving everything they owned and going on foot to the harbor, where fishing boats and British ships took them to the Lebanon."

"One final attempt to stem the wild exodus was made by our patrol commanders and officers in charge of the roadblocks. Each head of refugee family was read our proclamation and asked whether he was leaving Haifa of his own free will, or whether he was being intimidated by nationalist agents and fear of future reprisals. Leaflets were widely distributed by our patrols, but few if any Arabs turned back. Most of them were frightened to death by nationalist propaganda which said that we raped all Arab women, forcibly converted all Arab children to Judaism, multilated young men and enslaved the rest. Those who did not believe the propaganda, believed in final Arab victory and did not dare risk their lives by staying in Haifa and accepting our rule. In this way, like a bunch of sheep, Haifa's Arabs went into voluntary exile, from which they were never to return."

Haifa was the first big mixed Arab-Jewish city to be liberated by Israeli forces. The exodus of its Arab population set a pattern which was to be repeated all over Palestine in the weeks to come.

Officials of Israel's Arab Affairs Department believe that, originally there were only some 620,000 Arab refugees from Israel; 70,000 from Haifa; 150,000 from Jaffa and surrounding villages; 110,000 from Tiberias, Acre, Safad, and northern Palestine; 45,000 from the Jerusalem district; 85,000 from the costal belt, Sharon, and Shomron; 30,000 from Lydda and Ramleh; 130,000 from Beersheba, Migdal, the Negev and southern Palestine, plus scattered villages and townships in other parts of the country.

To get extra free rations from United Nations relief agencies, most Arabs registered dead and nonexisting family members as well. Deaths in Arab refugee camps are rarely, if ever, reported, and this boosted the original refugee number to over 800,000. In addition, over 400,000 children were born in refugee camps over the past 10 years. They never saw Israel, but they are registered as refugees. This brings the official refugee figure to more than 1 million souls.

The Arabs committed the greatest mistake when they left Palestine, and history never forgives mistakes of such gigantic magnitude. For they could have remained in their homes in what is now Israel, as the Israeli commanders begged them to.

An Advertising Agency's Concept of Advertising

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. KEARNEY. Mr. Speaker, in these times of great economic stress, and as a Representative from the State of New York, even though Madison Avenue, United States of America, is out of my constituency, I take great pride in the recent publication of a unique publication created by the advertising agency of Brown & Butcher, Inc., of 630 Fifth Avenue.

It is entitled "A Statement of Standards, Policies, and Practices."

Here is 8 minutes of realistic reading that not only conforms with the energetic affirmative attitude of the administration, but also accepts the necessity for integrity and commonsense that so clearly is a part of the integral reasoning of our own Chief Executive Officer, President Dwight D. Eisenhower.

As one of their key clients, Marshall S. Lachner, president of the B. T. Babbit Co. indicated at that company's recent stockholder's meeting this past Monday, the mere desire to sell at a profit is manifest in all walks of life, but to consistently maintain the respect of not only consumers but one's competitors as well, requires more than the will to expand, since the outstanding success of all American industry and their service organizations sharply reminds us that Abraham Lincoln's words add new luster to the irrefutable logic, "that you can fool some of the people all of the time and all of the people some of the time, but you can never fool all of the people all of the time."

Here then, in Brown & Butcher's booklet is clearly the demonstration that you can succeed even more quickly if you strive to fool none of the people at any time. This is apparent in the quick upturn in sales of the venerable B. T. Babbitt Co. when the new management team brought Brown & Butcher in the first of this year. Here is that philosophy that I commend to my esteemed fellow Congressmen, for while its birth was nurtured in this instance by one commercial segment of the American economic scene, the basic precepts are applicable in all walks of life, be it industry, labor, or the farm:

No matter what a man does to earn his bread, sooner or later under the greatest economic system the world has even seen, in these United States that man must market his goods, produce or services, and in our free competitive system the buyer's market has historically always responded to the extra sales ingredients of ingenuity and product integrity.

This is the story of one advertising agency's concepts of advertising. The concepts are simple because advertising and its objectives are simple.

Advertising is selling. The many complicated, component parts of creating and maintaining advertising plans and making an advertising agency work are not to be referred to here.

The objective of this booklet is to set forth as interestingly as possible to interested people the basic beliefs and principles of Brown & Butcher, Inc.

Here are set down high standards—a credo if you like—upon which this agency was formed and by which it will live.

We do not subscribe to, in fact, we resist in every way, any idea that there are any mysteries or half-hidden secrets to what advertising is all about. Actually, advertising is an extremely simple business. It is concerned only with selling. We in this agency are salesmen, and our responsibility is to help sell more merchandise at a profit.

It is not our job to entertain consumers. Neither is it our job to aim for prizewinning awards. We repeat, our job is selling more merchandise.

While we have learned, through experience, that a sales objective is a simple thing to define, we also know it is not so simple to keep in sight that objective.

Externally, client advertising budgets make an advertising agency an active working business. Internally, nothing makes an advertising agency good or bad except people.

It is an absolute conviction within Brown & Butcher, Inc., that no individual is born with instinctive advertising know-how. Rather do we believe that good advertising men are made by a long, painfully slow process—sweating out tough advertising assignments year after year. But long years and rubbing elbows with difficult problems are valueless unless the man has a high degree of intelligence augmented by practical commonsense. Advertising men are mature only when they have established firmly a record of producing and maintaining advertising that pays off.

These are the kind of men who explore thoroughly all possible solutions to marketing and sales problems. They have acquired the intuitive ability to reject the weak and incorrect way to do a job. They never fail to profit from each and every mistake made along the long road of gaining experience. In fact, they have learned how to do a job right by having first done it wrong. They also see and recognize mistakes made by others and avoid duplicating them. The good ones in the business are honest with themselves and the clients they serve. They have a sincere—almost a devout—belief in advertising done the right way. We repeat again—good advertising men are made, not born. We have learned the advertising business by working at it.

Our conception of advertising copy is fully as simple—and the record proves it to be effective—as are our other beliefs. There is only one motivating reason for a man, a woman, or a child to react favorably to an advertising-copy appeal. This is personal selfishness.

Selfishness is not used here in a cruel sense. Human selfishness to this agency means an individual's desire to be more comfortable, to save work, to be socially advanced, to improve a career, to have one's ego satisfied or inflated, to have one's taste pleased—any one of a variety of highly personal self-pleasures. Therefore, advertising copy must be directed at a known selfish interest on the part of consumers, and it must promise that the product advertised will satisfy one or more of those selfish desires. But, no amount of advertising ingenuity and no amount of sales experience can create repeated consumer buying response, past the initial trial, if the product does not actually justify the advertising promise made. Millions of dollars cannot consistently sell a bad product. Conversely, a few hundred thousand advertising dollars invested correctly can sell millions of dollars worth of a good product.

The first principle of advertising copy must be always to presell the product. The second principle is to sell the product, and forever resell it again and again. By selling we mean simply—constantly and consistently convince people that a specific product provides what they want or need—make them see and understand all the product superiorities, advantages, or differences inherent in it. Give customers more than a mere name by which to remember it—and forever resell it to keep them repurchasing.

This agency, while recognizing the tremendous importance of copy and its presentation, does not believe copy alone to be of the greatest single importance to advertising success. An agency's greatest—indeed its gravest—responsibility is the one of investing the money which a client entrusts to it. No amount of product development and refinement, no amout of ingenuity in the careful development and perfection of a product advertising story can be of much avail if the media funds are invested at the wrong time, or in the wrong manner, or against the wrong people in the wrong markets.

Investing advertising budgets in media is not a job for the agency alone. Such investment must be carefully coordinated with a client's sales and merchandising departments and in full awareness of sales objectives as well as marketing possibilities. There is no such thing as an established formula within an agency to be depended upon when decisions are being made regardng the investment of advertising moneys. Each product for each client represents a wholly separate and distinctly different problem. Being aware of this, and being experienced enough to determine in advance where and how media funds should be invested is of the utmost importance.

After knowing actual consumer marketing problems, it is the belief of this agency that, in selling a low or medium-priced consumer product, the media job in the simplest terms is one of delivering to the right people the largest number of advertising messages at the lowest possible cost.

Impressing only yourself or your friends with your advertising is indeed expensive if your real customers work in your factory or on the farm.

We believe in and expend a considerable portion of our total gross income in research. But research to us is not the overpublicized task of merely ringing doorbells and stopping pedestrians with a lengthy questionnaire. Research for research's sake alone is a complete waste of both time and money. Research is valueless unless it reveals the honest, irrefutable answer or answers to a specific question or questions. In turn, specific answers are valueless unless they solve or help solve equally specific problems.

We believe in research, but we shall always reserve the right to draw our own conclusions. We have learned from experience, statistics cannot replace judgment.

This agency opened with the following publicly announced principles:

1. It will not under any circumstances approach or solicit responsibility from clients above and beyond the number which the group of individuals who run this agency can personally supervise.

2. It will solicit business only from companies or individuals for whom it sincerely believes the agency can render a superior service and prove its value in the most obvious manner—by increasing sales.

In terms of number of accounts served, this agency will be medium in size by intent. No client will ever find reason to criticize agency service or sales results due to any lack on our part of striving for the very closest possible coordinated working conditions between principals on both sides of the job.

Complicated organizational groups, including so-called plans boards, neither have nor will have a part in the operation of Brown & Butcher, Inc. A client worth having is a client worthy of the best we have. We can function best when we work closely with a client.

Experienced advertisers have learned time and again that they receive, from an agency, service and help in almost direct proportion to their ability to command immediate and constant contact with the directing personality of key personnel of any agency. It is too often the case that an agency is chosen because of size, only for the client to discover that there exists a wall of ineffectual, irresponsible persons with whom he must do business almost exclusively.

In this agency we frankly seek a client's criticism and best thinking. We are neither all-seeing nor all-knowing. We have a reputation for exercising the courage of our convictions, but before we have a conviction, we take great care to make absolutely certain, if possible, we are right. We can only do an outstandingly good job when we have a client's help. Advertising dollars work harder when client and agency efforts are combined all the way from the inception of a plan and an idea down to the final point of success or failure—when a customer selects or rejects the product you make and the product we advertise.

Selling more merchandise is too often accomplished by the simple expedient of spending more money. An important part of an agency's responsibility to a client is making certain that sales are increased profitably for the client. This is done only when every advertising dollar works hard.

We do not assume the role of extreme specialists, but our experience has been primarily in the field of low- or medium-priced consumer goods with emphasis on drug and food products. In these fields, we are proud of our record. We know those jobs which we can do extremely well—and how to do them.

One of these days, if not now, you will have cause to be interested in seeking a new advertising agency affiliation. You may want someone to help stop a declining sales trend. You may want to talk to an agency extremely well-grounded in the problems involved in introducing a new product. You may feel that you could work better with an agency different from the one or ones you have at present. When that day comes, this agency would like the opportunity of sitting down and telling in greater detail the whys and wherefores of its stated beliefs and to present proof of its experience.

A union card and a hammer do not necessarily make a good carpenter. Neither can advertising men be adjudged good, strictly because they have kept good company. However, over the past 25 years the directing personnel of this agency has been indeed fortunate in having served an impressive number of successful products for a long line of notable companies. And, in quite a number of cases, the people available to you in Brown & Butcher, Inc., have been directly responsible for the whole advertising job, from initial advertising plans and strategy on through their perfection and their maintenance.

Postal Pay Legislation

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. FINO. Mr. Speaker, there is nothing more disheartening to our faithful postal employees than the continued

delay on the part of the House-Senate conferees in reporting back a decent pay bill for these Government workers.

It is certainly no secret that these hard-working conscientious public servants have been greatly neglected. As we all know, since 1951, they have received only one salary increase and that was a modest one. They are entitled to and deserving of another pay boost in order to keep pace with the high cost of living.

It is a downright shame that we have failed to give this important legislation speedier action and greater priority.

It is most unfortunate that the pay and rate increases are tied up in one bill. Certainly the merits and demerits of the rate increases should not further delay the passage of a decent living wage for our postal employees.

Mr. Speaker, the urgent need for this long-overdue pay increase bill is a matter of justice and fairness. By holding up passage of a pay bill we are perpetrating the greatest injustice to these Federal workers for which we have no logical explanation.

I urge the conferees to act immediately in bringing out a pay raise bill even if it means separating it from the rate increase measure.

Our postal employees want and need this increase now.

Address by Senator Strom Thurmond at Calhoun County Courthouse, St. Matthews, S. C., During Ceremonies for Unveiling Historical Marker, on Farm Day of Calhoun County's Golden Jubilee Celebration, May 10, 1958

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks I would like to bring to the attention of the Members of the Congress an address delivered by the distinguished junior Senator from South Carolina, Hon. J. STROM THURMOND, during ceremonies for unveiling historical marker on Farm Day of Calhoun, S. C., county's golden jubilee celebration, May 10, 1958.

ADDRESS BY SENATOR STROM THURMOND AT CALHOUN COUNTY COURTHOUSE, ST. MATTHEWS, S. C., DURING CEREMONIES FOR UNVEILING HISTORICAL MARKER, ON FARM DAY OF CALHOUN COUNTY'S GOLDEN JUBILEE CELEBRATION, MAY 10, 1958

Senator Gressette, Representative Nelson, Mayor Houser, county officers, distinguished guests, ladies and gentlemen of Calhoun County, this is an auspicious occasion. It is a great pleasure for me to be here today to help celebrate the 50th anniversary of the establishment of Calhoun County.

I have been following your golden jubilee activities closely, because of the great enthusiasm and interest which the citizens of Calhoun County and the surrounding areas have taken in this occasion. I do not believe that there is anyone in South Carolina who is not aware of this gigantic celebration and all its attendant festivities.

You have succeeded not only in growing a lot of whiskers, and in producing a period of joy and merriment for yourselves and others, but you have also succeeded in boosting public relations for Calhoun County to a new high. In doing so, you have demonstrated a strong community spirit which is vital to progress and future development.

FARM DAY

I am glad that you have set aside this special day of recognition to your farmers and their families. I know of no group in this country which works harder, renders a greater service, and receives less monetary reward than do our farm families. Having been reared on a farm, having finished Clemson College with a degree in agriculture, having taught agriculture in our schools, and having farmed myself, I believe that I have a pretty good idea of the difficulties which are besetting our farm families today.

They are caught in the tight squeeze of constantly rising production costs and continued low prices for their products. This is all wrapped up in Government redtape and acreage restrictions, which have had adverse effects on our money crops, and made it virtually impossible for some to continue in farming operations.

In view of the fact that other segments of our economy enjoy certain advantages by Government guaranties and subsidies, it is mandatory for our Government to provide some assistance to our farmers. That is why I have been working for price support levels at 90 percent of parity on our basic crops, and for increased acreage allotments instead of further reductions and restrictions.

I believe that the Government should reopen our old world markets, so we can sell and barter our farm products to the other areas of the world that need our food and clothing. Also, the Government should assist by engaging in greater research projects which can foster greater individual initiative and open new doors of opportunity to our farmers, who are willing and ready to engage in new agricultural adventures.

In all my experience in public and private life, I have found no substitute for individual initiative, willingness to work hard and long, and the exercise of good commonsense. The farmers of Calhoun County stand as a living monument to the exercise of these principles.

While acreage restrictions and competition from manmade fibers have reduced the potential of cotton as a money crop in this great farming community, the farmers of Calhoun County have not stood idle and depended solely on Federal assistance from Washington. They have moved to meet the problem through diversification and development of new crops. Calhoun County, which ranks second only to neighboring Orangeburg County in the production of soybeans, is rapidly becoming the soybean center of the United States. Some of your own farmers have done much research in this field. A shatterproof variety has been developed here, which has made the production of soybeans more profitable and valuable to the economy of Calhoun County and South Carolina.

Additionally, I noticed while riding this morning from Creston to Cameron, and then to St. Matthews, that some of the farmers have planted numerous peach trees, and others have turned to the production of barley and other crops that provide better opportunities at the present time.

I am informed also that beef and dairy farming have increased here in recent years. This is the type of initiative and ingenuity that have made it possible for Calhoun County to produce master farmers, and a forward-looking farming community through the years. If such progress continues, it may be necessary to move the Department of Agriculture from Washington to Calhoun County so the bureaucrats can keep in step with true agricultural progress.

INDUSTRIAL PROGRESS

I am also glad to learn that the people of Calhoun County are trying to balance their agricultural economy with industry. When the people of South Carolina elected me to the governorship in 1946, I determined that I would make this one of the primary goals of my administration. At the conclusion of my service, more than $1 billion had been expended or announced for investment in new industries and expansions. This created 60,000 new jobs, with new annual payrolls of approximately $125 million. One of the industries which came to South Carolina at the close of World War II was the Socony plant here in St. Mathews. It has played a vital part in the economy of this community.

New industries have continued to come into South Carolina, and I hope it will not be long before Calhoun County will begin to reap the benefits of your concerted efforts to attract new industry. As a result of the setback which agriculture has suffered in recent years, it is more urgent than ever that we locate more industries in our rural areas.

COUNTY HISTORY

Calhoun County is one of the smallest counties in South Carolina, but what it may lack in quantity is more than made up by the fine quality of its citizens, its fertile farmlands, its abundant resources, its beautiful landscape, its rich heritage, and its colorful history. While Calhoun is also one of the State's youngest counties, the history of this section dates back to 1704, when the first white settlement was established by George Sterling. This was some 72 years before Col. William Thompson, Rebecca Motte, and many other revolutionary patriots from this area made their valuable contributions toward the winning of our fight for independence.

Later in 1862, Col. Laurence M. Keitt and Olin M. Dantzler formed a regiment of volunteers for service in the War Between the States. They were joined by 460 others from this area, many of whom were killed or wounded in service, including those two great leaders of our southern forces. In subsequent conflicts, Calhoun County has also furnished to our country servicemen who have proved on the battlefield to be a great credit to their county, State, and Nation.

The same spirit of courage and determination, which fired patriots of this section to play such an important role in the defense of our country through the years, led such men as Ed Wimberly, Dr. T. H. Dreher, T. A. Amaker, G. A. Baxter, J. E. Wannamaker, J. Skottowe Wannamaker, Martin D. Keller, John Muller, George W. Fairey, John A. Peterkin, Paul Frank Spigener and many others to win their battle for the formulation of a new county in 1908, after two earlier defeats.

JOHN C. CALHOUN

When the county was established, it was named in honor of South Carolina's greatest statesman, John C. Calhoun. That Calhoun was not born, and never lived, in this immediate vicinity, matters not. He was the very embodiment of the principles for which the people of this county fought and gave their all, and for which their descendants are still fighting.

On the occasion of a ceremony held in Calhoun's honor in the United States Capitol nearly half a century ago, Senator Henry Cabot Lodge of Massachusetts spoke these words:

"He was the greatest man South Carolina has given to the Nation. That in itself is no slight praise, for from the days of the Laurenses, the Pinckneys, the Rutledges, from the time of Moultrie and Sumter and Marion to the present day, South Carolina has always been conspicuous in peace and war for the force, the ability, and the character of the men who have served her and given to her name its high distinction in our history. But Calhoun was much more even than this. He was one of the most remarkable men, one of the greatest minds that American public life can show. The man remains greatly placed in our history. The unyielding courage, the splendid intellect, the long devotion to the public service, the pure, unspotted private life are all there, are all here with us now, untouched and unimpaired for after ages to admire."

Such was the man for whom this county is named, the man whose life exemplifies the struggle of our State and of our Nation to maintain constitutional liberty. Calhoun was 1 of 5 outstanding Senators of all time selected by a special committee of the United States Senate in 1957, for inclusion in the Senate Hall of Fame. I had the honor of placing his name in nomination before the committee. We are proud that this great South Carolinian was 1 of the 5 chosen for this unique place in history.

PRINCIPLES OF CONSTITUTIONAL GOVERNMENT

Because this struggle for constitutional government still goes on today; because of the remarkable and startling—one might almost say ominous—parallel between today's events and those of the 1850's; and because of the eternal truth of the principles which Calhoun enunciated, his works are well worth our close attention today. In the words of that great student and champion of liberty, Lord Acton, Calhoun's speeches and writings were characterized by "arguments which are the very perfection of political truth, and which combine with the realities of modern democracy the theory and the securities of medieval freedom."

Calhoun understood the nature of constitutional government, of constitutionalism, as few men did even in his own day, and as woefully few do today. Over the past century we have already seen a grave weakening of the foundation of our constitutional structure; and what remains of it is being steadily eroded away, by relentless Federal encroachment.

Yet the people, due to their failure to understand the nature of constitutionalism, seem blandly unaware of the danger. Apparently, they will not realize that their liberty is in jeopardy, that its necessary supports are being destroyed, until they have actually lost it—when, of course, it will be too late. That is like refusing to become alarmed over the weakening of a dike until it actually bursts and the floods pour in.

Those of us who plead the cause of States' Rights and Separation of Powers of the three branches of government, and who warn of the dangers involved in Federal usurpation, are dismissed by some as alarmists, as men who are fearful of imaginary dangers.

Too many people feel that their freedom is secure because they still have the right to vote. Their mental attitude seems to run like this: What does it matter, after all, if more and more governmental functions are transferred from the States to the Federal Government, which can probably run them more efficiently anyway? What does it matter if one branch of the Federal Government assumes powers and functions which rightfully are supposed to be exercised by a different branch? Who is being hurt by the change? Where can any loss of liberty be shown? After all, are not our liberties perfectly safe, so long as we, the people, have the right to vote, the right of universal suffrage?

This is an easy line of thinking to fall into, but never could there be greater delusion. As Calhoun pointed out, "It would be a great and dangerous mistake to suppose, as many do, that (the right of suffrage) is of itself sufficient to form constitutional governments."

Calhoun well understood that the universal right to vote, alone, without other safeguards, would not save the people from tyranny. He knew that, without constitutional protections, the majority would form a government as absolute as it would be in the hands of irresponsible rulers.

Calhoun saw clearly that the essence of constitutional government lay in the establishment—and the jealous and strict preservation—of some system, some provision, which would act as a secure check against the potential excesses of the Government, against the tyranny of the unrestrained majority. "It is manifest," he said, "that this provision must be of a character calculated to prevent any one interest, or combination of interests, from using the powers of Government to aggrandize itself at the expense of the others."

CHECKS AND BALANCES: THE NEGATIVE POWER

In other words, what was called for was a system of checks and balances, a system which would prevent the building-up of a power-apparatus which could one day suppress the liberties of the people. Calhoun used the term "the negative power" to describe this counterbalance to the force of government.

"It is this negative power," he declared, "the power of preventing or arresting the action of the Government, which in fact forms the Constitution. It is, indeed, the negative power which makes the Constitution, and the positive which makes the Government."

When the framers drew up the Constitution in 1787, they carefully and deliberately provided for the negative power. They devised our famous system of checks and balances. The two principal features of this system, and hence the very pillars on which our liberty rests, are the twin principles known as States rights—that is, the reservation by the States of all powers not delegated to the Federal Government—and separation of powers, that is, the separation of the legislative, judicial, and executive powers into three distinct and independent branches of government.

Our forefathers were quite familiar with despotism, and they knew its forms and its methods. They knew that no man can be trusted with power. As Thomas Jefferson was later to express it:

"In questions of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution."

That is just what the framers sought to do. By means of these two governmental devices, separation of powers and States' rights, they sought to prevent that concentration of centralized power which they knew would be the death-knell of individual liberty in America. Liberty would be safe so long, and only so long, as these two principles remained intact and were scrupulously upheld.

Ladies and gentlemen, these principles are not being upheld today. In the case of States rights especially, the wisdom and the warnings of the Founding Fathers are being brazenly ignored. Constitutional limitations and restrictions, those at least which purported to restrain the power of the Federal Government, are being brushed aside. The primary and indispensable feature of our checks-and-balances system—States rights—is being eroded away to nothing, as matters which are rightfully the domestic concerns of the States are brought under the sway of Washington.

THE MEANING OF STATES RIGHTS

Just what do we mean, anyway, by this term "State rights?" Is it just a meaningless name that southerners love to prattle about? Is it simply an outworn political tradition? No. States rights is an enduring and valid principle, an ancient and a universal principle—it is the fundamental human right of local self-government.

Local self-government, States rights, home rule, self-determination—call it what you will—they are one and the same. Applied to almost any other land but the South, the United States has always recognized and supported the principle of local self-government.

The United States sympathized with home rule for Ireland. The United States insisted that the peace settlement after World War I be based on the principle of self-determination, as a result of which several national groups in Eastern Europe, formerly subject peoples of the Austro-Hungarian empire, achieved political independence. Since the close of World War II, the United States has supported self-rule for many former colonies of European powers, from Indonesia and Burma to Ghana and Morocco.

THE SOUTH'S STRUGGLE FOR SELF-RULE

In fact, the United States was founded on, and grew out of, the right of local self-government, of home rule—that was what the Revolutionary War achieved for the former colonies. Yet, when the South asserted this identical right, in the 1860's, the right was denied by the United States.

The sense of being a separate and distinct people had been rapidly gaining ground in the South, until finally, with South Carolina taking the lead in 1860, the Southern States declared their independence, and, with the formation of the Confederacy, asserted the existence of the Southern nation. The North's denial of the right of this new nation to exist resulted in the war for southern independence.

That the Southern States had every right to secede from the Union cannot be doubted. As sovereign States, they had voluntarily acceded to the constitutional compact and as sovereign States they had the right to withdraw from it.

Today being Confederate Memorial Day, we honor the memory of those courageous and immortal men in gray who fought for the Southern cause. No words that I could speak would be adequate to express the love, the appreciation, and the gratitude, which we, their descendants, feel for those men, who sacrificed their lives and their all for their beloved homeland.

I would like to say this much, however: I think we make a great mistake when we speak of the cause they fought for as the lost cause. It is far from being a lost cause—a fight for principle is never lost.

True, the South suffered military defeat in the war and failed in its bid for national independence, despite the heroic, almost superhuman, efforts of these men in gray. Yet the fight they waged, by its very heroism, by their own glory and nobility, made the South's sense of separate identity, its unity, its solidarity, stronger than ever.

Moreover, the cause which they upheld is still a living cause today, albeit in modified form. Local self-government in the sense of complete national independence may be no longer an issue; but local self-government in the form of States rights definitely is an issue, and those who battle the States rights today are waging a fight for governmental principles which are founded on the bedrock of the Constitution.

UNIVERSITY OF MICHIGAN LIBRARIES

THE CONSTITUTIONAL STRUGGLE TODAY

This issue of States rights versus Federal usurpation of power is the most important domestic problem facing this country today. Actually, the encroachment of the Federal Government on the rights of the several States has been going on for a long period of time, but over the last 2 decades, and especially since 1954, when the Supreme Court embarked on its new sociological tangent, Federal usurpation has increased to an almost unbelievable extent.

I shall not even attempt here to enumerate the specific usurpations of the Federal Government. To do so would require a great deal of time, and in any event, I think that we are all generally familiar with what has been happening in this respect over the past few years.

Suffice it to say, all three branches of the Federal Government have been guilty of usurpation of power. This is important to remember, because some people have gained the impression that the Supreme Court alone is responsible for the whole debâcle. That is not the case, although it is the Court which has led the attack since 1954. All three branches must share the blame—the Court, the Congress, and the executive. And they have all been at it for a long time. Thomas Jefferson observed as far back as 1825: "It is but too evident that the 3 ruling branches (of the Federal Government) are in combination to strip their colleagues, the State authorities, of the powers reserved by them."

We are indeed at a late hour to defend our liberties. As I have tried to emphasize and re-emphasize, the essential foundations have been perilously weakened. Although there is now much more awareness of the danger than ever before, the people—outside of those in the South, at least—have not yet been sufficiently aroused from their apathy to take effective political action to halt the trend toward Federal totalitarianism.

There has been one hopeful development lately. We seem to be making at least some headway toward devising some method of curbing the excesses of the Supreme Court. The proposals now pending before the Senate would reverse a number of the more flagrant decisions which the Court recently handed down in the internal security field, and in one respect would limit the appellate jurisdiction of the Court.

Frankly, however, despite this one encouraging development, the picture is not a bright one. It may be that the deterioration of our constitutional system has already proceeded so far that we will not be able to bring the ship of state back onto a true course, without first passing through some very stormy seas—that is, through a difficult period of governmental and political chaos which appears to loom ahead.

THE FUTURE OF THE SOUTH

Of one thing we may be sure. No matter how fierce the storms; no matter what changes our form of government may undergo; indeed, whatever the ultimate fate of this Union, come what may, the South is going to maintain its identity and the distinctive values of its way of life. More than that, I really believe that, out of the welter of storm and chaos that lies ahead, the South is going to regain at least a measure of its autonomy, its independence. I know not in what form, but I do believe that the South is going to become in truth, at last, master of its own destiny. We have witnessed over the past few years the beginning of a great historic movement. We have seen a great stirring, a reawakening, of the southern people, on all fronts—political, spiritual, economic, and intellectual. But especially have we seen a rebirth of the southern people's awareness of their own identity and their heritage. And we have seen this reborn awareness give rise to a determination and a spirit that is not going to accept Federal dictation, outside domination, or tyranny in any form.

THE ULTIMATE ISSUE

It should always be borne in mind, however, that the South is not fighting for itself alone; for the South's cause is the Nation's cause. It was on the principle of States' rights that the Nation was founded. States' rights is a principle of vital concern, not only to Southern States, but to all States; for States' rights, or local self-government, is the indispensable element of our checks-and-balances system, the very cornerstone of liberty.

The preservation of liberty is a goal which is—or should be—of as much concern to the people of the North as to those of the South. It should be of equal, and paramount, concern to the people of every State in this Union.

"Liberty," said Lord Acton, "is not a means to a higher political end. It is itself the highest political end." It is the ultimate issue at stake in the present constitutional struggle. On many occasions, men have tried to becloud the clear picture by the injection of extraneous issues; but the fact remains that it is human liberty which is at stake.

The issue is today just what it was in the time of Calhoun; and in conclusion, I should like to turn once more to his words:

"Stripped of all its covering," he declared, "the naked question is, whether ours is a Federal or a consolidated government; a constitutional or absolute one; a government resting ultimately on the solid basis of the sovereignty of the States, or on the unrestrained will of a majority; a form of government, as in all other unlimited ones, in which injustice, and violence and force finally must prevail."

This is the naked question again today, just as Calhoun phrased it more than a century ago. What will be our answer today?

If I know the spirit, the temper, and the courage of the southern people—the people of this county and of this State—their answer will be: Tyranny shall not prevail in this land. Freedom, independence, and constitutional government must, and shall, have the victory.

Ezra the Prophet

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. DAGUE. Mr. Speaker, the Biblical observation that a prophet is not without honor save in his own country was never more true than when applied to our dedicated Secretary of Agriculture, the Honorable Ezra Taft Benson. In a recent issue of What's Happening, a release by Prentice-Hall, Inc., the editor has this to say:

BENSON WILL SURVIVE

Beef cattle prices are up 36 percent over a year ago; hogs 21 percent; eggs 33 percent; vegetables 50 percent. Agriculture Secretary Benson, whipping boy for the farm bloc, is smilingly cautious: "For the remainder of 1958 a gain in farm income over last year is indicated." Congressmen report, to their surprise, major support for Benson not only in cities but in rural centers as well. Consequently, Democrats will ease their attacks on the Secretary. Republicans, who had practically written off the farmer, have revised their estimate of GOP congressional defeats in the farm belt in November. Now they think they will hold their own and, perhaps, even gain seats. At any rate, Benson will stay in the Cabinet.

And that, Mr. Speaker, is the way the people in my congressional district have felt all along. They have never accepted the demagogic appeal of the high support boys, and having farmed the good soil of southeastern Pennsylvania for 200 years they know that there is no alternative to a reliance on the will of the Almighty, and that you cannot run counter to the law of supply and demand and stay in business. And because they know that Secretary Benson has been right all along they have resented, as I have, the contemptible fashion in which he has been handled here in Washington and throughout certain areas of the country by people who should and do know better. I admire people of conviction who also have the courage to stick by their beliefs and in that category Mr. Benson is without a peer. May the good Lord, whom he serves both in and out of Government, increase him in courage and strength.

Hoeven on Threshold of Major Assignment

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. LECOMPTE. Mr. Speaker, an editorial in the May 12 issue of the Sioux City Journal, of Sioux City, Iowa, alerts Midwest farmers to the prospect of having an Iowa Representative at the head of the House Committee on Agriculture next year. If the Republican Party wins control of the House, my very able colleague, Hon. CHARLES B. HOEVEN, will become chairman of the committee, and if the Democrats control the House he will be the ranking Republican member. This is very important to our farmers, who long have relied on Mr. HOEVEN to take care of their interests in the committee, a Member of Congress whose influence has been so helpful to agriculture in general.

In this same connection it is interesting to note that Hon. HENRY O. TALLE, of the Second Iowa District, is ranking Republican of the great Banking and Currency Committee.

Under leave to extend my remarks in the RECORD, I wish to include the editorial from the Sioux City paper.

HOEVEN ON THRESHOLD OF MAJOR ASSIGNMENT

Of considerable importance to the farmers of the Siouxland area and the Midwest in general is a recent development concerning the makeup of the Agriculture Committee of the United States House of Representatives.

Congressman WILLIAM S. HILL, of Colorado, a veteran House Member and presently the top-ranking Republican on the Agriculture Committee, has announced his intention to retire at the end of this year.

This means that Congressman CHARLES B. HOEVEN, of Iowa, our Eighth District Representative, will move into the top GOP spot on that important committee in the next session should he be reelected this fall.

It also means that, if the Republicans were to capture control of the House, Congressman HOEVEN would become chairman of the Agriculture Committee. Such an occurrence would put an Iowan in the chairman's seat of the committee for the first time in about 26 years. The last midwesterner to hold the job was Congressman CLIFFORD HOPE, of Kansas. The one and only Iowan to hold the post was Congressman Gilbert N. Haugen who served as chairman from 1919 to 1931.

And it is of interest for midwestern farmers to note that should the Democrats win the House in this year's elections, the Agriculture Committee chairmanship would continue to be held by a southerner, Congressman HAROLD COOLEY, Democrat of North Carolina. And on the Democratic side of the committee, the ranking Members after Mr. COOLEY are from the following States, in this order: Texas, Alabama, Arkansas, South Carolina, Mississippi, Oklahoma, Virginia, etc.

Thus, a Democratic victory would assure the South's continued tight control over the Agriculture Committee, leaving the midwestern corn-hog-cattle-grain farmers' interests in a secondary position because of the South's major emphasis on a cotton-peanut type of agricultural economy.

Congressman HOEVEN, meanwhile, is chairman of the Republican conference of the House and deputy Republican whip. His stature as a Member of Congress has increased materially in recent years and he now stands on the threshold of a high-level assignment with the House committee that shapes American agricultural policies.

The value of his continued service in Congress should readily be apparent to the voters of Iowa's Eighth District and to all Midwestern States.

Austria: Three Tax Cuts in 4 Years

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Star of May 7, 1958:

AUSTRIA: THREE TAX CUTS IN 4 YEARS
(By Sylvia Porter)

Austria has just put into effect her third tax reduction in 4 years. After each of the previous two tax cuts the Austrian Government's income from taxes increased—and this is the way the trend is going again.

So stimulating to business have been the soundly conceived and timed tax reductions that her treasury has been able to collect more money via low tax rates than via the high ones.

Of all the nations in the Western World, Austria—which regained full political independence only about 3 years ago, is now the most prosperous.

The story of Austria's comeback is sensational, and the tale is particularly pertinent to us right now.

ARGUMENT OUTLINED

No responsible authority in public or private life is opposing a tax cut because he thinks our present tax structure is a good one. Those arguing against tax reductions now are doing so because they honestly believe that any significant tax slash would take so much revenue away from the Government that our already ballooning budget deficit would be swelled to astronomical proportions.

Even without a tax cut we're facing a deficit of eight to ten billions dollars or more in the year starting July 1. This wear of a soaring budget deficit now and devastating inflation later is the heart of the opposition.

But must it turn out this way? Would tax reductions designed to stimulate job-creating spending by consumers and businessmen automatically lead to a great loss in Treasury revenue? Our own experience after recent tax cuts says it wouldn't.

And Austria's record is refutation of the theory—which is the reason I've been digging for details.

In 1954 when Austria put through the first of her series of across-the-board tax cuts—giving both individuals and corporations relief—her total tax take was $729 million.

In 1955 the tax take was up to $791 million. That year she put through the second broad tax reduction. In 1957 the tax take was up to $996 million.

THIRD REDUCTION

Now, the third reduction is in effect. While this year's reduction favors middle and lower income taxpayers and particularly aids working couples, it also includes major relief for corporations and exempts income from stock dividends up to $144.

The forecast is for continuing business boom. Last year production in Austria rose 6 percent while prices and wages held stable. The estimate by the Institute of Economic Research is that production will climb another 6 percent in the first half of 1958.

Admittedly, Austria couldn't have achieved her brilliant recovery without our help; our Marshall plan aid was of crucial importance. Admittedly, she couldn't have done the job without superb, strong financial management; the fabled Austrian school of economists is reemerging and her Finance Minister Kamitz is internationally respected. Admittedly, Austria's economy cannot be compared with our vast, complex economic machine.

Nevertheless, we can learn plenty from Austria's experience—and the least our policymakers should be doing is to be studying it intently.

Air Force Helps Retarded Children

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. TOLLEFSON. Mr. Speaker, it was my privilege a short time ago to witness a program put on by retarded children from the Rainier and Lakeland Village Schools in the State of Washington. The program included band music, choral singing, square dances, tap dances, and solos. The big event was a basketball game known as the game of the year which climaxed the evening's program. The affair was attended by an estimated 2,500 persons. All were greatly thrilled by the performances of the boys and girls, and were enthused by the training and education which quite evidently had been given by the two schools.

The program was sponsored by the Washington Association for retarded children. Words cannot express the high regard in which I and others hold that organization for the wonderful work it has been doing for retarded youngsters in our State. The members give freely of their time and means, often at considerable sacrifice, in their service to these unfortunate young people.

Great tribute must also be paid to the officers and personnel at McChord Air Force Base at Tacoma for the splendid help and cooperation given to the association in connection with making the game of the year a success. They housed, fed, entertained, and transported the children of the two schools who had come to participate in the program. One could not praise them too highly for their wonderful help.

The Defender, a newspaper published in the interests of the personnel at McChord Air Force Base, carried an article about the game of the year which I include herein. The article follows:

RETARDED CHILDREN SHOW OFF TALENTS AT GAME OF YEAR

McChord personnel and units have given a hand this year to aid the Tacoma Chapter of the Washington Association for Retarded Children stage the children's basketball game of the year tomorrow night.

There will also be exhibitions of band music, choral singing, and square dancing, all by retarded youngsters. The objective of this event is educational rather than fund raising and is designed to inform the general public as well as special groups that mentally retarded youngsters can be helped.

Any funds remaining after expenses are paid will be turned over to the friendship fund of the two participating schools, Lakeland Village of Spokane and Rainier.

Col. Vernon L. Stintzi, base commander, is serving as one of the honorary chairmen for the event to be staged tomorrow night at the CPS Fieldhouse. Ceremonies begin at 7:30 p. m.

Commendations and credit for their assistance on the program are due these organizations and people: Headquarters, 325th Fighter Wing, Commander and Adjutant support; WAF base complement, aid in seating and issue of program; Air Police Squadron, Color Guard; Food Service Squadron, messing facilities for the children while at the base; Air Base Group, housing for children while staying here; Operations Squadron, photographic support; Transportation Squadron, transportation for the children while on the base.

Also furnishing support: 1705th Air Transport Group, MATS, senior NCO's for doormen and ticket takers; NCO Club, ticket sales; NCO Wives' Club, ticket sales at base exchange and commissary, Boy Scout Troop 104 and Pack 104, use of building for after-game party; one Sunday collection for aiding retarded children, and especially Chaplain Richards and Chaplain McElyea for humanitarian relations.

Particular credit must be given to M. Sgt. and Mrs. C. F. Lee for their tremendous job of coordinating the entire proceedings.

Sergeant Lee, maintenance supervisor for 1705th Air Transport Group, was named Washington coordinator for the National Association for Retarded Children and fund-raising chairman for the game of the year by the Washington State director.

He and his wife have coordinated on all arrangements for housing, transportation, entertainment, and the myriad other details involved in such an undertaking.

Sergeant Lee stated: "Everyone should take advantage of this opportunity to see these children perform. It shows what can be accomplished by care and attention."

UNIVERSITY OF MICHIGAN LIBRARIES

Address by Gen. Lyman L. Lemnitzer, Vice Chief of Staff, United States Army, at the Armed Forces Week Celebration, Charleston, S. C.

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose herewith an address made to the citizens of Charleston on May 13, 1958, by Gen. Lyman L. Lemnitzer, Vice Chief of Staff, United States Army.

The occasion was the celebration of Armed Forces Week.

General Lemnitzer is one of the great heroes of his day and age, having excelled in both of our late wars—World Wars II and Korea.

As a tactician he is unsurpassed. As a leader of men he has no superior. His devotion to his country can best be told by the decorations he has earned on the field of battle.

Mr. Speaker, his words of wisdom and counsel I commend to everyone.

The address follows:

OUR ARMED FORCES AND THE THREAT TO THE NATION'S SECURITY

(Address by Gen. Lyman L. Lemnizter, Vice Chief of Staff, U. S. Army, at the Armed Forces Week Celebration, Francis Marion Hotel, Charleston, S. C., May 13, 1958

It is a real pleasure for me to return to Charleston. On this occasion I would like to talk to you about our Armed Forces and the threat that presently faces our country and the other nations of the free world. I served at Fort Moultrie in 1939–40 when, as you will recall, we were working hard to build up our military strength for the test with the forces of Hitler, Mussolini, and Tojo in a war which seemed to be bearing down upon us in spite of all our best efforts to prevent it. This morning I had a long overdue opportunity to visit Fort Moultrie and Sullivan's Island again and I can assure you that it brought back very pleasant memories.

For all its peaceful beauty, Charleston has seen considerably more of war than most American cities. Its history as far back as the Revolution is a reminder that peace cannot be taken for granted. It is a reminder that if war strikes, it can strike directly at our homes and lives.

Today, developments in science and technology have made it more feasible than ever before for an enemy to deliver direct attacks upon our own territory here in the United States. Accordingly, it is only sensible for us to make provision to meet and, if possible, to prevent such attacks from taking place. While our political, diplomatic, and economic leaders play a vital role in carrying out this task, a major share of the responsibility falls properly upon the Armed Forces.

The theme of our Armed Forces observance in this year of 1958 is "Power for Peace." In keeping with that theme, my purpose today is in a sense to take stock of the Armed Forces, to assess the contribution which they are making to our national security. In so doing, I shall regard myself as being the spokesman not only for the Army but for all the military services. Because any such stocktaking can have meaning only in the light of the military requirements which the Armed Forces are designed to meet, I shall also discuss the nature of the military threat to the United States. With these points in mind, I have chosen as my subject Our Armed Forces and the Threat to the Nation's Security.

The first purpose of the military strength which the United States maintains is to prevent war. The best way we know to accomplish this aim is to present a convincing capability of being able to fight successfully, should fighting ever again be necessary. The basic premise we work from to preserve peace is the belief that a nation which resorts to cold-blooded aggression—as the nations of the Communist bloc have repeatedly done—is one which will use military force whenever it suits its political purpose. Such a nation, or group of nations, fights not for principle but for gain. Accordingly, it expects a profitable return on its investment. Our aim is to develop that degree of military capability which will convince any would-be aggressor that any gains he might hope to win by military means would not be worth as much as the military price he would have to pay to win them.

If the provisions we make to deter war prove to be inadequate to the task and our best efforts fail, then the purpose of our military strength is to win the war which has been forced upon us. This does not require us to maintain separate military capabilities to accomplish these two purposes. Military strength designed for deterrence is of the same type as that required for winning a war—in fact, by its nature, it can be effective for deterrence only to the extent that it promises to be effective for actual fighting.

To accomplish our purposes, therefore, the Armed Forces must first determine the nature of the existing threat of war and then design forces capable of meeting that threat effectively. We hope thereby to prevent war but, even if we do not succeed in that aim, we are then ready for any threat which materializes.

At this point it might be suggested that, given the existence of a significant menace to our Nation, we should meet it by concentrating the full resources of our economy and our manpower on placing our Armed Forces on a war footing. Such a course, however, is completely unacceptable. Our fundamental military doctrine has always been to maintain in peacetime only those military forces which would be necessary to meet the initial requirements of war and to provide a nucleus around which the expanded forces required for more extended operations could be built. In fact, even apart from the major impact upon our entire way of life which would result from converting our country into an armed camp, it would be ineffective militarily in the light of the problem which confronts us. The danger we face is not a thing of the moment. On the contrary, the Communist bloc gives every indication of being able to perpetuate the cold war indefinitely. Furthermore, the Soviet military threat is only a part of Communist strategy, which also includes economic aggrandizement, propaganda warfare, subversion, infiltration, and the coup d'etat. To concentrate exclusively on meeting merely one aspect of this aggressive strategy would simply be to invite defeat on some other plane, or facet, of the total menace.

The persistence of the determined expansionism of aggressive communism needs no discussion before this audience. It is enough to say that throughout the world there have been 15 wars since World War II and that Communist bloc nations have taken a direct part in no less than 8 of them. If past behavior can be taken as an indication of future intentions, the Communists have left no doubt either of their aims or of the means they are willing to resort to in order to achieve them. In short, no reasonable person can deny that the daily threat of war exists. With an army which by far is the world's largest, with a very real and formidable submarine force, with a substantial atomic stockpile, with a growing fleet of long-range aircraft, and with continued efforts to acquire intercontinental ballistic missiles, the Soviet Union certainly has the capability to launch all-out nuclear warfare on a global scale. Because the Soviet Union's military power includes great strength in all types of forces—land, sea, and air—it also has the capability to wage limited war. By limited war, I mean a war deliberately limited in the geographic area of conflict. Such a war may also be limited in the objectives sought, and it may even be limited by the types of weapons used.

If our efforts to deter war are to be effective, they must provide means to counter military aggression successfully whether it takes either a limited or an unlimited form.

For some years, our primary concern was the possibility of a general war. Accordingly, we concentrated on the development of atomic striking power to retaliate against any blow struck at us, and on defensive forces to reduce the effect of such a blow. The actions which we took in developing the Strategic Air Command, in building up our stockpile of atomic weapons, in establishing alliances such as the North Atlantic Treaty Organization, and in locating elements of our Armed Forces in strategic areas overseas made the price of global war too high and undoubtedly played a significant part in preventing the outbreak of a general conflict.

Today, the U. S. S. R. has reached a point where it possesses a substantial capability in nuclear striking power. Its offensive blows against us could be as devastating as any retaliatory blows we could deliver in return. This development does not mean, however, that the chance of general war has increased. The condition of atomic deterrence to the launching of a general war by the Communists still exists. Referring back to what I said earlier about the calculation with which communism uses military strength to gain an objective, the price of global war is still too high, for nothing the Communists could hope to gain would be worth the almost certain suicide which they would risk.

But the price of global war must be kept so high that a would-be aggressor would not be tempted to employ it as an instrument of national policy. Therefore, our requirement for the maintenance of an atomic capability, to include both a weapons stockpile and the ability to deliver those weapons over long distances, continues unabated. The requirement for maintaining and improving this capability is being met by the Strategic Air Command of the Air Force and by the Navy's strategically located carrier forces. We are advancing toward the development of intercontinental ballistic missiles. At the same time, the capabilities of our defenses against any Soviet air attack upon us are being continually improved. The responsibility for carrying out this task is performed primarily by the potent air defense forces of the Army, now vastly strengthened with guided missiles, and by the interceptor aircraft of the Air Force.

At this point I want to repeat that our strategic nuclear weapons and our ability to deliver them have played and are continuing to play an important part in preventing the Soviets from deliberately initiating a general war. However, it is also true that even when we had atomic superiority—a superiority which at one time was a complete monopoly—the Communist bloc continued to pursue its aggressive aims in limited conflicts. Thus, our strategic atomic capability by itself was not enough even under those conditions to provide the de-

gree of deterrence which was needed. Now, however, the Soviets are moving toward atomic parity. With no apparent reduction in Communist aggressiveness, the U. S. S. R. cannot be expected to be deterred from continued expansion.

As a soldier I do not like to speak of the intentions of a prospective enemy. I prefer to speak of his capabilities. But without trying to look into the minds of the men in the Kremlin, it seems to me that limited war appears to be the most feasible avenue of approach for the Communists to follow in pursuing their aggressive goals. That being the case, it is essential for us to examine limited wars which have been fought if we hope to understand the nature of the problem facing us.

One of the salient characteristics of these conflicts as the Communists have fought them thus far is that they have tended to take place in remote areas. This characteristic alone poses several requirements which must be met by any force designed to deter limited war effectively.

For one thing, since it is necessary to react quickly to aggression, forces to counter an attack must be available on the spot or in nearby areas so that they can be quickly moved to the combat zone. In part, this requirement is being met by the units of the United States Armed Forces which are deployed in or near prospectively critical areas overseas.

Another vitally important part of the free world's capability for meeting this requirement is to be found in the forces provided by our allies on the spot. A significant aspect of this element of the free world's capability to deter local aggression is our mutual security program, in which all the American military services are participating. Through this program our allies are being provided with weapons and equipment, and with training in their use, to permit attainment of the maximum degree of cooperation between their forces and ours.

In addition to the forces of our allies and to our own units stationed overseas, to achieve a capability for deterring limited war effectively, we must have available in the United States forces which are highly trained, fully equipped, and sufficiently mobile to permit their expeditious movement to a trouble spot, wherever it may develop. Such a force is sometimes aptly called a fire brigade. The Army is meeting its share of the responsibility for providing this fire brigade through a force consisting of several divisions and their necessary supporting forces which we call the Strategic Army Corps.

Another requirement for an effective deterrent capability is made up of the air and naval transportation to move the necessary Army forces and the supporting units they require for successful combat operations to the combat zone. In this connection, I want to point out that this is not solely a matter of transportation. It includes the requirement of keeping the sea and air lanes open, not only to move the initial contingents to the battle area, but also to transport the reinforcements and supplies which are essential to sustained military operations.

Finally, an important element of our deterrent capability is our ability to carry out rapid expansion of our military forces in time of emergency. For this, all the armed services rely upon the units of their respective reserve forces. The readiness and availability of the Army, Navy, Air Force, the Marine Corps Reserve, and of the Army and Air Force National Guard organizations play a vital part in our military effectiveness for limited as well as general war. In general war, of course, they would make possible the development of the strength required for large-scale sustained operations. In limited war, too, however, they would have an important responsibility. We must not lose sight of the fact that the outbreak of a limited war would by no means rule out the possibility of global conflict. If we are to have freedom of action to employ our active forces in suppressing a local aggression, we must continue to maintain the strength to deter general war. Accordingly, we look to our reserve forces to take the place in the United States of those organizations deployed overseas to defeat local aggression.

While it is true that what I have said thus far has been based on the nature of those limited wars which have been fought in the past few years, it is also true that the most threatening trouble spots which exist in the world today still tend to be relatively remote. For this reason, I believe that the military considerations which arise from the remoteness of a scene of action from the sources of our military power here in the continental United States continue to be valid and must receive adequate consideration in our planning.

What this all adds up to is that our military resources must be flexible. They must be able to deal effectively with aggression on either a limited or unlimited scale, and to overcome the various military problems posed by either type of threat. And these military resources must be thoroughly integrated. Teamwork is essential. No one type of force is supreme. They are mutually interdependent.

The Armed Forces of the United States are striving to develop their capability not only through flexibility but through quality. Because of the value which, as a Nation, we place on human life, we are doing everything within our power to provide our soldiers, sailors, airmen, and marines with the finest weapons and equipment which science and technology can supply. Our emphasis is on striking power, not upon the sheer weight of manpower.

To illustrate our efforts along this line, I want to mention some of the steps which have been taken by the Army—since that is the service with which I am most familiar—to meet the conditions which we believe would exist if war should come.

Some of the most striking of the improvements which we have made have been in the field of increased firepower. Developments taken place since World War II which have made it possible for us to achieve with a single weapon a degree of destruction which formerly would have required the massed and sustained fire of a large number of battalions of artillery.

I do not want to suggest that, regardless of the needs of a particular military situation, maximum destruction is necessarily the best. What is particularly significant in the new weapons is not so much the amount of their destructiveness as such, but their destructiveness in proportion to their size. The development of small-yield weapons represents an advance which—although often overlooked—is extremely important militarily. It is important because, for example, it enables us to put into the hands of a frontline squad a degree of firepower equivalent to the capability of a World War II medium artillery unit. Furthermore, these smaller weapons are being developed with several degrees of destructive power.

Our advances in fire power have not been confined solely to atomic weapons. Marked progress has been made in the development or improvement of weapons for our nonatomic arsenal. Through such means, the Army possesses and is increasing a wide range of destructive capability, giving it a flexibility which is particularly valuable for the successful conduct of modern battle. Thus, with the varied weapons now available or whose availability is anticipated in the near future, the commander can select those which are best suited to the requirement of the moment.

Another important area of improvement concerns increases in range capability. With our rockets and guided missiles we have gained an ability to deliver our firepower to targets farther behind an enemy's lines than ever before. We have also gained increased tactical flexibility, since our greater ranges make it possible for us to concentrate the fires of widely separated weapons against a target located anywhere in an extensive area.

As is always true, improvements in weapons impose changes in tactics and in tactical organization. We carry out a continuous program of testing and analysis to determine alterations which should be made to our tactical doctrine. With reference to our organization, we have recently completed the conversion of all the divisions of the active Army to the so-called pentomic structure. In contrast to the old "triangular" division, whose chief elements were three infantry regiments, the pentomic division with five battle groups affords a marked increase in flexibility and striking power. This type of division was designed to meet what we visualize the needs of modern war to be.

With all our improvements in weapons and organization, we must not lose sight of the unchanging fact that no matter how fine the weapons and equipment of any of our Armed Forces, the effectiveness with which they are used depends ultimately on the skill, the intelligence, the courage, and the dedication of the men who use them. Trained, disciplined manpower is still the common denominator of military effectiveness. All the military services are bending every effort to enhance the individual skills of their members. We know, too, that if war should come, we can rely with confidence upon the vast source of ability and patriotism which is furnished by the American people. These qualities, which have never failed our Nation, we count among our major military assets.

In concluding my remarks, I want to repeat that the character of the threat which faces us—its persistence and the various forms it takes—has determined the military steps which we have taken to counter it. To prevent war we must display that type of strength which gives clear evidence of our ability to win, and we must leave no doubt concerning our determination to use it if necessary. If it is to be effective in achieving its purpose, that strength must have the versatility and the flexibility to deal realistically with the dangers which exist and which can be expected to arise. The elements of such strength are the special characteristics and capabilities peculiar to each of our present-day Armed Forces. Their effectiveness is realized through their combination, for each of the elements contributes its essential share to the whole. The goal, then, which your Armed Forces seek is the security of our Nation, achieved through "power for peace."

So All Can Sing It

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. ZELENKO. Mr. Speaker, under leave to extend my remarks, I am pleased to insert the following editorial which appeared in the Galveston (Tex.) News on Sunday, May 11, 1958:

SO ALL CAN SING IT

A lot of people have been waiting a long, long time for Congress to do something about authorizing an official version of our national anthem, the Star-Spangled Banner, whose words, written by Francis Scott Key,

live in our hearts but whose high notes stop the average singer.

The more hopeful among those interested have wanted Congress to sanction musical modifications in the anthem so that its harmony range would fit limitations of our vocal chords.

Now, Congressman ZELENKO, of New York, has a bill in the hopper that would satisfy many Americans and some people in other lands who think this country should do something about its basically fine anthem. The Zelenko proposal would modify Public Law 823 of the 71st Congress which legally designated the anthem by title without authorizing an official version of words and music.

The bill would sanction the lowering of 13 notes by 2 tones in the phrase beginning, "And the rockets' red glare," and also by lowering by 2 tones 5 notes in the phrase, "O'er the land of the free."

Simple enough, and the changes would not break a sheltered tradition by altering the basic harmony of the piece, although the music of the anthem was adapted from an old English folk song, To Anacreon in Heaven.

The new arrangement was worked out by Paul Taubman, American musician. There are no fewer than 271 copyrighted versions of the anthem in the Library of Congress. All are difficult for the average singer to carry through, due to high notes.

Our national anthem is probably the most neglected national song in the world. Congressman ZELENKO reported that a high-fidelity recording of the song is not even available commercially.

It seems important that Congress take time to refurbish our national anthem and authorize an official version of words and music we all should like to be able to sing.

Attack on Nixon Moscow Inspired

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item by Victor Riesel:

WASHINGTON.—I have before me a document proving that the stoning of Vice President NIXON sprang from a network of violent youth squads which the Soviets have been organizing at Peru's University of San Marcos for 23 months.

This document is a 3,500-word series of directives issued by the party's central committee in Lima on June 7, 1956. There were originally 100 copies of it, all carefully numbered and secretly hand delivered to the organization's top officials and undercover operatives.

At the end of these directives, which calls for the infiltration of unions, religious organizations, universities, and political parties, is this warning to the party chiefs:

"Each recipient will have to answer before the central committee for his numbered copy so none falls into public hands."

The document—which makes it abundantly clear that these are Moscow's wishes—first orders penetration of the vital metal-mining unions and then says:

"But our principal battleground on the university front continues to be San Marcos (NOTE: the oldest university in America, founded 1551). There is the heart of the student movement, and through the revolutionary youth of our collaborators and sympathizers, we have made significant gains inside the liberal arts faculty and have had minor success in the law and science fields.

"This penetration program through fractions [small units—V. R.] in university circles must be given our greatest attention. There must be immediate action to comply with the directives of the 20th Congress of the Communist Party of the U. S. S. R."

It was at this Soviet gathering in Moscow that Khrushchev unburdened himself of the violent attack on Stalin. The Russians' global apparatus was then purged and reorganized. New directives for action everywhere flashed to national Communist Party centers across the world.

The Peruvian Communists' Central Committee then reissued these orders—which pivoted upon the raising of slogans against the United States.

Shortly after the document was issued, student groups were organized around slogans such as "Defend the Soviet Union against the planes and bombs of Yankee capitalism." The document eventually was passed on by someone to Serafino Romualdi, the AFL–CIO's director of Latin American affairs.

To observers, the attack on NIXON proves that the old-fashioned tightly controlled Communist International (Comintern) still exists as it always did.

There is such a thing as Moscow gold after all.

Admit Alaska

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. EVINS. Mr. Speaker, once again this year the Congress will be given the opportunity to extend the status of statehood to Alaska. The people of Alaska have earned and deserved the privileges and responsibilities of statehood and there has been widespread support for statehood from the citizens of the present 48 States. For example, last week the Nashville Banner, one of the South's great newspapers, carried an editorial calling for the admission of Alaska to the Union. Also, the distinguished reporter, Mr. Roscoe Drummond, in his syndicated column presented the case for Alaska.

Under unanimous consent, I include these two articles in the Appendix of the RECORD.

The articles follow:

[From the Nashville Banner of May 6, 1958]

ADMIT ALASKA

If promises mean anything; if party pronouncements mean anything; if individual congressional pledges and expressions of public favor mean anything—then submission of Alaskan statehood to a rollcall in House and Senate would see that Territory swiftly admitted to the Union.

Why not now?

The promise was given, and has been reiterated. Employing the Tennessee plan, Alaska is ready with its State constitution, its congressional representation. The bills for its admission have been drawn, and await only introduction on the floor of House and Senate.

Justice demands that Congress act on it, in justice both to Alaska and to the Nation, whose security and economic interests would be served by the development so long planned. It is pointed out that in article III of the Treaty of Cession, by which we acquired Alaska in 1867, we pledged Alaskans ultimate statehood. That was 91 years ago.

The Senate Interior Committee observed last year that "In all ways Alaska is a dynamic and spectacular land. No area of the world offers a more promising challenge to the man of vision. This waking giant is the essence of America in its sturdiest tradition and constitutes one of the Nation's best investments in the future."

Congress has been reminded, in the words of the Washington Daily News, that "Since the Thirteen Colonies became the United States of America, there have been 35 additions to the Union. And each time a new State has been admitted the national economy has surged ahead."

In Alaska, the United States has potentially a lasting spur to the economy, comparable to the opening of the West. That spur is welcome; it should be used.

The bills are ready. Statehood has been put off too long already—for no good reason. Let Congress act now and fulfill a promise, in the interest of the whole hemisphere.

[From the New York Herald Tribune]

THE CASE FOR ALASKA: REASONS FOR GRANTING STATEHOOD SUMMARIZED

(By Roscoe Drummond)

The outlook now is that Alaska will become the 49th State in the Union before the present Congress has run its course. The statehood bill has cleared the committees. An early vote in the House is in sight.

It has been before Congress since 1916 and its supporters are convinced that at last the votes are at hand to make Alaskan statehood a reality. Should Congress again say no:

It would be reneging on the most explicit commitment both parties ever put into their national platforms. In 1956 the Democrats and Republicans pledged immediate statehood for Alaska.

It would violate the manifest wishes of the American people who in a series of public opinion polls running from 1946 to 1958 have increased their support of Alaskan statehood from 5 to 1 to 12 to 1.

It would dishonor the promise of the 91-year-old treaty by which Alaska became an American Territory and in which we pledged to give its inhabitants all the rights, advantages, and immunities of the United States. The right to self-government is one of them. The right to be free from taxation without representation is another.

The more one examines the merits of Alaskan statehood, the more persuasive the case becomes. Obviously there are great advantages to the citizens of Alaska whose elected representatives in the Territorial legislature only last year voted unanimously for statehood. There are also many advantages to the United States, particularly when you consider that on this round earth Alaska is the doorstep to the American Continent and the most strategic outpost of our defenses as the alert flights to the Arctic demonstrate.

All may not be familiar with such basic facts as these: The Alaska people: Eighty-five percent of the Alaskans are of the stock of the American pioneers who trekked across the plains and mountains to build the Western United States. About 15 percent are Eskimos, Aleuts, and Indians. They are a sturdy, worthy, and resourceful people.

The Alaskan population: At present it stands at 212,500. But the most significant fact is the rate of growth. Between 1950 and 1956 the population increased by 53,000, or 48.6 percent. Alaska has shown a greater

percentage population growth than any State in the Union for 17 years.

At least 22 or our States had fewer people when Congress granted them admission.

Alaskan loyalty: Only in Alaska did the enemy invade North America in World War II. No more loyalty, no more patriotism, no more willingness to sacrifice were displayed by any part of our people than by the Alaskans.

Alaskan communism: The last report made by the Federal Bureau of Investigation in 1951 stated that there were 10 Communists in Alaska. There is no reason to believe there are any more today, probably fewer. Would that we did as well in continental United States.

The Alaskan land: Business Week puts it this way: "Picture a land mass stretching from Maine to Florida, from the Great Lakes to the Gulf of Mexico, embracing 20 easternmost States. Wrap around it a coastline greater than that of the United States itself, and you have an image of Alaska, twice the size of Texas and one-fifth as large as all 48 States together."

Alaskan resources: The United States has already gotten back 425 times over the $7 million purchase price it paid to imperial Russia, in metals, minerals, timber and oil. Alaska is rich in resources. Geologists conservatively estimate that Alaska is one of the 4 great petroleum basins in the world. No wonder Alaska isn't developed when you consider that the Federal Government owns 99 percent of the land.

Needed: Modern Truck Licensing

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. SCHWENGEL. Mr. Speaker, the Tuesday, May 6, edition of the Daily Times, of Davenport, Iowa, carried an editorial entitled "Needed: Modern Truck Licensing," which I would like to call to the attention of my colleagues.

This need is so obvious to all of us, yet it appears that no effective action is being taken to correct this situation. Under unanimous consent, I include the editorial in the RECORD in the hope that other Members will join me in taking the necessary steps to set up a system of uniform licensing for trucks.

The editorial follows:

NEEDED: MODERN TRUCK LICENSING

A truck rumbles across one of the bridges here and it is plastered with plates because the United States remains provincial in handling licensing for interstate traffic.

Roads now run from coast to coast and border to border and trucks carry an increasingly substantial amount of the Nation's freight.

Yet the States act as if they were separate principalities.

Trucking firms in the Davenport area say licensing and taxing of interstate trucking are notorious for confusion and redtape to which can be added greed and bickering in many States.

"And," says a spokesman for a transport line based in Davenport "the situation is getting worse, not better." Each State is afraid its neighbor is going to get more revenue from trucking and the trucker is caught in the middle.

One firm which covers only a few of the central Midwest States, estimates each of its trucks carries 11 different licenses, permits, registrations and tags of one kind or another.

This array of legal confusion exists even though the States serviced by this company are all covered by reciprocal licensing agreements.

Reciprocal agreements permit trucks to deliver a load or pick up a load in a State other than the one in which its license was purchased. However, even in States covered by these agreements a truck may not pick up and deliver a load in the same State without carrying a license for that State.

There was a time in the earlier days of paved highways when numbers of roads did not correspond from State to State. In fact, many roads were known by their names rather than by numbers—Lincoln Highway and Red Ball Route to name a couple.

Then it was recognized that it was essential that a uniform system of road numbers be established.

Interstate highways under the Federal program will be ready for use within 2 to 5 years and trucks will spin along with drivers scarcely knowing when they cross a State border.

Now is the time when uniform licensing, should be worked out in Federal law with one plate issued and each of the States in which a truck travels receiving its share of the fee.

Certainly matters as complex have been dealt with as States have gotten along with one another since the founding of the Nation. To work this out would be a sign of growing up in the regulation of transportation.

Resolution Memorializing United States Congress To Declare September 17, Constitution Day, a Legal Holiday

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert the following resolution adopted by the council of the city of Newark, N. J., endorsing the observance of Constitution Day, September 17, as a national legal holiday. At this critical point in history, it is important, as the resolution points out, for our citizens to reflect upon the noble document upon which our great Government is based.

The resolution reads:

Whereas the Constitutiton of the United States is regarded as the finest instrument of its kind ever devised by human skill, and is the oldest Federal Constitution in existence; and

Whereas under it, for more than a century and a half our Nation has enjoyed an unparalleled degree of democratic freedom and liberty never reached by any other country in the history of the world; and

Whereas the Constitution of the United States was adopted in constitutional convention assembled on September 17, 1787; and

Whereas it is altogether fitting and proper that our citizens, who enjoy the benefits of freedom and liberty under that great document, should pause on the occasion of the anniversary of its adoptiton, to reflect upon their good fortune and to dedicate themselves in preserving the principles therein enunciated unto themselves and their posterity: Therefore, be it

Resolved by the Municipal Council of the city of Newark, N. J., That the Members of the Senate and the House of Representatives of the United States be and they are hereby requested to concur in the passage of Senate Concurrent Resolution No. 41 declaring September 17 of each year to be a national legal holiday; and be it further

Resolved, That a copy of this resolution be forwarded by the municipal clerk to each Member of the present Congress of the United States from New Jersey.

The Facts of Farm Production Damage the Bootstrap Theory

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. WATTS. Mr. Speaker, under permission to extend my remarks, I wish to call the attention of the House to an editorial appearing in the May 12, 1958, issue of the Louisville Courier-Journal which gets to the bottom of the so-called increase in the farmers' income.

It is a very pertinent article and one in which all should be interested—the farmer, the consumer, the city folks, and the country folks.

It is a most timely article:

After many months of gloomy reports about the plight of the farmers, the statistics from Washington now show what appears to be an astonishing comeback.

As of mid-April, these reports show, prices received by farmers were 9.8 percent above those of a year ago. Farmers' cash receipts during the first quarter of 1958 were 7 percent above those of last year. And if this trend continues, farm income this year is expected to approach $13 billion, compared with about $11.5 billion last year.

Such reports have brought delight to many farmers and to such publications as the Wall Street Journal and Time which have been quick to point them out as examples of what happens when the Government keeps its hands off farm markets.

Unfortunately, the rosy glow of the present seems to be so bright that some of these publications and even some of the national farm leaders can't see beyond it.

The facts are that the present firmness of some farm markets is but a prelude to another decline. The Department of Agriculture has been at considerable pains to point out this fact.

The Department's April report on the demand and price situation explains that "increased receipts from livestock products were largely responsible for the gain" in farm cash receipts during the first quarter of this year.

Why have livestock prices been so good this year?

This is the department's own explanation:

"Increasingly, 1958 is proving to be a year marked by a considerable withholding of meat animals, with some expansion of inventories in prospect. This seems to be true for all species, cattle, sheep, and hogs, and it is one of the few times that trends for the three have coincided.

"The withholding occurs after 2 years of reduction in numbers of cattle and production of hogs. With slaughter supplies tending downward, and consumer demand for meat weakening only a little, the immediate result of withholding is to create a price boom.

"The boom feeds upon itself; each rise in price stimulates further holding back, to speed the expansion.

"This spiral, so dangerous to future prices, may not build as high as some have done previously, such as that of 1950–51."

The result of this, the department points out, is that livestock prices undoubtedly will decline later this year. It expects prices to be good, but lower. And the significant price effects of any overexpansion in hogs probably would not occur before the fall of 1959.

Behind all this, of course, is the administration's policy of forcing down feed prices. It is a farm axiom that cheap feed means cheap livestock. If there is any doubt about it, farmers and city publishers should refer back to a speech by Assistant Secretary of Agriculture Don Paarlberg at the convention of the American National Cattlemen's Association at Oklahoma City last January 7.

"The overall situation is relatively more favorable than we can expect to continue indefinitely," Paarlberg told the beef cattle producers. "Our tremendous supplies of feed grain must ultimately be translated into heavy supplies of meat, which undoubtedly could depress our markets at some future date."

On the basis of this fuller information, it is hard to buy the story that farmers have pulled themselves out of trouble by their bootstraps, much as we would like to believe it.

Israel Celebrates 10th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. POWELL. Mr. Speaker, today marks the 10th anniversary of the independence of Israel. In recognition of this significant event, I wish to extend warm greetings to the people of Israel, Prime Minister David Ben-Gurion, and His Excellency Abba Eban, Ambassador of Israel.

Israel was born out of a long struggle. She fought hard for freedom and self-government, and values them highly. Independence is a precious heritage. It was for freedom that most of our forefathers came to these shores. Ever since its its inception, Israel has been grounded upon democratic principles. The country is going through a period of rapid expansion. Like every growth, this has its pains, and history teaches us that it is natural that it should be so. But, in recent months some observers of the Israeli scene have taken these symptoms as the substance of Israel's life—forgetting the truth expressed in the old adage, "Falling blossoms indicate ripening fruit."

When we look back at our own history in the fitful decade after independence, it is easier to appreciate the problems facing Israel. It is not a small matter for a nation to embark upon the task of spreading prosperity and happiness, of undertaking to assure peace and progress, and of assuming the responsibilities of insuring to its peoples freedom and liberty. Israel is a young nation which has passed through many trials and tribulations during this infancy of her statehood. Israel has reason to be thankful for the many accomplishments that stand to the credit of her people. Nationhood brings responsibility and can only be sustained by self-discipline, hard work, and the spirit of a free people. The progress made in the past decade not only justifies a sense of pride in their achievements, but also the greatest degree of confidence in Israel's future.

Guided by the lessons her history has taught her, Israel has pursued a course which she feels will preserve her national life. This called for nothing less than a comprehensive program of nation building. I applaud the great strides Israel has made in these first 10 years of independence. She has almost doubled her per capita income; educational and social welfare programs receive unstinting support of the Israeli Government. We can all learn from Israel that whatever is spent in education, health, and welfare strengthens a democratic society every bit as much as what is spent on arms. Israel's material progress pays tribute to the resourcefulness and industry of her people and shows their determination to fashion for themselves a permanent and advanced nation. By strengthening their own internal life, by increasing their potential—economic, political, moral—such small nations as Israel can become active forces in the free world.

Israel is facing up to the challenge of nation building. The people are citizens of a great country on the verge of bold advance and are living up to the high standards they have set for themselves. The people of Israel believe in the future of their country for the Israel of the future will serve the welfare of the entire free world through her strength and the wisdom of her leaders.

In these perilous and anxious times there is a deep yearning among men for peace, security, and human dignity. It is clear to almost everyone that America wants peace. I wish it were equally clear that our policies measured up to the new requirements of peace. I salute Israel and again pledge my cooperation in furthering peace, freedom, and democracy. May the bright star of Israel be ever held aloft, undimmed, untarnished, so that its light reaches everywhere bringing faith, hope, and courage.

Need Help

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press, St. Marys, Pa., of Thursday, May 8, 1958:

NEED HELP

If any industry in the world needs help it's the railroads, who find themselves mousetrapped by senile Interstate Commerce Commission rules on one hand, a Government on the other that grants tax exemption to private airports that are direct competition to rail travel. There may have been some justification for the ICC at one time in America's railroad life, but there seems no need for its continued existence. This editorial may bring a reply from the Washington institution that will be given due space in this publication.

Suppose the Pennsy wanted to reduce train fares between St. Marys and Erie to 1 cent per mile. How long do you think it would take the ICC to nod its head in approval? Many a mother of today would be a grandmother before final approval or disapproval came through. That's the history of ICC redtape.

Uncle Sam helps pay the bills for practically all forms of transportation that run in direct competition to the railroads. Yet when the chips are down in world wars or other emergencies the same Uncle Sam is down on his knees to have the railroads carry the extra loads shoved over onto them.

At the present time railroad lines are not making enough money to purchase new equipment to place themselves in more competitive position with other common carriers and their appeals for Federal financing, not to cost the public 1 penny, land on deaf ears.

Without railroads this country never would have attained its present growth and greatness.

Today railroads are orphans of the storm.

Republicans Ought To Get a Horn

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of May 13, 1958:

REPUBLICANS OUGHT TO GET A HORN

Governor Stratton was in a fighting mood at a recent meeting of the Republican State central committee in Springfield. He bawled out the committee's publicity department for failing to tell voters of the accomplishments of the State administration, and cited the first issue of a party newspaper as an example of inep$ promotion of Republicanism.

"It is highly important that we do a better job of talking about such things as fiscal reform and the tremendous advance that has been made in support of elementary schools and institutions of higher learning," the Governor said.

While the point is well taken, it is only fair to add that Mr. Stratton himself is partly to blame. He has been one of the outstanding governors in Illinois history, but because he lacks a flair for publicity he rarely gets credit for his achievements and sometimes he is blamed unfairly for events beyond his control.

The contrast with his predecessor, Adlai Stevenson, is a striking one. Mr. Stevenson's

administration was afflicted by scandal after scandal involving members of his official family, and, though his intentions were generally good, he made no advance in many of the areas crying for progress or reform. Yet somehow he acquired a reputation as a statesman and twice won his party's nomination for the Presidency.

Mr. Stratton, without fanfare, has made enormous strides. He stamped out the cigaret tax counterfeiting which caused the State to lose many millions of dollars in revenue during the Stevenson regime. He engineered the passage by the legislature of the reapportionment amendment and was influential in its adoption by the voters. He persuaded the legislature to approve the judicial amendment, also.

Highway building under Mr. Stratton has been moving at a recordbreaking pace, appropriations for education and public welfare have been greatly increased, and departments under the control of the Governor have been administered with efficiency.

Voters of the Chicago area have particular reasons for being grateful to Mr. Stratton. Every worthy Chicago project has received his sympathetic attention and support, even though much of the credit usually went to the Democratic organization here. He joined Mayor Daley in getting legislative authority for a half-cent municipal sales tax, providing revenue badly needed by the city and many suburbs. He helped win approval of the $225 million Cook County bond issue for expressways, which advanced the planning of these roads before the adoption of the Federal expressway program.

These achievements are rarely mentioned, even by the hired Republican propagandists, but there is constant sniping at the Governor, not only by Democratic press agents but by editors who ought to know better. The Orville Hodge embezzlement was used to smear the Governor, even though the State auditor is, under the constitution, an elected official, entirely independent. Hodge was not even a political associate of the Governor; in the 1956 primary Hodge contributed campaign funds to Mr. Stratton's opponent. Instead of being blamed for Hodge's thefts, the Stratton administration ought to be given credit for the diligent work which resulted in recovery of the stolen funds.

It is no accident that Governor Stratton is the chairman of the National Governors' Conference, the first Illinois chief executive to be so honored. In Washington he is recognized as the leading spokesman for those who oppose further extension of Federal power at the expense of the States.

The Illinois Republican Party has good reason to be proud of the Governor, and should find ways to say so.

Sound Advice From Maj. Gen. Webster Anderson

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. WOLVERTON. Mr. Speaker, today the subject of efficiency and economy in operating our defense activities becomes one of great importance. The tremendous sums of money necessary to be appropriated to meet the challenge of the enemies of the free world requires that every effort be made by us to promote efficiency and economy in every way possible. This is necessary if we are to get the greatest possible use of the money expended in building our defense system.

In this connection it is well to remind ourselves that if we are to successfully meet the challenge with which we are faced, it is necessary to have a high degree of organization that will eliminate waste, promote efficiency, and provide economy without weakening the strength of our defense system. This is the underlying purpose of the President's reorganization plans recently submitted by him. The plan will, if adopted, give more defense at less cost.

As part of my remarks I wish to include a speech delivered by Maj. Gen. Webster Anderson, who is presently Executive Director of the Military Clothing and Textile Supply Agency, located at Philadelphia, Pa.

The speech to which I refer was delivered by Major General Anderson to a large and distinguished assembly in attendance at a dinner given in the city of Philadelphia on Saturday evening, April 19, 1958, by the Central Lions Club of that city.

The views that are expressed by Major General Anderson become more impressive and take on greater importance because of the worthwhile and distinguished service rendered by him in the varied capacities he has filled within the Department of the Quartermaster General of the Army.

The speech as delivered by Major General Anderson reads as follows:

Thank you Mr. Cushing, distinguished guests, members of the Central Lions Club, and your beautiful wives, it is with a deep sense of humility that I appear here to represent our Secretary of the Army, Gov. Wilber M. Brucker. The Secretary had originally asked our good friend and great Philadelphian, Arthur Kaufman, to make this talk. I am sure we all regret the sad incident which prevented his attendance.

You will note I said that Mr. Kaufman was asked by the Secretary. I was not asked—I was told.

I want to start out by complimenting you on your beautiful spring weather. We have endured together a long hard winter and must feel this is just reward. Other parts of the country are not so lucky. I have just finished a 2-week tour, including the Far West and Deep South. I was met by snow, blowing sand, and tornados. This is the best weather I have found anywhere.

Because of this trip I have not had a chance to discover what the Secretary or Mr. Kaufman would have said to you tonight. What I say, therefore, will be my own views and you musn't hold either of the other two gentlemen responsible.

I believe the public today pretty generally expects a soldier or sailor to talk about sputnik or Explorer or Polaris. Certainly these things have captured our imagination as has nothing else during my lifetime. I won't disappoint you entirely but I do propose to approach the subject from a somewhat different angle.

I think it is well agreed that the Russians stole the march on us last fall with sputnik. They certainly won a tremendous propaganda victory. They demonstrated advanced development techniques and possibly superior basic knowledge. But, what is most important, they showed a willingness to expend whatever effort, whatever resources in men, money, and materials were necessary to do the job.

In this country we refer to the gross national product as a measure of our total industrial effort. The GNP is limited by the availability of human and material resources. It is the job of Government to divide these resources between public and private needs. They do this by levying taxes. Remember that the potential gross national product for a specific period is a fixed quantity so the higher the taxes the fewer the private automobiles, cameras, dresses, etc. that can be produced. On the other hand the higher the taxes the more schools, highways and national defense we can have. During periods of war we do not hesitate to trade autos for guns. During periods of peace we have traditionally chosen autos. That to me is the No. 1 reason why the Russians got ahead of us in the matter of space travel. You will recall that as late as last summer the United States public through its representatives in Washington made substantial cuts in the President's military budget, a budget which had already been trimmed to the bone of immediate military necessity.

Let me give you an exaggerated example to illustrate this point. Assume that in 1955 this country decided to trade autos for missiles. The resources of men, money and materials which did go into the production of autos that year would, if applied to the missile program, have produced a Vanguard well ahead of the Russians. We had the knowledge, all we lacked was the determination to do the job.

Russia too is limited by her gross national product. They have chosen to sacrifice personal product for the public good. For them the decision is much easier than for us. One man can make it. Here the decision hinges on the opinion of 170 million. Personally, I think the fact that every worker owns an auto is a much greater, more significant national accomplishment than spinning a dog through space. In these very perilous times, however, we have to weigh most carefully the division of the pie between our personal comfort and the public welfare.

This decision can be a hard one and the cost of making a mistake can be disastrous. A number of years ago when I was a student at the Industrial College of the Armed Forces I made a study of the synthetic rubber production before and during World War II. Prior to December 7, 1941, the resources available for national defense were again limited. Decisions had to be made on the priority of expenditure. Mr. Baruch was pressing for the first synthetic rubber plant, the Navy wanted more battleships. The President was assured that the sealanes to our rubber supply in Singapore could be kept open. The cost of one battleship equaled the cost of a rubber plant. Yet the Navy got 5 or 6 ships while Mr. Baruch got no plant. After December 7, it was 4 years before a surface vessel got back to Singapore. You well remember the very narrow margin by which we solved the rubber problem.

This story is not meant to be critical of President Roosevelt or the United States Navy. It does teach us a lesson which we should not have to relearn by more mistakes. Our available resources must be carefully divided among our many requirements. We cannot have all we want of anything. We must on the other hand be prepared for any eventuality.

This lesson leads to another point about the Russian sputnik victory. To me the primary reason for that victory was the fact that Russia wanted it more than we did. They were willing to sacrifice to attain it. Just so they will limit their personal comfort to put more resources in military-aid and foreign-economic assistance. The stakes in this game are high. The Russians are willing to play it whatever the cost. Their resources are mobilized for war. Our 170 million policymakers don't seem to realize that we are in a kind of war. That success in that

war is going to require sacrifice. We need autos and mink coats and thick steaks all measured in terms of taxes to combat the Russians on the economic, the scientific, the cultural and the military fronts.

That is the real reason for our space travel defeat. A more popular public reason is the alleged chaos within the Department of Defense, the indecision, the interservice rivalries, etc. It is easy for the public which has deprived us the needed funds to find such a scapegoat. Actually the Department of Defense as presently constituted has gone far to solve the problems of the battleships and the rubber plant. Within the quiet cloisters of the Pentagon we are able to weigh objectively the military tools against the multitude of possible military needs. A soldier or marine to guard our world-wide interests, an aircraft carrier to project our flag and prestige into foreign waters, a bomber to deliver an annihilating attack deep in Eurasia. We are providing as best we can for every eventuality.

This is not to say that the Department of Defense is perfect or blameless. It is agreed that the organization needs change. There are those in Washington who would change it by destroying the power of the Secretary of Defense, who would return to the vagrancies and whims and the pressure groups of the public forum, those vital and delicate decisions of battleships versus rubber plants. They would foster interservice rivalries. Objective decisions on the expenditure of our resources would be well-nigh impossible. We have placed in the hands of our President the responsibility for the welfare and safety of the Nation. As in time of hot war we must give him the authority to discharge this sacred responsibility. I am therefore, firmly convinced that we must strengthen rather than weaken the Department of Defense. That is the essence of the President's reorganization plan which is certain to highlight Washington news for the rest of this congressional session.

I think a little story may demonstrate the need for reorganization to speed up and centralize the making of decisions. Down in South Philadelphia at the quartermaster depot I command a small Department of Defense organization about which I will speak a little later. Last year we were having financial and budgetary troubles. To help solve our problems we held a conference of interested Government agencies. There were 11 different offices represented—6 different levels of Government, each with some responsibility for approving my budget. A situation not conducive to the quick action imperative in this jet and missile age.

I am in the supply business—a far cry from the romance of space travel. Yet space travel as well as old-fashioned military operations are dependent on us supply people. We have heard a great deal recently about basic research and applied research or development. The supply and logistic function of the military may be likened to basic research. We produce no artificial moons streaking spectacularly across the sunset skies. But without us, those operational successes would not be possible. Like basic research they cost a tremendous amount of money, which is not reflected directly and immediately in the accomplishments of our Armed Forces. This is the area of the Department of Defense most susceptible to the economies and efficiencies of a businesslike administration. Furthermore, there is so much money involved that small percentage savings would render huge dollar savings. It is in this field that I believe the Department of Defense has made one of its most significant contributions to the national defense. The President's reorganization plan would enhance the authority to continue this good work. It is conceivable that some day even a tax reduction might result.

This brings me to the subject dearest to my heart—my own job. I am the Executive Director of the Military Clothing and Textile Supply Agency. This is an Agency formed by the Secretary of Defense about 2 years ago to supply clothing, textiles, and related items to all the armed services, the Army, Navy, Air Force, and Marine Corps. Our primary purpose in life is to save money for bigger and better missiles. That is, to make the national defense portion of the gross national product pie go further, to give you more defense for the luxuries you forfeit when you pay your income tax. We have four basic objectives, each designed to further the primary goal.

First, we are organizing a single distribution system to eliminate the waste and duplication, the cross-hauling, the back-hauling, and other inefficiencies inherent in the four separate systems. We will reduce our use of depot storage space from 20 million square feet in 46 depots to 11 million square feet in 12 depots at an annual saving of $10 million.

The second objective is to develop an inventory control system sensitive to the demands of our customers. Here we have the job of reducing a $2 billion inventory with a turnover once in 5 or 6 years. If we can bring this to manageable business-like proportions the savings in interest and storage charges will be $50 million per year.

The third objective is to develop modern procurement methods attuned to the industries with which we deal. As we reduce red-tape we speed up the purchasing process. This means less inventory on hand and on order to cover procurement leadtime. We have already effected a million-dollar annual interest saving.

The fourth, last, and in some ways the most interesting objective, is an energized simplification and standardization program. Here the potential saving is almost unlimited. For example, we are modernizing men's trousers by eliminating the obsolete watch pocket which has been costing us $700,000 per year. We have standardized our dress shoes to effect savings of over a million dollars a year.

I have talked about the gross national product as it reflects the availability of our total national resources. Through the medium of taxes these resources are divided between the public and private needs of the Nation. Two pieces of the pie. Unfortunately there is a third piece of the pie. That is the piece that goes into the garbage can through waste and inefficiency in Government, fires, recessions, and a multitude of other causes. This piece produces neither autos nor guns. The weekly cost of the current recession in terms of never-to-be-recovered lost human resources far exceeds the savings I can hope to achieve through the operation of my military clothing Agency. But that does not mean that I should stop trying.

My clothing Agency is an example of what the Department of Defense is doing about waste in Government. The President's reorganization plan will further this work. There will be less garbage. This means more missiles at less cost to you.

But remember that we are competing with a determined foe who is willing to pour any required resources into the economic and space-travel battles. To win this cold war we must not just equal his efforts, we must best them. The Russians beat us with sputnik because we did not have the determination to win. I hope that this can never again be said.

Statements of Policy on Legislation Affecting Real Estate Financing

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statements of policy issued by the Mortgage Bankers Association on March 15, 1958:

I. CREATING A VITAL HOME MORTGAGE CREDIT SYSTEM

The most critical problems in real estate finance center on the financing of housing. Since an ample supply of good dwelling structures is essential to the Nation's social and economic well-being, a candid and dispassionate consideration of the requirements of an efficiently operating housing market is called for.

Experience has demonstrated that, basic to all other requirements, is a system of soundly underwritten mortgage credit which will make funds available with low down-payments and long maturities to a large majority of families in all parts of the country. Experience has also shown that the indispensable ingredients of such a system are: (a) a mortgage instrument that provides for complete amortization in regular monthly payments; (b) a means of pooling unusual risks through mortgage insurance; and (c) a mortgage interest rate that is responsive to prevailing financial conditions.

The first of these requirements, the fully amortizated mortgage, is now universally recognized and accepted. The remaining two have been only partially realized.

THE PLACE OF MORTGAGE INSURANCE

Although the limitations on loan-to-value ratios imposed on their lending institutions by many of the States might be liberalized with safety, sound policy would still dictate that, beyond a point, mortgage institutions should reduce their exposure by pooling risks.

The mortgage-insurance system of the Federal Housing Administration was designed to accomplish this purpose. At its inception in 1934, FHA offered a simple formula for spreading risks, available to all types of lending institutions and accessible to all borrowers with good credit standing and an acceptable dwelling property. Though created and operated by Government, its support, after it was fully established, was to be provided by the borrowers who used the system; and any accumulation beyond adequate reserves was to be repaid to them. It was clearly understood that the interest rate was to be a readily marketable rate, since the purpose of the insurance was to broaden the market rather than impose restrictions upon it.

FHA has long since attained financial self-sufficiency and is today free of all but the most remote liability to the Federal Treasury. Nevertheless, it has more and more been treated as if it were a direct Government operation rather than an instrument for the general advantage of the private home market from which it derives its sole support.

As a consequence of successive amendments, the original concept of a nondiscriminatory, impersonal market mechanism has been much clouded, to the impairment of FHA's efficient operation and its potential

usefulness. Nevertheless, the original concept of FHA remains the best basis on which to recreate a sound and practical mortgage insurance system. What is needed is not a new system nor a supplementary system but a renovation of a system that has developed operating experience, financial strength, and the confidence of industry over nearly a generation.

To the end of restoring and revitalizing the original concept of mortgage insurance, the Mortgage Bankers Association offers these recommendations:

1. That the Federal Housing Administration be reorganized as a federally chartered mutual insurance corporation administered through a Board of Trustees appointed, with staggered terms, by the President, and by officers appointed by the trustees.

2. That FHA be made fully accountable for its operations directly to the President and to the Congress.

3. That FHA continue to be required to provide for its administrative expenses and reserves from its income from fees, charges, and premiums, but that it be freed from specific annual fixed budget authorizations and be permitted flexibility, within its previous year's income, in accommodating its administrative outlays to the varying demands of its services.

4. That a study be made to determine a more effective and equitable method of returning to mortgagors FHA's earnings in excess of expenses and reserve requirements.

5. That the FHA insurance system be revised to consist of 1 simplified formula for 1- to 4-family houses, 1 for rental housing, and 1 for cooperative housing, and that FHA be given wide latitude within each formula to meet the broadest possible economic range of demand.

6. That all special forms of mortgage insurance or guaranty be eliminated or be allowed to end without further extension.

7. That FHA be authorized and directed to adjust its mortgage-insurance premiums in accordance with its estimate of the risk assumed in the various types of mortgage-insurance transactions, taking into consideration the record of its 24 years of experience.

8. That the dollar limits on the FHA insurance authorization be removed and the amount of insurance written be limited only by an appropriate ratio to reserves.

9. That the applicability of the certified agency plan recently put into effect by FHA, or some other plan embodying the same principles, be rapidly extended.

10. That the regulation of interest rates and discounts on FHA loans be discontinued.

The accomplishment of these reforms should provide a mortgage-insurance system of broad usefulness and great flexibility, readily adaptable to the changes in the demand for housing and in the supply of funds, and capable of meeting the challenge imposed by the rapid growth and changing characteristics of our cities.

THE VETERANS' HOME LOAN GUARANTY PROGRAM

In its 1956 statement of policy, the association proposed a 3-year extension of the home loan guaranty program for veterans of World War II in order to allow time for an orderly transition to a single motgage insurance system under FHA. Instead, the Congress enacted a 1-year extension but so rigidly restricted mortgage yields that current market conditions have almost completely nullified the effect of the extension. Meanwhile, the terms for FHA insured mortgages have been sufficiently liberalized to offer an adequate means for meeting the mortgage needs of those who have not yet exercised their privileges under the Servicemen's Readjustment Act. The association considers the use of the FHA program to be more desirable than a further extension of benefits for War II veterans. It is recommended:

11. That the VA home loan guaranty program not be extended for veterans of World War II beyond its present termination date.

12. That, with respect to the program for veterans of the Korean war for whom the program does not terminate until January 31, 1965, the regulation of interest rates and discounts be discontinued.

A SPECIAL MEANS FOR BROADENING THE MARKET

Remoteness from the center of mortgage activity has always created difficulty in providing adequate mortgage funds for home buyers in small towns and cities. Difficulty has also frequently attended the efforts of members of minority racial groups, even in larger places, to obtain the consideration generally available to other classes of borrowers.

Not until the voluntary home mortgage credit program was created in 1955 at the instance of the mortgage investing institutions of the country did a practicable method exist for overcoming these difficulties. In spite of the disabilities under which the insured and guaranteed mortgage systems have labored during the intervening years, the usefulness of the program and the advisability of its continuance have been fully demonstrated.

Therefore, in the interest of the broadest possible service to the prospective home buyers throughout the country, the Association recommends:

13. That the voluntary home mortgage credit program be continued as a permanent feature of the Nation's home mortgage system.

THE NEED FOR MODERNIZING STATE LEGISLATION

Supplementary to the establishment of an effective mortgage insurance system, and important to minimizing the risk and cost of the mortgage operation and widening its geographic and economic scope, the Association urges that, unless they have already done so, states modify their laws in accordance with the following recommendations:

14. That less costly mortgage foreclosure procedures be achieved, by (a) the reduction of advertising costs, (b) the simplification of court procedures now involving costly legal expense, and (c) the elimination or reduction of redemption periods for forfeited urban property.

15. That, for fully amortized conventional mortgage loans, higher loan-to-value ratios be authorized than the customary 66⅔ percent to which State supervised institutions are now usually limited.

16. That mortgage investment by out-of-State financial institutions, including pension funds and trusts, be facilitated by providing that the making of mortgage loans, the pursuit of remedies under foreclosure proceedings, and the holding, or selling of property as the result of foreclosure do not constitute doing business in the State under the meaning of statutes relating to foreign corporations.

II. ENCOURAGING EQUITY INVESTMENT IN REAL ESTATE

The unbalanced relationship in the production of dwellings for sale and for rent, the difficulties that have beset the FHA rental housing insurance operation, and the slowness with which urban redevelopment is taking place are all in large measure attributable to the present unattractiveness of equity investment in income-producing property. Nothing could be more helpful in reducing the pressure for unsound mortgage insurance programs and in eliminating the excuse for direct governmental lending for housing purposes than an increase in the availability of true equity investment in rental property.

The cause of the lack of equity funds for rental housing is the relatively low potential yield to be obtained under present circumstances from a rental-housing investment—especially one in a moderate-rental category. At best, a rental property of this character is not likely to throw off a greater return after depreciation (by the straight-line method—and it will rarely earn enough to make any other depreciation formula applicable) than 6 to 7 percent. Unless the property is owned directly by an individual or a partnership, the income will be subject to a tax up to 52 percent, which may reduce the maximum yield to less than 3 percent. This is true whether the ownership is in the form of a corporation or an investment trust. Ownership by individuals or a partnership is not often practical where a large undertaking is involved.

By contrast, the income from capital pooled in security-investment trusts is not subject to an income tax to the trust entity. These trusts, which have had a phenomenal growth during the past 20 years, are able to obtain capital at rates of return well within the earning capacity of moderate-rental apartment property. If security-investment trusts, the assets of which now amount to approximately $10 billion, are so successful in attracting savings, it may be expected that trusts invested in income-producing real property could prove similarly attractive at a comparable rate of return.

However, the Internal Reveue Act discriminates against real-estate investment trusts by refusing to allow the same conduit tax treatment permitted to security investment trusts. Instead, it subjects them to the full corporate income tax. Consequently the trust, as a means of pooling the funds needed for equity capital becomes no more effective than the corporation.

As the one promising means available for breaking through this basic obstacle to a sound expansion of rental housing activity, the association recommends:

17. That the Internal Revenue Act be amended to provide that real-estate investment trusts be permitted to pass through to their beneficiaries income received from real estate equities or mortgages in the same manner that security investment trusts pass through income from stocks and bonds.

Words of Wisdom From the Italian Ambassador

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. CELLER. Mr. Speaker, I join with Ambassador Brosio of Italy in his suggestion that the United States avoid trade barriers, particularly during the recession. The Ambassador recently stated, and I thoroughly approve, that up to now the recession in the United States has had no genuinely significant effect on Italian-American foreign trade. But there are already signal warnings. These warnings indicate that any new or additional protective trade measures, particularly tariff increases as against imports from Italy, will slow the international flow of goods. That slowing process would have a dilatorious effect upon the economy of Europe—the economy that we are endeavoring to aid in every reasonable way.

It is significant that in New York City there is being staged an International World Trade Fair. Exhibits have come from all over the world. The countries

sending these exhibits to us hope to inspire Americans to buy their goods. By doing so, these countries can earn dollars with which, in turn, they can buy our goods. Unless they earn that hard currency, they cannot buy our goods. Unless we export 10 percent of our productivity, we are in trouble. It is that 10 percent that we export that keeps us out of the economic doldrums.

Italy and other countries buy from us considerable quantities of our goods. If we put up trade barriers and thereby isolate ourselves economically from Italy and the other countries, the rate of productivity and the rate of expansion in those countries are lessened. When that happens, these countries enter into economic decline. They have recessions. An Italian recession, coupled with our own recession, can create dreadful havoc.

I agree with Ambassador Brosio when he says:

> A decline in the level of internal economic activity in any country will, almost inevitably, lead to changes in its trade policies. When production is stagnant and employment is low, there is a natural and nearly irrepressible tendency to restrict imports by various protective measures, even if the principles of economics and of commonsense demonstrate that an increase in foreign trade is a means of expanding (internal) industrial activity and employment.

Italy's trade with the United States in 1957 shows that she imported from the United States goods to the sum of $651 million and exported goods to the sum of $244 million. It is noteworthy that metals, machinery, and automobiles are the predominating exports from Italy to the United States. This is a dramatic shift from former exports which concentrated on food and beverages. Italian imports from the United States, taken together with its exports to the United States, emphasize how rapidly Italy is industrializing her economy.

Address of Hon. William M. Tuck at a Dinner in Honor of Senator Harry Flood Byrd, at the Washington National Airport on Thursday, May 8, 1958

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. ABBITT. Mr. Speaker, it was my privilege to attend the testimonial dinner given Senator HARRY F. BYRD by the people of Alexandria last Thursday evening, May 8.

I am proud of the great services rendered the State and the Nation by the distinguished senior Senator from Virginia. He and his family are making a great sacrifice that he might continue to serve the Nation.

The principal speaker at the banquet was the Honorable W. M. TUCK, former Governor of the Commonwealth of Virginia and presently a Member of the Congress from the Fifth Congressional District of our great State. It was a privilege for me to be one of the guests along with Congressman TUCK.

Congressman TUCK delivered an outstanding address as he always does. I am in entire accord with his sentiments. Under leave to extend my remarks, I include herewith a copy of his address which is as follows:

Mr. Toastmaster, Senator BYRD, distinguished guests, ladies, and gentlemen, this is indeed a happy occasion. I am pleased and privileged to join this fine group in honoring a great American statesman who is deserving of the highest commendation and praise.

I have been associated with our dear friend, Senator HARRY FLOOD BYRD, in the public life of Virginia for 35 years. I served in the general assembly with him before he was Governor. Because of his ability, his steadfastness, and his sterling qualities of character, I have respect and unbounded admiration for him. His strength and forte lie in his determination to see straight through a problem and his absolute unwillingness to do wrong. In short, he has the ability to know the right and the courage to do it. He possesses a natural aptitude for governmental service and the fine conditions existing in Virginia today are attributable to him as to no other public figure.

Senator BYRD, although an aristocrat of truly illustrious ancestry, maintains the common touch and, in his daily contact with the public, demonstrates a sincere interest in his fellowman.

At the early age of 15, he assumed duties and responsibilities the average adult would have considered arduous, but soon demonstrated unusual ability and acumen in business and agriculture.

He developed rapidly in politics and while still a young man evinced a rare sagacity for values in that field. His first office was as a member of the city council of Winchester at the age of 21. By the year 1915 he was in Richmond as a State senator and soon gained statewide recognition for his leadership in opposition to the $50 million road-bond proposal and thus became father of Virginia's successful pay-as-you-go system. This was a natural role for the able young senator, who is so deeply and constitutionally opposed to public debt, except under the most extraordinary circumstances.

In January 1926 our guest was inaugurated Governor of the Commonwealth and his administration is vividly remembered. When he assumed office, the State government was topheavy with bureaus and agencies. He recognized the need for reorganization and successfully espoused a plan which brought Virginia to the forefront. He employed the practical and thrifty method of naming a small commission of prominent men to recommend amendments to the State constitution. The amendments were approved by the general assembly and the people, thus revising and modernizing the 1902 constitution. As Governor, among other things, he reduced taxes, lowered the State debt, launched a sound and economical highway program, expanded and improved the State service, and, all in all, gave the Commonwealth a program of progress which was truly an outstanding achievement.

He sponsored a State antilynching bill and there has not been a death by lynching in Virginia since the enactment of that law.

This indefensible crime is all but extinct in the South—the incontrovertible and final answer to continued agitation for Federal laws on this and kindred subjects.

Senator BYRD came to the United States Senate in 1933 firmly dedicated to a program calling for a reduction in Federal expenditures, strict economy in government, and steadfast adherence to the principle of States rights. He has not swerved or faltered and still holds to the time-honored virtues of free enterprise and self-reliance. He has steadfastly opposed the opening of the coffers of the Federal Treasury to the wastrels and squanderers who would debauch our currency and bankrupt our country.

Although it may have appeared at times that his was as a voice crying in the wilderness, be it said to his everlasting credit that he has struggled courageously against the forces of centralization and fought consistently in defense of the powers of the States, and he will continue in that effort.

With regard to party politics, you may recall Senator BYRD's response some years ago when an insistent questioner kept asking: "What kind of Democrat are you?" his reply was:

> "I want to tell you what kind of a Democrat I am. I am not a Republican, I will tell you that. I vote with them when they are right, and against them when they are wrong, but I am not a Republican. The kind of Democrat that I try earnestly to be is that kind of Democrat that two of the greatest Presidents of these United States were, both from Virginia. Thomas Jefferson and Woodrow Wilson. The kind of Democrat I try to be is the kind that Andrew Jackson was, who boasted that the proudest achievement of his administration was to pay off in toto the public debt. That is an opportunity that no one will ever have again. I am the kind of a Democrat that Grover Cleveland was, who said * * * it was the duty of the people to support the Government, and not the Government, the people * * *. The test of my vote in the Senate and my actions elsewhere, now, as they have been in the past, and as they will be in the future, is determined by what I believe to be best for my country."

I was greatly saddened when Senator BYRD announced early this year that he planned to retire and I joined his host of friends and admirers in an earnest appeal that he reconsider.

Thousands of Americans who respect integrity, economy, conservatism, and devotion to sound doctrines, and realized that Senator BYRD symbolizes, practices, and promotes these virtues, were likewise dismayed at the thought of his leaving the Senate.

Our joy was unbounded when he yielded to the unprecedented demand and agreed to serve for another term. His presence there at this critical juncture is imperative.

The name of Senator BYRD is synonymous with the good government with which Virginia is blessed.

Our Virginia government is interested in the well-being and happiness of all for whom government was established. We still believe in the fundamental principles—that all authority is vested in the people, and that government is the servant of the people and not their master.

We have been steadfast and firm in our determination to adhere to the fundamental principles of good government promulgated and established on the soil of Virginia, which we cherish and which have made our Commonwealth and our country great. Virginia has always been in the vanguard of the champions of free democratic government.

We believe that the faithful and impartial enforcement of law is paramount, and we recognize that as the first and foremost function of government. We have always believed in self-reliance, thrift, and hard work. Even during the darkest days of the depression, we still adhered to the principle of balanced budgets and made horizontal cuts in appropriations to the extent of more than one-third in order to wind up each biennium with a balanced budget.

Virginia is free from bonded debt. We have a relatively low rate of per capita taxation. Our expenditures exemplify the wisdom of our adherence to the pay-as-you-go

system and the careful control which has been exercised over State expenditures under the executive budget and unified accounting system. These are such that the Governor at all times may know the financial status of the government, as well as that of each institution or other governmental activity. At the close of each biennium all unexpended appropriations are returned to the general fund and are reappropriated or not, in accordance with the wish and wisdom of the general assembly. In Virginia there is only one appropriation bill, wherein the full financial needs of the State are studied in their relation to each other and acted upon in the same bill and at the same time.

We do not have a State tax on real estate, and the tax imposed on farmlands in Virginia by the localities is lower than all other States in the Union except three.

Despite our relatively low tax rates, we have been able to discharge our governmental functions in a satisfactory and commendable manner. Great improvements in our public-school system have been accomplished during the last 15 or 20 years; and our system of highways, for which the people of Virginia do not owe a penny, is unsurpassed, if indeed equaled, by any other State in the Union. Similar statements could be made with reference to other functions of our government.

Our relations between industry and labor have been exceptionally good. It is a tribute to both that they can examine each side of the picture and enjoy such cordiality in their negotiations. Both know that they can look to the Commonwealth of Virginia for fair treatment and for the protection of their rights. Virginia has an average hourly earning as high as any State in the South, being equaled only by Alabama and Tennessee. During the last year, only 1 State in the Union showed a higher increase in average per capita income than Virginia, and only 1 other State equaled Virginia's per capita income increase.

We have been careful to safeguard the fundamental rights of the individual worker. In 1947 the general assembly, pursuant to my recommendation, enacted Virginia's right-to-work law, declaring it to be the public policy of the Commonwealth that the right of persons to work shall not be denied or abridged on account of membership or nonmembership in any labor union or labor organization. The free and untrammeled right of every man to earn an honest living for himself and family, irrespective of membership in any organization, is a fundamental right, and cannot rightfully be abridged.

We have in Virginia the vigor and the determination to preserve our liberties. We will not consort with union racketeers and gangsters. We will not succumb to the venal influences which threaten many other states and the national government.

Virginia has met all of her governmental obligations and duties in a commendable and satisfactory manner, and continues to operate on the basis of a balanced budget.

If we are to avoid fiscal chaos in this country our National Government must return to the same principles and practices. Indeed, this wild and uncontrolled orgy of spending on the part of the Federal Government constitutes a hazard which is itself a grave threat to our national safety.

It is a strange paradox that the Federal Government instead of being the protector and the guardian of our liberty has through its various branches and agencies been the usurper of our freedom, and seeks to deny us the exercise of constitutional rights and privileges which we have enjoyed since the foundation of the Republic.

The Supreme Court of the United States, the very body set up under our Constitution for the protection of our liberties, is the greatest offender. In its school decision of May 17, 1954, and its subsequent decisions in the Illinois case, the two Pennsylvania cases, the New York case, the New Mexico case, the California case, the DuPont case, the FBI case, and a host of others, ignored precedents of long standing and undertook to write the substantive law of the land without regard to the rights of the Congress, the States, or the people. The Supreme Court, as at present constituted, has shown by these decisions great concern for the preservation of the integrity of the 5th amendment to the Constitution and none for the 9th and the 10th.

If these decisions are allowed by the Congress to stand, I can tell you now that our local and State governments will topple over into the abyss of destruction and remain nothing more than the hollow shells of a lost liberty. It is a sad commentary that the Supreme Court, the very instrumentality set up in the Constitution by the Founding Fathers for the protection and preservation of our rights, should use its powers to rob the people of liberties they have enjoyed for hundreds of years.

And now the Federal courts threaten to close our public schools by ordering integration of the races in violation of our constitution and laws and in contravention of our fixed habits and customs extending over the centuries.

Although exposed as no other Southern State to the evil influences emanating from Washington and from other places north of the Potomac, we have successfully resisted these efforts to integrate our schools for 4 long years and as long as we can avoid the faithless and perfidious leadership which has plagued so many other sections, there is no reason why we cannot continue to do so.

The white and Negro races of Virginia have lived together in peace, harmony and understanding for more than 300 years—longer than any other place on the Western Hemisphere. They will continue to do so if left free from the extraneous and unwarranted interference of certain political rapscallions in both our national parties who know nothing of the Negro and his problems and who care less except to use him as a vehicle upon which to ride into high public office.

Strict adherence to the philosophy and principles of our constitutional system is the surest means of conveying to our children and succeeding generations the blessing we have enjoyed as citizens in a free America.

Let us never forget that all power rests with the States and the people, except such as has been expressly delegated by the States to the Federal Government.

With the encouragement and leadership of men like Senator BYRD, a type of leadership which the people of Virginia and America deserve, we can restore to the States their proper and historic role in the government of our country and drive from the structure of our national life, the lingering termites of selfish interest and un-Americanism who for partisan political gain would destroy our Constitution and shatter our Bill of Rights.

I Got My Boy Back

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. HÉBERT. Mr. Speaker, I do not desire to prolong the unpleasant discussion of the stinking mess in the professional boxing ranks where the International Boxing Club must own a fighter "body and soul"—not to be confused with the ballad by the same name—before the fighter can get a crack at a championship. That sordid record is being implemented each day without my help, but I think I should bring this body up to date on the latest developments since I first exposed on this floor the fact that challenger Ralph Dupas had to be "cut up" seven ways in order to get a crack at the lightweight championship.

Dupas had his chance and he demonstrated that his is "a chancy job," as Marshal Matt Dillon describes his law-enforcement job in Gunsmoke. Of course there is no connection between the fight racket and the law. That is what the beefing is all about—no relationship between the two.

If Dupas had won the championship and had not been stopped by a technical knockout in the eighth round, Whitney Esneault, his manager, would have been compelled to manage in name only and would have received a pittance of his legitimate percentage of his fighter's purse. Having been defeated, Dupas is not further subject to the muscle except if he hopes or desires to fight for a title again. Then, of course, the same demands will be made of him and he will be compelled to accept, if he wants another go at the title. No "muscle in," no crack at the title.

But there is always a silver lining—as the poets say—behind every cloud and Whitney Esnealth had his.

Hardly had the fight been stopped when Whitney was heard to say: "Well, anyway I have got my boy back."

Of course Whitney is not expected to admit any of this nor is anybody else connected with the shakedown—either on the receiving or the taking end—expected to confess to the facts and the truth. Such an admission or confession would indeed be the coup de grace to any further working agreement or understanding between the parties involved.

Dan Parker, the famous sports editor of the New York Mirror, had some interesting comments to make the day following the Joe Brown-Ralph Dupas contest, and I pass them along to you with the repeated question:

"When are we, as Members of Congress, going to concern ourselves with the monopolistic practices of the boxing business which turns the pages of history back beyond the gangster rule of the twenties into the likes of slavery and peonage."

CONGRESSMAN HÉBERT GIVES US AN HONEST FIGHT

(By Dan Parker)

If we overlook the facts that Joe Brown had to knock out Ralph Dupas twice, Wednesday night, by courtesy of Referee Jimmy Webb, and that the boys, through no fault of their own, were Goombar stablemates, there was nothing wrong with their fight for the lightweight championship in the Houston Coliseum. In fact, it is amazing how honest boxing can be when the law is on the march after some of the brazen thieves who have all but murdered the sport.

Speaking of which, Referee Webb seemed bent on letting Dupas get murdered, in the eighth round, when he allowed the bout to go on after counting 10 over the New Orleans

jitterbug whom Brown had felled with a lightning left hook as Ralph led once too often with his right. After arising, Dupas was beaten to the canvas again with a shower of blows for which he was a limp target. Getting up at eight, he was wide open for a paralyzing right to the point of the chin that draped him, half conscious, over the middle ring rope. Still, Referee Webb wasn't satisfied. Dupas lifted his weary frame off the hemp and was backed into a neutral corner where Brown was ready to resume the sickening spectacle until reason suddenly penetrated Webb's cranium and he stopped the mayhem.

Even then, sadists in the crowd berated him and the gamest man in the ring came storming out of Dupas' corner, in a hammy pitch for an Oscar for the year's least convincing piece of offstage acting. I refer, of course, to Angelo Dundee, the man who acted as front, in the role of comanager of Dupas, the price Ralph had to pay the mob for the crack at Brown's title. What would have happened in this bout if Congressman EDWARD HÉBERT hadn't exposed the muscling in on Dupas' contract is anyone's guess. But it was obvious to all who saw the honest fight that developed after HÉBERT had turned the blinding glare of publicity on it, that it would have been quite safe for Joe to loan his title to the kid from New Orleans whom Mr. Carbo had tied up to make it 100 percent foolproof, the way he likes it. To date, as champion, Brown hasn't been in a phony defense. He can probably take care of anyone in the division, even though he's 32. Thus, Congressman HÉBERT may have unwittingly brough Dupas a beating that otherwise wouldn't have been his lot until the inevitable return title match. But that dodge was worked to death with Jimmy Carter—and where is he now, with his damaged eyes?

Dupas, like Willie Pastrano, who learned his boxing in the same school, is perpetual motion—most of it wasted. He's a difficult target to hit but give him time to wear himself out, bouncing around like a tennis ball in a vacuum and flailing away as if attacking a stack of barley, and he'll become a sitting dock, who forgets to duck.

Raph is the boy who has been the center of all the agitation in New Orleans as to whether he was eligible to fight Caucasians as one of them. Those who insisted that Dupas had Negro blood couldn't prove their point so Ralph remains in the pale face category which disqualified him from fighting Brown in New Orleans where mixed bouts are banned. On television he shows up as Nordic (and horizontal) as Otto von Porat ("oh, where is the floor at?") to complete the couplet Gene Fowler composed while the collapsible Scandinavian was being counted out one night during Gene's hilarious sports writing career. Ralph delivers a potent enough polthogue but he was in far beyond his depth when he tackled an unshackled Brown. Joey boy can perforate you when he's only half trying.

Getting back to Referee Webb, who seemed all tangled up in himself upstairs when the 8th-round knockdown came, he says he counted only 9 but I'm sure others besides myself heard him toll off 10 as Dupas started to arise. Webb also says Brown didn't stay in a neutral corner during the count. Maybe he was just coming over to help the referee pick up the victim, this being the semi-sacred type of bout that it was, what with the referee giving the boys a "God bless you both" at the outset. His benediction came immediately after he had instructed them as to what procedure would be followed in case of a "con-troe-versy," with the accent on the second syllable. Brother Webb moved around almost as fast as Dupas.

Sadly missing from this nationally televised championship bout was any mention of the name that's now never spoken in IBC circles. James D. Norris didn't get a single call from Big Jack Drees This was merely a bout matched by the International Boxing Club and there was no mention either of Truman Kella Gibson, his successor. But, as Truman remarked in a recent interview, "I won't be able to supply the warm personality that Jim gave to the IBC. Something will be missing." Of course, Jim has nothing more to do with the IBC, beyond owning it from Truman Gibson all the way down to the low man on the totem pole—the character Truman once "told off," whose name is never mentioned now, except in code. Promoter Lou Viscusi also disclaims any connection with the IBC in using his $68,740 gate as bait to con Cus D'Amato into leading his champion, Floyd Patterson, into this spider's parlor for a title defense against Viscusi's Roy Harris. Better Cus and Floyd should drink a hemlock potion in a toast to small-talking Lou's almighty gall.

I am sure that, much as the viewers missed Norris' name, the oratorical style of Buildup Bill Whitmore, the ring announcer, served the purpose of lotus petals, to lull them into sweet forgetfulness. Bill starts out each announcement like an ordinary human being and then, Silky Sullivan (what, that goat again?) builds up speed in the stretch and finishes in a raging fury. He struck the peak of his crescendo on the Dupas introduction screaming "the Native Dancer of the French Quarter of Old New Orleans," which, I understand, prompted Mushky Jackson back in Rumson, N. J., to ask if the gentleman didn't make a mistake in identifying his foreign kerns.

"He means a Franco, which they called a French quarter when I was in the AEF," was Mushky's quote relayed to me by Wawa Taysee, my Rumson spy. In any event I would like to announce, state, and make known the fact that Harry (the Verce) Balogh's honors are not only safe but in no danger or jeopardy whatsoever from this or any other quarter.

Southwest Mississippi Home Demonstration Council Storywriting Contest

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, on May 8, 1958, the Port Gibson, Miss., Reveille carried a story announcing the winners of the Southwest Mississippi Home Demonstration Council storywriting contest.

Mrs. Thomas G. Peyton, of Claiborne County, won first prize; Mrs. Mark McCaskill, of Warren County, won second prize; and Mrs. T. B. Stokes, of Pike County, won third prize.

Mrs. Peyton's story is not unique in America. It shows how the Federal, State, and county governments, working cooperatively without domination by the central government, can accomplish worthwhile goals. To paraphrase Thomas Jefferson: It is the diffusion—not the concentration of powers—that will prove the greatness of America.

Inasmuch as Mrs. Peyton's prize-winning story is a tribute to the dedicated employees of the Department of Agriculture Extension Service, as well as being a noteworthy personal triumph, I deem it important enough to bring to the attention of the Congress.

The Reveille article follows:

MY HOME DEMONSTRATION WORK AND WHAT IT HAS MEANT TO ME, FAMILY, COMMUNITY

(By Mrs. Thomas Peyton, Claiborne County)

On a cold February morning 22 years ago, we, my husband and two boys, ages 3 years and 10 months old, came back to the old family home to farm. I felt pretty unsure of my ability to be a first-class farm wife. I had not canned over two dozen jars of food in my life. My sewing, well to say the least, the inspiration I felt within and the lovely mental picture, never reached the finished product. I knew I was starting from "scratch" on almost everything any homemaker needed to know, and a farm wife needs many kinds of knowledge.

Shortly after getting settled my good neighbor incited me to join their home demonstration club "Reganton" (we called it "Midway" at that time) and I soon found I had struck not just a gold mine, but a gold mine of information. Our dear, "Miss Luter" was the home agent at that time and so ably instructed us in all the arts of homemaking. From early morning until late our beloved "Mama Carrie," the baby called her, and I labored gathering fruits and vegetables to be canned over the hot wood stove. The oldest boy quite often acted as our fireman, keeping the sticks of wood in as needed and quite often reminding us that the drippan under the old ice box had run over and water was on the floor. Soon the old-fashioned pantry was fast filling with bright and cheerful jars of not only good food but food that had been prepared by the latest methods of preserving the food value in that food. Those pages of instruction on canning, preserving and cooking that the home agent kept us supplied with, were certainly prized and much used at the Peyton's. Many times when I did not have just the information I needed on hand I called a neighbor. We still have that sharing of information today among all members and nonmembers.

The Home Demonstration Club came to my rescue when we purchased a 25-year-old Singer sewing machine so that I could learn to make clothing for myself and the boys. That way I was sure I could stretch the family funds—and how they needed stretching. Dresses, pajamas, and little boys' pants with elastic went fairly well, but the little boys soon needed man-type shirts and pants and I thought I was finished. My first man shirt came out with the buttonholes and buttons on the wrong sides. The boys didn't know the difference, but when you put improper openings on the pants even a 3-year-old knows it. I took my troubles to the agent and she instructed me in finishing these garments and supplied me with lots of informational material. After many hours of trying to improve my methods I decided to try my first tailoring job and make Easter suits for the boys. An uncle had given me two lovely suits and since the material was a light-weight wool and a suitable color for small boys, light gray and light tan, I was going to make them from those suits. As I ripped the old suits I was careful to note all tailoring details. The week before Easter the suits were finished and pressed with care. With both boys dressed in their Easter finery, mama-made shirts, suits, in fact, everything mama-made except the shoes and socks, we headed for Vicksburg to buy Easter baskets, Easter-egg dye, and the ducks I had promised them, Donald Duck and Minnie. I wasn't too sure how we looked in our homemade clothes, but I felt at least one embarrassment we didn't encounter this trip. When the older boy balked before the door marked "Ladies" and protested in a loud voice that no men went in there, I knew that with zippers, he

and even little brother could enter the portal marked "Men" and be confident men among men. And imagine if you can, the vain pride I felt when I overheard a lady ask the saleslady to show her a suit "like that" and pointed out my oldest. Junior opened his mouth and I swished him out. Outside he said, "Mother, why didn't you let me tell her you would make her one out of Daddy's suit."

We only found one lovely duck in all of Vicksburg so the boys had to form a partnership and they named him the Lone Ranger. As we headed back home over the road that was gravel and rough then, the boys played happily with the Lone Ranger and I was happy too, that I accomplished a little in my sewing.

This is not just my story, but that of my husband as well. Truly the information that he received through the county agent then and now helped him over many rough spots. He wanted to be the very best farmer he could, and I, wanting to be the perfect helpmate, often found I had been praying for rain when he wanted dry weather, and dry weather when everything was thirsty for rain. I told a friend of his that in the future I had better consult Tommy first, then pray. He answered, "Why? Don't you know he is strictly a dry-weather farmer, and if he ever faints, don't you dare try to revive him with water; just throw a little dust in his face." My prayers in 1957 didn't get through too well, did they?

Today as I write this in our new home with every convenience, I am made aware that the home demonstration clubs have come a long way. We had dreams of better things. The club helped keep those dreams alive, and put them into action. We have been informed on the buymanship of furniture and equipment, about proper wiring, how to care for and make the best use of these things. We have been taught many things about interior decorating and landscaping, how to budget our time as well as our money. Gone is the old pantry in our home, and instructions on home freezing has been worn thin with use. All the latest information on running our homes we still receive. We are made aware of State, national, and world news. We know who our lawmakers are, and we go out and vote our convictions. We make ourselves heard on measures we think should be passed. The club promotes and encourages tours both in the State and out of State that we might broaden our views. No longer does the country woman need be behind the times, for if she is, it is of her own choosing.

No short story would suffice when it comes to telling what the work has meant to me. Since no full-length book was asked for, I must leave out many things. I hope I've been a better citizen in my county, community, and State. I have certainly learned to be more aware. I write this not in a spirit of competition, but in humble appreciation to the present, and all the past home agents, and my good neighbors all over the county. God bless you, friends, and thank you for your efforts. I can only hope you feel you have accomplished some degree of success in this member; goodness knows you have tried.

The Monroe Plan for Top Students

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I include an able editorial from the Shreveport Times, Shreveport, La., of May 11, 1958, entitled "The Monroe Plan for Top Students":

THE MONROE PLAN FOR TOP STUDENTS

The problem of what the American secondary school system—high schools, public or private—should do about the gifted child (the youngster of extra high intelligence quotient) seems to have been solved by the Monroe plan of high school science instruction, now ending its first year at Neville High School at Monroe, La. It is scheduled to spread into three other Monroe high schools next fall.

The Monroe plan may become nationwide in no great length of time, for Olin Mathieson Chemical Corp., which put up $10,000 to launch the plan this year at Neville and is putting up another $10,000 for next year, operates 56 plants in 27 States. It is now making a survey to see how far it might spread the plan within its own system.

Newsweek magazine has given the Monroe plan some mention. Time and Cosmopolitan sent staff men recently to study it. A Pittsburgh paper has given it a 2-page feature spread. Some Louisiana parish school boards have asked Monroe public school officials to appear before them in person and explain it. Olin Mathieson has prepared a bound kit giving full details of the plan and how it has worked in Monroe—including pictures and examples of study and examinations.

The Monroe plan was conceived by a former Shreveporter, R. H. "Bob" Evans, vice president and general manager of Olin Mathieson in this part of the country. Olin Mathieson absorbed the Shreveport Frost forestry operations several years ago and contributions for "the Monroe plan" are from that division and are described as "Frostkraft grants."

Over a year ago Mr. Evans proposed to his company that it put up $10,000 to hire the best high school chemistry teacher that could be found in the Nation and to put in the best high school chemistry laboratory equipment available, and that teacher and equipment be provided free to a Monroe high school to provide college level chemistry for high school students capable intellectually of handling it. He gained quick company approval, plus a glad O. K. from Monroe and State school authorities.

It is worth noting that Mr. Evans conceived this plan and that it was launched before the Soviet launched its first sputnik and before there was any widespread talk about lags in science education in American high schools. Mr. Evans and Olin Mathieson recognized the lags long before Russia pinpointed them with its earth-orbiting spheres.

The search for a teacher capable of handling the kind of high school chemistry course Olin Mathieson wanted to finance took months—almost up to the opening of school last fall. In the end, a man of nationwide science teaching reputation was obtained—Lon Colborn, who instituted science for high-IQ students in Pittsburgh's Taylor Allerdice High School and retired after teaching there for 33 years.

Still young mentally, physically and even in years, Mr. Colborn was persuaded to come out of retirement and take the Monroe post. More than 300 of his former Allerdice students now are top scientists. More than 100 hold doctorate degrees from top colleges. Many of them have received medals and special awards for science work. He holds a special honorary masters degree in science from Carnegie Tech, one of only 10 honorary degrees in any field awarded by that school in its entire history.

After less than 1 year of operation of the Monroe plan under Mr. Colborn, a Monroe educator said:

"So dramatic has been the influence of this man in Monroe that neither students he has taught, the school, nor even the community will ever be the same again."

Parents' days at the Colborn class, when parents watch the students work, are increasingly popular. The whole city of Monroe is becoming interested.

Paul Neal, Neville principal, asked by The Times if the Monroe plan solved the problem of the gifted child, replied:

"All I know is that it is one solution—one that works; and that before this man Colborn came to us our gifted students rusted away. Now they are really going places."

Van Odom, Ouachita Parish superintendent, said:

"Before Mr. Colborn and the Monroe plan we gave our top students educational soup. Now they get good red meat."

The Monroe plan students at Neville now are the campus heroes. Any boy or girl who can get into the Colborn class and stay there rates (in the eyes of fellow students) above the star football back, the no-hit baseball pitcher or the girl who can win a statewide oratorical contest. It wasn't that way last September, but it is now. A "C" student in the Colborn class rates higher on the campus than one getting straight "A" in regular classes.

The Monroe plan students are not physical misfits with overdeveloped brains. They are redblooded American he-man boys and she-woman girls. They are athletes and leaders in extracurriculum work. Every one of this year's first class is headed for college—such institutions as MIT, Carnegie Tech, Tulane, Rice, Georgia Tech, Cornell, Louisiana Tech, Princeton, and SMU. "The universities are fighting to get these kids," parish superintendent Odom says.

Basically the gifted child is the one with what is called "superior" IQ. The average high school curriculum does not match his or her intellectual capabilities and thus brains are wasted. Some educators have urged pushing such youngsters through 4 years of high school in 2 or 3 years—an illogical plan because it puts the graduate into an intellectual vacuum. Such a student is through high school but not ready for college in age, maturity, or perhaps moral development or common sense.

Monroe plan students at Neville range in IQ rating from 130 to 139—100 being average—and are not in the genius classification. Fifty-five students applied for admission to the first class, 30 were accepted and 5 of these failed to make the grade and were dropped. Of the 25 continuing, 4 are girls. The class meets daily, 2 hours for each session.

The Monroe plan simply adds to the regular high school curriculum special science work which top IQ youngsters can handle but which average IQ students usually cannot handle. It does not interfere with other high school work—in classrooms or on the campus.

The Colborn students take college-level chemistry but all the rest of their classes are high school level and average IQ level.

The Monroe plan at Neville this year covered chemistry. Next year a similar class, but in physics and with a teacher of the type of Mr. Colborn, will be established at West Monroe High School. An interschool transportation system will be set up, enabling students of Ouachita Parish High School and St. Mathews Parish (parochial) School to attend either the Neville or West Monroe class. Students will be permitted to take both classes during their high school term but not at the same time.

Olin Mathieson will put up $10,000 again—a Frostkraft Grant—for the coming year, with $5,000 going to the Monroe city school system (for Neville) and $5,000 to the parish school system for West Monroe. The school boards concerned will pay the salaries of the two teachers and the Frostkraft grants will go for labortaory equipment and other costs.

UNIVERSITY OF MICHIGAN LIBRARIES

In 1959–60 it is planned to add a third course to physics and chemistry—math.

Parish Superintendent Odom describes the work of Bob Evans and Olin Mathieson in the Monroe plan as a shot in the arm for an educator. "Neither ever has tried to dictate anything about administration of the plan," he said.

As for Mr. Colborn and education, here are a few of his utterances:

"It doesn't make sense to try to make a scientist out of every high school student. But it is important that students who want to prepare for science get adequate training in high school."

"Simply increasing the salary for teachers won't do the job. Why not hire teachers with a thorough knowledge of their subject, especially in science and mathematics, and then pay them commensurate with their training."

"There's a lot of talk about bigger and better schools, auditoriums, football teams, but rarely do we hear mention of bigger and better brains."

"We hear a lot about the crying need for school buildings, higher salaries for teachers, and for directing more students into science and mathematics. Woefully limited is the cry for better trained teachers. * * * There is really no shortage of teachers at all—only a shortage of adequately prepared teachers."

Industry all over Louisiana—specifically including Shreveport—and all over the Nation might profit by studying the Monroe plan. School boards all over Louisiana, including Caddo's—and also all over the Nation—might well study the Monroe plan. It's a proven success in a field where nationwide action is needed. It needs to be spread far and wide—as quickly as possible.

Mary Martin Day

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, on the evening of April 17, 1958, a young citizen of the New Zion Community, near Tylertown, Miss., brought honor to my State by being acclaimed the winner in the Betty Crocker All American Homemaker of Tomorrow contest.

This attractive 17-year-old farm girl, the daughter of my friends, Mr. and Mrs. Bird Martin, of Route 7, Tylertown, Miss., was selected from an original field of 300,000 senior girls in 11,000 schools throughout the United States.

Miss Martin, valedictorian of her class, an "A" student in the New Zion High School, her church pianist, chapter president and State news letter editor for the Future Homemakers of America, received her award in New York City the day before her scheduled high-school graduation.

Mr. Speaker, the people of Tylertown, Walthall County, and the State of Mississippi are intensely proud of Miss Martin's accomplishment. It gives me an overwhelming sense of pride to join my fellow citizens of our great State in saluting a versatile and genuine queen.

Very properly, Saturday, May 10, was proclaimed Mary Martin Day in Walthall County. State and local officials on that date joined with Miss Martin's friends to pay tribute to this outstanding young lady. General Mills, sponsor of the national contest, had representatives present.

Under leave to extend my remarks, I ask unanimous consent to include an editorial, and Miss Martin's own account of her experiences, which appeared in the Tylertown Times:

NEW ZION'S DAY IN THE SUN

New Zion community has always been an outstanding community in Walthall County.

It has good farms, good people, good churches, and a civic pride that is rarely equaled and probably never surpassed.

It is understandable then, this week, if their feeling of civic pride is bursting at the seams.

For New Zion is the home of a national champion, Miss Mary Martha Martin, refreshing, personable, and talented, was chosen recently as the Betty Crocker 1958 All-American Homemaker of Tomorrow.

Saturday has been declared "Mary Martha Martin Day" in Walthall County, and Walthall countians in every walk of life will join their New Zion neighbors in honoring this 17 year-old high school girl who has distinguished herself among 300,000 entrants of this nationwide contest.

New Zion is proud.

Walthall County is proud.

The state of Mississippi is proud.

And their pride is justified.

Here is a girl raised in a rural farm community of Mississippi, and trained in a rural school.

Her record has made her the winner in the search for the most outstanding young homemaker in the Nation.

The president of General Mills, Inc., which sponsors the national contest wrote in an open letter to Walthall County citizens this week:

"Miss Martin symbolizes the generation that will soon be shaping the homes of tomorrow. And, how those homes are shaped will certainly determine the nature of the world in which our children and our children's children will live."

How right he is.

In a time when juvenile delinquency is taking the headlines, when murder and robbery scream from the front pages, and the Nation's leaders ponder a solution toward the world's apparently unsolvable pell mell race toward possible destruction—it is infinitely refreshing to find a national program dedicated to restoring the dignity and importance of the American home.

General Mills is to be commended on its fine program, and we join our neighbors at New Zion in being proud of Mary Martha Martin, Walthall County's national champion.

STORY OF CINDERELLA TRIP TOLD HERE

(By Mary Martha Martin, Betty Crocker All-American homemaker)

A moment of doubt, a held breath, and then, we're off. Up, up, up, our magic carpet, the Delta DC–7, climbed and began to cruise at a rate of 190 miles an hour and an altitude of 17,000 feet. Yes; the first of many new and exciting experiences had begun for me, 1 of 49 modern-day Cinderellas and advisers.

With her magic wand, our fairy god mother, General Mills, had transported each of us to Washington, D. C., for the beginning of an educational, a historical, and an absolutely fascinating week of touring.

The first day and a half we were on our own. How exciting. But wait. What did we, Mrs. Jones and I, know about the District of Columbia. Sights to see, the place to eat—it was all new to us. Luck was just with us, I suppose, for you see we had a special guide, the delightful, friendly, good-humored W. M. Miller family. We enjoyed dining, worshiping, visiting, and sightseeing with them. Don't you agree we were most fortunate?

Food and friends, somehow, just seem to go together. They're both necessities. And both we had as we acquainted ourselves with the other lucky winners and advisers while consuming a delicious, plentiful buffet luncheon (the first of many) in the Federal Room of the Statler Hotel.

An enormous city built on the Potomac River full of lofty architecture, impressive and beautful sights such as the cherry trees in full bloom, the center of our Nation's Government, was next on our itinerary. Among great erections we toured was our National Capitol, where the two great lawmaking bodies of our Nation assemble; National Archives, where priceless documents and records are kept; Museum of Art, where invaluable and famous paintings are collected; and Smithsonian Institution, where displays are made in the fields of art and science.

Then we toured memorials made to great men who were responsible for a large part in the birth and growth of our Nation. These memorials include the Washington, Lincoln, and Jefferson. Then there is the Iwo Jima Memorial dedicated to marines who raised our flag on Mount Surabachi during World War II. And, of course, the downtown business district was a "must." What would any city be without its fashionable shops, famous restaurants, etc.

Thus ended our first, rather tiring, but nevertheless very interesting tour.

"Early to bed and early to rise" was certainly employed—maybe not the early to bed. But, no matter, every morning at 6 a. m. we were up, all packed and rarin' to go.

All aboard and ready to start the first lap of our tour by bus. A brief stop at historical Mount Vernon, home of Martha and George Washington, to see how people of that day and time lived. Time out for lunch in Richmond, Va., then Williamsburg next stop.

Williamsburg, quiet, old, and peaceful, that is, until we arrived. A moment to unload and mail call—here I became the envy of many, for you see, I received several letters and 13 of the 53 telegrams from you, my considerate and thoughtful friends.

Hurriedly, we left for the Jamestown festival for we were running late and we had no time to spare. There, on the James River was the first permanent English settlement, Jamestown. Its old fort consisting of mud and thatch buildings, its three ships, *Sarah Constant*, *Discovery*, and *Godspeed*, its old stone church, and its statues of John Smith and Pocahontas created an atmosphere which led us back 350 years.

We could almost visualize them landing there, and we were so thankful for such brave and courageous leaders who were willing to endure many hardships. For here the birth of our Nation had its beginning.

Back at Williamsburg we began our interviews with three psychologists. All of us were a wee bit jittery but we soon realized they were human beings, too. Thus, in our group interviews we have lively discussions concerning dating, premarital, and marital problems.

Dressed in costumes of olden days, we hurried down to breakfast eager to see the effect this rarity would have on the tourists. It was just as we expected—oohs and ahs and exclamations. It was truly a lovely sight to behold. There we were, 49 of us, dressed in rich velvets and satins, trimmed with bows and laces, standing out with hoops and panniers, and oh, the many different styles and colors. No wonder the tourists stood, open-mouthed and wide-eyed, snapping pictures all day.

One block of shops, homes, courthouse and jail, inns, and the governor's palace has been restored. How very interesting to visit

these places to see people enacting roles of those in olden days.

The governor's palace with its formal gardens was probably the most magnificent of all sights we beheld. Its furnishings were priceless. Imported pieces and some gifts from such notables as the Queen of England helped compose this palace of splendor. To us, homemakers of tomorrow, the kitchen is a very important part of a home. It was most interesting to see their appliances and equipment. We have come a long way here, too. Another must on our list was the historic college, William and Mary.

Lunches and dinners eaten by candlelight in many famous old inns was certainly an impressive experience. It was even more impressive when served by young men from William and Mary. A string concert at the governor's palace ended our day in the past.

A night in Philadelphia to see the Liberty Bell, Independence Hall, and the Church of Christ, and then on to that great metropolis, the cosmopolitan city, New York.

Here we were at last—in that place we had heard about, read about, and often dreamed about visiting.

Our only complaint was that we had only two eyes. The streets were crowded as usual with people honking their car horns, screeching their brakes, and saying a few friendly words to their neighbor. And the sidewalks were equally as bad with people scurrying back and forth. You might think oh, that was just a bad day or maybe a rush hour, but oh no, that is an everyday sight in New York. There is always a hustle and bustle. Our heads were twisting frantically from one side to another, our eyes were strained as our bus would cruise along and then stop with a sudden jolt. Try as we did we couldn't possibly see it all.

The neon lights, the very fashionable shops on Fifth Avenue, Broadway with its famous shows and stars, Park Avenue with its lavish suites and penthouses, Central Park, Empire State Building, United Nations Building (modern design at its peak), Chinatown, Greenwich Village, Fish Market, Harlem, and the Staten Island Ferry ride making possible a view of that famous skyline, were a few of the things we saw.

Excitement was really in the air as the four of us dressed in our luxurious rooms of that famed hotel, Waldorf-Astoria. Each of us sat at the all-American table there on the heavenly Starlight Roof, dressed in our finery, awaiting with eager anticipation the announcement of the 1958 winner.

Each of us knew it would be a great honor both to be chosen winner out of 49 and to be crowned All-American Homemaker of Tomorrow. Yet, none of us dared hope and dream it would be or could be herself. Certainly not me. Never have I been so surprised.

I could never describe the joy I felt nor the great responsibility I knew I must and would try very hard to assume. The following morning the other Cinderellas left with their advisers. There was a moment of heartbreak at their departure for during the past week we had made bonds of lasting friendships. Too, many of the lovely, youthful hostesses from General Mills were leaving and I can't express the feeling of loss that overcame me. For throughout the week they had worked so cheerfully and untiringly toward making our tour a success and an experience we would never forget.

Each of us sensed a feeling of gratitude to General Mills not just for the tour itself, but for the places the tour took in. For they showed us our heritage, a thing we can justly be proud of our Nation's Capital, where plans and policies are being made for the welfare of our Nation. Seeing all of this brought the realization that we, as tomorrow's citizens, must shoulder the responsibility of our great Nation. We can either build it or kill it.

Additional days in New York was another treat in store for me. There were pictures, interviews, My Fair Lady, nightclub acts, TV appearances, meeting famous personalities, and a shopping spree—it was "the most" and something I'll never forget. But each day, despite all of this, I became homesick just a little more. The hustle and bustle of big-city life doesn't appeal to me—I much prefer the wide-open spaces. Besides, there is no place like home—and, oh, it's wonderful to be back again.

Promote Massachusetts Week

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. O'NEILL. Mr. Speaker, the week beginning May 18 has been proclaimed by our distinguished Governor, Foster Furcolo, as Promote Massachusetts Week. This week has been set aside to bring to the attention of the people all over the United States the unique attributes of our State. I am delighted to be able to join with many of the Commonwealth's leaders and organizations in saluting the achievements of the great State of Massachusetts.

New England, as the late Bernard De Voto described it, "is the first American section to be finished, to achieve stability in the conditions of its life. It is the first old civilization, the first permanent civilization in America." Because of its traditions and its illustrious history, most Americans have developed a sympathetic interest in this area that cradled our national development.

Much has been written about the reverses that beset New England, and more particularly Massachusetts, in the postwar years—reverses caused primarily by the decline and exodus of the textile industry, at that time our economic mainstay. Many a gloomy picture was painted about the future of Massachusetts. But our economy has proven itself to be resilient and dynamic. The people of Massachusetts—a determined, energetic, frugal, intelligent lot—have rallied to support the Commonwealth through a thoroughgoing change in its economic base. An economy once dominated by the textile and shoe industries is now experiencing the ascendency of industries keyed to the electronic and atomic age. Massachusetts, utilizing its scientific and research resources and supported by its Yankee know-how, has pioneered a whole new way of economic life, geared to the needs of America's future. In large part due to the innate character and tradition of our New England citizenry, the future of Massachusetts now holds promise of sound economic growth and stability.

Massachusetts' available pool of scientific and engineering talent is undoubtedly one of its most vital assets. The State's leading educational institutions have become the natural partners of the highly technical industries that have migrated in recent years to Massachusetts. With these resources of intellect and scientific experimentation, the Commonwealth is equipped to meet our civilization's new challenges. Its future rests squarely on the expansion of its various scientific research and development programs.

People who have had the chance to live in Massachusetts can readily vouch for the good life our State offers. Massachusetts has distinguished itself as an educational, medical, cultural, shipping, and financial center. Even in the face of growing competition from the Western States, Massachusetts and its capital, Boston, have remained the hub for much of American life. Surrounded by the Commonwealth's scenic beauties, such as the Berkshires and Cape Cod, the monuments to its illustrious past, and an extraordinary variety of cultural and recreational facilities, the opportunities for Massachusetts citizens are unlimited.

We citizens of the Commonwealth of Massachusetts can be rightfully proud of our State's recent achievements. Through all-out drives to promote our State, such as the one which will begin on May 18, we can demonstrate to our fellow Americans that the courage, pioneer resourcefulness, and determination which characterized the colonial days in New England is still very much alive today, and that our State is ready and able to contribute as much to America's future as it has to her past.

Plan for a Pan-American Parliamentary Association

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. ANFUSO. Mr. Speaker, the stoning and the jeering of Vice President NIXON in several Latin American countries during his goodwill tour were not spontaneous demonstrations against him, nor were they directed against him personally. There is no doubt that this antagonism was engineered by known Communists and it was directed against the United States. This is part and parcel of the worldwide Communist hate America propaganda campaign which is hitting us one day in Peru, the next day in Lebanon, and so forth.

As in other parts of the world, the Kremlin has two objectives in Latin America:

First. To engender hostility toward the United States.

Second. To create chaotic conditions among our neighbors south of the border which might pave the way for a Communist takeover, such as was done for a time in Guatemala.

A number of circumstances are particularly propitious for the promotion of Communist objectives. Nationalism, which is shaking the Middle East and Asia, is also a powerful element in

Latin America psychology. In some of these countries the people harbor bitter memories of United States manifest destiny and dollar diplomacy, which have never been eradicated despite our good-neighbor policy of the last quarter of a century. The Latin American republics, poor and discontented with their rate of economic growth, are dissatisfied with United States policy toward them. Occasionally, responsible Latin American leaders have given us a friendly warning that, unless the expectations of the people for a higher standard of living can be achieved by democratic methods, they may seek other means to meet these demands.

All of this has proved useful to the Communists. Moscow capitalizes on the bitterness and the envy of the Latin American people, on their dissatisfaction and their eagerness for progress. The Communists seek to discredit the United States by associating it with imperialism, colonialism, and warmongering, while Russia is depicted as the harbinger of peace, progress, and the hope of the downtrodden.

Meanwhile, Russia is exerting allout efforts to expand its diplomatic, economic, and cultural relations with the Latin American countries, it is sending commercial missions to these countries which are offering to purchase their surplus products while selling them Communist-made goods on very attractive terms, and it is encouraging the exchange of scientists, educators, students, and others.

On the other side of the ledger, we have taken a number of steps in recent years to counter Soviet subversion in Latin America. There is the resolution adopted at the Caracas Conference in March 1954 which declares that, if international communism should come to dominate any of the American states, it would constitute a threat to the sovereignty and independence of all American states, endangering the peace of the Western Hemisphere and calling for immediate consultations regarding appropriate action. The resolution also calls for the exchange of information between the American republics, in order to counteract the subversive activities of the Communist conspiracy.

In addition, the United States has extended certain limited financial aid to the Latin American countries in the form of loans, grants, technical assistance, and the like. But various difficulties have arisen, over the types of loans, or refusal of Government loans where private investment funds are available, or lack of sufficient funds for long-term loans. Aside from loans made by the Export-Import Bank and the International Bank for Reconstruction and Development, we have given very little under our foreign-aid program to these countries. In recent years it has generally been around one hundred million dollars annually to all 20 Latin American republics, and that includes military, economic, and technical assistance.

By comparison with what we have spent in other parts of the world, I believe that Latin America is being all but ignored by the United States at a time when these countries merit closer attention than ever before. While we are ignoring Latin America, Russia is working overtime there seeking to gain favor and to convince those countries to remain neutral on the Soviet side. No wonder Vice President NIXON has found during his tour that there is a very considerable lack of understanding there about United States policies and motives. No wonder there seems to be a good deal of anti-American feeling there and growing resentment against us.

Perhaps the time has come for us to examine our relations with Latin America more closely. There seems to be a crying need for improvement. This should be done at once, before the situation in some of those countries deteriorates beyond the point of repair.

While I am not ready to prescribe any specific programs at this time, I should like to propose a plan which, if put into practice, could result in greater unity of purpose and action. We have at the present time the Organization of American States, which brings together periodically the representatives of the American governments for cooperation in various activities. We also have the Inter-American Defense Board, composed of high-ranking military officers of all 21 Republics, to plan the defense of the Western Hemisphere.

I would suggest the establishment of a third inter-American body to be made up of parliamentary representatives, who as spokesmen of the people can establish a closer relationship on a people-to-people basis. It may be called the Pan-American Parliamentary Association—PAPA—which is to meet annually or as often as deemed necessary in the different capitals of the Western Hemisphere.

The purposes of this organization should be to create better understanding among the peoples of the hemisphere, expansion of educational and scientific exchange programs, closer cultural relations, improvement in trade relations, encouragement of large-scale tourism between North and South America, help to provide relief in times of disaster, seek means to dispose of surplus commodities in the various countries to help their economies, and so forth.

I believe that if the representatives of the people of all 21 American republics could meet to discuss pressing economic, technical, social, educational, and similar problems—but not political or military matters—there would result not only more and better understanding, but also greater cooperation and definite achievements from which all the countries concerned would benefit. In view of the current developments in connection with the Nixon tour, I would suggest that this Pan-American parliamentary conference be called at once.

Let us not delude ourselves about the true situation in Latin America. Let us draw from it the definite but very painful conclusion that our neighbors in some of the Latin American countries are falling prey to Communist propaganda and are allowing themselves to be stirred up against their traditional and logical friend and neighbor, the United States. The young students and the others who are participants in the riots in Peru and Venezuela do not realize that they are being exploited by the Communists to the detriment of their own people. They do not speak for the people of Peru or Venezuela but against them.

For us there is also the further lesson that we have taken the Latin Americans for granted, while pouring our aid to other parts of the world. A positive people-to-people approach in our dealings with our neighbors has been lacking. We must restore such relationship by spreading good will now, if we are not to become bankrupt later in attempting to attain it by force.

World Science-Pan Pacific Exposition

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. PELLY. Mr. Speaker, a year ago the 1957 session of the Washington State Legislature set in motion what I believe will be the greatest promotion effort ever undertaken in the Pacific Northwest. The legislature, in approving legislation creating a world exposition at Seattle, Wash., in 1961, also passed a separate measure to provide financing.

Since the passage of this legislation, tremendous strides have been made. On March 27 I had the privilege of authoring H. R. 11733, for legislative and other purposes titled "World Science-Pan Pacific Exposition"; also H. R. 11734, designed to admit foreign exhibits duty free.

Mr. Speaker, I should like to review the steps that have been taken by the Washington State World Fair Commission to provide an outline of its future course, by including the commission's report to the State legislature as of May 1, 1958, and I urge that members of the House Foreign Affairs Committee consider H. R. 11733 with all deliberate speed in reporting this legislation to the floor for action.

WORLD SCIENCE-PAN PACIFIC EXPOSITION, 1961: REPORT TO THE LEGISLATURE, MAY 1958

LEGISLATIVE HISTORY

Plans for an international exposition were initiated in 1955 by the State legislature at which time a 7-man World Fair Commission was appointed by Gov. Arthur B. Langlie. The bipartisan commission was continued and enlarged by Gov. Albert D. Rosellini and the 1957 legislature.

TESTING SENTIMENT

During 1955 and 1956 a survey of key civic leaders was conducted by the University of Washington College of Business Administration, including a statewide mail canvass of 400 representatives of business, labor government, education, and civic leaders. Ninety-eight percent favored holding an exposition as a trade and tourism stimulant.

SITE SURVEYS

The present site, adjacent to the Seattle Civic Auditorium, was adopted after a survey conducted by the Washington State chapter, American Institute of Architects, American Institute of Planners, and others.

UNIVERSITY OF MICHIGAN LIBRARIES

CITY-STATE RELATIONSHIP

A working agreement with the city of Seattle was adopted to take advantage of the many exposition facilities available in the auditorium area (i. e.: Auditorium, ice arena, State armory, and stadium); in addition to additional facilities to be constructed under Seattle's $7,500,000 civil center bond issue.

FINANCING

Following passage in 1957 of a bill creating the exposition a separate measure was passed to provide financing. The measure, which did not preempt existing revenue, matched Seattle's $7,500,000 civic center fund with an equal amount from the State. The department of commerce and economic development was assigned as fund administrator. Funds were earmarked for land acquisition and site development only.

THE CORPORATION

To provide operational funds and leadership, Governor Rosellini, in October 1957, appointed a 56-man statewide board of trustees to the newly formed World Fair Corp., of Washington. This group, which meets periodically to review exposition planning and provide financial counsel and aid, was expanded to a total of 72 members in March 1958. Further additions from throughout the State will bring it to its ultimate composition of 100 members.

PLANNING

The complexity of reducing ideas to blueprints is progressing under a 7-man design standards advisory board, comprised of this area's best architects and planners, working with 2 nationally recognized authorities on design and lanscape architecture. Their activities are closely merged with volunteer planning groups comprised of experts in such diverse fields as sports, engineering, landscaping, financing, science, foreign trade, publicity, State development, and others. Indicative of the broad public interest in your State's 1961 exposition is the fact that approximately 200 experts in their field are donating valuable time in technical and planning activities.

STAFF

The salaried staff of the World Fair Commission includes Ewen C. Dingwall, project director, whose salary costs are shared by the city of Seattle and the State; Clayton Young, coordinating architect, and an assistant, and an office staff of two. Frank Ward, business manager, and Jim Faber, public relations director, are employed by the World Fair Corp. The Stanford Research Institute, whose planning helped make Disneyland a success, has been retained to provide attendance surveys and other technical advice.

CONDEMNATION

Condemnation is proceeding under joint city-State operation with equal distribution of costs. The State has won its initial test case in King County superior court. An appeal will be heard by the State supreme court in June. Appraisal work is on schedule. Careful attention is being given to amount of total land acquisition within original estimates. From 70 to 90 acres will be acquired by city and State. Eighty percent of the site occupied by substandard residences, with more expensive property on fringe. First groundbreaking estimated for early 1959.

TRANSPORTATION AND PARKING

Suggested locations for parking areas away from the crowded downtown business area have been provided. One such area, the Interbay fill area north of the exposition site, could accommodate 6,000 cars. Monorail, Inc., of Houston, Tex., will begin an engineering survey early this summer to determine feasibility of constructing a 6-mile monorail line to link the parking area with the exposition grounds, and thence to downtown Seattle.

COLOMBO CONFERENCE

The example of what a coordinated effort can produce in benefits to the State is illustrated in the successful campaign to bring the 21-nation Colombo Plan Conference to Seattle this October. Governor Rosellini, the Department of Commerce and Economic Development, our congressional delegation, the Seattle Chamber of Commerce, the World Fair Commission, Seattle's Mayor Clinton, and other united forces to make this possible. The 400 participants, who will be from countries we will be hosting in 1961, will be provided tours to Grand Coulee Dam, the Hanford Works, and other State areas.

PARTICIPATION SCIENCE

The world's first space age science fair, representing exhibits from throughout the world will provide the dramatic focal point of the exposition. This section, which will include premiere of International Geophysical Year discoveries, is being planned under outstanding national leadership, including Dr. Dael Wolfle, executive officer, American Association for Advancement of Science; Dr. James Mitchell, associate director, National Science Foundation, and Dr. Leonard Carmichael, secretary, Smithsonian Institution, representing the National Academy of Sciences.

PACIFIC RIM

To provide the drama and pageantry for the exposition and at the same time demonstrate our friendship for our neighbors, other planning includes a colorful Pan-Pacific section, embracing lands from the Orient to the South Seas, and from Latin America to Alaska. These areas include this State's best export customers.

OTHER PHASES

Cultural events. Seattle's new 3,000-seat concert hall, equipped with one of the Nation's largest stages, and its companion multipurpose auditorium will be the setting for international music festivals and art events.

Sports. A 30-man statewide committee is developing a program of international sports events to provide other attractions for the 1961 visitor.

Amusements. The fair fun zone is being planned by the men who made Disneyland a household word for family fun.

State exhibits. Designed to display Washington's recreational and economic advantages. Among exhibits proposed is a forest products building designed to last a century, a huge working model of the Grand Coulee Dam and Columbia Basin irrigation project, and statewide display of tourist attractions.

UNIVERSITY OF WASHINGTON

The celebration of the university's centennial year in 1961 provides an ideal theme for extensive participation. President Schmitz has named eight science department heads to assist in planning the university's participation in this area. Dr. George Taylor, internationally known head of the university's Far East department also is providing planning aid. Other educational institutions throughout the State will be asked to participate in the science section.

LEGISLATION

Legislation to provide full-scale Federal participation in the 1961 exposition was introduced in the United States House of Representatives March 27 by Congressmen DON MAGNUSON and THOMAS PELLY. Similar legislation was introduced in the Senate April 23 by Senators MAGNUSON and JACKSON. The major piece of legislation creates a Federal Fair Commission and three salaried Fair Commissioners. The Commission is empowered to utilize all Government planning services and exposition exhibit material created under the Department of Commerce; to survey exhibit material at Brussels that can be utilized; and to provide the next session of Congress with detailed recommendations and amounts necessary to be appropriated for full-scale Federal participation, with heavy science emphasis. For purposes of legislation, the exposition has been titled "The World Science-Pan Pacific Exposition."

OTHER FINANCING

The World Fair Commission is confident that the impetus the exposition has gained through enthusiastic efforts of the national science community and through other national factors will provide sufficient finances to create an outstanding international exposition in 1961. These added funds can be drawn from Federal departments, from private foundations, industry, exhibitors, and concessionaires.

Arthur Eugene Wood

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, a distinguished citizen of Mississippi, Dr. Arthur Eugene Wood, a senior member of the faculty of Mississippi College at Clinton, has recently received well-deserved recognition of a lifetime of inspirational teaching of chemistry. Because he has been personally responsible over a period of years for inspiring students in the field of chemistry, Dr. Wood is to receive a $1,000 cash award and a gold medal for being 1 of the 6 outstanding teachers of college chemistry in the United States. This award will be made next month by the Manufacturing Chemists' Association, the major trade organization of American chemical manufacturing companies.

Dr. Wood has played an important role in helping Mississippi College to rank first among the institutions of the Southwestern States in the output of doctors of philosophy in chemistry, and high up the list of all United States institutions in chemical doctor of philosophy turned out.

In 1953, the Florida section of the American Chemical Society paid tribute to Dr. Wood in recognition of his inspirational teaching in chemistry. I am delighted that his great public service as a teacher is to be rewarded again.

Dr. Wood was 1 of 6 outstanding teachers selected this year by a group of distinguished educators and scientists to receive this award from the Manufacturing Chemists' Association. Gen. John E. Hull, United States Army, retired, president of that association, upon announcing the recipients of the 1958 award, said:

Sound teaching is fundamental to the training of our Nation's scientists and engineers of the future. Through this program we seek particularly to honor those working with undergraduate college chemistry stu-

dents; at the same time, however, we wish to call public attention to the essential work of all teachers in the science fields.

I agree with General Hull, and I commend his organization for paying this well-deserved tribute to Dr. Arthur Eugene Wood.

Under leave to extend my remarks, I include a brief biograph and an editorial from the Jackson State Times May 7, 1958, edition lauding Dr. Wood's noteworthy achievement.

ARTHUR EUGENE WOOD

Born-Twiggs County, Ga., 1886; bachelor of science, Mercer University; master of science, Vanderbilt University; doctor of philosophy, University of Pittsburgh. Teaching service: State Teachers College, Florence, Ala., 5 years; A. & M. College of Texas, 3 years; Mississippi College, 1920. Mississippi College ranks No. 1 in chemistry. Doctor of philosophy among Southwestern States, No. 43, among 719 United States institutions in chemistry doctors of philosophy. Wood's work largely accountable for industry's liberal support of department. In 1953, awarded citation by Florida section American Chemical Society in recognition of lifetime of inspirational teaching of chemistry. During his tenure, Mississippi College has awarded degrees to 495 chemistry majors.

DR. WOOD LIKE BEACON OUT OF NIGHT

At a time when most Americans seem unhappily motivated by desire for material wealth and cheap entertainment, Dr. A. E. Wood, beloved chemistry professor at Mississippi College, shines forth like a beacon out of the night.

His latest honor is all the more evidence of Dr. Wood's fulfillment as a selfless educator who loves his students and the society they serve. Of all the Nation's chemistry teachers, Dr. Wood was 1 of 6 picked for a $1,000 award of the Manufacturing Chemists' Association. And in all the South no other was chosen.

Distinguishing himself, he has distinguished his college and State.

Typical of many in the field of education, Dr. Wood regards his calling properly as one of the finest of mankind. Often he has remarked that he would not swap jobs with someone making three times his salary.

The campus of Mississippi College has known the teaching of Dr. Wood since 1920. Thousands have come to know the atomic weight tables, qualitative analysis charts and all the other wonders of the laboratory from Dr. Wood.

A man whose vision probes beyond the limits of most, Dr. Wood has steered many hundreds of students into scientific careers invaluable to the Nation's economic and military security. Grants and other honors have singled out Mississippi College's service in this respect. They bear witness to the untiring hand of Dr. Wood whose newest acclaim brings joy to thousands the Nation over.

The Fight Over the Defense Department

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. BOLAND. Mr. Speaker, the most persuasive and perceptive editorial that I have read supporting President Eisenhower's proposal to reorganize the Defense Department appeared last Sunday in the Springfield (Mass.) Republican, a newspaper whose views on domestic and world affairs have been held in great esteem by those in and out of public office for generations. The editorial writer certainly is well versed with the problems of the military and he has given profound thought to the reorganization proposals of the President.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD this editorial from the Springfield Republican entitled "The Fight Over the Defense Department":

[From the Springfield (Mass.) Republican of May 11, 1958]

THE FIGHT OVER THE DEFENSE DEPARTMENT

The hearings on President Eisenhower's plan for the very necessary reorganization of the Department of Defense which have been in progress before the Armed Services Committee of the House of Representatives, have revealed varying emotions. There has been, in fact, altogether too much emotion and too little objective thinking by the committee and the protesting witnesses. One writer, apparently influenced by his previous close association with the Navy, where most of the protest has been concentrated, has made the surprising comment that the hearings have been in accordance with the finest tradition of the House of Representatives. The hearings have certainly been in accordance with a tradition of the House but, unfortunately, the tradition in question is very far from its finest.

There is an extraordinary resemblance between what has recently been going on and what went on in the House of Representatives when Elihu Root, remembered as one of our wiser statesmen, was Secretary of War more than 50 years ago. Then, after the ghastly exposures of incompetent Army functioning and the fatal supply of our troops with embalmed beef in the war with Spain, Root finally succeeded, over the objections of ignorant Congressmen and jealous Army officers, in securing the creation by act of Congress of an Army staff, evolved after much study of the German general staff which, however, it did not too closely copy. If there are members of the present Armed Services Committee and numerous officers of the Navy and the Marine Corps who know too little of what went on then, they might profitably study it now. The story is available in condensed form in Philip C. Jessup's admirable biography of Root. It is available in more detail in Root's official reports as Secretary of War.

The unchallengeable historical value of what Root then accomplished, under conditions basically similar to those with which, although in far more complex and aggravated form, President Eisenhower is now forced to contend in behalf of our national safety, is to be found in a single statement of two sentences, made years after Root's work had been done by a secretary of war of the opposite political party. Reviewing our experience in World War I, Newton D. Baker, Secretary of War under President Wilson, declared that Root's creation of the Army staff was not only his outstanding contribution to the defense of the country, but the outstanding contribution made by any secretary of war from the beginning of history. Without that contribution from him, the participation of the United States in the world war would necessarily have been a confused, ineffective and discreditable episode. Yet it was a contribution which Root had been forced to make, if he was to make it at all, over just such opposition as President Eisenhower and Neil McElroy, our present able Secretary of Defense, are now encountering.

Root's reorganization, dealt, of course, only with the Army and the War Department. There was then no Air Force, no military plane, in existence. The need of amphibious operations with the Navy was less developed, by the art of war as it was then, than today. The weapons available for making war were less varied, less numerous and far less destructive. It has been estimated that in recent years their number has increased from 250 to over 1,500. Even such a numerical comparison is hardly to be relied on. Yet it reflects something of the complexity of modern warfare and the necessity of unified command if, for the safety of the Nation, the right weapons are to be employed at the right moment, and by whatever segment of the armed services can employ them most effectively at the moment.

What Root went through is indicated by what he wrote to General Otis. "The bill," Root told Otis, "has been frightfully carved up already and I do not know that I shall be able to recognize it when it comes out of Congress." In more detail Root wrote to General Wood:

"I suppose we will have some Army legislation within a few weeks but no one can tell yet what it is going to be. The Senate committee has reported pretty nearly the bill that I sent to them. The House has cut out all the good things that they understood, and put in all the bad things they could think of. Whether in the result the Lord will protect the right, or the Devil take the hindmost I cannot tell."

In spite of all that Chairman VINSON, of the House committee, has had to say against copying the German general staff system, which he perhaps does not fully understand, the fact is established that Root benefited in a large degree from study of that system. The outstanding analyst of the German general staff was Spenser Wilkinson, the distinguished English military critic who afterwards became the Chichele professor of military history at Oxford University and who, around the turn of the century, occasionally contributed valuable letters on military and other topics to this newspaper.

Looking back on our experience in World War I, just as Newton Baker did, Root wrote to Professor Wilkinson in 1919:

"Plainly it would have been impossible, both for England and for America, to play the roles they had in saving us all from German domination but for the existence of general staffs whose business it was to plan and think and secure information. I do not forget, although I dare say a great many people do, what a great part your little book, The Brain of an Army, played in bringing it to pass that both countries had some sort of an institution of that kind already in existence when the sudden emergency came."

If neither Mr. VINSON nor his reportedly enslaved committee colleagues have studied Root's reports and The Brain of an Army they should. They would find in The Brain of an Army a letter from Field Marshal von Moltke himself, the famous creator of the German staff with which he won the war of 1866 against Austria and the war of 1870 against France. In this letter, printed in the second edition of The Brain of an Army, Moltke expressed the opinion that the German staff system might not be suitable to the constitution of other nations, an opinion in which Professor Wilkinson concurred, although Wilkinson argued strongly for a powerful chief of staff.

So Mr. VINSON and his colleagues might finally be convinced that when they talk about President Eisenhower's trying to "Prussianize" the Defense Department they are talking nonsense. Yet they would find that the essence of efficient and economical national defense on which Wilkinson insisted, as Eisenhower and McElroy are insisting today, under far more dangerous and therefore

more imperative conditions, is the avoidance of wasteful confusion by the clear allocation of different functions; the unified command which is made possible only by the quick, streamlined passage of orders from one level to another; and above all, the unified, strategic planning by which alone the enormous sums we spend on national defense can be used with the highest possible effectiveness.

After careful study of the President's plan as set forth in the bill introduced by Representative MARTIN, the wise conclusion seems to be this: The bill, now wholeheartedly supported by the powerful Democratic chairman of the House Appropriations Committee, Representative CANNON, of Missouri, represents the very minimum needed to bring order into the Department of Defense and to bring security to all of us who together make a free Nation.

A Globe Guide to the Nation's Capital

EXTENSION OF REMARKS
OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. O'NEILL. Mr. Speaker, it is a privilege for me to bring to the attention of my colleagues in the United States House of Representatives, a series of articles which appeared in the Boston Globe entitled "A Globe Guide to the Nation's Capital."

It is a most interesting series and I am sure will be of great aid to Members of Congress in describing for the visitors from their home districts the many places of historical interest in the city of Washington.

The author is my very good friend, John G. Harris, who is now the political editor of the Boston Globe. John has covered for that newspaper practically every major political story—local, State, and national—over the last quarter century. For years, during national campaigns, he has traveled the country with Presidents Franklin D. Roosevelt, Harry S. Truman, and Dwight D. Eisenhower, as well as with candidates Dewey, Stevenson, and Nixon.

Born March 7, 1908, the son of George and Mary Winifred (Casey), John was graduated from the Boston Public Latin School and from Harvard College. While at Harvard, he earned his tuition working nights in the Globe sports department, and after graduation continued with the Globe as a staff reporter while studying law. Fortunately for the newspaper, he decided to stick to reporting.

I had the pleasure of first meeting John when I was in the Massachusetts State Legislature and he was assigned as the Globe's statehouse reporter. We have had a long and enduring friendship throughout the years I served as a State representative and as speaker of the Massachusetts House of Representatives. When I was elected to the Congress of the United States in 1952, John was then serving as the Globe's Washington correspondent.

I hold John in very high regard as a newspaperman of great ability, a fine husband and father, and as a valued and trusted friend. I am more than happy to be able to share with you the following articles which he has written:

1. PENNSYLVANIA AVENUE—THE MAIN STREET OF AMERICA

WASHINGTON.—By bus, by auto, by train and plane, in large groups with teachers, in small family parties, young America will fill the hotels and motels, these coming weeks, to look for history made and in the making in Washington, a city which is in itself a mamouth museum.

If I could walk around the city with you, as I should love to, here are some of the things we should see.

The White House, most famous dwelling in the land, where has lived every President since John Adams, with Abigail, was the first to move in. The city where George Washington, in his masonic apron, laid the cornerstone of the House of Congress. Where Lincoln, wearing his shawl, paced the streets. And where John Wilkes Booth aimed his pistol.

But, first, let us look at the way our Capital was laid out, a city planned as no other city in the world.

It is, indeed, a planned city, a sort of grid of streets placed over bisecting diagonals. The diagonals are the spacious, main thoroughfares, avenues proudly named after the various States. At most of the intersections there are parks and circles and in these are statues and memorials to famous Americans.

Capitol Street, running north-south and east-west, divides the city into four zones, northeast, northwest, southeast, and southwest. When Washingtonians refer to Washington they usually mean the northwest section, northward of the Mall, and out toward Rock Creek where the foreign embassies are located, that a visitor spends most of his time.

Major L'Enfant, who came from France with Lafayette and became George Washington's chief engineer, designed the plan. You can still see it at the Congressional Library. L'Enfant, and other leaders of his day, believed the new Federal city would grow to the eastward and that is why the front of the Capitol, where inaugurations are held, faces to the east.

Instead, the new city grew to the westward—now the northwest section. Men like Robert Morris, financier of the Revolution, who invested in land to the eastward lost their fortunes.

Take another look, and you will observe that the principal buildings and memorials are located in such a fashion they form a cross. At the intersection is the Washington Monument. At the bottom is the Capitol on the Hill, and at the top is the Lincoln Memorial beside the Potomac. (Beyond the latter now, in a direct line, is the Iwo Jima memorial on the opposite side of the river.)

On the north arm of the cross is the White House. On the south arm, beside the Tidal Basin—a breathtaking sight when the cherry trees surrounding it are in bloom—is the Jefferson Memorial.

Massachusetts Avenue, center of fashion in the northwest zone, is the Capital's longest thoroughfare, running clear across the District and even beyond.

Pennsylvania Avenue, though, is the Capital's most famous street. It is usually the place a visitor begins his tour. The mile and a half section between the Capitol and the White House, whose locations were suggested to L'Enfant by Thomas Jefferson, is considered the Main Street of America. Jefferson called it America's Appian Way.

Jefferson was being visionary. Today it is a boulevard of splendor, flanked by monumental Government buildings, especially along the south side, which is called the Federal Triangle. In Jefferson's day it was mostly a marshland. There was a path through it that George Washington often traveled, and Jefferson, when he was President, planted some poplars.

But it was often called a quagmire, especially after heavy rains. We have the tale how Daniel Webster's carriage became mired in it, and he was carried piggyback by his coachman to the sidewalk. Paving was still meager in Lincoln's day. Now it is the avenue of heroes and statesmen, the Nation's route of triumph.

The Treasury Building interrupts the direct view from the White House to the Capitol. Blame that on Andy Jackson. After he had won his great struggle with Biddle and smashed Biddle's bank, Jackson needed a treasury. "Put it there where I can keep my eye on it," directed Jackson, looking out a White House window.

The view from the Treasury Building to the Capitol is uninterrupted and is among Washington's most famous views. Along this route have moved the inaugural parades, some led by Presidents on foot, some on horseback (Andy Jackson rode that way), some in carriages (Lincoln insisted upon an open carriage despite the risk to his life), and later some in automobiles.

Along this avenue have moved the victory parades after each of our wars, save the first.

Here our Nation's heroes have been welcomed.

Here all its greatest statesmen have rode and walked.

There is no more thrilling sight than to look along the avenue toward the great dome of the Capitol, crowned with the statue of Columbia. At night it blazes with illumination, a gleaming jewel. It is the symbol of a free nation and of freemen's faith in their institutions. For Columbia was placed aloft in 1863 when the Nation was in the midst of the Civil War.

Roughly midway along this stretch is the beautiful Archives building. Here are now housed the birth records of our Nation—the Declaration of Independence and the Constitution.

This avenue has many tales to tell. Most striking and poignant of these is one that reminds us that the Presidency of our Republic is not alone a position of power such as no other constitutional office in all history has ever wielded. It can also be a position of danger.

At both ends of this avenue attempts were made on the lives of Presidents. Right on the steps of the Capitol, an insane man, in the first assassination attempt in our history, fired upon Andy Jackson in 1835, but missed. And just a few years ago, in 1950, when President Truman was living in the Blair House across the street from the White House, which was being renovated, assassins tried to gain entrance. A plaque there tells how a White House guard was killed.

Just off the avenue, two of our Presidents were mortally wounded. Look up 10th Street from Pennsylvania Avenue and you can see the red-brick front of Ford's Theater where Lincoln was shot. And at Sixth Street, where the National Gallery of Art is now located, there was once a railroad station. There, while waiting to entrain for Massachusetts to deliver a speech at Williams College, Garfield was shot in the back.

2. WHY IT IS CALLED THE WHITE HOUSE

Visitors (10 a. m. to noon, Tuesday through Saturday) form long lines outside the White House grounds. No tickets are needed. White House guides show visitors through what are known as the public rooms on the lobby and ground floors.

Rooms on the second floor comprise the living quarters of the Presidential family and are not open to the public. In one of these second-floor rooms is the best-known piece of White House furniture, the Lincoln bed, with its spread crocheted by Mrs. Calvin Coolidge.

Inside and out the White House is gleaming and stately. It has been so closely connected with this Nation's destiny that in

walking through it you cannot fail to feel both thrilled and awed.

On the first floor a visitor sees the magnificent reception rooms, the Green Room; the elliptical Blue Room, opening on the semi-circular south porch; the Red Room, the State Dining Room, and the long corridor leading to the East Room.

Downstairs, on the ground floor, may be seen the oval diplomatic room leading to the rose garden and F. D.'s swimming pool. Most exciting for the women visitors is the China Room with dinner ware from administration all the way back to the first White House mistress, Abigail Adams. Everywhere are presidential portraits and gifts from foreign rulers.

The East Room, a huge ballroom, has been the setting for brilliant, gay receptions and moments of national bereavement. William Henry Harrison, first President to die in office, lay in state here. So did Lincoln. Deranged by grief, Mary Todd Lincoln, saddest of White House occupants, did not leave her upstairs room for five weeks—not even to attend her martyred husband's funeral.

James Hoban, an Irishman (he got a $500 prize), designed the White House and George Washington laid the cornerstone. It was the new capital's first public building. There is a wistful tale that shortly before his death George, accompanied only by Martha, visited the still unfinished White House. When Abigail Adams moved in, it was still unfinished, and she used the East Room to dry her laundry.

Hoban rebuilt the White House after it was burned by the British in the War of 1812. He had the burned exterior walls painted white, and hence the name. Before fleeing, Dolly Madison, the White House's most famous hostess, saved china, silver, and the portrait of Washington still to be seen in the East Room. She had this painting cut from the frame.

Many changes have been made in the original building. Andrew Jackson added the square portico at what is now the front entrance and the south portico to which Harry Truman later added a balcony. Teddy Roosevelt added the executive wings, following a plan of Jefferson's. Coolidge raised the roof and added a third floor. Franklin Roosevelt added an underground bomb shelter.

Biggest remodeling was under Truman. The entire interior (all but the shell) was redone at a cost exceeding $5 million. By this time the public so loved the building no one complained. Quite a contrast with the early days, for when John Quincy Adams spent only $36 of Government funds for a White House mirror, there was such a hue and cry about extravagance, he decided to pay for it himself.

---

3. Famous People of Lafayette Square

Lafayette Square, Washington's most famous park, is located directly across Pennsylvania Avenue from the White House grounds. George Washington gave it its name.

In the center is the first equestrian statue in this country, and it was made from captured cannon. Andy Jackson, his military hat held high, rides a charger as the hero of the Battle of New Orleans. Replicas of this statue stand at the site of Jackson's victory and on the statehouse grounds in Nashville, Tenn., a few miles from the Hermitage.

At each corner of the park are memorials to foreign patriots who helped at the birth of this Nation—Rochambeau, Von Steuben, Kosciuszko, and Lafayette.

Time is slowly eroding the charm of this square. For its attraction has been the private homes and the tales of famous people who have lived around the square. These homes are being steadily replaced by Government buildings, and the old houses, once centers of high social life, are disappearing.

At the close of the War of 1812, St. John's Church—cream-colored stucco—was erected on the north side of the square. This church, looking like a Greek temple, is known as the Church of the Presidents. There is a presidential pew and all Presidents since Madison have visited or worshiped there.

The site of the Hay-Adams Hotel was once occupied by the homes of John Hay, personal secretary and biographer of Lincoln, and by Henry Adams, Yankee author, descendant of Presidents, friend of many Presidents. On the corner, where now stands the National Chamber of Commerce, was the home of Daniel Webster.

Drop into the Chamber of Commerce building and you may see the desk Divine Daniel used when Secretary of State. Webster's house was a gift from admirers. Here he loved to feast, for to Webster a splendid meal was the "climax of civilization." And here Henry Clay, on a stormy night, came and made the deal with Webster which postponed the Civil War for a decade.

Clay lived at the opposite corner in what is known as the Decatur House. Commodore Decatur, naval hero, left a gay party there one night without telling his wife and fought a duel. He returned mortally wounded and Mrs. Decatur fainted dead away in the arms of Dolly Madison. Dolly, arbiter of Washington society for years, lived on the square.

Her house was later the Cosmos Club, a scientific and social club, now displaced by the National Science Foundation. At times Mrs. Madison's funds were so low that she pawned her silver. Webster's servant used to bring her gifts of food. Next to her house, still standing, is a house where Clay also lived. He won it at cards. Here, too, lived Secretary of State Seward, who was stabbed there by a conspirator the same night Lincoln was shot.

On the site of the adjoining USO (Belasco) Theater was once the home of Mark Hanna, the first national political boss. Here he held his famous corned-beef hash breakfasts and maneuvered national policy. There was a club here earlier, and General Sickles, then a Congressman, saw something from the club window that led to a tragedy.

Sickles' home was on the opposite side of the square. From one of its windows Sickles saw his wife signal to her lover, the son of the author of the Star-Spangled Banner. Sickles marched out of the club and shot and killed Key beneath trees still standing in the park. Sickles, later a hero at Antietam and Gettysburg, won the Congressional Medal of Honor.

---

4. The Capitol, Heart of the Nation

Washington, with its southern background, is a metropolis of courtliness and etiquette. So it is part of the code of courtesy for those about to visit the Capitol to go first to the offices of their Senators and Congressmen to obtain passes to the House and Senate galleries.

Courtesy also has advantages.

You may travel on the toy-like underground subway to the Senate office buildings. You get to see the places our lawmakers have their offices and the big, ornate chambers in which they have held famous public hearings, often TV'd to the Nation.

By walking along New Jersey Avenue between the old and new House Office Buildings, you can cover ground that shatters a myth. According to an old tale, Thomas Jefferson, first President to be inaugurated at the new Capitol, rode up alone on horseback and hitched his horse to a post.

Actually Jefferson was living in Mrs. Conrad's boarding house near the site of the present Congressional Hotel. He walked to the Capitol that first inauguration day accompanied by friends, by partisans waving banners, bands playing and walking into the old Senate Chamber to be sworn in by the great Chief Justice John Marshal.

The plaza in front of the east side of the Capitol, sunshine or storm, has been used for Presidential inaugurations since 1817. Henry Clay, then Speaker, feared the House Chamber could not safely accommodate a throng. The Capitol had been burned at the same time the British set fire to the White House. Sketches of that day show Monroe being sworn in with ruins of the Capitol in the background.

Most Capitol tours begin as one enters the rotunda where experienced guides are available to groups at a small fee.

It is breathtaking to throw your head back and glance up to the dome, 180 feet from the marble floor to the canopy with Brumidi's masterpiece, the circular painting of the Apotheosis of Washington.

Brumidi, who had done frescoes in the Vatican and European palaces, spent many years of his life adorning the walls and ceilings of the Capitol. While painting the frieze of the rotunda he suffered an accident that led to his death. The murals here of another artist, John Trumbull, are most celebrated because the likenesses of the Founding Fathers—Franklin, Washington, Jefferson, others—were made from life.

Statuary Hall, to the south, was originally the House of Representatives. Here ex-President John Quincy Adams, who served for years as a Congressman, was fatally stricken and died in the adjoining clerk's office.

Each State is entitled to send two statues. All cannot fit in this hall. Sam Adams is there, but the other from Massachusetts, John Winthrop's, is on the floor below.

Beyond this hall is the House of Representatives.

Going southward from the rotunda you come first to the old Supreme Court chamber, originally (until 1895) the Senate Chamber.

It was here that Webster delivered his famous reply to Hayne, "Liberty and union, now and forever, one and inseparable." Beyond is the modern Senate Chamber, roguishly known to some as the Cave of the Winds.

Throughout the building are murals, paintings, statues associated with our history and the Congress. Vice Presidents are all shown because they presided over the Senate, not because some of them became President. Do not miss seeing the cloak rooms, the lobbies, the ornate Presidential Room and the ceremonial room for the Vice President, where a now forgotten Vice President from Massachusetts, named Wilson, was fatally stricken.

At the lowest level beneath the rotunda you may see a crypt which was intended as the last resting place for George Washington. But he was placed in a crypt at Mount Vernon.

Instead, now a visitor can see a catafalque with black drape on which martyred Presidents and national heroes, including Lincoln, have laid in state in the rotunda.

---

5. Supreme Court's Marble Temple

The statue of our greatest Chief Justice, John Marshall, is on the west terrace of the Capitol, facing the Washington Monument, and quite a walk from the resplendent white Vermont marble temple which is now the abode of the Supreme Court.

Marshall, Chief Justice for more than 3 decades, foresaw the powerful role of the Court as guardian and interpreter of the Constitution.

It was he who asserted the Court's coequal rank with the executive and legislative branches of our Government, and its authority to rule acts of Congress or President unconstitutional.

It was not until 1935 that the Supreme Court moved into its present quarters across the plaza from the Capitol. This $10 million structure, with its own terraces, gardens, statuary and Corinthian columns like those

of the Capitol, at last provided a setting suitable to the majesty of our supreme bench.

Quite a change from the earlier days.

Marshall was Thomas Jefferson's cousin, but Jefferson had little regard for him, called him a "Federal bulldog." When Marshall, in the *Marbury* v. *Madison* decision, asserted the Court's right to rule a Federal statute unconstitutional, Jefferson expressed the dread that the Constitution had become mere "wax in the hands of the judiciary."

Andy Jackson's angry retort to one of Marshall's rulings was:

"John Marshall has made his decision. Now let him enforce it!"

The marble exterior gleams so brilliantly in the full sunlight a visitor is well-advised to wear sun glasses. But do not let these hinder you when studying the pediment over the main entrance. It is quite unusual.

It looks, with its classical figures, like most other pediments. But on this one the faces of the statues bear famous likenesses.

The three figures on the left, reading left to right, bear the likenesses of Chief Justice (ex-President) William Howard Taft, Secretary of State Elihu Root, and Cass Gilbert, architect of the building.

The three on the right end, reading left to right, are Chief Justice Charles Evans Hughes, Robert Aiken, the pediment's sculptor, and John Marshall as a boy. (A little Alfred Hitchcock touch?)

As you enter, observe the panels on the bronze door which mark great moments in the development of law, the Justinian Code, Magna Carta, Westminster Statute, and, in the upper right panel there is Marshall delivering the *Marbury* v. *Madison* opinion.

The Supreme Court room is at the end of the spacious main corridor. It is so awesome a room, with its beautifully veined marbles, high ceiling of classic design, columns, draperies, one feels as though he has entered a cathedral.

The guards caution: "Quiet."

The Justices, each in a chair to his own liking, sit in a single row. Despite the grandeur, the acoustics are far from perfect.

Elsewhere in the templelike structure are the private offices of the Justices, their conference chambers, studies, libraries, and rooms for the many clerks and attendants.

These are open to the public only by appointment. But you can ask to be shown the delightful spiraling marble staircase.

While in the vicinity of the Supreme Court, walk one block along East Capitol Street to the white marble Folger Shakespeare Library. Here, inspired by Ralph Waldo Emerson, is one of the greatest Shakespearean collections in the world. You will delight in sitting in a theater which faithfully reproduces a London theater of Shakespeare's day.

---

6. Four Hundred Miles of Library Shelves

The Congressional Library, a palatial Italian Renaissance building across the plaza from the Capitol and on the same street as the Supreme Court, is today just about the largest library in the world. It has 400 miles of shelves and a collection of more than 11 million books.

Its beginnings in 1800, though, were quite humble. Then it occupied but a single room in the new Capitol. When the British invaders, who entered Washington by Maryland Avenue alongside the Supreme Court site, set fire to the Capitol and the White House, the library went up in flames.

Thomas Jefferson's financial difficulties gave the Library a new start. The liberality with which Jefferson entertained guests both at the White House and Monticello dissipated his great fortune.

Faced with bankruptcy, the sage of Monticello parted with his beloved library and it was purchased by Congress.

By the time the Library was moved into its present building in 1897 it was already considered among the greatest collections in world history.

Through purchase and gift it acquired the papers of most of our Presidents and statesmen.

It has 95 percent of all extant papers of George Washington.

These and other rare Americana can be seen in the rare-book division along with illuminated medieval manuscripts, thousands of books printed before 1500, a Gutenberg Bible printed on vellum, early documents, papers, and broadsides telling firsthand the history of this Nation. There are Lincoln's first two drafts of the Gettysburg Address.

As you approach the building observe the fountain at the foot of the main staircase. It is called Neptune's Court with its nymphs and seahorses.

Pick out the granite busts of Emerson, Hawthorne and Franklin among those on the facade. Observe the many carved heads over the windows which represent all the races of man.

The central stair hall inside the vestibule and the many-sided reading room in the rotunda beneath the great dome have been called the building's foremost architectural attraction. The former, with double staircases, arcades, statuary, paintings, ornamentation lavishly done, has been likened to a vision in polished stone.

Since this is basically a library to serve Congress, and in it is a vast legislative research division and reading rooms for both House and Senate, it is curious to find among the murals in the reading room lobby one whose subject is Corrupt Legislation. Beside the figure of the briber is a strongbox filled with coins.

The reading room, surrounded with galleries of stacks, is quite a marvel.

Despite the enromous size of the collection, books requested at the central desk seem to arrive with incredible speed.

The public and scholars are welcome to use the Library but material can only be taken out by Congressmen, Government officials, and the White House.

The Library, under the copyright laws, receives two copies of every book published in this country. Not all these are retained. There simply isn't room despite the big annex built at the rear of the Library in 1939.

Copies of all newspapers are sent to the Library and there are files for these.

There are many special collections. The largest music collection in America is in the Library. Its periodical collection and map collection are unsurpassed.

And if you think visitors to the reading room can get material fast, this is nothing compared to the speed of service for Congressmen. How is that accomplished? By an underground transmission tunnel that runs under the plaza over to the Capitol.

---

7. Car Ride Cost Mellon $15-Million Gallery

As one walks along the Mall, going from the Capitol toward the Washington Monument, on the right is one of the largest marble buildings in the world, a building preeminent for its beauty in a city literally abounding with magnificent structures. This is the National Gallery of Art.

The gallery's collection, valued in the hundreds of millions of dollars, ranks with those of the great treasure temples of Europe and often it is called the Louvre of the Western Hemisphere.

How it came to be built of pink-white marble, making it an architectural gem, is itself fascinating.

The story has to do with the American multimillionaire Andrew W. Mellon, who gave the gallery to the Nation, and with the most spectacular art salesman in all history, Lord Duveen.

Duveen, a fabulous collector, for years sold immortality to American millionaires in the form of the paintings and sculpture of the old masters.

On one occasion Mellon paid Duveen $21 million for art objects Duveen conveniently assembled in an apartment near Mellon's home at Dupont Circle, just north of the White House.

It originally was Duveen's dream to house these and other treasures he had sold Mellon in a national art gallery.

The plans went ahead secretly, with Duveen engaging Architect John Russell Pope. Mellon originally wanted a limestone building. As Secretary of the Treasury under three Presidents, Mellon had practically rebuilt Washington with one limestone structure after another.

But limestone was not good enough for Duveen.

One day he got Mellon to take a ride with him around the city. Duveen kept pointing to limestone buildings, many of them Mellon's projects, and noted how the stone had become stained and looked shabby.

Finally Mellon asked how much it would cost to build the gallery of marble. He was told an extra $5 million. Mellon agreed.

When, getting out of the automobile, Duveen mentioned what a splendid trip it had been, Mellon remarked, "Yes; but it has been the most expensive ride of my life."

None of the gallery's creators saw it completed.

Mellon and Pope died 2 months after the construction started.

Duveen died in 1939.

In 1941, on behalf of the Nation, President Franklin D. Roosevelt accepted the building at the dedication.

Mellon, in giving his own $50 million collection as well as the $15 million for the building, expressed the hope others would also make gifts.

That hope has been lavishly fulfilled

Samuel H. Kress (Duveen, on one occasion alone, sold Kress $20 million worth of paintings), Joseph E. Widener, Chester Dale, Lessing J. Rosenwald, and many others, have made seemingly priceless contributions.

Each year brings more treasures (there were 650 gifts last year), making this a matchless gallery in less than 2 decades.

Everything about the building is spacious and beautiful—the central rotunda with its dark-green Italian marble pillars, Bologna's Mercury on the rotunda fountain, the two garden courts with their fountains, greenery, and flowers, and concerts, too; the statuary and parade of masterpieces in one gallery after another.

All the masters are represented. In gallery 8 is Raphael's Alba Madonna for which Mellon paid $1.1 million, highest price ever paid for a single canvas.

In that gallery, too, are Raphael's St. George and the Dragon (Mellon paid $840,000) and the Earl of Cowper Madonna ($836,000). There are Titians, Van Dycks, Giorgiones, El Grecos, Rembrandts galore. Look for Raphael's Portrait of a Young Man. It's so lifelike you know at once you're looking at the work of a master.

Dictatorships have contributed, strangely, to the building of this artistic treasure trove.

The Soviets in need of cash in the early depression 1930's, sold famous art works from the Hermitage (winter palace) collection started by Catherine the Great. The Alba Madonna came from there.

And Hitler, spurning Italian art, permitted it to leave Nazi Germany. Art-wise Duveen snapped it up.

---

8. Smithsonian Institution, Gift From Briton

The shadowy figure of James Smithson is among the most curious things about the

UNIVERSITY OF MICHIGAN LIBRARIES

strange-looking, red sandstone, nine-towered, Romanesque structure on the Mall, the Smithsonian Institution, which has been a landmark and magnet for tourists since it was erected in 1852.

Smithson, an Englishman who never saw America, believed himself to be the son of the proud Duke of Northumberland. That would make him the half-brother of haughty Earl Percy, who, riding a traditional white horse which drew the heavy fire of the minutemen, led British reinforcements to the battle of Lexington and Concord.

Smithson, who used many names in his life, finally settled on the family name of the Northumberlands. A shy man, he exiled himself to Italy and devoted himself to science.

When the Royal Society of London declined to publish one of his scientific papers, Smithson left his then immense fortune to the United States, saying his name would live when the titles of the Northumberlands and the Percys are extinct and forgotten.

The Smithsonian Institution, with the main 1852 structure now chiefly an administration building, embraces a complex of enterprises.

Just behind it on the Mall are three of these—the odd-looking Arts and Industries Building, packed to overflowing with Americana; the Aircraft Building with its planes displaying the history of flight; the Freer Gallery with gems of oriental art and the incredibly beautiful Peacock Room the artist Whistler created for a London residence.

Directly across the Mall is the massive, white granite, four-storied Natural History Building, an especial lure to youngsters, with its dinosaurs and meteorites, lifelike exhibits of American Indians and primitive peoples, totem poles, animals shot by Teddy Roosevelt on safari, American art, precious stones, California's first gold nugget and an old apothecary shop.

Many other attractions come under the Institution, which sends out exploring expeditions and is a world exchange for research.

Out in Rock Creek is the Institution's National Zoological Park, which grew from the desire to save the American bison from extinction. Today it is among the world's greatest zoos. It has acquired two white rhinoceros never before seen in this country.

Biggest attraction, though, is the Arts and Industrial Building, first used for Garfield's inaugural ball. It is so packed with items relating to our history it is often called the Nation's Attic.

Here one finds the plane flown at Kitty Hawk by the Wright brothers, Lindbergh's plane, The Spirit of St. Louis.

Here are the tattered flag that inspired Francis Scott Key to write The Star-Spangled Banner, the field equipment and uniform of George Washington, Lincoln's death mask, the table at which Jefferson penned drafts of the Declaration of Independence, a display of the inaugural gowns of all the wives of our Presidents.

All sorts of historic devices, Whitney's cotton gin, Howe's sewing machine, early coaches, locomotives, first automobiles, Bell's telephone, Morse's telegraph, the first typewriter, Franklin's printing press, the Nation's stamp and coin collection. Exhibitions by the thousands until the eyes and feet weary.

Indeed, there is so much, the Institution is about to build a new, most modern, vast Museum of History and Technology located between 12th and 14th Streets, next on the Mall to the National History Building. And, just think, all this collecting started only a century ago as a result of the Institution's scientific field trips and exploration of a railroad route to the Pacific undertaken for the War Department.

While in this area, plan to visit the National Archives Building, an impressive structure with four Corinthian facades conceived by the same architect who devised the National Art Gallery, John Russell Pope. It is along the Mall near the apex of the Federal Triangle.

Here, among our priceless documents are the Declaration of Independence and the Constitution, which, for safety, are lowered each night into a 50-ton underground safe.

9. Washington Monument Setbacks

The noble, white-marble shaft of the Washington Monument, rising abruptly from the Mall to a height exceeding 555 feet, today dominates the entire Washington landscape and bespeaks our national veneration for a patriot "first in war, first in peace, first in the hearts of his countrymen."

Few might imagine that tragedy and discord could ever have been linked with this greatest obelisk in the world. Yet they were.

On July 4, 1850, a gala celebration was held at the monument, then barely begun. President Zachary Taylor, "Old Rough and Ready," only 16 months in office, was there for the occasion and some took it as a hint the 65-year-old hero would seek another term to try to stop the North and South from rushing into civil war.

It was a fiercely hot day. The orator, George Washington Parke Custis, then 69, adopted son of George Washington, went on at great length. Taylor, to quench his thirst, took long draughts of ice water. When he got back to the White House he nibbled cherries, drank more ice water and iced milk, all against doctor's orders.

That night he took ill. Five days later he died in a fever.

The discord, a blend of intensifying hard feelings between North and South and of bitterness produced by the Know-Nothing movement (a sort of Ku Klux Klan of its day), brought a halt to construction in 1855 and it was not resumed for a quarter of a century.

The marble, though taken from the same Maryland quarry, weathered differently and that is why the monument above and below the 153-foot height, is of different shades.

A monument to Washington had been discussed even during the Revolution. The Continental Congress, in 1783, talked about one and Washington himself is said to have favored the present site.

But nothing was done until the Washington National Monument Society was formed in 1833 and solicited public contributions.

Robert Mills, who designed the Treasury Building for Andy Jackson, conceived the plan to have an obelisk. Fortunately his further plan to have a sort of circular, colonnade pantheon at the base with horse-drawn chariots and statues was abandoned when the cornerstone was laid July 4, 1848. Dolly Madison, at 81 years a chief fund-raiser, and Alexander Hamilton's widow, who lived to 97, attended.

When construction was resumed in 1880, the Army engineers were placed in charge and public funds were used.

In 1884 the capstone was put in place on top of which are the words "Laus Deo" (Praise to God).

A new dedication was held in 1885.

The orator was the Bostonian Robert C. Winthrop, one time Speaker of the National House, who had also been the orator at the laying of the cornerstone. He was Daniel Webster's pupil.

One of the glories of the monument is the way it reflects the color moods of the sky, sunrises, sunsets, moonlight, and storms.

You may ride up the monument in an elevator or walk the 900 steps and thus better observe the inscribed, worldwide gifts of stones built inside the shaft.

The view at the top, from all four sides, is awesome.

George Washington never lived in Washington. Indeed though it was named after him, he always called it the Federal City. Still he knew it well, owned lots, laid the cornerstones of the White House and Capitol.

There's a quaint tavern in Georgetown (3049 M St.) where Washington, Jefferson, and L'Enfant chewed over plans for the Capital City.

Historic Alexandria, 6 miles south and once a rival port to Boston, was often visited by Washington. You can see his pew there in Christ Church, where he was a vestryman, and see the memorial built to him by the Masonic lodge of which he was worshipful master.

But to feel the presence of Washington you must travel 16 miles south of the Capital, along the Mount Vernon Memorial Highway, to the colonial mansion and estate the Mount Vernon Ladies Association started restoring just a century ago.

There you see the grounds, the dwelling and belongings as they were when Washington lived there.

And at the foot of a sloping hill, beside the Potomac, is the vault in which George and Martha were buried.

10. Two Other Lincoln Memorials

Abraham Lincoln, bidding a sad farewell to his neighbors in Springfield, Ill., as he started for Washington to be sworn in as President, told them he did not know "whether ever I may return." He never did, for Washington, focal point of the Civil War's agony, was to be the city of his martyrdom.

Mrs. Franklin D. Roosevelt once said that if ever a ghost walked the White House it was Lincoln's.

The tall, gaunt, dark-haired man, prone in public to tell jokes to protect his sanity, used to pace his office on the second floor of the White House and glance across the Potomac to the rebellious Virginia shore as he, alone, pondered ways to save our Republic.

Almost daily, often late at night, he would walk along the long corridor, tramp down the westside staircase now no longer there, and out across the open grounds to what is now the Passport Office Building on 17th Street. It was then the War Department.

There he pored over messages from the front. There he wrote the compassionate letter to Mrs. Bixby whose five sons were lost in battle.

Now beside the Potomac, encircled by the Capital and the Virginia hills is the Nation's shrine to the martyred President, the Lincoln Memorial. To millions of visitors, coming in an endless stream, a pause here is an emotional experience. The eyes of many fill freely with tears, remembering Lincoln's greatness, his humility, his sacrifice.

"In this temple as in the hearts of people for whom he saved the Union, the memory of Abraham Lincoln is enshrined forever."

Such is the perfect tribute.

The white marble structure, designed by Henry Bacon, was started on Lincoln's birthday, 1914. Eight years later, on Memorial Day, 1922, it was dedicated and opened to the public. Its Doric colonade, one column for each State in the Union in Lincoln's day, resembles the finest temple of ancient Athens, the Parthenon.

The name of Massachusetts, among those of all the 48 States, is over the center of the entrance to the inner chamber.

Dominating this sanctuary is the colossal, 19-foot-high, seated statue of Lincoln that Daniel Chester French, a Bay State artist, carved from white Georgia marble. It represents Lincoln as war President and is the glory of the memorial.

There are two smaller chambers separated by rows of Ionic columns. Carved in stone in the south chamber is the high resolve of Lincoln's Gettysburg Address. In the north chamber, likewise carved in stone, is Lincoln's immortal second inaugural address, "With

malice toward none, with charity for all, with firmness in the right as God gives us to see the right."

This exquisite building, with its graceful surroundings, vistas, and reflecting pool is not the only memorial in Washington associated with memories of Lincoln.

There is the cottage on the grounds of the Soldiers' Home, out North Capitol Street way, where President Lincoln summered. Here he wrote the first draft of the Emancipation Proclamation.

Northwest from here, on 13th Street, is Fort Stevens. When Confederate Gen. Jubal Early threatened to take the capital Lincoln, deeply worried, rushed out to watch the fighting.

He stood there, his tall figure a fine target, until a young officer yelled, "Get down, you fool."

The advice came from Lt. Col. Oliver Wendell Holmes just as a bullet whizzed by and killed a surgeon 2 feet away from Lincoln.

The night before he was assassinated Lincoln had a dream of people mourning over him in the East Room. Ford's Theater, where he was shot on Good Friday, April 14, 1865, is now a museum on 10th Street. You can trace Booth's footsteps and see the derringer he used.

Across the street is Petersen House and the incredibly small bed in which Lincoln died.

---

11. LEE'S MANSION, CIVIL WAR HOSPITAL

Robert E. Lee, a West Pointer, a hero of the Mexican War, must have recognized that if he joined the Confederacy that one of the first places to be seized by the North would be his magnificent family home, Arlington House, and its more than 1,000 surrounding acres now the Arlington National Cemetery.

Yet Lee's sense of duty forced him to say "No" to Lincoln's request that he take command of the Northern troops.

Lincoln's go-between was Francis P. Blair, then 70. Blair, who had been a member of the "kitchen cabinet" of Andy Jackson, summoned Lee on a spring morning, April 18, 1861, to the small front study in Blair House, just across from the White House. After all, old General Scott had figured Lee in command would be worth 50,000 soldiers.

Blair was the right man to make the attempt. His granddaughter had married the cousin and boyhood chum of Lee, a naval officer who would remain devoted to the Union and later head the successful blockade of the Confederacy. And it was Jackson who had secured Lee's appointment to West Point, honoring the son of the Revolutionary hero "Light Horse Harry" Lee.

But Lee's mind was made up.

He later wrote how he declined Blair's offer from Lincoln. "Though opposed to secession and deprecating war," Lee added, "I could take no part in the invasion of the southern States."

Events moved fast.

Lee recrossed the Potomac to Arlington House and wrote his resignation as a Federal cavalry colonel. Three days later he went off to Richmond and became Confederate commander-in-chief in Virginia.

His wife, Mary Custis, great granddaughter of Martha Washington, hurriedly began sending the family belongings to a safer place. Among them were heirlooms from George and Martha Washington, silver, china, household and personal furnishings, the bed (now at Mt. Vernon) in which George Washington died.

But some of these were lost forever because on May 24, on the heels of the flight of Mary Custis and her children, the Federal troops moved in.

The North had no other course, for Arlington, as a visitor quickly realizes, has strategic command of the city of Washington.

Arlington House's location and views are so splendid, Lafayette, when a visitor there, proclaimed them the best he had ever seen. The mansion, with its eight massive Doric columns and pediment designed after the Temple of Theseus in Athens, was built in 1802 by Mary Custis' father, an adopted son of George Washington.

In the family parlor, where visitors now sign their names, Mary in 1831 was married to Robert E. Lee, then two years out of West Point. From here Lee, while Mary raised their seven youngsters, periodically went off to military duty, the Mexican War in which he was wounded, and the capture of abolitionist John Brown at Harpers Ferry.

After the Federal troops moved in, Robert and Mary never again saw their estate. The dismantled home was converted into a hospital. The wounded from the Civil War's first battle, Bull Run, were brought there.

In 1864 the Federal Government acquired the estate for unpaid taxes and started a national cemetery. Near the mansion is a monument which marks the grave of 2111 unknown dead found on Civil War battlefields.

Lee's oldest son, George Washington Custis Lee, tried for years to recover the estate. Finally, in 1882, the Supreme Court awarded him the title and he promptly agreed to sell to the Federal Government.

The mansion, however, remained an empty shell until the Army, then caretaker began restoration in 1925. Two years ago it officially became a national memorial to Lee.

Now a visitor to the refurnished mansion, the adjoining building with their former slave quarters, the wisteria-covered bandstand on the terrace, the gardens, and trees, can see first-hand how pleasant was life for Virginia's tideland aristocracy. And the rejected Major L'Enfant, planner of Washington seen in the distance, has now a matchless burial place in front of Arlington House.

---

12. HOW UNKNOWN SOLDIER PICKED

On the morning of October 24, 1921, American and French soldiers stood at ceremonial attention outside the city hall at Chalons-sur-Marne, provincial capital east of Paris and on the road to Verdun. The body of an American hero, 1 of 5,000 unidentified Americans who gave their lives in World War I, was about to be chosen as the Unknown Soldier.

A sergeant from our occupation forces, himself wounded in battle, entered a makeshift, dimly lighted chapel in the hall. He was 1 of 6 selected as pallbearers. In his hand was a bouquet of white roses, the gift of a Frenchman who had lost two sons in the war.

In the chapel were four flag-draped coffins. They had been taken from the four American cemeteries, Meuse-Argonne, St. Mihiel, Somme, Aisne-Marne.

The sergeant walked three times around the coffins. Then, as he later said, "in response to a mysterious but irresistible urge," he placed the flowers on the coffin second to the right as he entered. He then stood and saluted.

Now the world poured out its heartfelt homage.

With tears and highest honors France already had enshrined her Unknown Soldier beneath the Arch of Triumph and Britain hers in Westminster Abbey.

America's revered object of every possible military honor was taken to Le Havre and placed aboard the cruiser *Olympia*, Dewey's flagship in the Battle of Manila Bay. Guns saluted as the cruiser left the harbor.

On arrival at the navy yard in Washington, the casket was borne to the rotunda in the Capitol and there the Unknown Soldier lay in state on the same catafalque that had borne our martyred Presidents, Lincoln, Garfield, and McKinley.

On Armistice Day, November 11, in the most solemn procession, the casket was taken along Pennsylvania Avenue, across Key Bridge, along the road to Fort Myer, where the minute guns boomed a continuous requiem.

The magnificent white-marble amphitheater was crowded with the highest civic and military dignitaries of this and other lands.

Ailing Woodrow Wilson, World War I commander-in-chief, had, at the risk of his life, come in a carriage.

The military chief of World War I, General Pershing, wore only the victory medal.

Ex-President Taft, then the new Chief Justice and now buried near the entrance to the cemetery, was in the throng.

President Harding delivered the eulogy.

For 2 minutes at noon, as the casket was lowered into a crypt, the Nation observed silent prayer. Church bells, which had tolled for 15 minutes, ceased. Traffic halted, street cars stopped, telephone service was suspended.

As the cannon fire gave its final echoes among the trees, the bugle notes of taps, soldier's farewell, spoke their message, clear and sad.

The tomb was completed in 1930 with the emplacement of the sarcophagus, one of the largest blocks of marble ever quarried, taken from the same white marble as that of Lincoln's Memorial.

Engraved on it are the precious dozen words: "Here rests in honored glory an American soldier known but to God."

Perpetual honor guard is maintained by soldiers of the Third Infantry, "The Old Guard," which has fought in all our Nation's wars.

The Defense Department, with necessary work already underway, plans to inter two more unknown servicemen beside the Tomb of the Unknown Soldier. The crypts are now being made and the dedication will be held this coming Memorial Day. The memorial slabs, at ground level, will pay tribute to a World War II, and Korean War Unknown.

Arlington, once the estate of Robert E. Lee, is the Nation's largest national cemetery. It is a cemetery of heroes, and buried among its trees, row on row, along its 10 miles of paved road, you will find many illustrious names.

Visit the trophy room of the Unknown Soldier, the nearby burial place and shrine of the heroes of the Battleship *Maine*, the "Temple of Fame," once Lee's summer house, and, in back of the cemetery, the Confederate monument.

Legend tells us that the first burial was of a Confederate prisoner who died in 1864 in the Lee mansion, then converted to a field hospital.

A short distance further along the Potomac is the nerve center of our worldwide defense, the fabulous Pentagon.

Built in wartime rush, opened in 1943, it is the largest office building on earth, 18 miles of corridor, 1 mile around its outer edge.

It is fascinating to visit and observe how its city-size 33,000 inhabitants function as they chart this Nation's military course in the space age.

---

13. JEFFERSON MEMORIAL VERSUS THE BLOSSOMS

As one observes the delightful Tidal Basin surroundings of the $3 million white Vermont marble temple, now the Nation's shrine to Thomas Jefferson, it is difficult to believe that women once chained themselves to trees on this site to prevent the workmen from starting the memorial. That was called the "Battle of the Cherry Blossom Trees."

Now, the memorial is the center for the annual Cherry Blossom Festival. The number of the cherry trees, just as President Franklin D. Roosevelt promised when he laid the cornerstone in 1939, has been increased. Here, 2 weeks ago, the pageant was

held and the Cherry Blossom Queen received her $400,000 crown of gold and pearls.

The erection of the memorial, which Roosevelt had urged upon Congress, was to pay a debt of gratitude "long overdue" to the philosopher-patriot who was the author of our Declaration of Independence.

F. D. R., in his old naval cloak, presided at the dedication on April 13, 1943, in the midst of World War II. He called the memorial a "shrine to freedom."

That day was the 200th anniversary of Jefferson's birth. Jefferson's noblest words, said F. D. R., are those inscribed inside the rotunda, taken from a pledge Jefferson made to his old friend, Dr. Benjamin Rush:

"I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

As you enter by the main stairway, coming up from the Tidal Basin, observe the sculptural group over the portico.

It represents Jefferson, already well known for his literary ability, being named chairman of the committee to draft the Declaration. With omissions rather than changes in his text, it was the one promulgated to the world July 4, 1776.

The heroic bronze figure of Jefferson, by the New York artist Rudolph Evans, stands 19 feet above its pedestal in the center of the rotunda. Jefferson, in life, was a tall, rangy man, with sandy red hair and hazel eyes.

The four panels on the interior walls contain excerpts from Jefferson, breathing his sentiments on freedom, political and religious, education and human progress.

Placing of the memorial at this site, on a line with the Washington Monument and the White House, completed the cross arrangement envisioned by Maj L'Enfant, the man who planned the city. The architect was John Russell Pope, creator of several other Washington masterpieces, among them the National Art Gallery and National Archives Building.

The true creator, though, was Jefferson himself. He was America's first great architect. He loved the central rotunda scheme of the Pantheon, temple to the Roman gods, and this memorial embodies it.

A similar domed rotunda is the main feature of Monticello, the University of Virginia, and the capitol at Richmond, all of which he designed.

Jefferson, like his contemporary Ben Franklin, was a most versatile man. Everything interested him; science, literature, art, farming, music, botany.

Monticello is filled with his inventions, 7-day clocks to bifocals. He submitted a plan for the White House, and its extensions follow that plan. Even food got his attention, and it was he who introduced ice cream to America.

A true Democrat despite his aristocratic background, it was he who discarded the courtly bow and introduced the Presidential handshake.

Above all he was a philosopher, a champion of freedom of man. Curiously he did not even care to mention that he had been President when he designed his gravestone down the slope from Monticello. He mentioned on it only that he was author of the Declaration, author of the Virginia statute of religious freedom and, his final great work, founder of the University of Virginia a few miles from Monticello.

While in this vicinity, notice how the cherry blossom trees have been extended along the walks and drives of Potomac Park.

These trees were started by Mrs. William Howard Taft when she was in the White House, the idea coming from her years in the Orient while her husband was on missions there before he became President.

Across the southern tip of the park you can see the National War College on the point where the Anacostia River enters the Potomac.

Off here, in 1844, occurred the tragedy of the U. S. S. *Princeton*. An experimental gun, called the Peacemaker, exploded, killing two Cabinet members and other statesmen. President Tyler, who was talking to his future bride, narrowly escaped.

---

14. EMBASSY—and CHURCH—ROW

Washington, capital of the free world, is a celebrated center of diplomatic life. The embassies, legations and missions of virtually all the nations are to be found along lower 16th Street and especially along Massachusetts Avenue, from Scott Circle to Rock Creek and beyond, which is known as Embassy Row.

These two thoroughfares of magnificent buildings likewise have a spiritual eminence. On the streets are located many of the 1,200 churches, of 27 denominations, that make Washington a religious capital. Along the seven miles of 16th Street, north from the White House, are 25 churches.

This is more than in any like distance in this country and has led to 16th Street being called The Street of Churches.

Just about every denomination has built or plans to build a religious center in the Nation's Capital.

Most recently the Moslems built a mosque with graceful minaret, near Rock Creek.

Beyond the impressive residence of the Papal delegate, going out Massachusetts Avenue, is the new Greek Orthodox Church of St. Sophia with its great white dome.

Along 16th Street are the new synanogue of the Washington Hebrew Congregation, the expanding Methodist Church, Temple Baptist Church, Russian Orthodox Church of St. Nicholas, Church of Latter-day Saints, Christian Scientist Church, All Souls' Unitarian which looks like London's St. Martin-in-the-Fields, and many more.

The Gothic, 14th century grandeur of the still incomplete Washington Cathedral, the Church of SS. Peter and Paul, with its flying buttresses and stained-glass windows, crowns Mt. St. Alban beyond the Naval Observatory on Massachusetts Avenue.

In it are St. John's Chapel with a statue of Norman Prince, founder of the Lafayette Escadrille, and Chapel of St. Mary given by Larz Anderson.

Thousands annually come in pilgrimage to this cathedral—beautiful as any in Europe—for, in a bay off the cathedral nave, is the tomb of our World War I President Woodrow Wilson.

Another area of Washington which annually attracts thousands of visitors is the section called Brookland, or "Little Rome."

This is in Northeast Washington, beyond the old Soldiers' Home where Lincoln summered. Here are the Catholic University, the National Shrine of the Immaculate Conception and the Franciscan Monastery.

The shrine, on the campus of the university, was started in 1920 with the late Cardinal O'Connell presiding at the laying of the cornerstone.

It is to be a huge Byzantine-Romanesque structure rivaling any in the Old World. Its crypt, in use since 1926, is of surpassing beauty with its chapels and mosaics, and is the largest in the world—bigger than St. Paul's in London, and Chartres, largest of French medieval churches.

The Franciscan Monastery, called the Memorial Church of the Holy Land, is among the Capital's greatest attractions. While the church's architecture is Byzantine, the golden yellow brick and red tile, with the surrounding beautifully kept gardens, give it the appearance of an early Franciscan mission in California.

The Franciscans, who have for years maintained the holy shrines of the Christian world, have reproduced many of them here both on the monastery grounds and within the church.

On the grounds is a replica of the renowned Portiuncula shrine in Assisi where St. Francis founded his order. Around the church is a cloister with 15 chapels called the Rosary in Stone.

Outdoor shrines, on the hillside, include reproductions of the Grotto of Lourdes, the home of the Holy Family in Egypt, the Chapel of the Ascension like the one the Crusaders built on Mount Olivet, the Tomb of the Blessed Virgin as it now is in the Valley of Gethsemane, and the Grotto of Our Lord's Agony on the eve of His crucifixion.

Inside the monastery are reproductions of shrines in the Holy Land—among them the Shrine of the Annunciation as it is now in Nazareth, the Grotto of the Nativity in Bethlehem, the altar over the Crucifixion on Calvary, the Holy Sepulchre as it is in Jerusalem. And beneath the monastery, open to visitors, is a reproduction of the catacombs as they are today in Rome.

---

15. IF THERE'S TIME LEFT—

Even after a visitor has seen what are called the "main points" of interest in the Nation's Capital, there is still an almost endless list of fascinating things to see and places to go.

Even a puff of smoke can tell a curious tale. Notice it coming, sometimes in puffs and sometimes in a stream, from roof chimneys of the Annex Building across the street from the Bureau of Engraving and Printing as you head along 14th Street back toward downtown Washington after leaving the Jefferson Memorial.

Reason for the smoke?

In the cellar of this Annex Building are huge incinerators and into those nearly every day of the week goes $4 million in paper bills, $1's, $5's, $10's, and so forth. This is worn-out money being removed from circulation.

The big Bureau of Engraving and Printing on the opposite side of 14th Street at C Street SW., is the world's largest engraving plant.

Here roughly $35 million a day in paper money, bonds, Government securities, and stamps are printed.

Free of charge, you may walk along special ramps over the printing presses and see the money being turned out in sheets. There is quite an exhibit of money, too, including the largest gold note ever issued.

In the Federal Triangle of departmental buildings, between 9th and 10th Streets on Pennsylvania Avenue, is the Department of Justice where the FBI has its headquarters. Monday through Friday there are tours every half hour.

You can see crime laboratories, the biggest fingerprint collection in the world, detection methods and a display of weapons taken from notorious criminals.

A block further along Pennsylvania Avenue at 12th Street, is the huge Postoffice Department, said to be the biggest single business in the world. Stamp fans will be interested in the stamp exhibit (going back to 1847) which has been assembled in the department's Philatelic Agency, located in new ground-floor quarters on the 12th Street side near Pennsylvania Avenue.

Near the base of the Federal Triangle are the enormous buildings of the Departments of Labor and Commerce. Uncle Sam's strongbox, the Treasury, is located nearby on 15th Street. Counting money by the millions is a daily activity. In the cellar are old money vaults, for this is the third oldest Government building in Washington.

While at the Treasury Building, visit the document room in the attic and downstairs see the collection of contraband seized by the Coast Guard.

You can see the draft for buying Alaska (Price $15 million—Seward's folly); warrants

for buying the Panama Canal Zone; and the flag which draped Lincoln's box at Ford's Theater, the one on which Booth tripped and broke his leg.

This department, by the way, was the first to hire women Government employees. This was during the Civil War, and officials found that the women could count money better than the men.

The Corcoran Art Gallery, on 17th Street at New York Avenue, gift of a Georgetown banker, was the Nation's greatest prior to the National Art Gallery being given by Mellon. It is a beautiful building with famous exhibits.

A block away at 18th Street, is the unusual Octogon House. This is where Dolly and James Madison lived (and the peace treaty was signed for the War of 1812) after the British burned down the White House.

Returning to 17th Street, you pass the American Red Cross headquarters and Continental Hall, and at the corner of Constitution Avenue, you will find one of Washington's most beautiful buildings, the Pan-American Union.

This white marble structure, sometimes called the capital of the American Republics, cost $1 million, contributed by Andrew Carnegie and the republics of the two Americas, which form the Pan-American Union. On the facade, above the heroic statuary groups, are the figures of George Washington and two liberators of Latin America, Bolivar and San Martin.

The vestibule opens into a Spanish-style patio filled with exotic shrubs, trees and flowers, and paved with tiles as in the palaces of early Latin America.

Beautiful staircases, besides the patio, lead upstairs to the mammoth Hall of the Americas, considered one of the most magnificent in the world.

At the rear of the building is an open Aztec garden with strange floral displays and Aztec relics.

A Rare "Pro" Leaves White House

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in a recent issue of the St. Louis Post-Dispatch. Its title gives it away. "A Rare 'Pro' Leaves White House" could only refer to the imminent departure of a gentleman known to us all as a remarkably able politician, Mr. Maxwell M. Rabb.

The author of the article, Mr. William S. White, is known as a man who sees Washington through a pair of the shrewdest and knowingest eyes around. His appraisal of Mr. Rabb's work should carry special weight.

There are rumors, Mr. Speaker, that Max Rabb may decide to live in New Jersey even though he will have his office in New York City. Should he locate his home somewhere in Union County—certainly one of the most pleasant and convenient parts of the metropolitan area—I can assure him that our people will welcome him and his family generously and enthusiastically.

The article follows:

A RARE "PRO" LEAVES WHITE HOUSE

(By William S. White)

WASHINGTON.—The legend of the able and unselfish second-tier man who really runs the Government for the very top people is an old favorite. Regrettably, it is almost as full of moonshine as it is of amiability.

Long Washington experience suggests that the great majority of second-tier men are just that—usually expendable without vast damage to the public interest. Nevertheless, once in a while an official turns up who lends more than a trace of truth to what is only a hardy cliché. Such a man is now leaving the Eisenhower administration. He is Maxwell M. Rabb. Rabb is secretary to the Cabinet—the first such official in history in a post that was set up at his own suggestion.

He is also associate counsel to President Eisenhower. Less officially, he has been the President's chief adviser on minority group problems—civil rights and the like. Now he has resigned, effective in mid-May, to enter a New York law firm.

COMPETENCE NOT WANTED

Parenthetically, Rabb himself has long been in a tiny minority. He is a member, along with Press Secretary Jim Hagerty, of that minute group in the White House that really knows something about practical politics.

Rabb came in, as an ex-Senate staff man, in those brave old days of the businessman's Government when knowledge in politics was held suspect by the new crusaders. In their eyes, Senator Robert A. Taft's great handicap was his tactless and unashamed pursuit of what had been his lifelong profession—politics.

Rabb, a professional politician, too, discreetly bore and played down his dangerous competence. And from his position of anonymity he served with great effectiveness.

PEACE IN THE CABINET

Many will argue that the Eisenhower administration's accomplishments could be adequately reported without using up a great deal of paper. In any case, at least two solid achievements seem to this observer to stand out.

For one thing, the Eisenhower Cabinet has been run without the prolonged, and thus destructive, in-fighting that has wounded many other Cabinets.

Score this to Rabb. His system of Cabinet briefings and Cabinet responsibility for action will be seen as a genuine contribution to political science.

Secondly, the White House itself—if not always the rest of the administration—has handled the harsh complications of the racial crisis with restraint and commonsense. And on these infinitely tricky matters the watchword at the White House has usually been, "Give it to Max."

It is here, most of all, that being a good politician has paid off for Max Rabb.

CIVIL RIGHTS NOT CIVIL WAR

He has fought the southern civil rights opposition with devotion and skill—but without bitterness or passion. He has supported the civil-rights pressure groups where he has thought them wise; he has told them off where he has thought them wrong.

Always, of course, he has battled the anti-civil-rights pressure groups. But even these he has treated as though they had a right to a point of view.

He encouraged the President in refusing to take that form of leadership which so many urged upon him—the calling of a White House conference on civil rights that would have given an incomparable sounding board to every thin-lipped extremist on both sides.

In a word, Rabb always declined to treat civil rights as though it were civil war.

RESPECTED BY ALL

He was unwilling, of course, to dignify suggestions that the Supreme Court was unconstitutional, or perhaps un-American, in its antisegregation policy.

Equally, however, he was unwilling to act as though the thing to do was to send dive bombers to Alabama and Arkansas.

This position he took not as a do-gooder but because he knew that good politics—which is usually decent politics—demanded a solution and not mere screaming.

He was a professional doing a job, and all the other professionals—Democratic and Republican, right, left, and center—appreciated him.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Small-Business Forum of the American Management Association

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered on the subject Partners in Business, at the small-business forum of the American Management Association, in New York City, on May 14, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PARTNERS IN BUSINESS

(An address by Senator EDWARD J. THYE, Republican, of Minnesota, before the American Management Association Small-Business Forum, New York City, N. Y., May 14, 1958)

Gentlemen, I consider it a real privilege to participate with you in this first small-business forum of the American Management Association. It is most appropriate that the problems of the small-business firm in our economy should receive your careful and extensive study and investigation.

Doing business today is a challenge which demands the best of everything a business has to offer. Doing business today as a small firm is something which demands the utmost in energy, skill and initiative.

MAIN STREET

I have always thought of small, independent business in terms of Main Street—the thousands upon thousands of Main Streets which run through every city, town and village of our country. It is here that we find the majority of the Nation's retail outlets and service establishments. They represent a large portion of our business population which numbers approximately 4,300,000. These outlets serve a nation of 170 million consumers. These business firms along our Main Street constitute the arteries of commerce in the blood stream of our free-enterprise system.

Just a stones' throw away from the Main streets are the warehouses of wholesalers and distributors and the small manufacturing plants of America. Thus we can see that within a radius of a few blocks in any city we find endlessly reproduced the American economy in miniature.

Ours is an economy founded upon the principle that honorable men should be free to compete with one another in the area of commerce and manufacturing. It was founded by men such as yourselves who rejected the principle that Government should write all the rules and regulate men's every action. They likewise rejected the principle of cartel control of all business enterprise. These men believed that a free economy, with healthy competition, would produce the type of ingenuity and accomplishment which would give to our society a standard of living greater than that of any other nation.

Today, private enterprise is spending $5.5 billion for research and development in new products which promise to further improve our standard of living. Translating this fact into a phrase, it means that new frontiers are opening up each day and that there are endless horizons for those who participate in our free enterprise economy. There is no other nation in the world today that enjoys the benefits of such a system.

HUMBLE BEGINNINGS

The present wonders of our economic system had humble beginnings. It all began in small establishments along our Main Streets. As time went on, some of these small business firms grew and today we classify them as large business. Throughout the early stages of our economic development, there was no attempt made to distinguish between large and small business. People spoke in terms of business regardless of size. There was no recognition of any basic conflict of interest among business concerns of different sizes. Essentially big business and small business became partners in the task of supplying the needs of a constantly expanding population. Most reasonable observers accept this time-honored partnership as being the cornerstone of our dynamic growth. The shelves of the smallest merchant on Main Street are stocked with the products manufactured by large corporations. The interdependence of all business is demonstrated by the fact that our laregst mass production industries obtain necessary supplies and services from thousands of small suppliers and subcontractors.

During this period of industrial and commercial expansion, our Government laid down certain ground rules when it became apparent that such action was necessary. The Sherman Antitrust Act, the Clayton Act, and the enforcement of these laws was necessary to preserve the element of free competition in a fast-growing economy.

WORLD WAR II IMPACT

Perhaps the most significant turning point in our economic development was World War II. This all-out war effort called for an unprecedented productive effort; it inspired inventions, new products, and a productive philosophy which was climaxed by the innovation of atomic energy. It was during this period that certain business firms grew to the point where they became known as industrial giants. As an aftermath, people began to think in terms of large business and small business.

During the past 10 years, a premium has been placed on technology and research. Competition has become more keen in all areas of business. At the same time, taxes have steadily increased, costs of doing business have risen sharply, the need for credit has increased, and the American public has developed buying habits and tastes which demand the utmost in supplier resourcesfulness and imagination.

The factors I have just mentioned can be termed business problems to business progress and success. They fall most heavily upon the small business man in our economy who cannot employ the high-priced business technician or scientist or business expert.

OUR DILEMMA

At this point, we can begin to see the dilemma we are faced with. On the one hand we recognize that the strength of our economy, to a large degree, depends upon a healthy small business community. On the other hand, the progress we have made and which we hail as a great accomplishment has created serious problems to the small business firms.

TIME FOR ACTION

The time has come when we must recognize that there is need for constructive action if we are to maintain the highly successful free competitive system which we have come to admire and respect.

This must be accomplished through the utilization of a dedicated partnership. The partnership in such a venture must be the small-business man, the large business firms, and the Government.

SMALL BUSINESS ADMINISTRATION

The Government is already at work assuming its rightful role and responsibility. That is being accomplished on many fronts. You are all acquainted with the activities of the Small Business Administration which was established in 1953. I had the pleasure of authoring the legislation which established this agency. Through March 31 of this year, the SBA had approved 9,542 business loans, totaling $445,992,000 and 7,105 disaster loans in the amount of $73,910,000. The agency has a constructive record of accomplishment in the field of procurement assistance and managerial and technical assistance.

The Small Business Administration has proved itself to be an effective partner within our economy. The time has come when it must be established as a permanent agency. I have introduced a bill which would accomplish this, as have other Members of the Senate and House of Representatives. It is imperative that SBA gain permanent status for three main reasons. First, the agency would be able to attract more competent personnel; second, our banking institutions would be more apt to participate in the SBA loan program; and third, the SBA would be able to work more effectively in the area of procurement assistance.

ACTION TAKEN

The President has established a Cabinet Committee on Small Business to recommend directly to him those measures which would be of constructive help to small business. This action is unprecedented in our history.

The Department of Justice and the Federal Trade Commission are at work every day to give vigorous enforcement of the antitrust laws. This is essential if our system of competitive enterprise is to survive.

Every agency of Government has established a program designed to channel a fair share of Government contracts to small business.

Both the House and the Senate have a Small Business Committee working in the interests of small firms.

The Congress and the executive agencies are working to eliminate government competition with private enterprise.

It is apparent to any objective observer that the Government is attempting to maintain a climate within which small business can grow and expand.

Business and associations such as yours are also already at work in an attempt to

solve the problems which confront our small firms today.

THYE PROGRAM

In addition, there are certain specific things which must be done. They must have your support in order to succeed.

PROPOSED LEGISLATION

You are all interested in what proposals are now before the Congress and the Senate which affect the small-business firms of the Nation. It would be impossible for me to enumerate all of the bills now in committee. However, let us examine what proposals we have which deal with the three main problems facing small business today, namely:

1. Availability of credit.
2. Availability of equity capital.
3. Tax reduction.

I am convinced that if we are successful in passing constructive legislation in the above categories that the future for small business will be bright, indeed.

CREDIT

1. Credit: Here I have already outlined the necessity for legislation extending the life of the Small Business Administration. This is a necessity if the full credit needs of small business are to be met. Also pending before Congress is an amendment to the 1953 act, which I have prepared, extending the period of time for loans to 15 years.

EQUITY CAPITAL

2. Equity capital: There is no question about the need for sources of equity capital today. There is some difference of opinion as to what Federal legislation is needed to accomplish this purpose. First, I wish to make clear that some system for providing long-term financing for small firms is urgently needed. I will support any reasonable bill recommended by the proper committees. Only secondarily am I concerned with the form which may be established to do the job.

The bills presently before the Senate Banking and Currency Committee propose different systems. I have introduced a bill which would incorporate the existing structure of the Small Business Administration to administer a long-term equity program. The other bills would establish another independent agency to do this job.

I favor the utilization of the SBA because it has acquired intimate familiarity with the equity capital needs of the small business in the operation of its lending program. In considering loan applications, an examination is made by the trained examiners of sufficiency or insufficiency of equitable capital. A listing is made of those cases where additional equity capital is required. I would also like to call to your attention that the Small Business Administration has been concerning itself within the past few years with ways and means of promoting more equity capital for small business. In conjunction with the Investment Bankers Association of America, it has discussed the problem and the IBA has formed a small business committee. Meetings have been held with the SBA, SEC and members of the private business world, both businessmen and investment bankers. The SBA has backed legislation to loosen the requirements in the Securities Act of 1933 so that it will be possible for small businesses to float securities and comply with registration requirements with less cost.

One of the basic differences between my bill and other proposals lies in the character of aid provided to small business investment associations. In my bill, as well as in the other measures, the Government has power to make loans evidenced by debentures of small business associations. Some bills, however, attempt to facilitate the establishment of small business investment companies in which the Government invests its stock in the companies in the amount not more than $250,000. I submit that the soundest opinion of experts in the field of private investment companies is that if there is lack of sufficient interest in a small business investment association, so that it cannot obtain its basic paid-in capital from private sources, it will, in the end, prove a failure in its administration.

Once a small business investment association has been launched with its paid-in capital acquired from private sources, I contemplate that, on the basis of debentures and that in return for debentures, the SBA shall lend capital funds for lending purposes. I think that this is a sound and fundamental distinction between Government ownership and Government assistance.

There is also a fundamental difference in the provisions for aid to State and local development corporations. The bill I contemplate provides that the SBA will be able to make loans to a State or local development corporation "to existing indentifiable small business concerns and for a sound business purpose approved by the Administration." There are various restrictions imposed on such loans. I would like to call to your attention that SBA has been making loans of this character with a limitation which would be removed by this legislation. If you will examine the studies made on the lending features of State and local development corporations (7 State loan corporations now operating, and as many as 2,200 local organizations identified by the Department of Commerce) you will find that most of the activities of these corporations are in the lending field, rather than equity purchases. The Small Business Administration's experience in dealing with and evaluating identifiable concerns should be preserved.

Other proposals would provide that in the case of some State and local development corporations, the Government will make loans to enable them to supply the equity capital for small business concerns and the funds will be given in exchange for obligations of such institutions. Students of local development corporations can advise you that most of them are not set up in such a manner that they would be able to obligate themselves in this manner.

TAX RELIEF

3. Tax Relief: I believe that some tax reduction measures will pass the current session of Congress. There is little argument that tax adjustment is needed. I support the following tax adjustment bill for small business:

(a) An allowance for reinvestment in the form of a tax deduction for a business which increases its investment in inventory or depreciable assets out of income. This allowance would be permitted on a graduated scale which would require the taxpayer to assume full responsibility for a portion of the expansion. The amount of investment permitted as allowance would be as follows:

Fifty percent on first $10,000 eligible investment.

Thirty percent of $10,000 to $20,000 eligible investment.

Twenty percent of $20,000 to $30,000 eligible investment.

The maximum allowance in a year would be $30,000.

This proposal would provide much-needed equity capital for small firms.

(b) A retirement deduction to be allowed for sole owners or proprietors. Each taxpayer would be permitted a deduction for an amount up to 10 percent of his taxable income, or $1,000 whichever is the lesser, if invested in a prescribed manner. This retirement deduction would eliminate present discrimination which exists in the Revenue Code.

(c) Payment of estate taxes over a 10-year period. An extension of payment over 20 years would be made in cases of emergency.

(d) Accelerated depreciation on used equipment and machinery. There would be a limit of $50,000 for each tax year of such purposes.

(e) Permission for small corporations having only one class of stock to be taxed as partnerships.

(f) Easing restriction of unreasonable accumulation of earnings section by raising $60,000 exemption to $100,000.

This is a program which I have been advocating for some time. Some of the provisions have been before the Senate in the form of legislation since early 1957. Such a program would not only give assistance in the near future, but it would also provide for the strengthening and growth of small-business firms.

I am confident that legislation will be enacted in the next 3 months which will alleviate the financial pressures upon small-business firms.

THE NEXT STEP

The next step will be for all of us to preserve a business climate and atmosphere which will stimulate small business growth and expansion. To do this we must:

1. Call for strict enforcement of our antitrust laws as a safeguard to our free economy.
2. The administration's premerger notice legislation must be passed in order to give our Justice Department and Federal Trade Commission the opportunity to examine the impact upon competition of corporate mergers.
3. Businessmen must enter into a period of self-analysis in order to improve their efficiency and capability of competing in today's complex industrial expansion.
4. Business organizations and associations such as yours must provide assistance and guidance to small firms who cannot afford full-time technical advisers. Research and the development of new methods are to be found. Technical fields are the new frontiers of this era. The early history of America was an ever-advancing frontier. Virgin prairies, as well as the timberland, awaited the courageous pioneer to develop it. But following this pioneer, was the equally courageous businessman with the opportunity to establish businesses that did not have the competitive economic system that the smaller businessman is confronted with today.

I am confident that these aims will be accomplished. No one can deny that new frontiers open up every day in the business life of our Nation. These frontiers lead to horizons which are exciting and which will stimulate the inventive genius which has become a hallmark of American progress. In our day, there can be no sympathy with pessimism. There can be no surrender of free enterprise to crippling controls by government.

We must rededicate ourselves to a system of free enterprise which has made our Nation great.

Work Opportunities for Graduates of Colleges and High Schools

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared on the subject, Creating More Job Opportunities for Individuals

Leaving the Farms and for the New Graduates of Our Colleges and High Schools.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CREATING MORE JOB OPPORTUNITIES FOR INDIVIDUALS LEAVING THE FARMS AND FOR THE NEW GRADUATES OF OUR COLLEGES AND HIGH SCHOOLS

A grassroots effort on the part of the citizens of North Dakota to meet the problems of a changing economy in the United States and in the world which is altering the way of life in North Dakota is sufficiently important, I believe, to be brought to the attention of Congress. North Dakota, as an agricultural State, is not alone in facing this problem. This is a further reason I feel it important to call to the attention of Congress the excellent progress of the relatively new North Dakota Economic Development Commission.

This commission was created in 1957 by the North Dakota Legislature and consists of the governor and eight members appointed by him. The first meeting was held in the governor's office in July 1957. Present, in addition to Gov. John E. Davis, were all eight members, comprising as representative and capable a group of citizens as could be found anywhere to analyze and do something about the economic problems and opportunities of our State. The commission members are: Richard H. Barry, of Fargo; John R. Bernabucci, of Jamestown; Andrew L. Freeman, of Grand Forks; Harold Hofstrand, of Leeds; Wesley Keller, of Minot; Harold Kelly, of Devils Lake; James A. O'Brien, of Dickinson; and Harold Shafer, of Bismarck.

The first order of business at this first meeting was to adopt certain principles and to select an initial list of objectives. Among these were the following:

(a) To go to the grassroots and encourage every community in the State to analyze its opportunities and economic problems. The commission felt that 90 citizens might be 10 times as effective as the 9 commission members working alone and that 900 citizens might be 100 times as effective. They felt that since ideas and suggestions are often born in unusual and surprising ways, the more people working with the commission, the better its chances of steady, if not spectacular, progress.

(b) To segregate and identify the problems which cannot be solved on a community level, such as certain inequities in the Federal income tax laws, and to establish subcommittees to explore the practical steps to be taken.

(c) To keep constantly in mind that the largest source of income in North Dakota is from agriculture and that agriculture serves as the foundation upon which a substantial part of the entire State's economy rests.

By September the commission had the good fortune of finding a capable full time executive director with the experience and the aptitude to stimulate the grassroots action, as well as possessing the imagination and coordinating ability to keep other phases of the commission's program rolling. This director, Lawrence A. Schneider, and the members of the commission have in recent months been planting seed, so to speak, in the minds of farmers and community leaders in every section of North Dakota. Progress from this type of activity is not immediate, but when it appears it is usually sound.

A couple of weeks ago, the North Dakota Economic Development Commission brought to my attention a problem which cannot be solved at the community level. I presented their proposal to the Senator from Alabama [Mr. SPARKMAN], chairman of the Select Committee on Small Business. In a letter to me dated April 22, the Senator from Alabama stated: "It appears to me that all the points made by the commission are valid. I am asking the staff of the committee to determine to what extent these additional provisions should be prepared as amendments to our omnibus small business tax relief bill." The points to which the Senator from Alabama referred are contained in the following resolution adopted by the North Dakota Economic Development Commission at a meeting held on April 7, 1958, in Gwinner, N. Dak., in the plant of the Melroe Manufacturing Co., which incidentally is one of the most inspirational examples of grassroots endeavor in North Dakota, or for that matter, in the entire United States.

"Whereas investment capital and long-term capital for: (a) The development of this State's natural resources; (b) the growth of small locally owned industries; and (c) risk capital for new inventions is in short supply in North Dakota; and

"Whereas North Dakota is confronted with a serious and complex problem to provide within its borders more job opportunities for individuals leaving the farms and for the new graduates each year of our colleges and high schools; and

"Whereas the Internal Revenue Code of the United States contributes to the previously mentioned short supply of local capital because of certain inequities in the code; and

"Whereas North Dakota should join with other States with similar problems and conceivably leadership can be crystallized by the commissions similar to the North Dakota Economic Development Commission which exist in most of the other 47 States: Therefore, be it

"*Resolved*, That the Governor of North Dakota send to the Members of Congress from North Dakota and to the governors in the other 47 States for the attention and support of their economic development or similar commissions the following recommendations related to the Internal Revenue Code of the United States:

"1. That the present $1,000 limitation which may be taken in any 1 year as a capital loss by the investor in the stock of a small- or medium-sized business be increased from $1,000 to a more realistic amount.

"2. Permit the costs of selling capital stock in small- or medium-sized companies with net worths below $1 million to be treated as an operating expense not to exceed 10 percent of the amount of the issue to correspond with the principle permitted by the code in connection with expenses created in raising long-term loans.

"3. Permit the costs in the form of dividends on temporary capital such as preferred stock callable in less than 10 annual installments to be treated as an operating expense the same as interest, recognizing that there is already at least two precedents in the code for the treatment of dividends on preferred stock as an operating expense.

"4. Permit companies with net worths below $1 million and which are not subsidiaries or affiliates of other corporations to have a 10-year period to build up their capital from earnings by having the surtax rate on annual profits start at $50,000 instead of $25,000.

"5. That Congress study ways and means of permitting private enterprise to deal with certain blighted areas of local communities including the creation of increased automobile parking space by permitting the owners to treat as an operating expense or capital loss the expense of demolishing old commercial and dwelling structures.

"6. That support be given to United States Senate bill 3194 known as the small business tax-adjustment bill of 1958, cosponsored by 36 Senators as of March 21, 1958, and providing in part for the installment payment of estate taxes, permitting farmers and businesses alternative methods of depreciation on used as well as new machinery and equipment."

Armed Forces Week

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. PAYNE. Mr. President, this week has been designated as Armed Forces Week in recognition of the role which our military services play in maintaining the strength and security of America. The State of Maine, which is one of the Nation's key strategic areas, is deeply honored that the able and distinguished Secretary of the Army, the Honorable Wilber Brucker, is the principal speaker at the Armed Forces Week dinner being held tonight in Portland, Maine. Mr. Brucker has prepared a very fine address for this occasion.

Mr. President, I ask unanimous consent that a statement which I have prepared on Armed Forces Day and the speech of the Secretary of the Army to be delivered at the Armed Forces Week dinner in Portland, Maine, be printed in the Appendix of the RECORD.

There being no objection, the statement and speech was ordered to be printed in the RECORD, as follows:

STATEMENT ON ARMED FORCES DAY BY SENATOR PAYNE

On Armed Forces Day 1958, we find ourselves on the threshold of a complete revolution in military technology. We have long since passed the era of the dashing horse cavalry of the Civil War, and the demoralizing trench warfare of World War I. Yes, we have even progressed far beyond the artillery, the blockbusters, the propeller-driven bombers, and the battleships of World War II and the Korean war. Today, we are entering the age of guided missiles with atomic warheads, antimissile missiles, supersonic bombers, hydrogen bombs, atomic-powered ships and aircraft, and hundreds of other devices which permit man to destroy his enemies by the thousands and hundreds of thousands.

But with all of these weapons of mass destruction, the basic strength of our military power lies not in its technology, however destructive it may be, but in its personnel. Because of the very destructiveness of the offensive and defensive weapons surrounding him, the fighting man today is no longer concerned with military matters of limited scope. By firing 1 atomic shell, by releasing 1 bomb, by launching 1 missile, he is capable of destroying entire cities and countless lives.

On the defensive his responsibilities and capabilities are even greater. The one enemy airplane or missile he succeeds in destroying can save an entire Nation. The radar screen he watches can be the key to our Nation's survival.

The individual military man, therefore, can be in many ways the deciding factor in a modern war. He must understand the technology of the most complex military devices ever created. He must understand the psychology of his enemy. He must be able to discern in an instant whether or not the speck on his radar screen is an enemy invader. In short, he must possess enough

foresight, enough intelligence, enough ability, and enough competence to protect an entire Nation.

He is the balance of power in the world. No number of missiles, no number of hydrogen bombs can protect our country without the military man who understands the technology and use of these weapons.

To repeat, warfare is undergoing revolutionary change. We must not make the error of believing that this change is one from an age of men pitted against men to machines against machines. The change in warfare today is one to an era in which man assumes an even greater role in matters of judgment and responsibility.

In this age of supertechnology, therefore, the need for highly trained, stable, responsible servicemen is infinitely greater than it has ever been before. More than ever we need a large steady core in our armed services of competent, responsible individuals who can understand both the capabilities of our superweapons and the implications of their use. In our military program we must put at least as much emphasis on securing and retaining such personnel as we do in improving weapons.

On Armed Forces Day, when the implements of modern warfare are usually stressed it is even more vital to recognize the man behind the gun. Without him these implements would be useless. With him they make us the best defended Nation in the world.

ADDRESS BY HON. WILBER M. BRUCKER, SECRETARY OF THE ARMY, AT ARMED FORCES WEEK DINNER, GREATER PORTLAND CHAMBER OF COMMERCE, PORTLAND, MAINE, MAY 15, 1958

It is a pleasure for me to be here this evening. I consider it a privilege indeed to have this opportunity to meet and talk with so many civic-minded citizens of dynamic Portland.

This afternoon, as I visited many of your historic sites, I was forcefully reminded of the rich and courageous past of this city, thrice risen from the ashes, active participant for nearly 3 centuries in the building of the American tradition, the home of countless brave and hardy men who fought in all our country's wars on land and sea. I was particularly impressed with your harbor, the port of call for ships of many nations. It is only natural that a city which has played such a long and continuous role in international commerce, and the development of the United States, should have an abiding interest in world affairs and the security of our Nation.

Our attention is focused today upon the most important material aspect of our security, the impressive military strength of America, arrayed in the cause of peace and justice. When we consider the clearly visible evidence that the Communist conspiracy, which has already seized control of 15 nations and one-third of all the people on earth, is still belligerently on the march toward its announced goal of world domination, we have good reason to be very thankful every hour of every day for our Armed Forces, the sturdy guardians of our freedom and our national integrity.

America is confronted with a world situation fraught with graver peril than any she has ever before faced in all her history. Let there be no shadow of a doubt about that in any of our minds. No amount of Soviet sophistry can obscure the plain fact that our own beloved United States, leader of the nations of the free world in the mortal struggle against Communist aggression, the most formidable obstacle athwart the Communist path to global conquest, is the ultimate target of every Soviet plot and action.

The dangerous tensions and fundamental conflicts which exist in so many parts of the world today underscore our imperative need to be prepared for every eventuality. It is the combined strength and versatility of our Armed Forces, our Army, Navy, Marine Corps, and Air Force, integrated in a great defense team, the sustaining power of a worldwide system of collective defense linking the United States and 45 other nations, which deters the Soviets from unleashing the might of the largest mobilized military forces in the world in an effort to achieve their goal.

The essence of our military strength is unity. Anyone who participated in the global campaigns of World War II, or has studied them, must recognize the complete interdependence of ground, sea, and air fighting elements in this modern era. The inexorable advance of science and technology has wiped out for all time the conditions which in years long past made possible the successful waging of war by separate forces. When we consider the lightning pace and the complex nature of a future war, which might involve on both sides tactical and strategic nuclear weapons of vast power, extremely accurate long-range ballistic missiles with thermonuclear warheads, antimissile missiles, and even such things as space vehicles and space platforms, it becomes clearly evident that nothing less will suffice for our national security than welding the various specialized capabilities of our military services into a fighting instrument able to respond instantaneously with all appropriate force in any emergency.

Our present military organization was created on that concept, and it has been progressively improved as experience dictated in order to keep up with the swift progress of technology and the march of world events. Our Commander in Chief, President Eisenhower, has recently taken steps to effect a further reorganization of the Defense Department designed to achieve even greater unity and effectiveness in military planning and operations both in peace and war. I need hardly say to you that the Army wholeheartedly supports the President in his effort to insure that America's strategic requirements are fully satisfied. Certainly no service partisanship which stands in the way of forging the strongest possible defense for our Nation could be tolerable in this age of constant peril. Your Army has always been a team player, and it will continue to discharge its full responsibilities as a member of our mighty defense team under all circumstances.

I do not see anything in the President's plan which threatens to wipe out the individual characters and capabilities of the several services, to destroy their indispensable esprit de corps, or stifle that healthy spirit of competition which is the driving force of all real progress. It will not create a military czardom or a Prussian-type military staff. It will not undermine the constitutional authority of the Congress. It will, however, serve to further enhance the flexibility of our military organization, and increase the speed and effectiveness of our response to any challenge. It is just good, hard, American commonsense.

The Sino-Soviet bloc has more than 8 million men under arms at this very moment. Communist forces include over 400 ground divisions, 500 far-ranging submarines, and more than 25,000 modern aircraft. These figures are particularly significant when we realize that at the high point of World War II Germany, Austria, and Italy had less than 400 divisions, and that a German force of only 100 U-boats nearly succeeded in severing the ocean lifelines of the Western allies. The mere number of divisions, ships, and planes tells only part of the story. We must also take into account the fact that today the Soviets possess powerful nuclear weapons and efficient means of long-range delivery which dwarf into insignificance anything which was in the hands of the Axis powers. Tremendous improvements have been made in other weapons and equipment during the last decade which vastly enhance the capability of ground forces. Furthermore, the Soviets are concentrating almost all of their best scientific and engineering talent on the frenzied development and production of ultra-modern weapons and other technological devices in an all-out effort to place in the hands of the plotters of the Kremlin the power to dominate the land, the sea, the air, and even outer space.

Certainly we must recognize that in a time of peace, the Soviet Union is on a war footing. Its military might is the clenched fist with which Communist leaders have promised to smash us. They are ready and waiting to move in swiftly for the kill if they should ever catch us with our guard down.

The twin questions certainly uppermost in the minds of most Americans are: "How can we expect the Soviets to use their power?" and "How can we best defend ourselves against it?"

Because of the growth of atomic stockpiles, general nuclear war, fought to its inevitable conclusion, could result in nothing short of disaster for all participants. In the present situation, with an abundance of powerful retaliatory weapons on both sides of the line, it is illogical to believe that the Soviet Russians, who obviously covet the palpable rewards of world mastery rather than the charred remnants of civilization, would irrationally abandon all hopes of profit, and invite the almost certain destruction of their own country, by intentionally launching a suicidal nuclear conflict. Therefore, we must regard limited aggression, with a succession of limited, attainable, profitable objectives, as by far the most likely form in which the Soviets will employ their military power to carry forward their ruthless program of conquest.

Local wars, fomented civil strife, military intimidation, and similar forms of limited operations are all down in the Soviet book as very practical methods by which they might achieve their ultimate purpose without ever challenging our nuclear retaliatory power. The Soviet Union has been employing this strategy for over a decade, and we see on every hand ample evidence that they are pursuing it today with unabated zeal.

In the few short years since the end of World War II, the Soviets and their allies have engaged in 8 local wars and military actions designed to advance their interests, and ever-increasing military, economic, political, and psychological pressures are being used to divide, confuse, and weaken the free world.

In Asia and Africa, the Soviet Union is strenuously fomenting unrest, and attempting to corrupt nationalistic aspirations in order to create situations which lend themselves to Soviet aggrandizement. We have seen it at work maliciously meddling in the Middle East in the hope of gaining a solid foothold in that area of tremendous economic and strategic importance.

By every kind of sordid chicanery the Soviets are attempting to soften up and destroy the North Atlantic Treaty Organization because they know that they cannot seize and profitably exploit the rich prize of Western Europe, stepping stone to the conquest of America, as long as the nations of the Atlantic community maintain their interlocking military strength and their moral cohesion.

For a long time, dedicated statesmen of the free world have labored incessantly but fruitlessly to negotiate with the Soviet Union some sound basis for the limitation of armaments, and the permanent reduction of the nuclear peril which hangs over the world. Now, after stubbornly refusing to

try to work out any agreement which might lead even to a first step toward genuine disarmament, the Soviets have come forth with the announcement, cunningly calculated to prey upon the prejudice and fear of millions of people, that they are unilaterally suspending nuclear tests. They make abundantly clear that this is a blackmailing scheme by pointing out that they, and they alone, will decide when and if such testing should be resumed.

We can hardly consider this move as anything but a cynical attempt to turn the tremendously serious business of armament control, and the easing of world tensions, into a cheap propaganda farce which the Soviet Union can exploit to its own advantage. It serves in no way to advance the cause of peace and justice, but only to confuse the issue and obstruct real progress toward a settlement of nuclear issues.

In order to judge the sincerity of the Soviets, we have only to consider their long record of broken covenants and completely sterile promises, and the utter moral bankruptcy of their system. We have only to remember that they still refuse to allow one positive step to be taken toward the reunification of Germany, Vietnam, or Korea. We have only to contemplate the spectacle of Khrushchev speaking unctuously of peace, and appealing to America to follow the example of Soviet Russia, as he stood on the violated soil of Hungary, soil soaked with the blood of patriots who were massacred by his troops only a year and a half ago when they sought to throw off the unbearable yoke of Soviet brutality. Hungary remains a constant and explicit warning to all free nations. We forget Hungary at our mortal peril.

In order to distract attention from its plots and counterplots, and the increasing menace of its military power, the Kremlin trumpets the diabolical charge that Americans advocate preventive war. However, the whole world outside the Iron Curtain has good reason to know that, on the contrary, America stands forthrightly for peace, and the peaceful triumph of the highest principles of our Christian civilization. Our constitutional form of government with its built-in guaranties against the sudden initiation of war, our history of moral idealism, and the ingrained habits of mind which underlie the American way of life furnish compelling evidence that we could never resort to aggression.

If war comes, it will not be of our choosing. We stand before the world with clean hands and a clear conscience, clothed not only in the mantle of moral sincerity, but also in the armor of material strength. The best guarantee of peace, the surest deterrent to war, is a degree of strength which discourages any potential enemy from launching aggression.

The concept that we might safely rely upon a single type of defensive capability, such as massive retaliation, is completely invalid. It is entirely unresponsive to the requirement for balanced forces which make available the specific type, degree, and distribution of power required to cope with any conceivable situation without destroying the fabric of our civilization.

It is significant that the Soviets have enthusiastically embraced the balanced force concept; that they are building and maintaining huge, modern, well-equipped, and well-trained ground forces capable of effectively participating either in a massive assault, or in local military operations designed to drag one country after another behind the Iron Curtain should we give them the opportunity.

It would be tragic indeed if we were less well prepared for limited war than we are for the far less likely contingency of all-out nuclear war. If that were the case, only two courses of action would be open to us in the event of the communists launched limited aggression: We would either have to let them get away with conquest on the installment plan, would would be disastrous to us in the long run; or we would have to pursue the course of desperation by precipitating the suicidal nuclear holocaust we are striving by every means to prevent.

No amount of talk about the vast power of strategic nuclear weapons can obscure the pressing necessity for the balanced forces which are required to face the Soviet troops ranged against our own and those of our allies in the frontlines all along the Iron and the Bamboo Curtains. Furthermore, advanced weapons systems, strategic missiles, and manned bombers, although absolutely essential to the effectiveness of our combined forces, and thus to the deterrence of aggression, will never be able to win any war alone. No final decision can be obtained by remote control. Ever since the first crude machines of war were contrived to extend the capabilities of man, all down through the years to the age of nuclear weapons and guided missiles, there have always been those who have needed to be shown again and again that it is the fighting man on the ground who is the fundamental element of warfare, the only ultimate weapon. In this nuclear era, strong and efficient Army forces, able to cope with any foe, any time, any place, and on any terms as part of a unified land, sea, and air command, are more essential to our national security than they ever have been in the past.

Our modern Army is characterized by balance and versatility. It is new in weapons, equipment, and organization, a new, streamlined force prepared to meet the requirements of the entire spectrum of war from an all-out nuclear conflict throughout the whole wide range of lesser enemy operations which are possible, and which would pose a grave and direct threat to the security of the United States. Our Army today has a new dual capability, a one-two punch, the ability to fight effectively with either atomic or nonatomic weapons, which is the key factor of our national power to apply military pressure with precise discrimination in order to deter aggression on the spot, anywhere in the world. Moreover, in any kind of war we might have to fight, large or small, that one-two punch would be indispensable to victory.

Our new pentomic division organization, consisting of five powerful battle groups, has been carefully taliored to the exacting requirements of atomic warfare. The pentomic airborne division with current equipment is completely air transportable across oceans and continents to any possible area of combat by swift strategic airlift, and within a battle area by tactical airlift, all in types of aircraft which are available today. The battle groups of the pentomic infantry division can similarly be moved by strategic or tactical airlift.

Through its dynamic research and development programs, the Army has kept fully abreast of all the tremendous advances of science and technology, and is putting them to practical use in every field to enhance its power and flexibility. For example, its years of pioneering experience in rocketry are paying handsome dividends in the development of guided missiles and rockets for military purposes, and are also helping America to push back the frontiers of space.

The Army's arsenal contains more than 10 types of missiles and rockets precisely adapted to the accomplishment of its varied tasks. Tactical surface-to-surface missiles range in size from the mighty Redstone, which can deliver a nuclear warhead more than 200 miles, to the relatively tiny Dart, which is capable of destroying the heaviest tank. The Army's Nike Ajax is capable of knocking down any known type of high-level plane at any altitude and speed at which it can fly. It will soon be replaced by an even better surface-to-air weapon, Nike Hercules, which is much faster, has much greater range, and a considerably greater altitude capability. Armed with an atomic warhead, Hercules would be able to destroy whole formations of enemy bombers.

An outstanding example of the achievement of the Army's excellent military-civilian team of missile scientists, engineers, and technologists is the great 1,500-mile intermediate range ballistic missile Jupiter, which is now in production and will soon take its place in the line of America's defense. The Army Jupiter-C missile, so called because similar vehicles were used to test components of the Jupiter during the course of its development at the Army Ballistic Missile Agency in Alabama, lifted the United States into the space age on January 31 of this year when it hurled Explorer I, America's first earth satellite, into orbit. Less than 2 months later, the Jupiter-C orbited Explorer III.

All in all—counting our experience with the modified Redstone which preceded Jupiter-C as a test vehicle, the Jupiter-C, and the Jupiter itself—the Army has attempted 37 launchings of the big missiles in its Jupiter program. Twenty-eight were successful, completely successful, shots. They accomplished everything planned. Seven were partially successful—they all had good launchings, but then, for various reasons, did not entirely meet the scientific requirements which had been set up. Only two did not score at all. This record stands up against even the most wildly optimistic Soviet claims.

Although our Armed Forces provide America with a stout and durable shield of military strength on land, at sea, and in the air, it would be the grossest folly for us to conclude that we could do without the support of dependable allies. We cannot afford to allow the foundations of collective defense to crumble, because in the final analysis our own safety rests upon them.

The United States could hardly be expected to defend the whole free world alone, yet the defense of the free world as a whole is vital to the defense of America. This fact spells out the transcendent importance of our mutual security program. Through it we multiply our strength by assisting our friends to build and maintain their own military forces which mutually contribute as much to our protection as to their own. We are currently helping to maintain approximately 200 foreign allied ground divisions, involving 5 million soldiers; 2,500 combat vessels, and 32,000 planes, of which about 14,000 are jets. We must recognize that these divisions, ships, and planes are as truly a part of America's military shield as those within our own Armed Forces.

If America should succumb to the perennial fever for the abandonment or substantial reduction of our mutual security program, we would be faced with some very serious consequences.

1. The essential power of the free world to resist aggression would rapidly deteriorate, since a majority of our allies, particularly those in Asia, would not be able to maintain their forces without our help.

2. In view of the fact that many of our indispensable overseas outposts occupy foreign territory, and are available to us only so long as our allies can maintain their independence, we would inevitably be forced back, step by step, to our own shores as one after another of our partners went down under Communist pressures.

3. It would be necessary for us to increase our expenditures for defense by an amount incomparably more than we spent for mutual security in order to make up in some degree for the loss of overseas positions and, as far

as possible, replace the support of allied forces with additional forces of our own. In this connection it should be remembered that while we have spent $20 billion over a 7-year period to support those 200 divisions, 2,500 ships, and 32,000 planes, our allies have contributed 6 times as much, $122 billion.

4. The number of American young men drafted into military service would have to be raised by many hundreds of thousands a year to provide for the necessarily tremendous increase in the size of our standing Armed Forces.

5. Even if we did expend billions more on defense, and committed to military service a proportion of our limited manpower unprecedented in peacetime and possibly disastrous to our economy, America might well ultimately find herself a beleaguered island in a sea of Communist tyranny, shorn of friends, cut off from many materials essential to the production of military hardware, and faced with slow but sure extinction.

Far from being a giveaway program, as many sincere people have called it, mutual security is the most productive investment in our own future which we could possibly make. The only giveaway involved would be the result of discontinuing or seriously curtailing these essential programs. If we did that, we would give away many of our friends to aggressive Communist imperialism. We would give away many of our most vital military bases overseas. We would give away our conscience and our ideals. We would, indeed, give away our own security.

It is particularly fitting on Armed Forces Day that we give solemn consideration to the responsibility for the security of the United States which rests upon all segments of the American community. No one can truthfully say, "I have no part to play, no obligation to discharge." The man in uniform is only the military spear point of our defense. If we forget that, we lose all perspective as to what makes American strong and able to resist successfully the manifold Communist threat.

Soviet scientific advances, dramatized by their success in launching earth satellites, have been more effective than millions of words in bringing home to the American people the fact that we cannot afford to take our security, or our world position, for granted. We Americans have had a rude awakening to the fact that our vaunted world leadership in science and technology is being menacingly challenged by the Communist dictatorship. We had fallen for the attractive fallacy that there is some easy way to maintain and enhance our national strength, and preserve our freedom, which does not entail real personal effort and inconvenience on the part of every one of us. We had turned away from the hard disciplines in favor of the softer ways of life because we believed that the triumph of American principles was inevitable. We had come to the conclusion that it was no longer necessary to roll up our sleeves and work and fight to keep America strong. Perhaps we have learned our lesson in time.

There is no easy, pleasant way to protect our freedom, and insure our national survival, in this atomic age of peril. Our security is not to be found in armaments alone, but rather in the willingness of all our people to sacrifice in a common cause, in the toughness of our moral fiber and the steel-hardness of our spirit, in the quality of our self-discipline, in our readiness to shoulder responsibility manfully, and to put our hands to the plow with no thought of turning back.

Success of the Rambler

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. PROXMIRE. Mr. President, one striking exception to the generally depressed conditions in the automobile industry is the success of Wisconsin's American Motors Corp. The Milwaukee Journal of May 12 had an editorial suggesting the reasons for the success of this company in spite of the recession.

Mr. President, I ask unanimous consent that this editorial, entitled "AMC Finds a Market," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMC FINDS A MARKET

Despite the bad slump in automobile sales, Wisconsin's American Motors Corp. is well on its way to its best year since the present corporation was formed. After several years of losses, AMC showed a comfortable profit for the first 4 months of 1958.

The other day the company boosted its production of Rambler cars and added employees for the third time since April 10. Employees in Milwaukee and Kinosha now total about 11,000, compared with 7,600 a year ago. April sales totaled 15,418 Ramblers, compared with 8,074 in April a year ago.

Rambler is the only United States small car that has been selling well. AMC's advertising has been geared to attract the customer who wants a small, relatively undecorated car and a car that is less expensive to buy and operate than the major brands. The company has found a good market.

Rambler sales, however, still represent only a fraction of the total automobile picture. AMC president, George Romney, set a 1958 sales goal last fall of 150,000 cars. Total sales of all makes this year are expected to be at least 4,200,000. Rambler, in other words, would represent less than 4 percent of the market.

And the Big Three—General Motors, Ford, and Chrysler—are far from convinced that there is a serious swing to smaller cars. The designs for their 1959 models were decided upon early in 1957 and they call for even wider, longer, lower and more chromy models than the present ones. Chances are the 1960 lines won't be much different.

Why is Rambler selling so well? Probably the recession has been a factor. Buying a cheaper car is an easy way of spending less money. But that is not the whole answer, because the vast majority of purchasers are still willing to invest in more expensive models.

There is also a reverse psychology involved. It is fashionable in some circles now to be different and buy a small, economical car such as Rambler or one of the foreign imports. For some it is the smart thing to do, even though they can afford bigger cars.

Lastly, there is a small, hard core of car buyers who don't believe in excessive horsepower, length and width. They don't want the chrome and the frills that run up the cost, but add little to the utility.

Wisconsin has a big stake in the entire automobile industry. Many of our factories are suppliers of parts—locks, ignition systems, frames, etc. Trucks are made in the State. General Motors employed 10,000 persons in 1957 in the AC Spark Plug division here and in the Fisher body and Chevrolet plants at Janesville.

Wisconsin wants to see a prosperous automobile industry and certainly hopes that AMC will continue to be part of it.

The Fight on Recession

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. SCHOEPPEL. Mr. President, on April 28, 1958, the magazine Steel published an editorial entitled "Fight on Recession: Will You Join Us?" written by Walter J. Campbell, the editor.

The editorial is the forerunner and the spearhead of a short and long term depreciation reform, something which is not only aptly pointed out in the editorial, but also in the article to which it refers.

I commend the editorial to the reading of all my colleagues. During this period of recession, its practical approach to this very important problem can be of great help to us.

So, Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIGHT ON RECESSION: WILL YOU JOIN US?

(By Walter J. Campbell)

A bold yet simple program to correct the recession and to halt the march of inflation is proposed by the editors of Steel on the following pages. It is based on these facts:

The recession got its start (and has its deepest roots) in the capital goods industries.

Capital goods dollars have more bounce than soft goods and service dollars.

The quickest, surest way to correct the recession is to stimulate spending for capital goods, spending for reequipment and, where needed, spending for new plants.

The most direct method to encourage spending for tools is to free industry from our straitjacket depreciation laws.

Steel's program has only two steps:

For the short term, allow any equipment, building, or land acquired from January 1, 1958, until June 30, 1959, to be amortized for tax purposes in 5 years if the owner elects to do so.

For the long pull, set up an industry-Government commission to modernize the depreciation setup on a permanent basis.

The program has its genesis in letters and conversations with our readers. Scores of you who are participating in this publication's cost crisis competition (its aim: the updating of capacity and equipment to lower unit production costs) have suggested

that deprecation reform is essential to keeping our industrial machine modern.

You have said that investment triggered by liberalized depreciation will do more to regain high-level employment and output than any stopgap measure aimed at putting more dollars into the consumer's pockets. You have pointed out that the updating of our industrial machines (as opposed to outright expansion) is an immediate need in slenderizing costs, boosting output per man-hour of labor input, and holding down prices.

We realize that 1 publication alone—or 1 company or 1 industry alone—cannot overcome the inertia that is blocking depreciation reform. Pleas made in the past by industry and publications—in editorials, in speeches, in corporate reports, in testimony before congressional committees—have been like drops of water falling on the desert. They have evaporated before they could form a reservoir to build up enough pressure to get action.

With the Nation groping anxiously for a way to stem the recession, we believe the time for concerted action is now.

In the weeks ahead, the editors of Steel will continue to spearhead the drive for short- and long-term depreciation reform. Our voice will reach all Congressmen and appropriate Government officials.

Will you join us in the fight?

Outstanding Citizen of the Year, Rotan, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. YARBOROUGH. Mr. President, recently the citizens of Rotan, Tex., honored Mrs. R. R. Gray as outstanding citizen of the year. It is not unusual for the women of Texas to play an active and constructive role in the affairs of their communities, but I think that the community which recognizes and rewards these noble women is to be commended.

The citizens of Rotan are fortunate in having a civic worker with the creative sense of obligation of Mrs. R. R. Gray. Texas is fortunate in having a community as generous in its recognition of the contributions of its citizens. The people of Rotan, and especially the Rotan Chamber of Commerce, which presented the award, are deserving of commendation.

This is another first, another frontier crossed by the women of America. Mrs. R. R. Gray was not merely the first woman to receive the Rotan Chamber of Commerce's Outstanding Citizen award, she was the recipient of the first award which the chamber made.

Tom Reynolds, a staff writer for the Abilene Texas Reporter-News, in May 10, 1958, issue of that newspaper wrote an excellent story on the award which Mrs. Gray received.

Mr. President, I ask unanimous consent to have this account printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMAN IS TOP CITIZEN OF ROTAN
(By Tom Reynolds)

ROTAN.—Boys, ain't you ashamed? A woman did the most work in town last year.

She is Mrs. R. R. Gray, female extraordinary, named Friday night as Rotan's outstanding citizen of the year, in recognition of her civic role in 1957.

The first woman member of the Rotan city council, the energetic widow is the consignee for Magnolia Petroleum here. Chosen by a chamber of commerce committee, she received a plaque from retiring president Floyd Clifton, at the annual May Day banquet. Dr. Sterling Price, pastor of the Abilene University Baptist Church, was the main speaker.

The award was the Rotan chamber's first.

In addition to running a gasoline business full time, Mrs. Gray holds these jobs: She is executive secretary-treasurer of the Rotan chamber, is a leader in the Fisher County chapter of American Red Cross, city council member, member of the First Baptist Church, 6-year secretary of the Lions Club and—says Clifton—she is ever willing to help with almost all civic activities.

Mamie Lois (Mim) Gray probably is the only grandmother-consignee for Magnolia in the United States, said new chamber president Mac Weathersbee. The Gray family has been in business here since the town started in 1907. Mrs. Gray took over the business entirely upon her husband's death in 1949. She formerly taught in Rotan for 7 years and holds a speech degree from North Texas State Teachers College.

She has a son, John, in the Army, and one daughter, Mrs. Will Levens of San Antonio.

Some 125 guests watched as she received the plaque.

Groping a little breathlessly for comment, she said, "I'd have to borrow a phrase from Elvis and our teen-agers—I'm all shook up." She added, "I hope I can justify your choice."

Dr. Price, the speaker, pounded out a link between civic and church work for his listeners, at the same time leveling a blast at prejudice.

He urged cooperation of all on all civic drives. "Work with people that you don't have too much affection for personally, but work for the community for which you do have affection."

He said, "I urge you to seek more diminishing prejudices. I hate prejudices—denominational or religious" and he indicated racial prejudice. "Prejudice is an affront to God's image." He warned that a community "can kill itself as dead as four o'clock by denominational fighting."

Among his warmup jokes, Dr. Price defined the new chemise dresses: "They remind one of prohibition. The joints are there—they're just harder to find."

President Mac Weathersbee introduced new officers. Charlie Woods is vice president; Mrs. Gray secretary-treasurer.

Directors are H. T. Fillingim, Jr., Kenneth Kelly, Wendell McWhirter, J. D. Burk, Lloyd Hurst, Ray Brown, Roy Kingsfield, Juston Morrow, Floyd Clifton, Wayland Gray.

The Rev. J. A. Cooley, pastor of the First Methodist Church here, was master of ceremonies. County Superintendent C. J. Dalton gave the invocation. The banquet was held in the Rotan High School cafeteria.

Wade Burroughs, high school band teacher, and his wife, sang at the affair.

Measures To Promote Air Safety

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. WILEY. Mr. President, the people of the United States demand increased measures to assure safety in the air.

The recent series of shocking collisions between planes has highlighted the growing problem of modernizing airport and technical navigation facilities so as to cut to an irreducible minimum the hazards of flight.

The crash of 2 airliners over the Grand Canyon in 1956, the crash, last month, of an Air Force jet and a United Air Lines transport in the Nevada area, the tremendous number of near misses recorded over major metropolitan centers—all these point up the problem.

Virtually every Member of Congress finds, at one time or another, that he must use the facilities of National Airport. This overcrowded airport will handle 4½ million passenger movements alone, in 1958.

It is the hope of all Washingtonians, public officials and private citizens alike, that plans for the new airport at Chantilly, Va., will proceed carefully, but with dispatch.

It is essential that the civil aeronautics authorities incorporate in the plans for the Chantilly Airport as many modern facilities and devices as will be necessary; not simply as of the time of completion, but for an extended period beyond.

Time after time we have seen how an airport, or an air navigation system, becomes obsolete practically the day it opens.

The safety of countless people is involved in making sure that every possible device which human ingenuity can install shall be used at Chantilly.

So, too, it is essential that elsewhere in the United States, in the crowded air corridors around Chicago, New York, Los Angeles, and other regional centers, men think ahead, plan ahead, and act ahead, so as to reduce the toll which, all too frequently, has been taken.

The jet age is upon us; jets cannot be stacked up in the air the way today's conventional aircraft can be stacked up—circling literally for hours over airports, awaiting landing instructions.

The speed of jets, the huge fuel consumption of jets, the runway problem of jets—all these and other factors make it imperative that we plan adequately for the jet age.

We dare not be pennywise and pound-foolish. We dare not risk an incalculable number of human lives because we are not sufficiently mindful of the problems of tomorrow.

Coming as I do from an air-minded State—a State with rising air traffic of

its own—I feel particularly strongly on the importance of modernizing navigation and relaxed systems, both automatic and man-controlled, so as to conform to tomorrow's needs.

I send to the desk two articles, both Associated Press dispatches from the past few weeks, which reflect the problems of the crowded skies. I ask unanimous consent that both be printed in the Appendix of the RECORD, together with an article from the May 11 issue of the Christian Science Monitor entitled "Too Many Near Misses."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CROWDED SKY GETS BLAME

WASHINGTON, D. C.—With all that sky up there, why do airplanes ever collide?

A Government study of air accidents, published Sunday, puts most of the blame on two factors:

1. Crowded skies near airports.

2. Very limited visibility from the pilot's seat of the average plane.

The findings were based on investigations of 50 collisions—90 percent of which occurred within 5 miles of an airport.

In many of the accidents, the report said, 1 or both of the pilots involved simply couldn't see the other craft, although 92 percent of the accidents were in clear weather.

The report, published by the Commerce Department, was written by R. Byron Fisher and Wayne D. Howell of the Civil Aeronautics Administration's technical development center at Indianapolis.

Fisher and Howell studied 50 accident reports culled from investigations of 92 collisions from 1949 through 1954. They selected only those mishaps in which investigators determined the angles at which the colliding planes approached each other.

They found that head-on collisions were a rarity, which isn't surprising since cockpit visibility is best straight ahead. Only 8 percent of the colliding planes met nose to nose.

About 80 percent of the accidents involved one plane overtaking another from the rear. Fisher and Howell noted that it is almost impossible for a pilot to see what's going on behind him.

Why couldn't the pilot of the plane behind see the fellow ahead? They had an explanation for this, too.

Since most of the mishaps were near airports, the planes involved generally were taking off or landing.

Take the case of two planes slowly descending for a landing. One may be ahead of the other, but at a lower altitude. The pilot of the rear plane can see straight ahead, but he can't see what's below him with the nose of his plane sticking out ahead of him. So perhaps he overtakes the plane ahead and glides right down into it.

Fisher and Howell said that more than 50 percent of air accidents might be prevented if airports could be equipped with some sort of anticollision equipment, even if it were effective for only a few miles.

While 90 percent of the studied accidents occurred within 5 miles of an airport, 25 percent took place directly over airports.

More than half of the collisions were at an altitude of 500 feet or less.

Of the 100 planes involved, 75 were private craft, 14 were airliners, and 11 were military.

AUTHORITIES LEARN NEW LESSONS FROM AIRLINER TRAGEDIES—BUT TOO LATE

LOS ANGELES.—The big silver airliner purred smoothly between cloud layers at 17,000 feet.

Suddenly, near Nellis Air Force Base, Nev.—but let airline pilot Bob Fox tell it:

"A flight of 3 jets dived from above right across our nose, missing us by about 150 feet.

"They were going so fast that there was no time to execute any maneuver at all."

This happened in January 1957 and Fox lived to tell about it—to the Civil Aeronautics Board. Others haven't been so lucky.

Last Monday in the same area an Air Force jet and a United Air Lines transport collided, killing 49 persons. Last February a Navy bomber and an Air Force transport collided over Norwalk, Calif., killing 48. Last year a jet and a transport collided and the big plane fell like a bomb into a Pacoima, Calif., schoolyard. Only 8 persons died—there could have been hundreds. Two airliners collided over the Grand Canyon in 1956, killing 128.

These accidents tragically point up the growing danger of aerial collision in the crowded skies over the United States. And the problem is probably more acute in southern California than anywhere else in the country.

Southern California—with its vast desert reaches and good flying weather—is ideal for military air training. Huge aircraft plants build and launch thousands of aircraft annually. Los Angeles is a tourist and business capital of the West.

All this makes for heavy aerial traffic.

For instance, last year more than 2,800,000 commercial, private, and military aircraft jammed the 10-mile-wide airways of California, the Las Vegas area of Nevada and the Phoenix-Tucson section of Arizona.

What's the answer?

From each disastrous collision officials have learned—belatedly, they admit—new lessons. After the Pacoima crash, the testing of aircraft was restricted to ocean and desert areas and all jet craft were banned from Lockheed Air Terminal. New flight procedures came out of the Norwalk crash, which still is under study. More lessons will be learned from the Las Vegas disaster.

Military pilots are warned about stunting or firing sonic booms in populated areas. Often their diving and rolling are only testing but mistaken by civilians as stunting, officials said.

Later this year when the jet airliners take to the air officials expect more headaches. Said one airline pilot: "Man, we're using Wright brothers rules and regulations and airways for supersonic planes."

Some airline pilots want military planes restricted to altitudes and areas where commercial planes don't operate. But an Air Force colonel answers: "We're all in this together because we all use Civil Aeronautics Administration facilities. We'll have to solve it together."

And pilot Fox concluded: "In the Las Vegas crash, both pilots were strictly legal—but it killed a bunch of people."

TOO MANY NEAR MISSES

An important factor in the problem of air safety is use of air space near busy airports by commercial liners, military planes, and private fliers all at the same time. This point is brought out by a digest of testimony taken before a congressional subcommittee looking into the collision between a large passenger liner and a jet training plane near Las Vegas, Nev., on April 21.

The picture of air traffic congestion is one which may well astonish if not alarm many laymen. Within the last 2 years, it was testified, there have been 2,000 near misses—or an average of about 3 a day—between planes on the Nation's airways.

So long as weather conditions permit operation under visual flight rules it is normal for numbers of military craft to penetrate commercial air lanes, as did the jet from Nellis Field, without notice to the civilian flight controllers on the ground. No specific regulations have been placed on the books to apply to the super-high-speed planes.

Offhand it might be assumed that the only way to separate military flying sufficiently from the commercial airways would be to relocate a number of fields whose approaches cross the flight lanes of nearby airports. But no one wants to handicap defense, and there are less drastic remedies.

The Government's Airways Modernization Board is at work on a program by which eventually all flying above 20,000 feet will be placed under instrument control no matter how bright the weather. This would apply to military and private aircraft as well as airliners. Probably instrument control would have to be brought down to lower levels at landing fields. And military planes, it would seem, should certainly obtain civil as well as military ground control clearance before entering commercial airway levels.

The work already under way toward equipping United States airways for fully controlled flight must be pressed forward with all speed if America is to keep ahead of the demands of the jet air age.

Sputnik and the Educational Crisis

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. PROXMIRE. Mr. President, Miss Malvina Lindsay calls attention to the discouraging fact that the public's interest in education, which was white hot after sputnik went up, has proved to be short-lived. Once we had successfully launched our own Explorer, the interest in crash programs and massive reconstruction swiftly waned.

Perhaps it is just as well that this is true. The real needs of American education do not depend on the missile race for their validity. We must get genuine, continuous public support for building an educational system that will meet all the needs of our society.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Miss Lindsay's column, entitled "In Sputnik's Wake: School Apathy", which appeared in the Washington Post and Times Herald on May 15.

There being no objection, the column was ordered to be printed in the Appendix of the RECORD, as follows:

IN SPUTNIK'S WAKE: SCHOOL APATHY

(By Malvina Lindsay)

The public, which so recently was aroused over sputnik and eager to mass-produce scientists and start crash programs in education generally, now is showing waning interest in this undramatic and long-range activity.

Bills providing aid to school construction seem to be bogged down in congressional committees by partisan wrangling. And Members of Congress are receiving relatively little mail concerning them. Yet their mail was heavy when legislation relating to pay television was before Congress.

Also in many communities the drive to counteract this Nation's lag in education has

been stalled or detoured by indifference or by group controversy.

Is it that American grassroots sentiment responds only to acute crisis? Is our emphasis on material values so great that only legislation relating to things moves us? Are we incapable of interest in long-range goals?

Excitement over sputnik could not have been expected to continue at fever pitch. Nor could all the earnest resolves that grew out of that fright retain their burning zeal. But more follow-through was to be counted on from a people that had been fully informed about the weakness of their educational ramparts.

Meanwhile the need for action grows. A study of school overcrowding made public yesterday by the National Education Association shows that about 300,000 city grade-school children are on half-day schedules, compared with around 250,000 2 years ago. More than half of urban grade-school children are in overcrowded classes. Testimony before a House education subcommittee showed that about 800,000 children in all grades were on half-day schedules.

Oversized classes are one of the major handicaps to discovery and development of talent, to maintaining of discipline, and to helping each child realize his potentialities.

If the public is unmoved by educational lacks under its nose, small wonder it is even more unmoved by what those lacks are piling up on the the horizon, namely, loss to the totalitarian world of the battle of productivity.

Not only scientists, but persons highly trained in all walks of life will be urgently needed if the economy of tomorrow is to expand rapidly enough. By 1956 a 35-percent increase in numbers of workers in professional and technical fields will be required, the United States Department of Labor estimates.

Two House education subcommittees have just approved a $240 million, 4-year aid program to improve science and language training in elementary and high schools. A $260 million program of scholarships and loans for science and mathematics students has also been approved. But the basis for such programs must be laid in all-around improved teaching and facilities in elementary schools.

Controversy over feudal domain in one form or another is largely responsible for slowing up educational defense. The bogey of Federal interference with State educational affairs causes some opposition to proposed legislation. Meanwhile, many States are not able or willing to step up adequately their own expenditures for education. But the effects of a lag in education in any region soon permeate the whole national economy, since the fruits of ignorance, like those of talent, cannot be confined within State borders.

While many parents now are deeply concerned about half-day schedules, overcrowded classes and deteriorating instruction in the schools their children attend, they do not seem to be able to take the political steps that would promote action to change this. Then, too, educational legislation lacks highly paid lobbyists and well-organized pressure forces. It lacks glamour, tangibility and attention-getteing devices. It faces the same problem as American foreign policy—that of getting public support for its long-range needs.

The more discouraged proponents of a bold, dynamic educational offensive say that the best hope for it would be for the Russians to put a man on the moon or to announce that as a result of Soviet productivity every man, woman and child would receive a big Zil car. There may be danger of such salvation coming too late.

Plight of the Rural Electric Cooperatives

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. YARBOROUGH. Mr. President, the April 1958, issue of Rural Electrification, the publication of the National Rural Electric Cooperative Association, contained an extremely illuminating editorial dealing with one aspect of the REA co-op problem.

This editorial underscores the interrelationship of the income and welfare of the small-family farmer and the financial stability of the REA co-ops throughout the country.

The REA co-ops have entered into area coverage covenants with the Rural Electrification Administration by which they pledge themselves to provide electricity to all those in the area of each co-op who are not served by other distributors of electricity. However, because of the ever-expanding size of the American farm, caused by the hundreds of thousands of small farmers who are leaving for the cities each year, and other factors resulting from the Eisenhower-Benson administration's farm policy, the rural electric co-ops are faced with 325,000 idle services on their systems.

Many of the problems of the REA are caused by the lowered income of the small-family farmer and the fact that many of them have been forced off the farms.

The article also delineates the services being rendered by the REA. Guarantees for lines and services have not declined one iota, despite the large decline in population.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "Idle Services: Plight of the Rural Electrics," which appeared in the April 1958 issue of Rural Electrification.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IDLE SERVICES: PLIGHT OF THE RURAL ELECTRICS

Today the rural electric cooperatives have a gigantic problem with some 325,000 idle services on their systems.

When the rural electrics entered into the area coverage covenant with their Government, it was done without any reluctance on their part, for it was the cooperative members' strong wish and desire to offer electricity to all those unserved who wanted it. The combination of this unselfish attitude and the generosity of the Government's social decision in requiring it has now come to plague the feasibility of many rural electric cooperative systems.

Due to a number of reasons—the original economic unfeasibility in some areas of providing area coverage, the increase in size of farms, the soil-bank program, the reforestation program, low farm income, etc.—the rural electrics now find themselves with these 325,000 nonrevenue producing services, and many other connected services that do not pay their way. This is a staggering nonrevenue producing investment amounting to about $100 million which must, nevertheless, be repaid by the other remaining rural users, with interest.

To force the rural electric cooperatives into the private market to borrow their funds, with interest rates and service charges probably totaling 6 percent, as proposed by the administration, would be like cutting the jugular vein of the patient while he is undergoing a serious operation; the patient could not hope to survive.

And this is precisely what the administration's Wall Street anti-REA proposal would do—cut the rural electrics' jugular vein.

The rural electrics are successful—but barely so—despite their burdensome area coverage and the 325,000 idle services, and they will continue to be if they are not crippled by the administration.

The President's Press Conference on May 14, 1958

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. FULBRIGHT. Mr. President, the transcripts of the press conferences held by the President of the United States are printed in their entirety by very few newspapers throughout the Nation. The CONGRESSIONAL RECORD, on the other hand, is accessible to, and is read by, hundreds of thousands of our citizens who attempt to keep themselves informed of happenings in our national and international affairs.

Because I think these persons should have ready access to the complete transcripts of the President's news conferences, I ask unanimous consent that the transcript of the press conference of Wednesday, May 14, 1958, as printed in the New York Times of Thursday, May 15, be printed in the Appendix of the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

[From the New York Times of May 15, 1958]

TRANSCRIPT OF THE PRESIDENT'S NEWS CONFERENCE ON FOREIGN AND DOMESTIC AFFAIRS

President EISENHOWER. Good morning. Please sit down. This morning I have one short announcement. You people know that there are very delicate situations now in Lebanon and Algeria. These situations can well be very grave as they develop. We are watching them closely, and that is all I can say about the matter, because I believe any words now when emotions are so stirred and extremism can be voiced all around the world, that it is best for the moment to say nothing about them. So I will have nothing to say. This is not usual; I assure you. It is not my custom to do this, but that is what I think should be done this morning.

1

MARVIN L. ARROWSMITH, of the Associated Press. Mr. President, how do you assess the current wave of anti-American demonstrations in South America against the Vice

President? Do you see any pattern of Communist inspiration, or could it also be a case of genuine resentment against United States policies?

Answer.—Well, you have raised a very interesting but a very complex picture. I don't think there is any single cause. There is always—there are economic causes.

For example, in Uruguay, you may know about the difficulties there have been about these packing plants that were originally owned by United States firms and which can no longer make a living, and they—where they want to get rid of them. There is the—in Bolivia, you have always the tin problem.

In Peru, you have the very low prices of, current prices of lead, zinc, copper, and so on.

And in Venezuela, on the economic side, you have had these rumors that the United States was ready to—was trying to impose quotas upon a country, quotas on the oil-producing countries; and, of course, there is no truth to this last one at all.

But there have been economic difficulties, and it's—one reason that we are so certain with these developing countries and with many of them dependent on raw materials for their living, they have got to have trade. They have got to trade with us. They have got to have some aid, and the economic aid programs of this country today, and trade programs, in my opinion, are as vital to our security as any defensive measure we take.

Now, as to whether or not there are Communists in all these, there is a habit, as we know, of the Communists to try to exploit and take leadership in any unrest that is latent or developing, and if they can bring it out in the open as a real riot, why, that seems to be a practice of theirs and there has been sort of a pattern around the world: in Burma, Jakarta, in South America, other places, that looks like there is some kind of concerted idea and plan that is followed.

So, while I think no one would be so bold as to make direct accusation, the fact is that it looks like a lot of case, a case of where there is a lot of smoke; and, therefore, there is probably some fire.

2

RAY L. SCHERER, of National Broadcasting Co. Mr. President, could you discuss the considerations which led to the dispatch of troops to the Caribbean?

Answer. Well, it is the most—it is the simplest precautionary type of measure in the world. You—we had reports yesterday that were serious. We knew nothing of the facts. We could get no reports from the outside, other than telephone calls from the Embassy; and not knowing what was happening, and not knowing whether the Peruvian (Venezuelan) Government might not want some aid from us, we simply put it at places where it would be available, in reasonable amounts, and in bases that were well within the American zone; and that is all there was to it. There was no——

(There was a chorus of "Mr. President.")

Answer. There was no—no—even no offer was made to the Peruvians (Venezuelans). The idea was only in the case they would want to ask it, would we even think of it.

(The President conferred with his press secretary, James C. Hagerty.)

Answer. I kept saying Peruvians; I mean Venezuelans.

3

PETER LISAGOR, of the Chicago Daily News. Mr. President, I would like to ask whether we anticipated these demonstrations would be as violent and furious as they were and whether, in the light of that any thought was ever given to canceling out a part of the Vice President's schedule to prevent them?

Answer. No. These things were discussed, but there was no thought given to canceling Mr. NIXON's visits to these countries.

In each case he was invited by the Government and, as you know, many of these state leaders or Presidents-elect have come to visit this Government.

It is a courtesy to return their call when you can, and, moreover, it was because of his ability to discuss with leaders down there some of the problems that I just referred to, some of your economic problems, and in the hope that we could reach better understanding, that such a trip as that is undertaken.

Now, no one, I think, anticipated the violence of—particularly this last riot, and I think possibly everybody there was a bit caught by surprise.

4

LLOYD M. SCHWARTZ, of Fairchild Publications. Mr. President, some members of the Commerce Department's Business Advisory Council have just recommended that you ask for a moratorium on price and wage increases. I wonder whether this strikes you as a practical approach to the recession problems?

Answer. Well, this asking a moratorium, I think that is merely trying to use persuasive powers to get them to avoid both price and wage increases. Now, some of them, I think, already are scheduled, and I don't know, I would have to take a look at that as a feasible suggestion. I have constantly urged that both business and labor leaders take a very long look at this problem, and to see whether the persistent wage-price spiral is not a thing that we must get away from in the long run or we are going to suffer for it.

5

Mrs. MAY CRAIG, of the Portland (Maine) Press Herald. Mr. President, Governor (Leroy) Collins, of Florida, in a recent article in Look magazine, surveys the segregation system in the South, and what he says he is determined to see in Florida, point 2, is this:

"Segregation of the races in public schools and recreational facilities will continue in any community where its abandonment would cause deep and dangerous hostility."

My question is: Do you intend to follow the Little Rock pattern in other States where there is hostility to it?

Answer. Well, what do you mean by the "Little Rock pattern"?

Question. Sending in the Federal troops.

Answer. For what?

Question. As you said, to obey a court order.

Answer. That is right, to obey a court order; and that is the point. I did not send troops anywhere because of an argument or a statement by a Governor about segregation. There was a court order, and there was not only mob interference with the execution of that order, but there was a statement by the Governor that he would not intervene to see that the court order would be exercised. That is exactly what I did.

Now, I don't know, I am not going to try to predict what the exact circumstances in any other case will be.

But I do say this: I deplore the need or the use of troops anywhere to get American citizens to obey orders of constituted courts; because I want to point this one thing out: There is no person in this room whose basic rights are not involved in any successful defiance to the carrying out of court orders.

For example, let us assume one of you was arrested and you were arrested by a sheriff who didn't—who was—didn't think what you were doing in the particular town was correct, and the town was inflamed against you but the Federal judge says—this being, let's say, taking place on some Federal property, the Federal judge comes in and says he will issue a writ of habeas corpus and you are in jail, unjustly, illegally, unconstitutionally.

But there is now power there, no one—the Governor won't intervene; the marshal of the court is powerless, no one can do anything.

Now, what is a President going to do? Now that is a question you people answer for yourselves. I answered it for myself.

6

CHALMERS M. ROBERTS, of the Washington Post and Times Herald. Mr. President, you said a few moments ago that these anti-American demonstrations or outbursts of one kind or another around the world appeared to look like some kind of a plan or concerted idea by the Communists.

Answer.—Well, I said no one thing could be, have—take the full blame for any of these, but I did say that there did look, in this particular case, that there was a pattern.

Question.—What I wanted to ask, Sir, was do you see this as an effort to provoke these incidents or to exploit incidents arising for other reasons?

Answer.—Well, I think that a large part of it would be exploitation. As a matter of fact, I have been through this myself. In 19— in January 1951, the President (Truman) sent me to 12 capitals, I believe it was, in 14 days, 18 days.

It was a very difficult trip, I assure you, in midwinter, and that both in 2, and I think 3, of the big European cities, there was placards from one end to the other that they were going to—there was going to be a demonstration here that would chase the Americans, and particularly the old general back to the United States.

Well, they fizzled out because, fortunately for me, I still have a name over there as being sort of the liberator of the country, so that the Communist papers, which, in possibly 1945 were saying I was a very great fellow, had a hard time now to say I was a villain.

And so—but I do know something of, I experienced some of, these things, and when you are living in a house where the fences around are all painted "Go Home Ike", and all that, why, you feel it. But I think that they are largely efforts to exploit situations rather than to by, you might say, de novo create them.

Question. Would it violate your initial admonition to us to ask whether in this group of situations that you were talking about you do include the French Algerian and Lebanese situations?

Answer. Well, I would say I really can't talk about them because they are not necessarily the same kind.

7

PAT MUNROE of the Chicago American. Mr. President, several months ago, Senator (EVERETT M.) DIRKSEN, Republican of Illinois, recommended Robert Teakin for the United States court of appeals in Chicago. Teakin is now being investigated by a House subcommittee. I wonder if you intend to nominate him, sir?

Answer. Why, I have never made such a—I never indicated in any way a decision about the possibility of appointing him. There are all sorts of investigations of numbers of people before an important appointment is made, and I haven't in this case anything to say at all.

8

MCLELLAN SMITH, of the York (Pa.) Dispatch. Mr. President, the day before Mr. NIXON arrived in Montevideo, Uruguay, the government seized that private plant down there financed by American capital. They did that at a time when this administration is trying to get private capital to invest more money abroad in foreign countries. Now, my question is this: If we permit this thing to occur, isn't it going to damage this

program of sending of private capital abroad? Are we going to make any representations to the Uruguayan Government, or are we just—let them take the plant?

Answer. Well, I am not going to discuss this thing in the great—in the detail that it would require, if you were going into all the differing situations. But you must admit that Uruguay was suddenly facing a very emergency situation, because the American parties wanting to get out of this business, they no longer could make any money, and they were trying to find purchasers; and, therefore, it looked like there was going to be no meatpacking taking place for the Uruguayan population.

And remember this: There is no country in the world that is precluded from seizing property as long as it is ready to give just compensation. In our own country, right here, a State can take—a State, any State, can take private property from you. It does have to give just compensation.

Now, to say we are ignoring the situation is, of course, beside the point. We, of course—we are keeping in close touch with it. But there are, as I say—this isn't a usual thing, and you cannot generalize that this is Uruguayan practice. They have not done this before.

9

GARNETT D. HORNER, of the Washington Star. The Washington Star is urging in a frontpage editorial today, sir, that the people of Washington turn out in force when Mr. NIXON returns tomorrow to show him that there are some people around who like him [Laughter.]

Answer. I am one of them.

Question. I am asked to ask you, Sir, if you plan to meet him at the airport and if you think it would be a good idea for all Government workers to be let out [Laughter]. So they can do likewise?

Answer. Well, as a matter of fact, while normally it would—while it would be creating a precedent, because of my admiration for his calmness and fortitude and his courage in very trying circumstances, I would like to make some special gesture.

Now, just exactly what my morning schedule will permit, I am not sure; because I don't know what time he is coming yet, and I certainly won't know until after his evening's program in Venezuela is completed.

But as far as—if it were feasible, if it is feasible and you could take the governmental workers that are on the line of march, and you found out the time or the route of entry in the city, if in a half-hour's time we could give them out 45 minutes or an hour, why I would be all in favor of it, but I haven't yet seen any scheme for doing it. But I would go along with your spirit of your editorial, anyway.

10

JOHN SCALI, of the Associated Press. Mr. President, Vice President NIXON was tentatively planning to visit Europe on a goodwill visit sometime this fall. In view of the demonstrations that he has encountered in Peru and in Venezuela, do you see any need for him to reconsider his trip?

Answer. I wouldn't think so. If I were making it, I wouldn't reconsider; and I don't think he would think of it for a second.

[There was a chorus of "Mr. President."]

Answer. This lady right here. You.

11

MARY PHILAMENE VON HERBERG, of the Pacific Shipper. During the Senate hearing yesterday——

Answer. You will have to speak a little louder.

Question. If I have to tell you my whole name, it is kind of hard. During the Senate hearing yesterday on a bill to construct the superliner passenger vessel for the Pacific, and one for the Atlantic, this bill passed the House by an almost 3 to 1 vote, a controversy arose between the Defense and Commerce Departments. The Defense Department says it desperately needs these ships in operation now, so that in time of an emergency they would be able to carry troops. The Commerce Department says they want the ships for trade, but they are kind of against the financing, the only financing on which the operators say they can buy these ships. Do you have any comment on that?

Answer. Well, they brought the thing to me yesterday, but it has not been—I have not been given an analysis which yet makes me—give he yet the right to make a judgment. I will take a look at it.

12

WILLIAM MCGAFFIN, of the Chicago Daily News. Mr. President, Congress will have to take a look at taxes no later than June or otherwise certain taxes will expire. And there is a feeling in doing so Congress may decide to cut the income taxes. If they do, will you go along with them or will you veto the measure?

Answer. Well, again you are asking me to always prophesy, and I really——

Question. The tax cut, Mr. President, is very much in the news.

Answer. Well it may be, but I still don't see any reason to say anything more about the tax, and I have told you people time and again that the Secretary of the Treasury (Robert B. Anderson), the leaders of the Senate and the leaders of the House are watching this every day, when is the time to take it up, and exactly what the measure should be. So, I'm——

Question. Do you agree you will have to——

Answer. What is that?

Question. Do you agree, sir, that a decision will have to be made before the end of June?

Answer. A decision is going to have to be made soon.

13

EDWARD P. MORGAN, of American Broadcasting Co. Two questions relating to civil rights, Mr. President.

Senator JAMES O. EASTLAND, Democrat, of Mississippi, is boasting that he is going to get reelected by blocking your civil-rights program.

Your nomination of Mr. Wilson White as Assistant Attorney General has been bottled up in his Judiciary Committee for months. Do you plan to push for his confirmation?

Item No. 2. Virginia schools, several of them are under Federal Court order to desegregate in September. What is the Federal Government doing now, if anything, say, by quiet FBI investigations, informal talks with civil leaders to prevent in advance a recurrence in, say, Arlington, of the Little Rock incident?

Answer. Well, I don't believe that you can start a gestapo around here, Mr. Morgan, and have secret police going down into every place they can to worm out of people what their evil intentions can be.

Now, what I think is this: Everything we say, everything we do must be to support the law of the land, as interpreted by the Supreme Court, whether or not we always individually approve it.

Now, so far as getting Mr. White approved by the Senate, you do what you can. But if a Senate chairman wants to bottle that appointment up for a long time, you have a very difficult situation; and I, for one, have not yet found a really good way to get it out of there.

14

RAYMOND P. BRANDT, of the St. Louis Post-Dispatch. The latest reports show the gross national product still going down. Have you any plans to revive your ideas about public works to increase employment and expenditures?

Answer. Mr. Brandt, I don't believe for 1 second that any—except without—I will put it this way: With minor exceptions that there is any additional public works to be decided upon, brought into the appropriations picture and finally built that will do anything for this present recession.

I don't believe that, I don't believe that anything beyond small things in the agricultural field or upper—upstream things where workmen can go to work very quickly, and acceleration of programs already started, for example, your post office and all that sort of thing. That is the kind of thing that will bring some people to work. But to start new plans, it will be 2 years before they will be actually in construction.

15

JOHN HERLING, of Editors Syndicate. This is on the extension of unemployment insurance. In your message to Congress, you asked us to act promptly, energetically, and broadly, to temper the hardship of workers.

Answer. That is right.

Question. Whose unemployment has been exhausted or prolonged, rather, and, under the current bill having administration support, governors of about 24 States said they can't act without special legislation or even constitutional amendment.

Now, most State legislatures are not in session or have just adjourned. It means a lot of delay. In view of this, will you continue to support the current measure?

Answer. Are you speaking——

Question. If not, sir, do you have alternative measures in mind?

Answer. Are you speaking of the amendment that was accepted in the House that the States themselves would have to show their——

Question. Yes, sir.

Answer (continuing). Readiness?

Question. Yes, sir; so-called Herlong amendment.

Answer. Yes. No, I can't say anything further on the thing at the moment. I better would have to see the bill come out as it was finally written, and then to determine exactly whether the States can do it or can they not. I, personally, thing they can.

16

ROD MACLEISH, of Westinghouse Broadcasting Co. Mr. President, sir, we talked a lot this morning about demonstrations and anti-Americanism around the world. Do you think, sir, that there is a failure in articulation on the part of our country to make its intentions and philosophies well known to people, a failure to articulate clearly the things we really believe in, and the policies we hope to enact?

Answer. Well, I tell you, I think that is, that attempt is made, that is sure, and I think that a very great deal of it goes out. But you must simply—here is one thing we must not forget: Among equals, the greatest and the richest and the strongest is bound to create some envy, and when you have any incident, therefore, that incites or brings to the surface this latent dislike or envy, well then, there is trouble.

But, by and large, we have spokesmen all over this country, we have our own press associations that are sending out news all the time. I think that so far as people want the news and the truth and the facts, including the intentions of this country and its—and the underlying basic peacefulness of our people, I think they can get it just as easily as they can get news of their own country.

17

FRANK VAN DER LINDEN, of the Nashville Banner. Sir, do you think that the need of the Marines and the airborne troops in the Venezuelan situation would imply that we should have an increase of strength of the Marine Corps and the airborne or certainly no further cuts in strength?

Answer. I don't say any such thing. We took 2 companies of troops of 2 types to put them at little stations where they could go somewhere. Now, you are going to make out of that a great big program for [laughter] for revising the entire defense establishment, that is a little far-fetched. [Laughter.]

FRANK HOLEMAN, New York Daily News. Mr. President——

18

JOHN M. HIGHTOWER, of the Associated Press. Premier Khrushchev within the last few days has accepted, or so it appears, a proposal of yours to hold some technical talks on test control measures. Do you expect now to go forward with these talks and send him a new letter in a short time?

Answer. I didn't understand the last part.

Question. Do you expect to go forward with these talks, and will you be replying to his letter shortly?

Answer. Well, of course, we will be replying to his letter shortly. Right—at the meantime we are discussing with our allies their ideas on the way this could be done, and we would certainly expect some kind of agreement very soon, and a substantive answer made to Mr. Khrushchev.

19

SARAH MCCLENDON, of the Camden (N. J.) Courier Post. Sir, we hope to build that superliner in Camden and I wanted to ask you another question about it.

Answer. Yes.

Question. I didn't quite understand. I take it you would not insist on private financing of this big vessel or these two vessels?

Answer. I say that the two questions brought up, I haven't heard of this argument until a few days ago, because I didn't know it had arisen, in the way it is—it has—and I will have to decide between the two as far as the administration system, the administration part is concerned.

Now, for my part, let's make no mistake I believe in private financing; but, if we have got to have this, these ships, because of defense purposes, which, and I just have a letter, I think, last evening on a—a very persuasive letter on it—if we have to do that, well, of course, the Government has to pick up some more of the tab.

But, to my mind, it is really—when we go beyond the ratios and the formula set down by the Maritime Act, then we ought to have a very clear, definite need and that is the thing that has to be decided.

20

CARLETON KENT, of the Chicago Sun-Times. Mr. President, has Admiral (Lewis L.) Strauss indicated to you whether he will accept reappointment (as Chairman of the Atomic Energy Commission)?

Answer. I don't know for sure that he will or will not, I don't know yet.

21

Mr. HOLEMAN. Sir, on May 26 the Navy plans to rebury the selected, the unselected, unknown World War II at sea. Do you approve of that, sir, or do you think there are enough unknowns in the ocean already?

Answer. Well, I will tell you, this is a delicate question, and I believe if any great service believes that the deep sentiment of orphans and widows would be, would be benefited by some kind of ceremony that symbolized the sacrifices of our seamen, then I would be in favor of it.

Now, this—of course, we have lots of unknowns. There is no question about it. Maybe the mere ceremony of another kind would do it. But these people have thought and studied and certainly have inquired from those that are the most deeply affected, and I would go along with it for that reason.

22

SPENCER DAVIS, of the Associated Press. Mr. President, you spoke a little while ago, sir, about the trade and aid program being as vital as any defense measures.

Answer. That is right.

Question. Are you satisfied that the programs that you have before Congress are proceeding in a manner which will be compatible with your wishes?

Answer. Well, now, let's make very clear the administration's first duty is to work out a program is any important subject, in these two we are talking about, MSA (mutual security) and world trade, and you have—you do it after long prolonged study with all the departments and many civilians invited to contribute their knowledge and opinions, and finally you put before the Congress a program, you believe in it. It is the program that you think should be done, should be enacted.

But, after all, the legislative process is largely not in the hands of the President, except for the—his recommendations to them, and finally his part in approval or disapproval of the legislation.

Now, I am the last one, therefore, to say that everything I want to is be done by—on a rubberstamp basis, and without the Congress taking the kind of reaction that will show their considered opinion of what they think about the thing.

Now, I will do my very best to persuade them I am right, because I think I am, but that doesn't mean that in any detail I could find it difficult to—some detail of procedure or any other things of that kind, that I couldn't accept it cheerfully.

23

ROBERT ROTH of the Philadelphia Bulletin. Mr. President, are you going to Gettysburg on Tuesday to vote in the primaries, and if so, will you tell us for which Republican candidate for governor [laughter] you will cast your ballot?

Answer. Well, you must have asked the last part of the question for a laugh. [Laughter.] I am going to, if I possibly can make the arrangements. It is not too easy because, among other things, I have got a big engagement in New York Tuseday night, and we have got things around here these days that are on sort of an hour-by-hour basis. But if I possibly can, I will be up in Gettysburg to vote in the primaries.

Mr. ARROWSMITH. Thank you, Mr. President.

Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. HUMPHREY. Mr. President, recently there appeared in the Kansas City Star an excellent editorial entitled "This Area Has a Huge Dollar Stake in Trade." The editorial strongly supports the extension of the Reciprocal Trade Act. It supports this extension not on the basis of academic theory or political philosophy. This support is based on solid economics—economics which reveal the importance of trade to the Midwest.

This same theme and argument was stated in a persuasive and convincing manner by the Secretary of State, John Foster Dulles, in his address on the occasion of the Minnesota centennial celebration in the University of Minnesota Stadium.

I ask unanimous consent that the editorial and a newspaper article concerning the speech of Secretary Dulles be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Kansas City Star of May 12, 1958]

THIS AREA HAS A HUGE DOLLAR STAKE IN TRADE

The overshadowing reason for reciprocal trade is national survival in a world trade war with Soviet Russia. But many Congressmen seem to be more affected by the immediate pocketbook interest than the long future of the United States.

So, we submit, this dollars-and-cents motive also supports reciprocal trade. This is particularly true of the agricultural areas, notably the Kansas City trade territory. Without foreign trade the farm problem would be far worse than it is today. We can't expect the people of other countries to buy wheat from us unless we buy something from them.

The United States exports goods and services valued at $19 billion a year. Take another look at that figure—19 billion. It is about half the prodigious outlay for national defense. The supporters of reciprocal trade have figured that these products sold abroad account for 5 million jobs. The protectionists disagree, but we have yet to see a clear answer to the claim of 5 million.

Now look at the specific interests of agricultural America and the States of Missouri and Kansas.

The United States is the world's largest exporter of agricultural commodities, supplying 22 percent of the world agricultural exports. The proportionate share of wheat exports for Kansas alone exceeded $180 million in 1956–57. The State's sorghum exports were valued at $6,219,000. In addition:

Kansas dairy product exports: $3½ million.

Kansas corn exports: $3.2 million.

Kansas livestock and livestock product exports: $18 million.

That adds up to an impressive foreign market for the Kansas farmer. To little Switzerland alone Kansas, in 1956–57, exported grain, meat products, machinery, and chemicals valued at more than $4 million. And Switzerland is not one of America's chief customers. Part of this—actually less than half—was sent abroad under Public Law 480, a program which was devised to move agricultural surpluses. But 480 is a temporary setup. The abundance of American farms proves the need for permanent, long-term markets. Without such markets, it is easy to visualize a crushing farm surplus problem.

Another Department of Commerce survey shows the effect of reciprocal trade on Jackson County. Sixty percent of the country's workers are employed by industries which have large foreign markets. It is estimated that in 1956 Jackson County's share in exports by those industries exceeded $51 million. Industrial production of that amount can mean a lot of jobs.

Advocates of reciprocal trade admit that certain industries have been hurt by foreign imports. For the Missouri-Kansas area, mining is the chief example. Definite efforts are being made in Washington to provide some sort of help for America's mines.

But on the other side of the coin are the millions of jobs, industrial and farm, that result directly from reciprocal trade. That is the hard-headed economic case for the program. Yet in Washington there is still little enthusiasm for reciprocal trade, even among the lawmakers from States that have a vital economic interest.

Among some Kansas Congressmen—not all—this lack of enthusiasm is particularly evident. Apparently they have listened to the oil interests from their State, and the oil lobby, hurt by cheaper foreign imports has become particularly vociferous. The Farm Bureau and other large farm organizations support reciprocal trade but the farm interests aren't as active as the oil lobby.

It's up to the individual voters to remember that this area's pocketbook interests are on the side of reciprocal trade.

Any of its Congressmen who vote against reciprocal trade are voting openly against the farmers and a majority of manufacturers and workers of the area. More important, they are voting against the Nation that is engaged in a desperate world trade war with Russia.

DULLES URGES RECIPROCAL TRADE PACTS FOR PEACE

MINNEAPOLIS.—Secretary of States John Foster Dulles called Sunday for a renewal of the reciprocal trade agreements program as necessary both for the Nation's economic welfare and for international peace.

Dulles, who returned from Europe Sunday, spoke at a Minnesota centennial celebration in the University of Minnesota Stadium. He came here from Paris after attending a meeting of the North Atlantic Treaty Organization council of ministers in Copenhagen, Denmark.

The world cannot survive in peaceful prosperity, Dulles said, if each nation emphasizes only its independence and neglects interdependence.

The United Nation stands for interdependence, he said, but it has weaknesses in certain areas. It has great influence on countries that have a decent respect for the opinions of men, but little influence with nations that lack such a respect, he said.

THE CHEAPER WAY

Dulles said it has been necessary to supplement the U. N. with other security measures, such as NATO, Southeast Asian Treaty Organization, the Baghdad Pact, the Pan-American Union, and the Organization of American States.

"By United States participation in such regional defense groupings," he said, "we supplement the United Nations where it is weak."

It is far cheaper for the United States to get its security through foreign mutual-aid programs, he said, than to raise and maintain the additional military forces it would need if it stood alone.

Among the dignitaries on the platform to hear Dulles speak were Princess Astrid of Norway, Prince Bertil of Sweden, Prime Minister Einar Gerhardsen of Norway, Prime Minister H. C. Hansen of Denmark, Prime Minister Reino Kuuskoski of Finland, and Gen. Lauris Norstad, supreme commender of NATO forces. Diplomats representing 25 countries also were present.

AN ALL-OUT EFFORT

Dulles' appeal was part of an all-out effort by the administration to get through the hostile House Ways and Means Committee its bill to extend the reciprocal-trade program for 5 years.

Several committee members have said the measure will not be approved unless the administration agrees to key changes. The administration has refused to compromise.

Dulles said the embattled program provides United States farmers and industrial workers with assured markets throughout the world. He warned against a reversion to the high tariffs of the early 1930's which he said helped drive Germany and Japan to extreme nationalism and did nothing to pull this country out of the depression.

Hospitalized Veterans Aided by UAW Local 72 Program

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. PROXMIRE. Mr. President, a report has just come to my attention of the splendid service which members of United Auto Workers Local 72 in Kenosha are giving to hospitalized veterans. This is a wonderful story of compassion and genuine humanity. Members of this union—headed by a group of union members who are themselves war veterans—perform many personal kindnesses for hospitalized veterans in Veterans' Administration Resthaven Hospital at Waukesha.

Surely everyone concerned in this heart-warming enterprise deserves the warmest commendations of all of us. This includes officials of American Motors Co., and of the Kenosha Evening News for the fine recognition which it has given to this activity.

Mr. President, I ask unanimous consent that this report, which appeared in the Kenosha Evening News, of Kenosha, Wis., on April 24, 1958, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOSPITALIZED VETERANS AIDED BY UAW LOCAL 72 PROGRAM

One of the lesser known programs sponsored by UAW Local 72 is the outstanding service rendered to hospitalized veterans.

The activity is conducted by the veterans committee of the city's largest union and it's probably the only organized group visiting veterans at the Resthaven Hospital at Waukesha on a monthly basis. In addition to regular visits on the third Thursday of each month, the union has adopted between 24 to 30 patients in 5 wards as their special charges.

Personal items including shaving cream, toothpaste, brushes, candy, gum, cigarettes, stamps, stationery, pens, pencils, and cookies are given to the veterans on the regular monthly trips. The visiting committee is usually composed of 2 members and 2 members of the union's auxiliary.

Last year the committee spent a total of $1,530. This included gifts not only at Resthaven but occasional trips to veterans hospitals at King, Tomah, and Wood, Wis.

The committee was established in 1942, and since this program was started the Kenosha union has spent more than $18,000 for veteran hospital activities.

When Christmas time rolls around, local 72 gives in addition to its Christmas goodies a $5 bill to each of its adopted veterans.

Last week the union committee went a step further and presented the hospital with fishing equipment for the vets. Committeemen are also planning on sponsoring fishing trips to a commercial fishing pond located near Waukesha.

Financial aid to help supply the Woods veterans hospital with an organ and remodel its auditorium is another local 72 project.

The veterans committee and local 72 also remember others who have made contributions to this Nation's defense.

If a veteran obtains a job at American Motors within 90 days after his discharge and works at AMC for a year, he may add his service time in computing seniority and other union benefits.

On the legislative scene, local 72 has sponsored the State law which gave an additional auto license tag to disabled veterans. Other committee functions include attendance at hearings in Madison on bills of interest to veterans.

The entire local 72 vets committee is comprised of veterans of military service. The group includes Raymond Gerl, chairman; Ronald Broesch, vice chairman; Theresa Van Der Wee, secretary; Louis Greenwald, Edward Raiman, Robert Spence, Stanley Jensen, and Walter Vaughn, board members.

Brannan Farm Plan Applied to Metals

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Brannan Farm Plan Applied to Metals." The article was written by Mr. Leland DuVall, of the staff of the Arkansas Gazette, and published on May 7, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRANNAN FARM PLAN APPLIED TO METALS

(By Leland DuVall)

The Eisenhower administration has revived the provisions of the Brannan farm plan and has appealed to Congress to provide the necessary appropriations for the price-supporting operation.

But there is one small catch to the maneuver, so far as farmers are concerned: The renamed and revamped Brannan plan would be applied to the prices of copper, lead, zinc, acid-grade fluorspar and tungsten.

The administration—and particularly Agriculture Secretary Ezra Taft Benson—has chided leftover supporters of the farm pricing system, except as it is applied to wool. The wool program is in operation, with Benson's blessings.

For the benefit of those who may not remember 1949, the Brannan plan called for a price support system for perishable farm commodities that would allow the price to move freely according to supply and demand. If the price fell below the level at which producers could make a living, the Government would provide supplemental payments. Charles F. Brannan, Agriculture Secretary for President Truman, argued that the free price would assure full consumption while the Government payments would provide

farmers with an income that would provide for an adequate standard of living. The plan was rejected, despite the fact that it was offered only in connection with the sale of perishable products. John Foster Dulles, campaigning for the United States Senate, denounced it as an "economic jabberwocky" and other critics referred to the proposal as a sinister form of socialism.

There have been few expressions of surprise at the fact that the Eisenhower administration has made the Brannan plan provisions the backbone of its program for the price support of the five metals. Interior Secretary Fred A. Seaton proposed the set market price floors and the subsidy plan at a hearing of a subcommittee of the Senate Interior Committee. The chief difference between the Seaton plan and the Brannon plan is that Brannan proposed to support only the prices of perishable commodities. Seaton would support the price of the nonperishable metals. Brannan said the support should be used only if the commodity were not easily storable, and in this connection the Seaton plan is even more radical than the original proposal. Secretary Seaton said the plan had the support of President Eisenhower.

FOREIGN COMPETITION

The prices of the five key metals have been following the same path taken by farm prices in recent years and have been declining. Behind this, of course, is the fact that large quantities of foreign-produced lead, copper, zinc, fluorspar, and tungsten have been finding their way into the United States market and the competition has beat down the price. Companies that produce these metals have argued that they could not be expected to compete on an even basis with the foreign producers and that they should be protected by a new tariff schedule. Last week the Tariff Commission recommended higher duties on lead and zinc, but the Eisenhower administration is committed to a policy of reciprocal trade agreements.

The Seaton plan calls for supports of the following amounts and levels:

Copper, 1 million tons a year at 27.5 cents a pound while the current price is around 23.75 cents; lead, 350,000 tons at 14.75 cents, compared with a price of about 12 cents; zinc, 250,000 tons at 12.75, well above the present 10-cent market; 180,000 tons of fluorspar at $48 a ton; and $375,000 short-tons of tungsten at $36.

The Government has supported the prices of several metals in the past through its stockpiling program (somewhat similar to the ever-normal granary as applied to the farm commodities a few years ago) but this can no longer be justified on the ground of national defense. The amounts of each metal on which price supports would be paid under the Seaton plan is close to the normal annual production.

Seaton proposed that the metals be sold on the open market at whatever price they would bring and that the Government pay the producers enough on each sale to bring the price up to the support level. Producers would prefer to have price protection in the form of tariffs, since the subsidy payment would depend on a new appropriation each year by Congress.

No one argues that the metals companies are not feeling the pinch of foreign competition and very few people are surprised at the fact that an American producer is unable to meet a competitive situation created by cheap labor. As it applies to industry, this is easily understood.

WHAT ABOUT FARMER?

The strange fact is that the people who know that domestic metal is more expensive to prduce than foreign metal cannot understand why the American farmer faces the same problem when he sells his cotton or wheat. Of course, the farmer is at another disadvantage since he is expected to sell his surplus on the foreign markets while the domestic metals cannot even hold their home markets and stay in business. The farmer is often roundly criticized because he cannot sell his cotton near the producing areas in other parts of the world and absorb the transportation costs.

Perhaps the most common solution offered to the cost-price squeeze of the cotton farmer is a "price reduction that will enable the farmer to recapture his lost markets or his traditional share of the world market." The arguments of the metals producers and of Secretary Seaton could be used—with cotton substituted for copper—to explain why this is a difficult job.

The Annual Forum of the National Conference on Social Welfare

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. WILEY. Mr. President, one of the many professional groups which makes an increased contribution to the well-being of the American people consists of the social workers of our land. In the decades from the 1930's onward, this profession has come increasingly to the fore in helping to meet the needs of the American people; especially in this urban age, with its many stresses and strains on the family and on other units of society.

From the University of Wisconsin and other leading institutions of higher learning in the land there comes an increased number of specialists in this field, and from many members of the profession in my State, I am glad to receive a wide variety of messages on problems in Wisconsin and elsewhere.

I noted with interest, therefore, the annual forum of the National Convention on Social Welfare in Chicago. The forum heard a frank discussion on many issues. There was controversy and free exchange of views between leading experts; problems as to the degree and financing of welfare work; problems of the relations between public and private work. These and other questions engaged the attention of the forum.

One need not agree with the major points stressed by the speakers who feel that it is good to have such a forum at which, openly and candidly, problems may be raised and thinking stimulated.

If we are to be adequate to the challenges facing this country, particularly the challenges facing our youngsters, our teen-agers especially, then we must mobilize the best judgment of expert men and women who are willing and able to speak their minds, voice their convictions, and advance their remedies as they see them.

The tremendous problem of financing programs by public and/or private means requires particularly careful thinking by our citizens.

I send to the desk two articles written by Ellen Gibson, of the staff of the Milwaukee Journal, describing the forum. I ask unanimous consent that both be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SOCIAL WORKERS TOLD THEY'RE GROWING SOFT

(By Ellen Gibson)

CHICAGO, ILL.—The Nation's social workers Monday were roundly chastised for nestling in comfortable cocoons instead of leading the fight for improved welfare services.

Dr. Eveline M. Burns, New York City, in an address prepared for the 85th annual forum of the National Conference on Social Welfare, contended that social work should be a commitment, not just an interesting way of earning a living or filling leisure time. She is the conference president, a social economist on the faculty of the New York School of Social Work, and an authority on social security.

As social work becomes more professionalized, its focus narrows, Mrs. Burns said. Trained workers have shunned public-welfare jobs for the comfortable and protected environments of private agencies, where they feel they can develop under better supervision.

DOORS ARE CLOSED

The public agencies, which spend 90 percent of all welfare funds and serve an even larger proportion of all clients, have been denied their fair share of the limited supply of trained personnel, she said.

Social agencies, likewise, have tended to close their doors to the groups whose needs are greatest—problem youth, disorganized families, unwed mothers with several children, she said.

A half century ago, Mrs. Burns pointed out, social workers made their greatest contribution in seeking solutions for poverty. But recently they have lagged behind lawyers and economists in crusading for social insurance, and are cool to proposals for children's allowances or a public assistance program that drops the offensive and costly process of determining need in favor of a standard pension approach.

If the climate is hostile to improved welfare programs, "I suspect the fault is largely ours, for we have not challenged it," Mrs. Burns said.

MANY DON'T SHARE

The enormous increase in national productivity has done more for the well-being of people than almost all our social welfare programs, Mrs. Burns said, but many groups do not share this rising standard of living.

She mentioned 4 million families with cash incomes under $1,000 a year, the plight of low-income migrant workers in often intolerable living conditions, racial discrimination in jobs, housing and education, the concentrations of minority and low-income groups in city centers, the bad housing that millions endure, the high costs of medical care, the miserable record in rehabilitation, and low unemployment and assistance grants.

The forum, expected to draw more than 6,000 persons active in health, welfare, and recreation fields, opened Sunday at 3 Loop hotels and the Civic Opera House.

SOCIAL WORKERS SEE WELFARE OUTLAY RISE

(By Ellen Gibson)

CHICAGO, ILL.—Spending for health, education, and welfare will show a startling rise in the next decade and most of the money will come through taxes. Donations to private philanthropy are shamefully low and unlikely to increase markedly.

These and other conclusions were presented Monday by speakers at the 85th an-

nual forum of the National Conference on Social Welfare here.

The idea of a state of welfare for all the people is firmly rooted in America by now, although many persons are reluctant to admit it "for fear of being charged with a belief in the welfare state, whatever that is," said Wilbur J. Cohen, social research professor at the University of Michigan, and former Director of Research for the Social Security Administration.

SIXTY BILLION HEALTH BILL

He noted that legislators, for example, were acting increasingly in a socially conscious manner even when denying any similarity of objective with social workers. The only controversies today, he said, swirl around complexities of administration and cost sharing.

The Nation now spends $60 billion a year on all phases of health, education, and welfare, said Cohen. Two-thirds is spent by public agencies out of taxes. Three-fourths of the private expenditures are on health and medical care. Spending is still substantially below needs, said Cohen, and a healthy and growing economy can afford doubled public expenditures.

One of the most likely developments in the near future will be the addition of hospital insurance to social security to meet the special problems of the aged, Cohen said.

AGREES ON GIVING

F. Emerson Andrews, New York, director of the Foundation Library Center and author of several books on philanthropic giving, agreed that voluntary giving was not a substantial part of total spending in welfare fields. All the health agencies together—from the older polio and cancer groups to the newer associations combating muscular dystrophy and multiple sclerosis—have never collected in any year as much as $1 per person. Taxes spent on public health services amount to $2 per person per year, he said.

But Andrews argued that private philanthropy was still a vital characteristic of America. Private agencies are still in the best position to experiment, Andrews said.

WELFARE WAR STILL ON

The welfare war raging for some 9 years between advocates of Community Chest and other forms of united appeals and the supporters of separate fund drives is by no means ended, Andrews said. The Red Cross, National Society for Crippled Children, and other groups traditionally favoring independent campaigns have stiffened their attitudes in recent months. Advocates of federated drives retaliate by denying plant solicitations and corporate or foundation gifts to groups that refuse to join hands.

But neither method, Andrews said, raises enough money.

He suggested compromise approaches. Independent agencies might combine their drives to gain access to plant payroll deduction systems. Chests might permit donors to earmark half their contributions for the 2 or 3 agencies they particularly like, he said. In small towns, with plenty of volunteers with time to give, there is little reason why numerous separate drives cannot go on, he said.

SEES BIGGER FEDERAL ROLE

Emphasis on national defense is increasing the need for the Federal Government to take responsibility in many such related areas as health, education, science, natural resources, highways, and social welfare, according to Herman N. Somers, Haverford, Pa., political scientist.

"Those who speak of a return of functions to the States overlook the fact that the States never exercised the functions in question until Federal assistance made it possible," he said. "Those who ask that the Federal Government turn over some of its tax jurisdiction overlook the fact that many States are not now fully using their tax resources. One-third of the States, by their own decision, have no personal income taxes."

Formulas for financing social welfare may be improved or changed, Somers said, but the Nation will not advance by drawing rigid lines between governmental units or by pretending that one level of government belongs more to the people than another.

FEARS SCHOOL DROPOUTS

The loss of young abilities by school dropouts, based frequently on personality problems, is wasteful and a greater problem than juvenile delinquency, according to Solomon O. Lichter, a Milwaukee native, now director of the Chicago Scholarship and Guidance Association.

An alarming 40 percent of all pupils who start high school do not finish, he said. He called them "educational casualties."

The same problems that caused them to leave school will keep them from getting and keeping a job, he said.

Their problems show up in school but are usually emotional in origin and should be treated, individually, by some outside agency, Lichter said. From a 3-year study of 110 adolescents, capable of high-school work but ready to quit school or already out of school, the association found these causes of serious maladjustment.

High school coincides with puberty and a sudden increase in sexual and aggressive impulses that teen-agers cannot always control or understand.

Parental pressures for social or academic achievement may actually evoke passive resistance.

Undisciplined family backgrounds may lead to troublemaking in class.

Overstrict homes can produce rebels outside.

The current emphasis on enriching the curriculum for gifted child, on the theory he doesn't do well because he is bored, is wrong, Lichter believes. When this child has unrecognized personality problems, making life harder for him will not help. Lichter favors a school structure that meets the needs of the majority of pupils with special help for the casualties.

Nixon: An Example for the United States

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. MARTIN of Pennsylvania. Mr. President, this morning in the Philadelphia Inquirer there was published a very good editorial on the subject "NIXON: An Example for the United States."

I ask unanimous consent, Mr. President, that the editorial be printed in the Appendix of the RECORD, because I feel it is an excellent comment on the situation now confronting us.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NIXON: AN EXAMPLE FOR THE UNITED STATES

As a result of the shocking and unprecedented attacks on Vice President NIXON and his wife in Venezuela, American troops have been sent to Puerto Rico and Cuba, only a few hours flying time from Caracas, the Venezuelan capital.

These American paratroopers and marines were not sent as a threat, to interfere with any foreign government or country. They had no orders to go to Venezuela, and would get none unless the Venezuelan Government asked for assistance.

But the American forces rightly stood for two things: Their presence at American bases in the Caribbean reflected American indignation at the insulting and wholly unwarranted treatment of the second highest official in our land, and American determination to assure his safety—with our own forces, if necessary.

Even after the situation in Caracas has quieted down and the Government there seems to have reasserted the control it so obviously lacked when Mr. and Mrs. NIXON were stoned, spat upon and jeered by howling mobs, it is difficult for Americans to take a calm view of this affair.

We might try to follow the example set by Mr. NIXON, however, whose cool courage and self-control under the most trying circumstances were matched only by the calm bravery displayed by his wife.

For the Vice President, indignant as he had every right to be, was also understanding. He did not underestimate the part undoubtedly played by Communists in stirring up the vicious mob attacks in Caracas and at the airport. But he judiciously weighed these disgraceful occurrences against the broader background of Venezuela's recent emergence from dictatorship, the violence bred by that kind of rule, and the danger that this violence in turn could lead to another dictatorship, this time from the left.

And, within hours after being subjected to treatment without parallel in the history of the high office he holds, Mr. NIXON could say: "I came as a friend and I go as a friend. All of us as Americans must work together as friends and partners to abolish poverty and misery and to achieve freedom for all."

President Eisenhower took a similarly broad view at his press conference. His attitude of anger at the treatment of the Vice President and determination to insure his safety had been shown in the dispatch of troops. Mr. Eisenhower also recognized the hand of the Communists in the uprisings, both in Venezuela and Peru and he, too, saw that economic conditions were an additional factor.

These things should be remembered by all of us, as Americans in every part of the country join today, in spirit at least, in the huge welcome being planned in Washington for Vice President and Mrs. Nixon.

But there is also the problem of good will tours, such as that undertaken by the Vice President, which seem to be poorly planned in advance. If our Embassies in South America did not know of the anti-American feelings in some places, they weren't doing their jobs. If the weakness of governments and their inability to cope with lawless mobs was a surprise, there was failure somewhere along the line in intelligence.

We are fortunate that the United States was represented on this tour of the vital South American area by Mr. NIXON, whose conduct arouses pride in every American.

There should be no occasion for coolness and courage under fire, however, when anyone representing this great Nation is on a diplomatic visit. Before any more good will tours are scheduled for Vice President NIXON or any other official, there should be solid assurance that he will not be exposed to incidents which imperil his life and affront the dignity of the United States.

Nineteen Hundred and Fifty-eight Opinion Poll

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, each Congress I have made it a practice to send out a questionnaire to my constituents, seeking their views on major national issues. I have found this a most valuable method of keeping abreast of opinion in my area, and of affording the residents of my district an opportunity of registering their feelings on major problems confronting their National Legislature.

Believing the results of this questionnaire might be of interest to my colleagues, under leave to extend my remarks I should like to include the following figures:

1958 questionnaire

[Total questionnaires, 5,873]

Question	Yes	Percent	No	Percent	No opinion	Percent
1. Do you believe that recent evidences of Soviet technological achievements indicate the need for greater Federal expenditures for national defense?	3,469	59.1	1,922	32.7	482	8.2
2. Do you believe a need is indicated for greater Federal expenditures to improve the American education system?	3,990	67.9	1,623	27.6	260	4.5
3. Do you believe Congress should press for greater unification of the armed services in the Defense Department?	5,027	85.6	541	9.2	305	5.2
4. Would you favor complete unification of the armed services, putting all servicemen in a single uniform and reorganizing the Department on the basis of strategic mission assignments?	2,411	41.1	2,799	47.7	663	11.2
5. Do you favor cuts in nondefense Federal programs such as agriculture, water resource development, etc., in order to permit larger expenditures for national defense and scientific development?	2,362	40.2	3,036	51.7	475	8.1
6. Do you consider the mutual security program an essential part of our national defense effort?	4,223	71.9	522	8.9	1,128	19.2
7. Do you favor enactment of President Eisenhower's reciprocal trade program?	3,945	67.2	594	10.1	1,334	22.7
8. If a choice had to be made between retaining a balanced budget and providing adequate funds for national security, do you believe 1st priority should be given to national security?	5,161	87.9	412	7.0	300	5.1
9. Do you favor Federal legislation aimed at preventing the misuse of labor-management welfare and pension funds?	5,412	92.2	305	5.2	156	2.6
10. Do you believe Congress should go beyond welfare-fund legislation and attempt to police general union finances, election procedures, etc.?	3,615	61.6	1,839	31.3	419	7.1

Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. LANGER. Mr. President, as the ranking Republican member of the United States Senate Subcommittee To Investigate Juvenile Delinquency, I have taken an active part in the hearings and reports submitted by the subcommittee on the various factors relating to juvenile delinquency. With the problems of juvenile delinquency continuing to be of great concern to the people throughout the country, it becomes more apparent that increased efforts must be made to curtail this rising tide of juvenile delinquency and juvenile crime.

Last week, I inserted in the RECORD some remarks by Peter Chumbris relating to the role of the church and the community in rearing youth, which can be found on page 7363 of the CONGRESSIONAL RECORD for May 7, 1958. Today, I would like to insert in the RECORD an article entitled, "Could Your Child Become a Delinquent?" written by Joseph Kahn, published in the Parade section of the Washington Post and Times Herald for May 11, 1958. This is an informative article and contains 25 questions a parent is asked to answer honestly, and from those answers, the parent can gain some effective knowledge as to whether his boy or girl is safe from delinquency.

It has been brought out in some of our hearings that national advertising councils and other public service announcements have been very effective in curtailing traffic deaths, in alerting people to diseases such as cancer and other illnesses, building better schools, and so forth. For example, in an Albuquerque, N. Mex., newspaper several years back, during a polio epidemic, the newspaper, on the front page, warned the parents to be careful of seven items in order to protect their child from polio. This front-page announcement was carried as a public service for the duration of the polio epidemic. There was no question that many parents heeded the warning and many children were saved from polio. Constant reminders to parents and community leaders stressing things to watch in children to protect them from delinquency and keep them on the road to juvenile decency could be as effective as these public service announcements in traffic, health, schools, and so forth.

Therefore, Mr. President, I should like to have printed in the RECORD the full text of the article by Mr. Joseph Kahn and the very pertinent 25 questions each parent should honestly answer to be sure that his child will grow into manhood without the harmful lifetime effects of being a juvenile delinquent.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COULD YOUR CHILD BECOME A DELINQUENT?
(By Joseph Kahn)

Could your child become a delinquent?

If you are an average American parent, you have been shocked by the recurring headlines about troubled teen-agers, the gang battles, the vandalism, the trials, the inevitable sentences—and the tragic waste of youthful promise. Probably you have asked yourself that ominous question.

Now there is a way to get the answer with remarkable accuracy. Presented here for the first time is a proved self-examination to measure your child's delinquency potential by measuring you, his parent.

The test on the opposite page, developed by Parade, is based on a scientific yardstick devised by the New York City Youth Board. Using it for the past 6 years, the board has predicted delinquent behavior months, even years before it occurs.

Among one group of 220 youngsters, youth board predictions of delinquency proved accurate in 195 cases. Overall the predictions have been 80 to 90 percent accurate. Among children rated as potential nondelinquents, the predictions have been about 90 percent accurate.

Above all, the board has learned that if predelinquent symptoms can be spotted, something can be done about them.

FIVE KEYS TO DELINQUENCY

The self-test offered here evolves from research launched more than a decade ago. Drs. Sheldon and Eleanor Glueck, of the Harvard University Law School, worked out the original formula.

Comparing 500 delinquent boys with 500 nondelinquents over a 10-year period, the Gluecks found that such factors as poverty, poor housing, and broken homes were not necessarily crucial in producing delinquent youngsters.

They did find 5 factors which differentiated the 2 groups. They are:

(1) Discipline by father, (2) supervision by mother, (3) affection of father, (4) affection of mother and (5) cohesiveness of family.

In determining the delinquency potential of a given youngster, each of these qualities is graded and scored. Thus, according to the Gluecks and the Youth Board, parental attitudes and actions in themselves provide the key to delinquency.

An overstrict, harsh, unreasoning father—in contrast to a firm, kindly one—is scored low. A careless mother who allows her child to roam the streets is rated poor. Hostile, indifferent, rejecting parents get no-passing grades.

This formula has served as the basis of an 8-year experiment started by Ralph Whelan, energetic director of the Youth Board. Having worked with the Gluecks in Boston, Whelan figured that their findings could be used to predict potential delinquency. He and other Youth Board staffers then adapted the Glueck research to their own needs.

The Board has found that future delinquency best can be predicted when a boy (or girl) is between 4 and 7, the years when long-range behavior patterns begin to emerge. However, Parade's self-test can be valuable to any parent and any child.

Are there actual predelinquent symptoms to watch for? The Youth Board says yes. They may include anxiety, fear, lying, stealing, even muscular tics. Note the word may. All these may indicate emotional disturbance, but they also may be routine among young children and soon outgrown. The key still seems to be: How do parents treat their children?

Delinquent behavior itself has various definitions, but authorities consulted by Parade agreed on a simple working description. A child is delinquent, they said, if his actions repeatedly bring him to the attention of the police. This rules out most pranksters

and practical jokers, most children saddled with excess nervous energy.

Delinquency is marked by repeated, active rebellion against authority. The child usually is extroverted and lacks remorse feelings. Often he is so defiant that he will not take discipline at home, in school or from outside agencies. He usually steers away from supervised activities, even athletics.

To collect data about a specific child, Youth Board interviewers see the child's parents. The child himself is never interviewed. Based solely on parental attitudes and actions, plus information from social agencies, the Youth Board rates the probability of delinquency.

YOUR JOB AS YOU SEE IT

Success in making the predictions has been so stunning to date that Whelan believes that agencies which deal with problem children might focus their major preventive programs on the family rather than on the child.

The test offered here gages the major areas of a child's relationship with his parents, as seen through the parents' eyes. In taking the test, you can measure your effectiveness as a parent as well as learn what direction your child is heading.

The value of the test depends largely on how honest you are with yourself. You must answer the questions honestly, not as you think they should be answered, if you expect to wind up with accurate information.

If you have more than one child, test yourself separately for each one, since relationships differ between parents and individual children.

Remember, too, that this test measures delinquency potential. If you get a low score, pay special attention to the section following the test. That will tell you what you can do to decrease your child's delinquency potential.

Either parent can answer questions 1 through 23. However, the remaining questions are designed specifically for the father and mother.

PARENTS, ANSWER THESE QUESTIONS HONESTLY

1. Do you know most of your child's friends? Yes ☐ No ☐

2. Are they welcome in your home? Yes ☐ No ☐

3. Are you active in encouraging your child's activities, interests, hobbies? Yes ☐ No ☐

4. Do you frequently arrange to spend short periods of time alone with your child? Yes ☐ No ☐

5. Do you offer to spend time answering your child's questions about school problems? Yes ☐ No ☐

6. Are you generous in praising your child for trying and accomplishing? Yes ☐ No ☐

7. Does your child carry out assigned household responsibilities? Yes ☐ No ☐

8. When you are not at home, do you provide responsible supervision for your child? Yes ☐ No ☐

9. Do you encourage your child to join in organized activities suited to his age? Yes ☐ No ☐

10. Are you careful not to favor one child over another? Yes ☐ No ☐

11. Do you really have confidence in the character and capabilities of your child? Yes ☐ No ☐

12. Do you show affection for your child by holding him, hugging him, kissing him good night? Yes ☐ No ☐

13. Do you really enjoy your child's company for lengthy periods? Yes ☐ No ☐

14. Within reason, do you keep your promises to your child? Yes ☐ No ☐

15. Are you consistent in disciplining your child rather than harsh one moment and easygoing the next? Yes ☐ No ☐

16. When you punish your child, does he understand the reasons and think you are fair? Yes ☐ No ☐

17. Do you avoid dwelling on an unpleasant incident after it's over? Yes ☐ No ☐

18. Do you really try to understand your child's fears, tempers, letdowns, so that you can help him work them out? Yes ☐ No ☐

19. Does your family do things together often—play games, plan parties, take trips, share hobbies? Yes ☐ No ☐

20. Does your family eat at least one meal a day together? Yes ☐ No ☐

21. Does your family attend religious services together? Yes ☐ No ☐

22. Do you plan ahead for your child's future education, vacations, etc.? Yes ☐ No ☐

23. Do you believe that your husband (wife) is setting a good example? Yes ☐ No ☐

For mothers only

24. Do you always know where your child is? Yes ☐ No ☐

25. Is there an established home routine for eating, bathing, and bedtime? Yes ☐ No ☐

For fathers only

24. Do you share responsibility for discipline instead of leaving it all to mother? Yes ☐ No ☐

25. Do you arrange to get home from work early enough to spend some time with your child before he goes to bed? Yes ☐ No ☐

THE SCORING AND MEANING OF YOUR ANSWERS

The more questions you answered "Yes," the less chance your child has of becoming a delinquent. Each "Yes" answer rates 1 point. A score of 18 or above indicates that your child has a very low delinquency potential. That is, he is very unlikely to go astray.

A score of 13 to 17 means he has a better than average chance of turning into a good, wholesome citizen.

A score of 9 to 12 calls for some serious self-analysis on your part.

A score of 8 or less means that you would be wise to seek outside help in reshaping your attitudes toward child-rearing.

Don't let a few "No" answers alarm you. They turn up in just about every family. But do analyze your "No" answers. Talk them over with your spouse. Don't approach the subject with a chip on your shoulder. Admit your faults. Talk them out. Remember: Most "No's" can be changed with some effort, a revised attitude or routine.

Look at question 4, for example. If household chores preclude alone-time with the child, reevaluate your routine. Something can be done. Children rarely need (or want) an hour or even a half-hour. A few minutes extra attention can do the trick.

A "No" to question 16 may require some investigation on your part. Why doesn't the child think you are fair? Are you too severe? If necessary, talk to the youngster himself. Does he feel that the only attention you give him involves punishment? Draw him out.

It is desirable—and logical—to give all the questions such thoughtful analysis. Further, the Youth Board advises:

If solutions cannot be found around the family table and you honestly believe you are doing everything possible, talk out your problems with other parents, school officials, your minister, doctor, or family service agency. Don't be afraid to go to them. They stand ready to help.

Above all, don't be content to let a "No" answer stand. If you do, you are admitting failure—either your own or some other family member's. And failure can contribute to the very thing this article is designed to help avert—delinquency in your home.

How One School System Is Meeting the Challenge of This Century

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. CARLSON. Mr. President, there is much discussion about the educational needs of this Nation in an era that is demanding more and more of our educational system.

There have been many studies and many articles prepared on this subject, but I call the Senate's attention to one which appeared in the May issue of the Ladies Home Journal, entitled "How One School System Is Meeting the Challenge of This Century," and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW ONE SCHOOL SYSTEM IS MEETING THE CHALLENGE OF THIS CENTURY

(By Glenn Matthew White)

"What am I to do with Johnny?" a teacher asked. "All he wants to do is read the college textbooks his father wrote." "Should Sally spend all her time reading Shakespeare?" another wanted to know. "She's only 9."

What to do with unusually intelligent children in public-school classrooms has always been a puzzle for teachers. They are not always the best behaved, nor do they do consistently superior work. There is a legend among teachers of gifted children that one bright child on his very first day in school turned on his teacher and snarled, "Get away from me with that pusillanimous primer." Probably no child ever said it in quite that way, but every teacher knows a book that might hold the interest of average children in a classroom is a bore to some and impenetrable to others in the same classroom. What is one to do with the child who can read well but is just too bored to do so?

In 1953 Lucille Nixon, a consultant in elementary education for the Palo Alto, Calif., public schools, found herself swamped with such questions. She took them to the superintendent, Dr. Henry M. Gunn. "We should have a program," she said, "for exceptionally able children throughout our entire school system." He agreed. He appointed a committee to plan such a program; 2 years later it was approved by the schoolboard and put into action. Since its inception, every possible evaluation, study and test of the Palo Alto program shows that—

The creation of a snob or elite group of children—a fear often mentioned when any proposal is made to single out those with high I. Q.'s for special attention—did not occur in practice. Children can be grouped in special classes for a portion of the day, or offered special opportunities in other ways, without the slightest damage to their relationships with others.

Children not included in the program are generally not jealous or envious of those who are. (This finding is based not merely upon expressed opinions, but upon special social distance tests.)

Many more children than previously supposed can profitably skip a grade in elementary school. They compete successfully with

older children without developing social or emotional problems.

When exceptionally able children are grouped in a special class for only one subject, their work improves, not only in that class but in all their regular classes as well.

The community generally approves of special provisions for the most able when it is informed and aware of what is at stake in public education.

The Palo Alto plan is comprehensive, involving all the schools in the system—20 elementary, 2 junior and 2 senior high schools. It directly involves about 1,000 children in the secondary schools and 500 in the elementary. From the start, care was taken to avoid creating a little snob class, although actually, as assistant superintendent Jack Rand points out, the danger of good students becoming a clique of snobs is not very great. The opposite extreme is more likely—and more common. In most schools smart youngsters assume the attitude expressed by their less able classmates—"Don't be a D. A. R.," meaning "Don't be a damned average raiser." Those who violate this edict are called queers. Palo Alto's cradle to college program for exceptionally able children is an additional effort to raise academic standards in a university town where the standards are already comparatively high.

At Stanford Elementary School for example, fourth, fifth, and sixth graders are getting a taste of such heady subjects as physics, chemistry, geology, philology, and logic. A tape recording of 9-, 10-, and 11-year-olds discussing their interest groups seems the more incredible for an occasional lisp among the childish voices: "Well, in chemistry we made this model of a battwy, we filled it with a solution of sulfuric acid." "Sulfuric acid is very dangerous—the formula is H_2FO_4." "Then we used an elec-electron pump and charged it for 3 or 4 minutes." "Susan's hair was supposed to stand on end, but it didn't because hair is not a very good conducer of electricity." "Our teacher brought in an electroscope. Besides telling us what an electroscope was he showed us how to make our own."

The nonscientists are also vocal. In philology (word study): "We had lots of fun. We learned a lot of Latin and Greek—prefixes, roots, and suffixes. It was lots of fun." "You felt kinda like you've got something, kinda secure." In art: "We learned a lot of words we didn't know too. We went to a stable and drew a horse." "We also had a real kitten for a model." "I didn't know you started with shapes—I thought it was faces." In modern dance: "I had never seen it and never taken any part in it. What I liked best was the composition, making up dances just as you felt like to music." In storytelling: "You can tell stories to younger children—and that's good." "Storytelling is a lot like acting." "Most people don't think it takes much to tell a story—but it does."

As this last child said, it takes something—probably the glow of bright young faces and sparkling eyes—to tell the story of Palo Alto's gifted-child program. The interest groups, which in most of the elementary schools meet twice a week for 12 weeks during the winter months, are led by teachers who themselves have special interest and training in a particular subject, or by other adults in the community who volunteer.

Some of the group leaders are from the faculty of Stanford University or are employed by research or engineering firms located in Palo Alto. These experts, many of them renowned in their fields, share with very young children knowledge most people assume belongs only in higher education. Parents with years of practical experience in less erudite occupations also lead interest groups.

The children love it. "I hardly knew anything about physics before I started," one blue-eyed 9-year-old girl confided. "It's fun—you get out of schoolwork and you learn things you didn't know before," said another. The purpose of the interest groups is to give direction to a child's natural curiosity and, incidentally, to help him understand why reading, writing and arithmetic are so important. Without mastery of these tools, he soon discovers, he can't find out what he wants to know. "The idea," said one boy, "is not to teach a great deal about a certain subject but to open new doors."

Group leaders are equally enthusiastic. Albert Robinson, a semiretired electronics engineer and father of 5 children under 12, led a group in the study of electricity at Barron Park Elementary School. He entertained the children by constructing motors and other devices out of bits of tin, wire and nails. "I wanted to see how simple I could make things to show some of the fundamental and universal concepts of physics," he said. He made a small car powered by a battery and the starter motor from a junked automobile in which each child could have a ride when he was able to explain how an electric motor works. One boy brought his father to the Robinson home and asked him to repeat the experiments he had performed in class "so dad can understand them." The rudiments of physics, Mr. Robinson believes, can be taught to children as soon as they can talk.

Elena Greene, a young mother who speaks Spanish, conducted a group in the study of that language at Green Gables Elementary School. She used no textbook—"Most Spanish textbooks have not been revised since the year 1." She began by teaching her group to sing simple Spanish folk songs while she accompanied them on her guitar. She had no discipline problems and feels the children got a basic feeling for the Spanish language during the short time she had with them. "Children listen with their whole selves, even when they appear not to be," she said, "and that is the way to learn a foreign language—to give yourself to it without thinking about it. Very young children are able to do this best."

The success of such a program depends largely upon the support of parents. "Without the help of men and women in the community who volunteered their services, our interest-group program would have been impossible," said John Bracken, principal of the Barron Park School. In the support of parents, the Palo Alto school system is fortunate. The town has more than a normal share of well-educated, able, and energetic citizens—people who value learning highly. Parent-Teacher Association meetings are invariably packed and the discussion more often deals with fundamental matters of education than how to get new equipment. At the school administration offices there is a card file of more than 500 community resource persons who have indicated a willingness to appear before school groups. The topics cover a wide range of human activities: Business and industry, cattle raising ("will show a small group branding at my ranch"), community and government service, dance, drama, electronics (30 cards under this heading), health, hobbies and collections, travel, transportation, music (1 card, that of a former symphony conductor, noted, "will describe the evolution of symphonic music"), the United Nations, vocations—and many others. The Palo Alto Times publishes a daily column of the writing of schoolchildren called Youth Said It.

The gifted child committee, made up of 17 teachers, principals, parents, and special consultants, met for the first time in the fall of 1953 and spent 2 years in study and discussion. Preceding this the California Congress of Parents and Teachers had sponsored a study of the education of gifted children and published a report. A large section of the Palo Alto chapter of the American Association of University Women devoted all its meetings to the topic in 1954.

"There was some danger," one member of the committee noted, "that the program would be expected out of existence by those who looked for miracles before it even got started." Nevertheless, when the school board approved the formation of a gifted-child program and an expenditure of $20,000 for the first year of its existence, it came as a surprise to almost no one. Dr. Kenneth Martyn, now associate dean of Los Angeles City College, was appointed director of research.

The Gifted Child Committee set as its goal the grade acceleration of at least 25 percent of the students with I. Q.'s of 140 or above. Screening to identify the gifted child, on the basis of tests and teacher evaluations, was established as a continuing process beginning with third grade. (Some 6 percent of the children in Palo Alto were found to have such high I. Q.'s, as compared with about 1 in 400 in the general population.)

Contrary to the myth that "bright kids don't need help—they'll find their way," many children with high intelligence quotients do not do especially well in their schoolwork. They are often bored and literally shut their minds to unchallenging material. To undiscerning teachers, some of them might appear to be stupid.

There are two types of specially grouped classes in the Palo Alto junior and senior high schools. The so-called research classes, of which there are 10, are for children with I. Q.'s of 140 or above, even though some of them did not do outstanding work in their regular classes. These students get a broader, deeper presentation of the same material given ordinary classes. There are 25 advanced standing classes for students who have done superior work, even though their ability may be only slightly above average. Candidates for the advanced standing classes are selected on the basis of ability, achievement and aptitude, as determined by tests and consultation with teachers and parents. These students proceed with advanced work in 1 or 2 subjects usually at least a year ahead of their normal-age group. Both research and advanced standing students attend other classes with the normal assortment of good bad, and indifferent students their age. They are not cut off from the crowd and many of them are leaders in student government, athletics, dramatics, and other extracurricular activities.

Most of the research and advanced standing classes are small, ranging from 17 to 25 students, although 1 biology class at Jordan Junior High has more than 30. At Cubberly High School there is one 11th-grade advanced standing English class of 25 students which has 2 full-time teachers. They alternate in the classroom and both keep busy because of the amount of preparation needed. The head of the department, Wade Robinson, looks forward to the day when he will have at least 3 teachers for every 2 classes. This arrangement he can show is most efficient, although for most high-school department heads it must remain only a dream.

Jean White, teacher of a ninth-grade research class in English at Jordan Junior High, said, "Small classes give the teacher a chance to move around, to have various students working on different projects at the same time. We had book discussions and it turned out that we had two space-fiction addicts. They were always talking about space fiction in terms none of us could understand. Other members of the class pinned them down, and it turned out they weren't sure what they were talking about either. No student can get away with much when the rest of the class is right up with him. It was a great chance for me to show how important it is to know how to write, say,

think what you mean, without hiding behind blurry jargon."

"When you first have a class like this," Robert Leon said (he has a research class in 10th-grade English at Palo Alto Senior High), "you think the kids are somehow different from others, special—but they're not. You soon find they behave about like the rest. They are often challenging and, of course, alert, but as a group it's just like any other class."

Even a casual observer will note some differences, however. The exceptionally able youngsters tend to drift into the classroom early—and like normal groups, they talk. But then they linger after class and talk some more, the chief difference being they talk about something. They seem to be thinking and, blessing of blessings, they have others to talk to.

For example, in Clyde Parrish's senior science seminar, an advanced standing class at Cubberly High School, class began long before he entered the room. One boy had drawn a design for a perpetual-motion machine on the blackboard and was challenging others to tell him why it wouldn't run forever. "I know it won't," he was saying "but why won't it?"

"Because 'forever' is too long a time," another boy informed him.

By the time the teacher arrived the small group was warmed up for an avid discussion of friction, the perpetual motion of a pendulum, forms of energy and why some machines will run forever—if it is not too long. Mr. Parrish concluded the discussion by suggesting that the boy actually try to build a perpetual-motion machine instead of endless theorizing about it. "One of the things I've learned," he said, "is that—in science, at least—some of the highest I. Q.'s don't like actual work. It may be that they haven't had a chance before and never got into the habit."

In Henry Martin's science seminar at the Palo Alto Senior High, students choose whatever excites their interest and explore it to the fullest. His students are engaged individual research projects dealing with such matters as rocket fuel, rare earth elements, and automation. One boy is working on a plan for a computer which he hopes will be able to calculate the possible matchings of biological characteristics in parents and give the odds on their having a made-to-order offspring. Two boys took a day off to visit an elementary school and explain to a second-grade class, with appropriate demonstrations, why and how sputnik stays up there.

Much of their work is directed toward competition in various science contests such as the Westinghouse scholarship contest and the National Science Fair (a local science fair as the first step to the final which is held in Washington, D. C., and the prizes include money and college scholarships). Five of the gifted students from Palo Alto High School have spent the summer at the University of Nevada for an intensive program called the Junior Engineers' and Scientists' Summer Institute. Eight students have been placed during the summer in research laboratories at Stanford and nearby research firms.

Mr. Martin pointed out that colleges are overloaded with information that did not exist 10 or 20 years ago and that high schools have got to provide more of the fundamentals in each science. To accomplish this, some subjects must be stepped down to the earlier grades. He laments the lockstep in secondary science teaching. "Many students can learn the fundamentals much earlier than they do now," he insisted. "Instead of how to cook and social adjustment, youngsters need to meet the vistas of knowledge much earlier.

"I'm also interested in seeing that they get a sense of the history of science. In this age, it's easy for students to get the idea that a lot of things—telephone, radio, TV, and the great industrial and medical advances—grew on trees, because they have been around all of their short lives. I keep trying to show the sacrifices, the years of defeat, and plain hard work, that went into them."

Since advanced standing classes are hard work and take much of a student's time, not all who are selected as eligible choose to take them. Some already have a heavy schedule of activities; others prefer not to work so hard. They are not required to do so and may proceed with their regular classes. Those who do so, however, may complete during their senior year in high school as much as a year of college English, mathematics, sicence, or social science. If they pass standardized tests and meet requirements, many colleges will give them advanced standing and credit for the work.

According to Robert Shutes, coordinator for the Palo Alto program, the "little snob" question seldom rears its ugly head. He recalled an incident of one little girl who went home from school in tears because she thought she was not eligible to take a difficult mathematics test. But it turned out she was eligible, and along with 70 other junior-high students who completed 7th-grade math in the 6th grade, she is now happily at work on algebra in the 8th grade.

Most students in the special classes are too busy keeping up with the others to feel boastful about their accomplishments; students in the ordinary classes have little reason to envy their labors. Since the plan covers all schools in town, from the early grades through high school, it is accepted by most as merely another aspect of busy school life. Evaluations based upon the classroom social distance scale—a kind of opinion survey among students in a class to determine how they rate one another as persons—show that the students selected for the special classes remain as friendly and are chosen as friends as widely as before.

Parents agree. The comment of Mrs. Ira Thatcher, whose daughter has been in several English research classes, is typical: "There was some worry it might make for a bad attitude, but it certainly hasn't. Members of the class do not have any feeling of superiority, because they have to work so hard to keep up with the others." Mrs. Arthur Ellis, whose son, Hugh, has been in research classes in junior and senior high school, said: "At the start people worried about the kids becoming snobbish, but in actual practice nothing like that has happened. I think that it has done a great deal of good for children who seemed to be lone wolves."

The cost of such a program is hard to separate from general school expenses. The biggest investment is probably in the time of teachers and that of the psychological testing service. The total budget allotted specifically to the project in Palo Alto last year was $52,050. The budget for the program for the mentally retarded was $57,530. The program for the mentally retarded directly affects only 75 children. The gifted-child program, exclusive of the interest groups which are for all, directly affects 1,500 children of the total school enrollment of about 10,000.

Superintendent Gunn is satisfied that the program has demonstrated its worth in the 3 years in which it has been operating. "Tests show that children in the program are achieving more," he said.

Even so, according to Lucille Nixon, the administrative consultant whose suggestions started the program, it is far from a completed accomplishment at the present time. "Don't tell people we have all the answers," she begged. "They'll write and ask us how it is done—and we don't know."

A Scientific Approach to Learning

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. BUTLER. Mr. President, ever since the launching of sputnik we have been aware of the necessity of training more scientists and engineers. Important research work is now being conducted in many countries, and the results of this work can only be appraised and understood by students who can read and understand foreign languages.

Science and the new devices it has made possible, including television and film techniques, have enabled our better teachers to influence and inspire many more students. Dr. Howard L. Bevis, president emeritus of Ohio State University and chairman of the President's Committee on Engineers and Scientists, reviewed some of the advances regarding education in an address before the 46th annual meeting of the Chamber of Commerce of the United States here in Washington last month.

All of us are concerned with the problem of increasing the quantity and improving the quality of our scientists and engineers. This address is an important contribution to the solution of this critical problem. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A SCIENTIFIC APPROACH TO LEARNING

(By Dr. Howard L. Bevis, president emeritus, Ohio State University, and Chairman of the President's Committee on Engineers and Scientists)

Some months ago, shortly after becoming Chairman of the President's Committee on Scientists and Engineers, I made the statement during a discussion with some newspapers reporters that what America needed was a technological revolution in the educational system, putting science to work for itself in producing more scientists, engineers, and teachers.

Pointing to forecasts that enrollment in the Nation's schools and colleges would double by 1970, I hazarded this statement:

"The demand for scientists and engineers in our growing technological economy and the shortage of qualified teachers to train them requires a new look at the whole system of education for the modern world."

Looking back over events in the field of education since that time, this statement doesn't seem quite revolutionary today as it did then. We have only to look around us at the equipment on display in this room, and to recall some of the newer techniques that are now in use. They demonstrate a vast potential, the opportunity for their universal application in the schools and classrooms of America that still lies ahead for our educational system.

As an educator and a former teacher, let me make clear that I do not believe modern scientific devices can replace the teacher. But I do believe that they can bring the teacher's knowledge to more students, multiply his hands, and put him in many places at once.

We are entering a vastly speeded-up scientific age, and it is up to the scientists and the educators to get together on new, imaginative uses for television, sound films, microfilms, tape recorders and the many other aids which will free the teacher to function more importantly as planner and overseer of the student's progress.

The development and use of these new devices and techniques for intensifying the learning process have moved through the experimental stage, since our bureau of educational research started its work at Ohio State University. Exploration and experimentation are still going on, and will continue to do so. But the use of educational television, films, and other audiovisual equipment has been thoroughly tried and tested.

Just a week ago, the United States Office of Education announced that modern mechanical and electronic devices are promoting a revolution in the teaching of modern foreign languages.

Language laboratories are now in use in more than 200 colleges and universities, and nearly 50 high schools have special language rooms. These special facilities enable capable instructors to reach a greater number of students. They help compensate for the teacher shortage, since much of the drill can be done outside class time. They provide a stimulating approach to language study, emphasizing the ability to speak a foreign language. Individual tape recorders and film strip machines enable the students of greater ability and aptitude to progress at a maximum rate. At the same time, they help less able students to make real progress at the rate their abilities permit.

There are many other examples of the application of scientific methods and equipment to teaching.

At the University of Oregon, an instructor can teach a course simultaneously on his own campus and three others in the State, thanks to a television link. Pennsylvania State University has worked with television for 3 years, and has discovered that in some cases TV students do better than their counterparts who see their instructors in the flesh.

The State of Alabama has operated for more than 5 years the only statewide educational television network in the country. Teachers are drawn from the two State universities and from the metropolitan school district of Birmingham. The Alabama network provides statewide classroom instruction at elementary and secondary levels. It provides adult education. And it gives the people stimulating discussion and cultural programs.

A number of city school systems are using educational television for citywide instruction—physics in Pittsburgh, shorthand in Washington, Russian in Schenectady. A project in color television, sponsored by the National Academy of Sciences, the University of Maryland, and the Army Signal Corps, is testing instruction in calculus.

Only a few days ago, Radio Corporation of America announced establishment of a $100,000 workshop at New York University for further exploration into teaching methods on closed-circuit television.

Many of you are familiar with the film series produced by Encyclopaedia Britannica which offers a complete course in high school physics on film.

There is also the Zacharias project at Massachusetts Institute of Technology, supported by the National Science Foundation, which is exploring the whole learning process as it may be intensified and strengthened by the use of television, films, three-dimensional aids and many other applications of the scientific approach to learning.

There are dangers in assembly-line education. We must be alert against simply using the new devices as gadgets which grind out more graduates. But this must not deter us from pressing forward on this new frontier of teaching—giving new opportunities and adding new capacities for our imaginative, dedicated teachers.

The application of scientific methods and equipment in the teaching of all subjects—the scientific approach to learning—is a part of the broader meaning of science education and the scientific attitude. It is giving us new knowledge about how people actually learn—and new devices to help them learn. It is giving us new insight into motivation—the key to learning.

The appropriate role of science in education is not necessarily to interest the student in being a scientist, but to interest the student in the process of scientific investigation. Thus science in education produces not only scientists; it produces nonscientists better trained for life in a scientific age.

Subsidy Limits

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. MAGNUSON. Mr. President, I call to the attention of the Congress an editorial from the Journal of Commerce of May 9 relative to the recommendation by the Bureau of the Budget that a limitation of 2,000 be placed on the number of subsidized voyages for the coming fiscal year.

As pointed out clearly in this editorial, one practical effect of such a limitation would be to preclude the 136 to 176 sailings of United States flag vessels which the Federal Maritime Administration has determined as essential in the public interest on the Great Lakes routes to be opened next year.

As Mr. Tastron, the Journal of Commerce shipping writer, points out, the limitation to 2,000 voyages which the Bureau of the Budget has urged would bar all United States flagships from the Great Lakes overseas trades, a development which I am sure the Congress never envisioned when it approved the expenditure of funds for the St. Lawrence seaway.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUBSIDY LIMITS
(By Edward P. Tastrom)

The recommendation of the Budget Bureau to Congress that a limitation of 2,000 be placed on the number of subsidized voyages for the coming fiscal year is entirely unrealistic in the light of what has been happening recently in the field of American flag shipping.

Either this division of the Government is unaware of the existence of the Federal Maritime Board or is deliberately ignoring the work of the maritime supervisory agency during the past several months in carrying out its duties under the Merchant Marine Act of 1936.

As of last January there were 1,897 subsidized sailings, leaving 103 open under the proposed 2,000 ceiling. Since then, the FMB has placed additional voyages under subsidy, reducing the number of open sailings to an estimated 30 trips.

Against this small total, applications are pending for an estimated additional 613 voyages. About 25 percent of this figure represents requests for increased sailings by presently subsidized lines. The balance represents applications for operating aid by American lines which do not presently hold subsidy contracts. Several of these seem certain of approval by FMB before Congress adjourns this year.

According to our calculations, we thus have applications for 20 sailings for each one that would be available under the Budget Bureau's system of reckoning.

Obviously, this situation calls for adjustment, particularly so in view of the fact that each of the approved applications will have achieved that status after having been carefully screened by the FMB to determine whether a subsidy is justified under the terms of the Merchant Marine Act.

Unless this ceiling is adjusted upward, a bundle of money will have been wasted by both ship lines and the Government on lawyer's fees, hearings, and reports, and the FMB will find itself stymied in carrying out a key segment of its legal mandate.

The major immediate danger lies in the Great Lakes trades where four American operators, seeking subsidy aid for service when the St. Lawrence seaway opens next year, are "shut out" by the appropriations bill as it now stands.

The FMB after lengthy hearings has determined that from 136 to 176 American-flag sailings a year on this route are "essential in the public interest." However, even if the Maritime Administration could find the money elsewhere, it could not contract for these sailings because of the 2,000 voyage limit set by the Budget Bureau.

The urgent need for readjustment in this ceiling has been pointed out to the Appropriations Committee by Senator CHARLES POTTER, of Michigan; Arthur Tarantino, representing Great Lakes shipping interests; and John J. O'Connor, representing the Isbrandtsen Co., a subsidy applicant.

As pointed out to the House committee, the voyage limitation is, in effect, an amendment to the Merchant Marine Act of 1936 and constitutes "legislation" by control of the purse strings.

Unless we are building the St. Lawrence seaway for the exclusive use of foreign-flag shipping, which is highly improbable in view of the millions of dollars of taxpayers' money being spent on this development, prompt action is needed in providing the subsidy aid which will permit American ships to engage in this service next year when the waterway opens.

It can be stated without fear of challenge, that lacking such aid, not a single American flag ship will be in the Great Lakes overseas business next year. We will be out of the ball game before the first inning starts.

Marquette Graduates in 1956–57

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. PROXMIRE. Mr. President, recently I placed in the RECORD a statement concerning the program for the future adopted by the officers of the Jesuit colleges and universities at a meet-

ing in January at Georgetown University. The statement appeared in the alumni publication of Marquette University. On that occasion I expressed appreciation for the fine contribution Marquette University has made to the State of Wisconsin and to the Nation.

Today I have a letter from the Reverend E. J. Drummond, S. J., the academic vice president of Marquette, who gives some figures on the graduating classes of 1956–57. I think this impressive contribution should be widely publicized.

Mr. President, I ask unanimous consent that Father Drummond's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARQUETTE UNIVERSITY,
Milwaukee, Wis., May 13, 1958.

The Honorable WILLIAM PROXMIRE,
United States Senate,
Washington, D. C.

DEAR SENATOR PROXMIRE: Thank you for sending me a clipping about the statement concerning Jesuit colleges and universities which you had recorded in the CONGRESSIONAL RECORD for April 28. In its beginning nearly every one of the private colleges and universities in the United States was, as the phrase goes, "church related." And as you have noted, these private schools have made a very considerable contribution in our pluralistic society.

Using merely figures to illustrate something of the contribution Marquette makes, within the school year of 1956–57 the university graduated 100 doctors, 64 people trained professionally in fields such as medical technology and physical therapy, 107 doctors of dental surgery, 77 nurses, 227 engineers, 290 in the several fields of business administration, 48 lawyers, 71 from the college of journalism, 49 from the school of speech, 379 from the various departments of the college of liberal arts, and 168 with graduate degrees in various fields. Along with the professional education given these students we have also striven to provide them with principles so that they might be able to direct themselves in later life as freemen and responsible citizens.

Today all of higher education requires a much fuller understanding on the part of the general public, and in particular, perhaps does private education and especially that under ecclesiastical auspices. So we shall rely on you to assist all of us in making clear what we are attempting to do and gain understanding and support as well.

Along with this goes, of course, my very good wish to you in all phases of your important work.

Cordially yours,
E. J. DRUMMOND, S. J.,
Academic Vice President.

Stan Musial's 3,000th Major League Hit

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. PRICE. Mr. Speaker, as an inspiration to American youth no figure in public life could possibly outshine Stan Musial, the great star of the St. Louis Cardinals baseball club. Adding to the list of records that stamp him as one of the alltime greats of the game, on Tuesday afternoon at Wrigley Field in Chicago, Stan Musial smashed out his 3,000th hit of his major league career.

Musial achieved his 3,000th hit, placing him in a select circle of 8 baseball greats, at an earlier date in his career than was the case with the 7 others.

But Stan Musial's contributions to the record book are not his most important contribution to the American way of life. We cannot measure the good he does through the inspiration he gives to the millions of American youth. Of strong character, good morals, and sincere religious beliefs, Stan Musial is a monument to American manhood. Respected and honored in his native community of Donora, Pa., and his adopted city of St. Louis, Stan is singled out as an example of the kind of a man whose leadership tends to instill in the young people of our country an ambition to follow in his footstep.

I saw Stan Musial play his first major league baseball game. I have had the pleasure of being personally well acquainted with him ever since that time 16 years ago. Everyone who has had that pleasure will agree with me that Stan Musial today, after having been acclaimed annually since as one of the game's greatest stars, is still the same Stan Musial he was when he entered the National League. No amount of fame and fortune has been able to destroy those fine traits of manhood which his parents developed in him as a boy in Donora.

My vocabulary is not adequate to permit to express my high regard for Stan Musial, either as Stan the ballplayer or for Stan the man. Suffice it is for me to say as everyone does—Stan Musial is a perfect gentleman.

Under leave to extend my remarks I enclose herewith newspaper accounts of Stan Musial's 3,000th hit:

[From the New York Times of May 14, 1958]

MUSIAL'S 3,000TH MAJOR LEAGUE HIT HELPS CARDS TOP CUBS—REDBIRDS CAPTURE SIXTH IN ROW, 5 TO 3—MUSIAL'S PINCH DOUBLE IN SIXTH SPARKS CARDINALS TO FOUR-TALLIES AT CHICAGO

CHICAGO, May 13.—Stan (The Man) Musial, hastily summoned as a pinch-hitter despite a well-advertised day off, joined 7 other baseball greats today by smashing a key double for his 3,000th major league hit and a 5 to 3 victory for his St. Louis Cardinals over the Chicago Cubs.

Musial was supposed to have been benched today so he could hit No. 3,000 in St. Louis tomorrow night. He was called from the Card bullpen in the sixth inning and belted his 2-bagger to start a 4-run Card rally.

It was the sixth victory in a row for St. Louis over the error-plagued Cubs, who lost their seventh straight.

MUSIAL LEAVES GAME

Musial had a 2–2 count, fouling off 3 pitches, before he tagged Chicago's Moe Drabowsky for a long drive into deep left field. After a swarm of photographers besieged Stan on second base, he was replaced by Frank Barnes a pinch-runner.

Musial batted for Sam Jones, the Cardinal starter, after Gene Green had led off the St. Louis sixth with a double and Hal Smith had grounded out. Green scored on Musial's hit. Before the inning ended, a walk, Don Blasingame's single, an infield out and Wally Moon's double scored 3 more runs.

The Cubs had fashioned a 3 to 1 lead after 5 innings, 1 run scoring on Lee Walls' 10th homer in the third. The Cubs' 12th and 13th errors in 4 games gave an unearned run to the Cards in the third.

A crowd of 5,692 in Wrigley Field cheered Musial's big hit. The previous players who made 3,000 or more major league hits were Ty Cobb, 4,191; Tris Speaker, 3,515; Honus Wagner, 3,430; Eddie Collins, 3,313; Nap Lajoie, 3,251; Paul Waner, 3,152, and Adrian Anson 3,081.

DAY OFF INTERRUPTED

Musial had been slumped nonchalantly on the Card bullpen, enjoying the sun beyond the dugout. Suddenly, Manager Freddie Hutchinson called for him. Stan jumped up briskly, strode for the dugout, grabbed a bat and moved up to bat.

Drabowsky's first pitch was outside for a ball. Stan fouled the next delivery against the screen. He fouled another off to the left. The fourth pitch was low for ball two. A long foul followed into the left field stands.

Then Stan measured Drabowsky's sixth pitch and boomed it out to deep left, far to the right of Walt Moryn, the leftfielder.

LIST OF MUSIAL'S RECORDS

These are the records Stan Musial established or equaled before reaching the 3,000-hit milestone yesterday:

MAJOR LEAGUE RECORDS

All-star games, 13.
Home runs, doubleheaders, 5.

MAJOR LEAGUE RECORDS TIED

Year's 300 or more total bases, 13.
Year's most two-base hits, 8.
Year's most three-base hits, 5.

NATIONAL LEAGUE RECORDS

Total bases, lifetime, 5,042.
Consecutive games, 895.
Year's 100 or more runs batted in, 10.
Extra bases, lifetime, 1,156.
Slugging percentage, lifetime, 580.
Batting championships, left-handed hitter, 7.
Year's leading in games played, 4.
Year's scoring 100 or more runs, 11.
Year's leading league in hits, 6.

NATIONAL LEAGUE RECORDS TIED

Year's playing 150 or more games, 10.
Year's leading in runs scored, 5.
Year's 50 or more two-base hits, 3.
Consecutive year's leading in hits, 3.
Named most valuable player, 1943, 1946, and 1948. His 7 batting titles are 1 behind Honus Wagner's record.
Led league in total bases 6 years.
Led in slugging percentage 5 years.
Led league in walks in 1953. Club leader in nine departments—at bat, runs, hits, singles, doubles, triples, home runs, total bases, and extra base hits. Named Player of Decade in the Sporting News poll, 1956.

National Defense Transportation Day

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. SIKES. Mr. Speaker, tomorrow is National Defense Transportation Day, set aside by Presidential proclamation and congressional resolution to focus public attention on the indispensable role all forms of transportation perform

in national defense. The event is being observed throughout the United States with parades and other special events and ceremonies. A radio program is being broadcast by stations across the Nation tomorrow which, among other things, describes the many important contributions of the Nation's independent airline industry to national defense in time of war and in time of peace. It is narrated by the noted TV and radio commentator, Mr. Joseph McCaffrey, who is well known on Capitol Hill where he has spent over 10 years covering Congress. The program opens with a foreword by Col. Francis W. Crary, United States Army, retired, executive vice president of the National Defense Transportation Association, the organization which sponsors tomorrow's observance. Under unanimous consent, I insert in the RECORD the remarks of Colonel Crary and Mr. McCaffrey:

REMARKS OF COL. FRANCIS W. CRARY, UNITED STATES ARMY, RETIRED, EXECUTIVE VICE PRESIDENT, NATIONAL DEFENSE TRANSPORTATION ASSOCIATION, ON RADIO PROGRAM MARKING NATIONAL DEFENSE TRANSPORTATION DAY, MAY 16, 1958

The third Friday in May of each year is National Defense Transportation Day—an occasion designated by the President of the United States to give full recognition to the importance of our Nation's transportation industry.

Sponsored by the National Defense Transportation Association and established as an annual national observance by public law of the 85th Congress, the day will be keynoted by the slogan "Transportation protects the Nation" to enable the Nation to become more familiar with the part transportation plays in our common defense.

The purpose of National Defense Transportation Day is not merely to display to the public the vast transportation system the Nation now possesses. It seeks, also, to bring about a broader understanding of the problems we face in maintaining our security and integrity in a troubled world, and the necessity for constant improvement and expansion of our land, sea and air transportation facilities.

In passing public law designating National Defense Transportation Day, the Congress of the United States declared, and I quote:

"Whereas this great transportation system, by land, by sea, and in the air, has been so expansive and comprehensive as to become somewhat commonplace in its acceptability, and the true importance and significance of this great transportation system in the community life and security of all our people, and as a bulwark in support of the armed services in a national emergency or preparedness in the defense of our country, is not given the full recognition to which this national development is entitled; and

"Whereas without effective transportation, all logistic effort collapses, and without effective logistics, all defense collapses."

REMARKS OF MR. JOSEPH W. MCCAFFREY

When the military needed extra airlift in past emergencies, the independent airline industry was there to do the job.

In 1948, on almost a moment's notice, the independent airline industry mobilized a fleet to support the Berlin airlift. Representing only 5 percent of the Nation's air transport, independent airlines moved 25 percent of the passengers and 57 percent of the cargo tons carried by commercial airlines in this strategic operation.

Again in 1950 the industry answered the nation's call to service and in support of the Korean airlift supplied over half the capacity called for by the military.

When refugees streamed out of Hungary following the abortive revolt in 1956, independent airlines flew the first airplanes from this country to airlift refugees from Vienna to the United States and elsewhere. They continued to support the Air Force's "Mercy Lift" of refugees.

This country's outer air warning network, The DEW line, has been supplied in substantial part by the independent carriers.

Not only have the independent airlines stepped into the airlift gap for the military during emergencies, they have, since 1951, supplied a continuous service in domestic movements of military personnel and cargo. In 1957, for example, independent airlines operated 4,971 commercial air movements of 218,856 military passengers.

Use of independent airlines for troop movements represents a substantial savings to American taxpayers because military personnel are kept on the job, not on the way. Independent airline service has saved over 50 million valuable man-hours for the military since 1951, in addition to millions of military dollars which otherwise would have had to be spent in unnecessary expense allowances and pay dollars. The record shows that the transportation service rendered the Defense Department by the nation's independent airlines is Uncle Sam's best buy.

Use of independent airlines to transport military passengers and cargo in peacetime further enhances the industry's value as a reserve airlift of the military in event of a national emergency. It enables the pilots and other crew members employed by the industry to keep alert their proficiency in military air operations. Not only are crews kept in a constant state of readiness, but the planes operated by the independent airlines are already equipped for military airlift work.

In cooperation with the Department of Defense, the Independent Airlines Association has set up machinery whereby it can mobilize the entire industry to meet any military emergency on a moment's notice. To facilitate Defense Department use of independent airline service, the association has offices on key military installations in the United States. These field offices, and IAA's member airline, are linked to the association's aircraft control center in Washington by a nationwide teletype network which operates on a 24-hour per day, 7-day week, alert basis.

The unique capability of the independent airline industry to serve the Armed Forces stands out as one of the finest examples of an effective military-industry partnership working together in peacetime to achieve maximum economy in travel within the Defense Department, and to assure an important ready reserve airlift capability in event of a national emergency.

While independent airlines are dedicated to national defense, they are dedicated also to providing the advantages of air transportation to the maximum public at the lowest possible cost.

In 1955 the Civil Aeronautics Board authorized the independent airline industry to extend its world-wide experience in military charter work to the field of civilian passenger groups. This enabled the industry which pioneered and developed low-fare air coach to contribute another significant first to air transportation when it established the only Government-approved air charter clearinghouse operating in the United States. Through the Independent Airlines Association's Air Exchange, civilian groups can arrange custom-made air travel tailored to fit their needs and desires.

In granting independent airlines permission to activate the Air Exchange, the Civil Aeronautics Board pointed out that the future ability of the industry to serve the military depends upon their ability to operate their fleet in commercial activities when not engaged in military work. The CAB said it felt that the independent airline industry possesses the inherent flexibility to meet the unique demands for charter and special-service flights.

Independent airlines are proud of their record of service to the public and to the Nation. The industry stands prepared to answer the Nation's call to duty wherever and whenever called.

Hope for Educational Legislation in 1958

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. NEUBERGER. Mr. President, many of us in the Senate still hope fervently for effective educational legislation at this final session of the 85th Congress. These hopes occupy two major fields—scholarships for outstanding college students, and aid to school construction and teachers' salaries in all 48 States for elementary and high schools.

An informative article on this vital topic appeared in the Washington (D. C.) Sunday Star of May 11, 1958, under the byline of George W. Oakes, who has specialized in writing in the realm of education. I am particularly pleased that Mr. Oakes has discussed not only the scholarship question but also the continuing urgent need for school-construction aid at the Federal level.

I ask unanimous consent, Mr. President, that Mr. Oakes' article from the Sunday Star may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Sunday Star of May 11, 1958]

FRIENDS OF AID TO EDUCATION SEE HOPE FOR SCHOLARSHIP BILL

(By George W. Oakes)

As Congress faces the last 3 months of its session, indications are that major education legislation will be enacted before adjournment. This year's big battle over Federal aid to education is underway in the House, the scene of past education defeats.

The sputniks, wide discussion of our educational deficiencies and the business recession, highlighting the need for increased Government spending, have left their mark on the legislators. As a result, the outlook for Federal funds to increase college scholarships and other related administration proposals looks favorable.

AN IMPORTANT STEP

The House General Education Subcommittee, spurred on particularly by Democrats METCALF and THOMPSON, recently has taken the first important action in this session by reporting out a 3-year $1.5 billion school construction bill. It is expected that the full House Education Committee will approve a similar measure soon. A year ago the administration's school-building program would have been enacted but for five votes.

Members of the House Education Committee are now trying to reach agreement on a scholarship bill—a compromise between the

administration's proposal and the more extensive and expensive Hill-Elitt bill. The scholarship bill is expected to reach the House floor before a school construction measure because it has the best chance of passage and it may be enacted possibly before the end of June.

Such action would encourage the Senate's leader in education, LISTER HILL, to bring his scholarship bill out of committee to the floor. Then it would appear likely that the two Houses will have little difficulty in agreeing on similar scholarship legislation. Present indications suggest that President Eisenhower would give his approval even though the cost might be substantially greater than the administration originally proposed.

One of the main issues to be decided when the House Education Committee meets shortly to report out scholarship legislation is the preference for science and mathematics in both the administration and the Hill-Elliott bills. Democratic and Republican members of the committee wish to remove any such bias in the legislation on the grounds that a broad training in the humanities is fundamental whether the purpose is to produce top scientists or well-rounded leaders. In fact, outstanding scientists have testified for aid to both humanities and science even if the aim is only to produce eminent scientists. Those who hold this view are convinced that they can get these ideas accepted by the committee.

FEDERAL AID OPPONENTS

The reason why a scholarship bill is likely to be enacted is that administration backing can insure enough votes especially in the House to offset the hard-core opponents of Federal aid among the southerners and Republicans. In addition, the defense angle will have a significant influence in lining up wavering supporters for scholarship aid at the college level even if the sciences and mathematics are not given special preference in the House bill.

There is considerable danger that any school construction bill may be bottled up in the Rules Committee or, if it emerges, once again meet defeat on the House floor.

Congressmen fighting for school buildings agree that considerable further impetus will be required to jump the hurdles of southern Democrats and many Republicans who for years have opposed Federal aid for this purpose. Mindful of last year's defeat, Speaker RAYBURN is understood to oppose taking a school-construction bill to the floor unless he is convinced that he can get it passed.

MIGHT CHANGE VIEWS

A deepening of the business depression or further disappointment during the next month in the expected upturn would be perhaps the only development that could enlist the necessary votes. It would also provide the best reason for the administration to endorse again its 1957 school-construction program as well as this year's scholarship proposals. Under these condition enough of those who have been mildly opposed to Federal funds for classrooms might find an excuse to change their view in order to pass the legislation.

Unless this situation occurs, it is extremely doubtful if school construction will have a chance on the House floor this session. Even though there has been widespread public discussion and interest in greater Federal aid for new schools, Members of Congress who for years have fought this battle do not notice a significant rise in popular demand for legislative action. Some believe that the educational world itself is too divided between those who urge more stress on quantity—more facilities for the rapidly increasing school population—and those who advocate greater emphasis on quality in the present school systems.

The Wonders of Radio Recording Tape

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, May 15, 1958

Mr. HRUSKA. Mr. President, one of my fellow citizens of Omaha, Nebr., has written me about a program which I think worthy of attention.

We have heard a great deal about the wonders of radio recording tape and how it has almost revolutionized the broadcasting and recording industries. Now, recording tape is at work in another vital field—the improving of international understanding.

Some 2,000 people—in all 48 States as well as in more than 60 foreign nations—are exchanging ideas, discussions, music, and a better understanding of each other through World Tape Pals, Inc. They are to be commended for their interest and work in this venture.

Mr. President, I ask unanimous consent that a letter addressed to me by Mr. Charles W. Madden, public relations committeeman for World Tape Pals in the Omaha, Nebr., area be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OMAHA, NEBR., *April 23, 1958.*

Hon. ROMAN L. HRUSKA,
Washington, D. C.

DEAR SENATOR HRUSKA: I am writing you on behalf of World Tape Pals, Inc., a service organization of nearly 2,000 members from all 48 States as well as from more than 60 foreign countries. It is our firm belief that world peace is simply a matter of understanding, and we are endeavoring to bring about this universal understanding through the medium of recorded tape. In response to President Eisenhower's people-to-people program, the members in the United States, consisting of well over half the total membership, are cooperating fully to make this peace program a success.

To quote President Eisenhower: "If our American ideology is eventually to win out in the great struggle being waged between opposing ways of life, it must have the active support of thousands of independent private groups and institutions and millions of individual Americans acting through person-to-person communications in foreign lands."

We of World Tape Pals are working toward world peace in several ways. First, through individual tape contact the members can teach and learn about others' countries, ideals, and ways of life, and can likewise discuss international problems from different points of view and offer intelligent, understandable proposals for easement and solution. How better can we learn than from our friends at home and abroad. I myself have friends in Germany, England, Gibraltar, Africa, Australia, and Japan. From them I learn about their lives and problems, and in turn I teach them about democracy and the American way of life.

Our world tapes for education project is a far-reaching venture which enables schools all over the world to participate in group tape exchanges of mutual interest, and to have access to an extensive tape library of cultural and educational material collected from all parts of the globe. As a teacher I can well appreciate the great value and potential of a project of the scope of world tapes for education.

World Tape Pals is now in its fifth year. We are presently planning an extensive expansion campaign and membership drive. In order to enlarge our scope of activities it will be necessary for us to solicit the aid of the various local civic, social, and philanthropic organizations throughout the country. In order to interest foundations and internationally minded people in the importance of World Tape Pals and our cooperation in the people-to-people program, we are endeavoring to obtain from each Senator and Congressman from all the States a letter of approval and support for tape recording as a means of aiding international relations.

Your consideration of this request for your seal of approval will be greatly appreciated and be of great value to the continuance of tape recording as an instrument in achieving world peace through understanding.

Sincerely,

CHARLES W. MADDEN,
Public Relations Committeeman for World Tape Pals in the Omaha Area.

Small Business Investment Corporation, H. R. 10980

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. MULTER. Mr. Speaker, on May 1, 1958, it was my privilege to appear before the Senate Banking and Currency Committee, Subcommittee on Small Business, in support of my bill H. R. 10980. My testimony was as follows:

STATEMENT OF ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Senator CLARK. Congressman MULTER, will you give us the benefit of your thinking. We are very happy to welcome you here to give us your help on this very complicated matter. We know of your wide experience in this field and of your interest as a member of the House Banking and Currency Committee in seeing that the thoughts of the two Houses are brought together with effective legislation.

I see that you have a very elaborate and, I am sure, a most helpful statement here. My suggestion would be that we place it in the record in full at this point, and ask you to hit the highlights, appreciating the inconvenience which we are causing you by keeping you here when you want to get back to the House.

Mr. MULTER. Thank you very much, Mr. Chairman, members of the committee and Members of the Senate. I appreciate the courtesies extended to me, and I am sorry that Mr. COFFIN has shortened his presentation to make room for me. I appreciate that and I also appreciate that Mr. MCCORMICK stepped aside so that I could present my statement.

I will follow your suggestion, Mr. Chairman, which is a good one, that the statement be made part of the record, and I will highlight some of the important features.

Senator CLARK. The complete prepared statement of Congressman MULTER will appear in the record at the conclusion of his oral statement.

Mr. MULTER. I join with Mr. COFFIN in urging that the Small Business Administration be continued as a permanent agency, and that your committee then take action on H. R. 7963, which passed the House by an overwhelming vote of 393 to 2 last year. It is implicit at least in some of the bills before you that you will continue that agency. I have elaborated in my statement upon the reasons why it is important that it be a permanent agency.

Many people will ask why should there be two agencies. If we are going to continue the Small Business Administration as a permanent agency, or even as a temporary agency, why set up a new agency for small-business investments or long-term loans? Of course, these definitions change very quickly.

When I first entered a bank as an employee in 1918, a long-term loan was a 1-year loan. Today the Small Business Administration is authorized to make loans up to 10 years, and we are now talking about the 10-year loan being a short-term loan.

There is not any doubt but that small business, if it is to be helped effectively, in addition to the lending facilities that the Government must extend to it, that we must make some means available to it to get capital which they need on a long-term basis.

My bill, H. R. 10980, was prompted in part at least by the thinking of Mr. MCCORMICK, who just testified here, and I want to give public credit to him for having stimulated the idea that is presented by my bill.

I would like also, if the principle of my bill is enacted, actually to test out whether or not the American public will participate in this kind of venture. I think we should do that before we have the Government step in and say, "We are going to do this because private enterprise will not do it." We know that private enterprise will not make long-term loans to small business. We do not know whether or not they will participate in a venture like this of long-term permanent risk capital investment. Let us try it. Let us test it, I say, and see if we can get them to do that.

The reason why I say there must be 2 agencies rather than 1 is important. I think Mr. MCCORMICK will bear me out on this, as will any banker, I am sure, who will come before this committee. The philosophy of lending is quite different from the philosophy of investing. The investment is intended to remain more or less permanently. There is no guaranty of return; there is no fixed amount of return by way of dividends or interest, but if the venture succeeds and prospers, the invested capital will be returned by way of profits earned which will be paid out in dividends, and even after the initial capital is all paid back the investment remains and continues to earn.

The loan, on the other hand, as we all understand it, is made for a definite length of time, agreed upon at the time the loan was advanced, to bear a fixed interest or return. There is always an assurance or guaranty, or there should be reasonable assurance, with necessary guaranties when available, for the return of the money. Even though it may be for a 10-year or a 20-year term, it nevertheless contemplates at all times that the money will come back out of the business and be returned, while venture capital and risk capital and investing capital is intended to remain there more or less indefinitely. As long as the business operates, the money stays there. Upon liquidation it will be paid back in proportion to what assets are available after liabilities.

So I say that basic difference in the philosophy of the approach of the men who must appraise where the investing money will go, or appraise the value of the loan and the assurance of repayment, is the reason why we need two different agencies to do the job. Eventually we may want to combine the two agencies. I doubt it.

I think, in addition to these important basic reasons, that the Small Business Administration is presently doing a good job, and filling a very real need. I do not think we will ever be able to do without it. I hope someday we can, but in the meantime with this new venture going into this new field, full of so many complexities and so many pitfalls, let us not risk that if it goes bad, it will give a black eye to the Small Business Administration and possibly cause that to fold up.

I have in mind specifically, as I am sure you have, that the RFC would not have been closed up when it was doing such a good job for small business, except for the fact that some of the big-business loans it had made gave it a black eye. Let us try to avoid that happening with this new agency.

Senator CLARK. Let me interrupt you to say that I personally agree with you, but what would be your answer to the contention that some of our friends make that by creating a new agency we are setting up another vast Federal bureaucracy which will have branch offices in every city and county and which is quite unnecessary. You know the general objections to the Government interjecting itself to that extent.

Mr. MULTER. If this agency is needed then all those arguments obviously fall to the ground. But my approach is slightly different than that of S. 3651, which was introduced by Senator JOHNSON and many others.

S. 3651 does appear to set up a permanent agency, and while it talks about letting private enterprise eventually take over, it has no provision, in the bill at least, for private enterprise taking over the main or mother organization. You do provide for the small investment company being helped by the mother agency, eventually to be completely privately owned. My approach is different from that.

In H. R. 10980 I set up an agency of Government with provisions which are self-executing and mandatory that small business eventually take it over. If the enterprise fails, and collapses, we will close it up. We would be among the first to do so if it did not succeed. But, if it succeeds I provide with every investment, that the company that is being helped must make a 10 percent investment in the Government agency or corporation that is set up, and eventually small business will own this agency that we are setting up and the Government will be out completely. It may take 10 years, but eventually the Government will get out.

If in the meantime it does not succeed and does not do the job intended, we can wind it up at any time.

I think that is a complete answer to those who say let us not set up another bureau or another agency of Government.

In that connection I cannot too vigorously urge upon you that in your approach please do not set up a policy board as part of the agency or part of the corporation which is going to include in its membership anybody in other Government agencies, whether it be the Secretary of the Treasury or the Secretary of Commerce, or the Small Business Administrator. Please keep them out of the policy-making organization or division of the corporation or agency.

Senator CLARK. Why do you say that?

Mr. MULTER. Because experience has shown with the Small Business Administration, where we have a loan policy board consisting of the Secretary of Commerce, the Secretary of the Treasury, and the Small Business Administrator, that the Small Business Administrator is under the domination of those two other agencies. The two other men are big business representatives traditionally. In fact, their views have prevailed rather than the views of the Congress, and the intent of the Congress. The views of the Secretary of the Treasury and the Secretary of Commerce have been running the agency so far as loan policy is concerned, and I say that is bad.

Senator CLARK. Do you think that would be true regardless of who controls the White House? My own view is, that is a reflection of current political philosophy of the party that won the election in 1952 and 1956, and it would change very rapidly if the party to which we both belong would acquire the Presidency.

Mr. MULTER. I believe you are right, that personalities will change and we will get better public servants who are more responsive to the will of the Congress and to the will and needs of the people.

Senator CLARK. In other words, you think that this agency should not be a part of the executive arm?

Mr. MULTER. Definitely not. And let me say in fairness to the Republicans, the Democrats too have called on big business for representation in Commerce and in Treasury. Commerce is supposed to be the agency taking care of all business, big and small, but traditionally, no matter who is in the White House, Democrat or Republican, the Commerce Department looked after big business and Treasury leaned toward big business rather than small business. The only small business agency we have today in Government is the Small Business Administration, and we should make it independent as called for in H. R. 7963. I hope you do the same thing here.

If we set up an agency, of course, we are inclined to say, let us have an administrator, one person running the agency or department. That is all right in most instances and I go for it in most departments. But in setting up a new agency of this kind which is actually going to be exploring new paths of enterprise, let us in the first instance, whether it be an agency or corporation, set up a board of at least 3 men, or a commission of at least 3 men, and call in 3 people from outside the Government, and let them explore and develop the policies and program and administration of this agency.

Let them be responsible for the making of the policy and the implementation of the policy. Where we are going into such a new field as this, I do not think we can find anyone man who will be able to do the full job. There too, we may fail because we do not have the right person or persons in control. If we can get three people from business and banking and investment to come in and do this job and set up this new agency or corporation, I think we can do a better job in the first instance. Maybe after 3 or 4 or 5 years we will go back to the idea of 1 man running it, but in the beginning we need that diversification of opinion and experience.

There are many good provisions in S. 3651 which I did not incorporate in my bill, and which I think should be incorporated in any bill that you bring out. I have indicated them in my statement and I will not take the time to mention them. There is one other provision which is neither in those bills nor in my bill, which I think we should not overlook putting in. That is the provision that the General Accounting Office have the right to go in and audit and report to the Congress. In these bills we call for reports to the Congress. Let us not make the mistake of not saying in the bill we enact that the General Accounting Office should have the right to go in and review and report to the Congress as to all of the operations of any agency or corporation we do set up.

The question of definition always give us considerable trouble—the definition of small business. I do not think the complete answer is found in my bill. I do not think it is found in the Senate bill. My suggestion is

we add to whatever language we take, whether it be that in the existing statute or that in any of the bills—that we add a provision which would give the administrator, or the board, or the commission that is in control of this new organization, discretion so that it does not arbitrarily exclude anyone. If his definition says 250 employees in this particular indutry is small business, do not permit the exclusion of one with 254 employees. Give that additional latitude and discretion so that we can bring a genuinely small business concern into this program, where the facts warrant it.

I think, sir, I have covered most of the important features of the legislation before you and, of course, as has already been indicated, they are elaborated on in my statement.

Senator CLARK. Thank you very much, Congressman MULTER, for your most helpful testimony, and particularly for calling to our attention your own bill, H. R. 10980. I see that you have a section-by-section analysis of it in your prepared statement, and I am going to ask the staff to familiarize themselves with it. I shall read it with great care myself before we go into executive session to mark up a bill for final action.

I really do appreciate your taking this time. I know you want to go back so I will not hold you any longer. Thank you ever so much, Congressman MULTER.

Mr. MULTER. Thank you.

(Congressman MULTER's prepared statement follows:)

"STATEMENT OF ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

"Mr. Chairman and members of the committee, I appreciate the privilege of appearing before you today in an effort to help in some small way in your deliberations on a very complex problem confronting the American public and the Congress.

"I, like many Members of the Senate and the House, have introduced bills to provide financial aid and assistance to small business.

"Need for a new legislative approach

"If the 4 million small-business concerns so vital to our free-enterprise system are to continue to exist, we here in Congress must find, as quickly as possible, a method whereby the financing so necessary to the life of a small-business concern will be made more readily available. Not only must we address ourselves to the problem of loans to small business but we must also establish methods of making available risk capital, now almost nonexistent, for these small businesses.

"My bill, H. R. 10980, is known by the title of 'Small Business Investment Corporation.' Its purpose is to furnish needed equity capital to small-business concerns in the United States.

"Today, we can all agree (1) that the growth and development of small business is essential to the continuing vitality and expansion of a sound national economy; (2) that small-business concerns in the United States are increasingly in need of equity-capital money with which to finance their growth and development; (3) that such money must come from either loans or risk capital or both; (4) equity-risk capital is unfortunately rarely available for this purpose; and (5) until private enterprise adequately performs this task, the Federal Government must fill the void.

"The Small Business Administration

"There is now pending before this committee H. R. 7963. That bill passed the House last year by an overwhelming vote of 393 to 2. It represents the clear and unequivocable attitude of the House that the Small Business Administration should be a permanent agency. The financial assistance program of the Small Business Administration covers only the loan feature—both for business loans and disaster loans. But unless and until this agency is made permanent by Congress, it cannot and it will not fully accomplish the mission for which it was created.

"There are many who urge that the authority of SBA is too limited and too restricted. Some urge the maximum amount of the loans is too low. Others say 10 years is too short a term. If a majority of this committee endorses either or both of those suggestions, then I say amend H. R. 7963 so as to accomplish those additional lending functions.

"But I beg of you, do not create a new lending agency for that purpose. There are those of our colleagues who rightfully complain that SBA has not in all respects implemented the intent of Congress. Some of those complaints are properly laid at the door of poor administration. The blame for others is ours, that of the Congress, because of the provisions we wrote into the law.

"On the administration end, SBA has learned and is learning from experience and is doing, and I believe will continue to do, a better job. We can help them.

"If we eliminate the loan policy board, we will at once make the agency more amenable to the legislative will and intent and, at the same time, eliminate the big-business views and influence of the Treasury and Commerce Departments. If we make SBA permanent, the agency will be able to retain experienced personnel. Because of its temporary nature, as fast as SBA trains good men they move on to other positions that give assurance of permanent tenure. In addition, SBA will get more and better cooperation from private industry and private banks if it has permanent status.

"A most important reason for continuing SBA is the important Government procurement role it plays for small business. There is no other agency set up to do that job. No other agency has ever really tried to do it. None of the other bills before the Congress seeks to set up an agency to assume that task.

"This phase of my testimony is fortified by the opinions of the small independent bankers of our country as made known by them to the National Federation of Independent Business.

"I therefore urge this committee to immediately report to the Senate H. R. 7963 with or without amendments.

"A new agency to supply equity capital

"I also urge that you report to the Senate for its consideration a bill which can be expeditiously adopted by Congress to supply the long-needed risk capital for small business.

"I have no pride of authorship; and I am confident that no Member of either body insists that his own bill is the only answer or the complete answer. We are all concerned with attaining one goal and that is enactment of legislation which is in the best public interest of the country at large.

"H. R. 10980, introduced by me in the House, was based upon extensive hearings held by the House Small Business Committee, of which I am privileged to be a member, and chaired by our able colleague from Texas, the Honorable WRIGHT PATMAN. At those hearings we received testimony from representatives of small and large business, as well as from economists and experts in the field of financing.

"The Honorable Edward T. McCormick, president of the American Stock Exchange, in his statement recommended to the House Small Business Committee on November 22, 1957, that Congress should set up a closed-end investment trust with both the Government and private investors participating in the initial capitalization to provide equity capital for small business.

"There emerged from these hearings several important conclusions.

"Small-business concerns require permanent capital which can be kept invested without the need to meet frequent interest payments. The most logical source for such funds is investment capital. However, it is apparent that small-business concerns, though they have good records and bright prospects, cannot compete for such money with the well-known large firms. Big business enjoys a near monopoly of currently available investment funds.

"Equity capital will permit greater flexibility in the business operation of the firm. Expansion to increase production and develop new ideas becomes possible. The credit base is expanded, permitting borrowing from the commercial banks and easing relations with suppliers and customers.

"H. R. 10980 establishes a mechanism which may well be the solution to a permanent problem of small business.

"It provides its own procedure for removing Government from the investment business.

"The corporation will eventually become a wholly privately owned institution.

"This is the most simple direct way of meeting the problem; and the agency will not be in competition with any existing Government agency.

"On February 3, 1958, I introduced a bill, H. R. 10453, which is the same as H. R. 10345, that of the distinguished gentleman from Texas [Mr. PATMAN], and of many others, and which is referred to as the small business capital bank bill.

"I am still in favor of the general principle of that bill. I offered my bill, H. R. 10980, as another approach to the same problem.

"Why 2 agencies instead of 1

"My bill, H. R. 10980, differs from the others, H. R. 10345 and H. R. 10453, in two important respects.

"First, it provides for immediate participation in this financing by the general public.

"Secondly, it omits the lending function found in those bills and instead provides only for supplying investment capital.

"I am firmly convinced that the 2 functions cannot be operated successfully in 1 institution or in 1 organization.

"The lending officer must be schooled in the philosophy of advancing money, for a limited time, for a fee—interest—fixed at the time of the advance, and conditioned on a reasonable assurance of repayment.

"The investing officer must be schooled in a philosophy which is almost the direct opposite, to wit, appraising the risk probabilities that will warrant advancing money for an indefinite time with no promise of refund but with reasonable assurance that profits will be earned sufficient to return the advance in varying installments—dividends—which continue even after the original capital has been repaid out of profits.

"The business and banking world has long recognized that those two functions should be kept separate and distinct.

"The great majority leader of the Senate, the Honorable LYNDON JOHNSON, has introduced S. 3651 which has been cosponsored by many Senators and is another approach to this important problem. A similar bill has been introduced in the House by the Honorable WRIGHT PATMAN. The able majority leader stated before the Senate on April 21, when he introduced his new bill, S. 3651, that this is a new approach to the problem and that he is confident that the committee will select the best and most workable features of the various bills now being considered by your committee. What we all want is a good law which will successfully supply the long-term equity capital needs of small business.

"A policy board dilutes control

"I have read Senator JOHNSON'S bill and I reluctantly find that I must disagree with at least one important feature of it—the creation of a Small Business Policy Board.

"Since the enactment of the Small Business Act of 1953, as amended, attempts have been made in both Houses of Congress to eliminate the Loan Policy Board, created by section 204 (d) of the Small Business Act of 1953, as amended. H. R. 7963 accomplishes that end. The SBA Loan Policy Board has hampered and impeded its operations.

"The Loan Policy Board called for by S. 3651 adds an additional official to the Board, namely, the Administrator of the new Small Business Investment Administration. That provision will not remedy but rather perpetuate a bad situation. The Cabinet officers, the big-business representatives in Government will continue to dominate, and I am afraid will stifle, what should be the friend and sponser and helper of small business. In 1955, in a report issued by a subcommittee of the House Committee on Small Business, House Report 1045 of the 84th Congress, 1st session, of which I have the honor to be chairman, we unanimously agreed that:

" '* * * the procedure of the Loan Policy Board appears to delay important decisions and hampers efficient administration rather than serving to expedite the important lending functions of the act. In view of the foregoing experience, this subcommittee recommends that section 204 (d) of the act be repealed. The subcommittee feels that the responsibility and jurisdiction for the policies, as well as the operations, of the Small Business Administration should lie solely within the administration of the agency. It is clearly the intent of the Congress that the Administrator be responsible for the activities and functions of the agency and that the agency be wholly independent and unaffiliated. * * *'

"That report was unanimously adopted by the full committee.

"Experience has also taught us some of the shortcomings of the Small Business Administration. Despite the fact that it has been created as an independent agency, it has failed to act as an independent agency and has been under the thumb of the Secretary of the Treasury and the Secretary of Commerce.

"Section 201 of S. 3651 establishes the Policy Board. Its functions are outlined in section 202 (b) as the coordination of the activities between the Small Business Administration and the Small Business Investment Administration. The Board is to establish under section 202 (a) the general policy governing the approval and disapproval of applications for financial assistance for both the Small Business Administration and the Small Business Investment Administration.

"As I have previously stated, I am firmly convinced that both the lending functions and the financial functions cannot be blended successfully in 1 institution or 1 organization. One is based upon the philosophy of advancing money for a fee or interest with a definite guaranteed promise of repayment at a fixed time or times—the other upon the philosophy of investing money based upon the risk probabilities, which warrant putting the money out for an indefinite period of time with no guaranty of return.

"Unless we have independent, unaffiliated agencies, both for lending and investment purposes, with responsibility resting with the agency itself, we must expect the thinking of the Secretary of the Treasury and the Secretary of Commerce to prevail. That is not to say that they may not confer and consult and in appropriate fields even cooperate. But the responsibility should be that of the operating head of the agency and not shared with some other official of the executive department of the Government.

"The SBA lending function is a successful program, even if not broad enough. This new and untried investment program may or may not succeed. We hope it will. But until it does, let us not risk losing the benefits of a good program because of any deficiencies or losses that may occur in the new on.

"Analysis of H. R. 10980

"At this point, I would like to present a section-by-section analysis of my bill.

"Section 1. The act is to be cited as 'Small Business Investment Corporation.'

"Section 2. The policy of the Congress and the purpose of the act are to provide small-business concerns of the United States with an adequate source of equity capital and thereby promote their growth and development in the interest of a sound, vital, and expanding national economy.

"Section 3 defines various terms used in the act.

"Section 4 (a) creates the Small Business Investment Corporation; (b) declares that the objective of the Corporation is to carry out the purposes of the act by supplying needed equity capital.

"Section 5 (a) creates a Board of Directors to administer the Corporation; (b) establishes the method of appointment of the Board while the Government still owns capital stock in the Corporation; (c) establishes the term of office of the Board of Directors; (d) sets the rate of compensation for the Board; (e) establishes travel allowances; (f) sets the method of electing officers of the Board with a rotating chairmanship and fixes a quorum as three members of the Board; (g) gives the Board power to adopt rules and regulations; (h) establishes procedures for selection and election of members of the Board at such time when the Government ceases to own any capital stock.

"Section 6 (a) sets forth the method of appointing an Executive Director of the Corporation; (b) establishes the compensation for the Executive Director along with allowances for travel; (c) fixes the duties of the Executive Director; (d) enumerates the general powers of the Executive Director (such as the hiring of employees and the acquiring and disposal of property in connection with the functions of the act).

"Section 7 provides the powers of the Corporation, including—

"(1) establishment of bylaws consistent with the act and the manner in which business is to be conducted both before and after the time when all capital stock subscribed for by the Secretary of the Treasury has been retired;

"(2) the adoption and use of a corporate seal;

"(3) the right of succession;

"(4) the making of contracts;

"(5) the right to sue and be sued;

"(6) the right to acquire, hold, and dispose of property (real, personal, or mixed);

"(7) the delegation of incidental powers to the Board in order to carry out the functions vested in it by the act.

"Section 8 (a), initial capitalization of the Corporation of $20 million, one-half of which shall be subscribed for and paid in by the Secretary of the Treasury immediately upon the establishment of the Corporation, and which shall be retired in full at the earliest practicable time, the other one-half shall be offered for sale to the general public at par. The stock shall have a par value of $100 per share.

"Section 8 (b) provides for additional funds by issuance of bonds to carry out the purposes of the act with a maximum ceiling of $500 million including the purchase by the Secretary of the Treasury of $250 million. The obligations sold to private investors shall not be guaranteed by the United States nor constitute a debt or obligation of the United States.

"Section 9 (a) gives power to the Board to promulgate standards to determine the eligibility of small-business concerns for assistance under the act; (b) grants powers to the Board to hold interests in unincorporated small-business concerns which meet the standard established by the Board; (c) requires as a condition for the obtaining of any assistance that the applicant invest in the Corporation's stock a sum equal to at least 10 percent of the amount advanced by the Corporation to such small business; (d) grants powers to the Board to sell the stock of the small-business concerns on the open market (after first giving the issuing small-business concern an opportunity to repurchase or retire such stock).

"Section 10 provides for the payment of expenses and distribution of earnings and esatblishes a priority by which such distribution shall be made.

"(1) Provides for the retirement of the capital stock subscribed for by the Secretary of the Treasury under section 8 (a).

"(2) Provides for the retirement of the obligations issued to and purchased by the Secretary of the Treasury under section 8 (b).

"(3) Provides for distribution of earnings to the holders of obligations issued to private investors under section 8 (b).

"(4) Provides for payment of dividends on its capital stock.

"Section 11 provides for the administration of the Corporation when all money invested by the Secretary of the Treasury under sections 8 (a) and 8 (b) has been repaid.

"Section 12 provides for annual reports to Congress during such time as any capital stock is owned by the Secretary of the Treasury.

"Section 13 provides for the publication of regulations by the Corporation.

"Getting the Government out of the business

"Mr. Chairman, the bill which I introduced, H. R. 10980, attempts in as simple fashion as possible, to provide the needed equity capital for small business. It should be noted that although initially there is an investment of Government funds, provision has been made to retire such Government funds and return this important function to private capital. The bill introduced by Senator JOHNSON and the other sponsors creates a new agency and makes no provisions for its eventual ownership by private enterprise.

"My bill, H. R. 10980, does contain a mandatory provision which will eventually cause private enterprise to own this corporation and carry on its operations, if they prove successful.

"The provision in the Johnson bill, S. 3191, section 404, provides for compulsory investment by the small concern in the private investment company but not in the overall agency which will finance the investment company.

"Miscellaneous provisions

"The provisions in S. 3191, section 304 (deposit of funds and contributions to retirement and disability funds); section 408 (tax treatment of losses and gains); sections 701 and 702 (repeal of sec. 13b of the Federal Reserve Act, capital loan provisions); section 703 (purchase of the new obligations by Federal Reserve banks); and sections 801-805 (criminal provisions) are not in my bill but should be in any bill that is enacted.

"Conclusion

"One final word about the board of directors called for by my bill (H. R. 10980) and the administrator called for by the Johnson bill (S. 3191), to point up a fundamental difference.

"If the new instrumentality we create to do this job is to be an agency then, of course, an administrator is called for; if a corporation, then a board of directors is necessary.

"If it is an agency, we may expect it will remain for all time a part of the Government. If, eventually, it is to be privately owned, a corporation is indicated as the more proper method of operation.

"Quite apart from that, however, we are here embarking upon a new and untried field of Government endeavor. Its pitfalls will be many. Its complexities are very great.

"Ordinarily, I favor one-man responsibility in Government departments. Eventually, that may make for more efficiency even here. But, at the start, I believe, whether agency, bureau, department, or corporation, we should enlist the services of at least three outstanding, experienced persons who will devote their full time to setting up and attempting to make work effectively and efficiently this new facility.

"That is a far cry, however, from having a policy board do the job. The board I refer to is one which will be charged with making and implementing policy and which will have no outside duties or conflicting interests.

"If we truly believe in free enterprise and competition, we must enact an equity risk capital bill immediately. We must take this action now and breathe life into what remains of free and fair competition. The responsibility is ours. Let us reassert our faith in our way of life and fulfill our pledges and responsibilities by enacting the programs which we know are necessary to maintain a healthy, competitive economy."

Senator CLARK. Mr. McCormick, will you come back now? I certainly appreciate your courtesy in stepping aside to give us time with the Congressmen, and we will try not to detain you too long.

Before I ask you any questions, I wonder if there is anything you want to add, yourself, to your testimony.

Recession With Inflation

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, many economists are disturbed that the consumers price index continues to rise even though there is a recession in the level of business. Some of the factors responsible for this unusual phenomena were described in an address by Mr. Robert C. Tyson, chairman of the finance committee of the United States Steel Corp., before the Executive Club of the Greater Boston Chamber of Commerce on April 18, 1958. Steeply progressive personal income taxes, high corporate taxes, and unrealistic depreciation allowances are deterring the maintenance of present job opportunities. They make it extremely difficult to provide the necessary tools and equipment to provide additional jobs for a growing population.

I believe all of my colleagues will profit from reading Mr. Tyson's statement. Accordingly, I am including it as an extension of my remarks in the Appendix of the RECORD.

RECESSION WITH INFLATION

(A talk by Robert C. Tyson, chairman, finance committee, United States Steel Corp., before the Executives' Club of the Greater Boston Chamber of Commerce, Boston, Mass., April 18, 1958)

It is a pleasure to meet with you today and to participate in your modern management conference. I sometimes think that there is no end to the list of problems with which management is confronted day after day. And, as all of us know, almost every management has problems which are peculiar to its own company or to the particular industry within which it functions. Such problems can run the gamut from raw-material acquirement, through the processes of manufacture or fabrication, to the distribution into specialized markets of the given goods or services. At all stages there are the recurring matters of organization, planning, financing, control, and auditing to be dealt with. It is a tremendous tribute to American management as such and to the American system of competitive production and distribution that, by and large, up and down the length and breadth of our land, myriads of such problems have been solved with sufficient success to produce a national scale of living that is incomparably superior to those of other times and places.

But I have not felt that I could be particularly helpful to you in attempting to deal with the specialized problems of any one company or industry, even my own. It seems, instead, that since over the years certain problems have been gradually arising with respect to our economy as a whole, matters which affect all companies, big or little, and wherever located, I might more helpfully discuss some of them with you today.

I have especially in mind the fact that over the past year the volume of industrial production has been seriously decreasing and unemployment has been increasing. But at the very same time we have been experiencing inflation in basic employment costs and in prices. This simultaneous decline in production with the rise in costs and prices is a relatively new and disturbing thing in our history. It has ominous connotations. Certainly it needs analysis and understanding if suitable remedies are to be sought and applied. Otherwise there is always the danger that some hastily concocted panacea may be adopted which will aggravate rather than improve the situation. And, I am sorry to say, such danger is not a matter of mere academic fancy in view of some of the proposals being advanced.

FRAMEWORK FACTORS

I think then that we would be well advised to discover just how we got into this situation if it is to be dealt with in an appropriate manner. This is not easy for management people as such to do because we will have to think in terms quite different from those in which most management problems are approached. Ordinarily a management problem is analyzed within a framework of social and legal assumptions that are not to be questioned. We assume, for example, competitive markets, a given monetary system, the sanctity of contracts, the privacy of property, the freedom of individual choice, the system of taxation—whatever it is—a given body of Federal and State law. These are the kinds of things we may think of as the framework factors within which economic life functions. The framework factors are the rules of the game arising out of the morals, customs and attitudes of the people which have been hardened into usage and codified into law backed by the great power of government.

I mention these framework factors because I am convinced that we can never fully understand our present economic predicament except in terms of an evolution in some of these framework factors. They have been changing slowly but cumulatively over the decades, and the cumulative consequence is as dramatic as it is little recognized by most people. For example, history discloses no instance in which a nation has escaped inflation if it persistently multiplies its money supply. We have reenacted the gruesome record. In 20 years our money supply has been quadrupled against a population increase of only one-third and the buying power of the dollar has been more than cut in half. As another framework change we may note that over these same years great industrywide labor unions have arisen. They represent great power that is political in origin but whose exercise has consequences that are economic and far reaching. And Federal taxation has risen to the point where it takes over 90 percent of the higher bracket income earned by our most productive citizens. Such rates have truly reached confiscatory levels.

Meanwhile the Nation has been through a great and terrible war and through an historically typical decade-long reconstruction boom. It is my belief that the big problem we now face and which, for lack of better terminology, I call "recession with inflation" is a convergence into a critical focus of certain war consequences and certain ominous trends in the framework factors. It is to the explanation of this attitude that I will devote the remainder of these remarks.

THE WAR CONSEQUENCES

Consider first the war consequences. War, as you know, fearfully wrenches the economy. It is a period of great activity spurred by a concentrated effort to survive as a nation. But it is simultaneously a period of great postponement, postponement of production of all those peacetime durable goods we can for the time being do without while we use up and patch up those we already have to make them last a little longer. In the meantime the Nation—as assumed to be required by the war exigencies—becomes flooded with what amounts to printing-press money, the natural effects of which are sought to be repressed by price controls and rationing.

When the war comes to an end I suppose we would all agree that it is the most natural thing in the world for the Nation to turn its hands to catching up on the production of things postponed while the war was on. So one highly abnormal situation replaces a preceding one. The war period's deeply subnormal production of peacetime durable goods of all kinds—producers', consumers', and public—finds its offsetting counterpart in their postwar highly supranormal production. But the catchingup job cannot be done in a day, a month or a year. It takes a long time, and the record of history shows that it normally takes 10 or a dozen years for the great postwar booms to run their course. Most all of you here can verify that out of your own experience, since most of you have lived through 2 such periods, the great boom of the 1920's following World War I and the great boom just behind us following World War II. If you delve into the records of the past you will find analogous periods following the Civil War and the War of 1812.

I suppose next that we would all agree that when the catchingup job is finally done,

then the need to be further busily engaged in such catching up has, by definition, vanished. The Nation has then earned the right to leisure, and since the catching up job can easily be overdone, the period of leisure can be correspondingly extended. Why the postwar reconstruction booms are overdone is not absolutely clear. Partly it may be due to the longlasting power of the backlog demand stimulus. Partly it is because they are fueled by soft money policies accepted in wartime and perpetuated through public habituation to this dire economic drug. But that the periods of leisure are extended can be readily verified by reference to the record. All of the great postwar booms of the past have been followed by what economists call secondary postwar depressions, ranging from about 4 years to a little over 10 years in length. The trouble with this long leisure is that in our complicated economy it takes the awful form of involuntary unemployment of a pronounced and prolonged sort. To avoid such an outcome this time is one of the most serious economic problems with which management and, indeed, the entire citizenry has ever been confronted. And this brings me to the changes going on in the framework factors.

THE CREATING OF NEW JOBS

But first I think the problem can be narrowed down a bit and brought into still sharper focus. Thus I think all of us would agre that if old jobs have to come to an end and idleness is to be avoided, then there is only one answer that makes any sense at all, and that is to stimulate, or at least not hamper by law, the natural and normal creation of new self-sustaining productive jobs. If we cannot find within ourselves the wisdom and courage to establish or reestablish a political and economic framework conducive to the creation of new self-sustaining jobs, then we are self-condemned to chronic unemployment akin to that which prevailed throughout the 1930's and from which we only finally escaped when we went to war, a solution that nobody ever wants to repeat. This is a harsh statement. But time is running out too fast to be spent in dodging the unpleasant realities.

So let us get a still sharper focus on how new jobs come into existence. Far too few people ever meditate on that fundamental matter and so I am going to issue you a challenge: Think as long and hard as you will, but a new, self-sustaining, productive job comes into existence only when someone somewhere invests savings in tools of production and thereby creates the environment in which men can go to work producing the marketable values to cover their continuing wages and the investor's profit. There is no other way. And here is the central and basic truth through reference to which we may judge the effectiveness of any public or private policy in solving today's problem of recession. Will it create new jobs—or at the very least recreate old jobs as though they were new ones?

TAXATION

With these matters in mind let us now look at the trends in that often obscure but awfully important framework factor we know as taxation. I am immediately confronted by realization that most everyone is against taxes on himself, but thinks it is all right for the other fellow to pay them, especially if his income is bigger. After all, he still has enough left to live on, or else the he is one of those big impersonal corporations. It is hard to get impartial consideration of matters so personal to so many, but I am nevertheless going to try to do so.

First it would seem well to get firmly in mind a broad perspective on what has been happening to taxes over the years. Most people do not realize that in America there are over 100,000 taxing authorities. Back in the 1920's the total taxes levied by them were about $9 billion. That was about 10 percent of the net national product; but by 1956 the taxes had increased to over $100 billion, or nearly 30 percent of the net national product. This is an extraordinary and startling growth and it would be surprising indeed if it did not have profound influences on the American civilization. Any tax at all tends to impair people's incentives to produce or to invest savings in production; and the bigger the share of what you produce that is taken from you in taxation, the less your interest is in producing abundantly. But just as serious as the overall trend toward enormous taxation is the fact that the taxation of income of both individuals and corporations has now come to be heavily concentrated upon the vital creation of savings that flow into job-creating investment.

Let us look at that trend for a moment. As far as the taxation of individual income is concerned this is the story of steep progressive taxation. Those best able to risk—and often lose—venture capital in the creation of new jobs are naturally those who earn larger incomes. In the absence of fraud or coercion those of larger income receive it only as they and their property equivalently serve the community at its own competitive prices. The skilled machinist gives more and gets more than the apprentice. Since each thus gives to the community the equivalent of what he gets from it there is no moral basis for taxing the more productive at higher rates. But leaving that aside, the consequences to the creation of new jobs can be disastrous because steep progressive taxation systematically eliminates a principal source of venture capital upon which progress depends. Taxing the more skilled and the more productive at ever increasing rates undermines both their incentive and their ability to provide the venture capital on which new jobs depend. It self-denies to the Nation the enterprise leadership of the very people who have competitively proved their capacity for it. No wonder Karl Marx advocated this kind of taxation. It is also profoundly shortsighted because as the sources of new jobs are dried up, government is called upon to support the unemployed and aid many undertakings, such as agriculture, housing, shipping, stockpiling, and so on. This in turn provides seeming justification for maintaining or further steepening the taxes, thus energizing a spiral into some sort of statism.

Because of preoccupation with war and postwar boom, few people realize the growth in this anti-employment type of taxation. In 1930 the top Federal income-tax rate was 25 percent, applied to taxable income over $100,000. Today the top bracket rate has been lifted to 91 percent, and the former top bracket rate of 25 percent applies to an individual's taxable income in the $4000 bracket. Half or more of an individual's taxable income over $16,000 is now taken by taxation. The individual income tax trends and the economic situation have drifted into an alarming juxtaposition: Never before has this taxation been so great a barrier to the creation of new jobs; and seldom before has the creation of new jobs been so imperative.

Consider next the broad trends in the taxation of corporate income. Corporations are not the creations of government. They are the resourceful invention of people to enable large numbers of them cooperatively to pool their resources and their labor and so accomplish mighty production tasks beyond the power of any one individual or small number of them. Corporations provide about three-quarters of all nongovernment employment. If we want many people to be employed, then it would seem to be only ordinary common sense to see to it that taxation be designed to permit and encourage job-creation by corporations rather than to discourage and hamper that process.

But the taxation and double taxation of corporate income also unhappily have come to impair productive incentive and to dissipate the seed corn of progress. Look at the facts: In 1930 the tax on corporate profits was 12 percent. Today the tax is 52 percent, more than 4 times as much. Moreover when corporate income is paid out in dividends it is again taxed to the recipients at the steeply progressive individual income tax rates. For all corporations the total dividends—which are all that stockholders ever get from their corporations—before such second taxation amount to only 3.5 percent of national income. It is important to realize, as very few do, that in this country three-quarters of the productive employment hangs on this tiny part of the national income—for without dividends or the prospect thereof there would be no corporations. Misguided tax or other assault or corporate income could well have unexpectedly dramatic consequences to employment.

The tax on corporate income as presently constituted works out as a penalty for being efficient because the company that operates more efficiently pays a higher tax per unit of production. Taxes levied at high rates against efficiency cannot help but impair that efficiency and so compound rather than diminish the problems of business recovery.

Especially significant is the tax dissipation of corporate receipts vitally needed for reinvestment in the business; for without this seed-corn income no company can either make good the insufficient depreciation allowed on existing tools of production or have money to purchase additional job-creating tools. Nor can it readily attract outside capital. It is clearly not good sense to tax away money otherwise destined to provide new jobs and products at a time when these may be much needed. This is not money to be distributed and dissipated in consumption, to enrich selected groups of people to the envy of others. It is, instead, the very core of growth in corporate America upon which so many prospective jobs must inescapably depend.

But the story of tax impairment of employment does not end there. A combination of persistent inflation—to which I will come in a moment—and lagging tax code adjustment to it, means that not only are future jobs threatened but also existing jobs are being undermined. This is because the real capital of many companies is being eroded away by taxation as that capital turns over through depreciation. It results from the fact that it takes many more of today's cheapened dollars to replace equipment as it wears out than it took originally to purchase the equipment many years ago. But depreciation allowed in computing taxable income is limited to the smaller number of dollars originally expended. The difference between such depreciation and the larger amount needed to recover the purchasing power expended—and so to keep the facilities intact—is arbitrarily called income and taxed as such. For United States Steel, about which I naturally know more than about other companies, such tax erosion of capital as it turned over through depreciation amounted to over $650 million in the years 1940 to 1957, inclusive.

If under such taxation the tools of production are not to deteriorate, then part of income must be reinvested merely to make good the deficiency in depreciation allowed. But to have $1 of income after taxation to make good the depreciation deficiency, $2 must be secured either in higher prices charged customers or in cost reduction. The unrealistic tax treatment of depreciation thus has 1 or more of 3 consequences, all of which are undesirable: Either the existing tools of production are not replaced as they wear out; or corporate income needed to fi-

nance job-creating expansion is diverted to meet the depreciation deficiency; or prices may have to be raised on a 2-for-1 basis, to the extent that competitive conditions permit.

There have been some tax expedients that have temporarily mitigated the depreciation problem. For example, under certificates of necessity portions of the cost of new facilities certified as necessary to the national defense could be amortized for tax purposes within the first 5 years of such facilities' estimated useful lives. For many companies the addition of amortization on new facilities to so-called regular depreciation on old facilities gave, temporarily, a truer total of depreciation on all facilities based on current dollar values. The record is clear that this temporary approach towards realistic treatment of depreciation for tax purposes had a most pronounced effect in releasing the flow of capital into job-creating investment.

But now—and at a most unfortunate time when capital expenditures are already declining—the effect of this tax expedient is operating in reverse. The 5-year accelerated amortization amounts are running out and the former unrealistic treatment of depreciation is reappearing and, short of corrective legislation, is due to be even more exaggerated. For, once the depreciation on existing facilities has been taken in the form of accelerated amortization, then no further depreciation on them at all may be taken in the future. Allowable depreciation will thus be even less than the quite inadequate so-called regular depreciation would have been in the absence of accelerated amortization. The employment-deterring consequences may, of course, be correspondingly increased.

I have, however, some hopes with respect to this matter. I note that it is receiving attention from the Ways and Means Committee in terms of testimony, particularly that of Rev. William T. Hogan, S. J. of Fordam University and of Maurice E. Peloubet, a distinguished certified public accountant. They testified on January 15 with respect to a treatment of depreciation for tax purposes called reinvestment depreciation. They would apply to long-term facilities certain accounting procedures analogous to those developed many years ago for short-term inventories, known as LIFO. Under the proposed plan the cost of a new facility replacing an old one could be charged to current costs to the extent that it exceeded the original cost of the facility being retired. This would represent a long step towards the only realistic basis of depreciation, which is recovery of purchasing power originally expended.

Gentlemen, in discussing the taxation of both individual and corporate income I have tried to draw your attention to how this taxation has evolved over the years while the Nation has been preoccupied and energized by war and postwar boom. The simple fact, as I have noted, is that such taxation has now come to bear most heavily upon that vital creation of savings that flow into job-creating investment. It tends to undermine the incentive of everybody to engage in superior effort. Now that the boom is over and recession is being experienced, I feel deeply that if we are to have a healthy and lasting recovery it is important to evoke the initiative, the effort, the enterprise, the leadership of our most able and efficient citizens and corporations. I doubt that it can be done by taxing away up to 91 percent of any fruits of the individual's additional effort; and I equally doubt that innovation of new products and job-creating investment in facilities can be helped by taxing away the corporate funds for their financing. Somehow we must find some way to remove these powerful tax deterrents.

But please understand me in one respect. I do not urge any overall blind reduction of taxes in general on the basis of a phony purchasing power theory or to create huge Federal deficiets. There is a world of difference between intelligent tax reform to restore incentives and to free up the flow of savings into job-creating investment on the one hand and, on the other, a blind resort to what amounts to printing press money which would only aggravate an inflation which has already become institutionalized too much in America. That way lies trouble and that brings me to the framework factor behind the vigorous continuation of inflation despite significant business recession.

INFLATION

Wartime inflation in America—as in other times and places—is characteristic. You can read all about it in the textbooks. You can think of it as a demand-pull type of inflation. It results from Government resort to printing press money or its more modern equivalent of issuing debt that becomes the basis for the expansion of bank deposits that people use for money. With this new money the Government drains the markets of goods to meet its huge wartime demands. The resulting inflation is accepted or endured as part of the process deemed necessary to winning the war. But continuous peacetime inflation is a new thing in America. You cannot read about it in the textbooks. You can think of it as a cost-push inflation. Its fundamental root is the continuing elevation of employment costs resulting from the rise to tremendous political and economic power of industrywide labor unions.

More and more people are coming to understand and accept this as a fact, regardless of whether their attitudes be sympathetic or critical. But what people do not so fully understand is that when basic employment costs advance, industry by industry, to a degree greater than the rise in overall national productivity they cannot help but force all other costs up with them. The direct employment costs of anyone business may range from a small part to a very large part of its total costs. But every business must purchase goods and services from others. These purchases from others reflect the increased employment costs of the suppliers, whose own purchases reflect the increased employment costs of their suppliers in turn, and so on and so on. When all industry is taken on a consolidated basis, employment costs represent over three-quarters of all costs. These costs cannot rise endlessly and prodigiously without bringing about cost-covering price increases; and there is your cost-push inflation, as simple as that.

I suppose at this point I should take 1 minute to dispose of the propagandized notion that inflation has been due to expanding corporate profits. The facts as collected and published by the United States Government show that total corporate profits in 1957 were actually $2 billion less than in 1950. In the same time-span labor income per year increased by over $95 billion. It is not profit inflation, it is wage inflation that has forced prices upward. It is the essence of our new institutionalized cost-push inflation.

There is a distinctive feature of cost-push inflation that is worth noting. It is that, being a manifestation of power rather than a reflection of economic circumstance, it is quite insensitive to economic forces as we know them. I find this reflected in the records of my own company, as indeed it is reflected in the records of the Nation as a whole. Year after year, whether in war or in peace, in good years or bad years, the employment costs per hour inexorably march ever upward. In my own company for over 20 years the average annual increase in employment costs per hour has been the equivalent of about 8 percent per annum compounded.

Well, as I noted a moment ago, these matters are gradually coming to be better understood by more and more people, so I need not dwell on them. But I do assure you that they are worthy of your most thoughtful consideration in studying the problem of recession with inflation, for what better guarantee could one have that unemployment would be hastened and prolonged as the great postwar boom fades than that business should be confronted with ever increasing basic costs as it tries to sell into increasingly saturated markets?

Gentlemen, I now come to the conclusion of these remarks, and as I do so I confess that I have no specific panacea to offer. But I do have a plea to make. It is that you will each for yourselves seek—as I have here briefly sought with you—to discover and define the process through which new productive jobs come into existence and with them the more and better and newer products and services that make for an ever rising scale of living in our land. Learn, too, the things that can impair that process, as well as the things that must be done to guard and improve it. And then, ever afterwards, let your attitudes, your actions and your words, public and private, be such as to guard rather than undermine that precious American heritage.

Rochester's Gain Is the Nation's Loss

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. KEATING. Mr. Speaker, the Nation will lose one of its most effective and most able public servants when Secretary Marion B. Folsom leaves his post with the Department of Health, Education, and Welfare. At the same time, my home city of Rochester, N. Y., will welcome back one of its most highly respected residents.

Since his arrival in Washington some 5 years ago, Marion Folsom has established an enviable reputation as a man who gets the job done.

His unassuming, competent administration of what is surely one of the most taxing and challenging positions in the Federal Government has won well-merited, wide acclaim.

Marion Folsom's efforts in Washington these last few years have been merely an extension of a life largely devoted to helping others to achieve a better and happier existence. His work in framing our social security structure, the many vital programs he has extended and initiated within the Department of Health, Education, and Welfare, and his work in making that Department an integral part of our Nation's striving toward the better life—these and many other achievements will long stand as monuments to Marion Folsom's contributions to his country.

As he leaves Washington, many, many people here, on both sides of the political aisle, and on both sides of many issues

he has dealt with, wish him continued success and happiness. And Rochester looks forward to his return with eagerness. Truly, Rochester's gain is the Nation's loss.

I feel confident the feelings of many residents of Rochester are ably reflected in recent editorials appearing in the Rochester Democrat and Chronicle and the Rochester Times-Union. Under leave previously granted, I insert them at this point in the RECORD:

REPORT ON FOLSOM

Rochesterian Marion B. Folsom brought the quiet dignity of a good man to his post as Secretary of Health, Education, and Welfare. Washington needed that. And when, to the dignity, was added extraordinary competence, the result was predictable—a Cabinet officer paired with Agriculture Secretary Benson for stanch adherence to principle.

When Folsom leaves his post, a process now reported underway, Rochester will regain one of its best liked citizens.

Whether he rejoins his colleagues at the Eastman Kodak Co. or decides to retire, Marion Folsom has more than earned the right to spend the remainder of his life doing just as he chooses. A large part of his career has been spent making plans to assure a better life for others. He is one of the foremost living experts at setting up practical systems for that purpose.

Much of what makes Kodak such a fine company to work for can be traced to his work. As treasurer for many years of the big Rochester industrial firm, he demonstrated that it was good business to care for people as human beings, not merely as workers. One of the principal authors of the Social Security Act in 1934, he revised and broadened the law under President Eisenhower.

It is a safe prediction that his stature will gain increasing recognition as the years pass.

FOLSOM TO LEAVE RECORD OF FINE ACHIEVEMENT

The forthcoming resignation of Secretary Folsom from the President's Cabinet should not be regretted since it means his return to Rochester, but we do regret it.

FIRST SO HIGH

After all, Mr. Folsom was the first Rochesterian to be named to the Cabinet. He has never ceased to be a source of pride to his home city.

Five years is considerably longer than Mr. Folsom expected to stay in Washington when he went there in 1953 as Under Secretary of the Treasury in the President's first administration. But after piloting through Congress the first general revision of the tax laws in many years he was named Secretary of Health, Education, and Welfare, and stayed.

Now he is expected to revert to his former status as a frequent commuter to Washington. As an author of the original social-security statutes, his testimony was always sought by every succeeding Congress on social-security matters as well as on economic legislation. That demand will continue. He has always advocated participation in Government by business executives.

It would be difficult to assess now which was his greater contribution, as Under Secretary of the Treasury or as Secretary of the Health, Education, and Welfare Department.

As Under Secretary his principal field was tax matters and the tax revision bill of 1953 was a monumental piece of legislation. It not only made the largest reduction in taxes ever made in a single bill but it also took out of the tax code the most glaring inequities that had crept in during years of piecemeal revisions.

But at the same time, Mr. Folsom will be considered for all time the creator of the Health, Education, and Welfare Department. He was not the first Secretary of the new Department which was created under President Eisenhower, but he gave it the form it will probably retain for many years to come. Again he was active in revision of the Social security laws which extended coverage and increased benefits, though he was defeated when he opposed bracketing disability pensions into the social security system.

SCHOOLS LOSE

One unfinished task on which he extended great energy was the matter of Federal aid to school construction. The Democratic Congress first defeated his effort to equalize educational opportunity through Federal aid to school building and then defeated its own substitute bill.

Mr. Folsom will leave the Department in good hands. The expectation is that the President will appoint Dr. Arthur S. Flemming, president of Ohio Wesleyan University. Dr. Flemming has been in and out of Government service almost as long as Mr. Folsom and for 6 years was director of the Office of War Mobilization.

AEC Chairman Lewis L. Strauss' Press Club Speech

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. HOSMER. Mr. Speaker, so much interest has been sparked by AEC Chairman Strauss' excellent National Press Club speech on May 8, together with the question and answer period following, that I have asked to set both out in this RECORD for the benefit of those who do not have available the texts. The speech was as follows:

REMARKS BY LEWIS L. STRAUSS, CHAIRMAN, UNITED STATES ATOMIC ENERGY COMMISSION, AT THE NATIONAL PRESS CLUB, WASHINGTON, D. C., MAY 8, 1958

Not quite 4 years have passed since I was first here as your guest. I recall that experience as a pleasure, not completely unalloyed, but of course I know that dispensing pleasure is not the main purpose of journalists; nor, in the nature of things, can it now be mine. Still, from our previous encounter, and having in mind certain issues that have made for discussions between us, I draw a consoling thought. From your hale and hearty faces, I am persuaded that none of you is any the worse for strontium 90, a substance not to be confused with printer's ink. The latter really can be deadly, especially when the fallout is intense. It is not I but you, I venture to think, who deal with the most potent materials, for you can produce mutations in the thoughts, the fears, and also the hopes of all men.

It seems to me that I can best contribute to the discussion that is to follow by setting forth, in advance, several ideas that I consider fundamental to any serious consideration of the matters that concern us.

These matters have to do with the implications of the atom. Clearly, we Americans are at the threshold of another fateful decision as regards the use that we shall make of the new power that has come to our hand. It is increasingly apparent that the world of the atom is a house of many mansions. As I read the recent history, United States policy has already crossed two such thresholds of decision and, as yet, we have only penetrated the outer chambers of a vast establishment.

The first chamber was represented by the discovery of the means and the control of fission. The first use was military; and because, at first impression, this promised to be by far its most important use, there were men and women of great influence who thought that what had been opened in a time of desperate need could be again entombed forever. It was seriously proposed that the American stock of atomic weapons be carried out to sea and dumped. It was also seriously proposed by very important people that the United States should share its weapons knowledge among the other great nations, thus to remove the envy and apprehensions which our sole possession would arouse.

In the end, we chose to do neither. We sought instead to lock the doors and bar the windows of the anteroom that we had been first to enter. That was the central intent of the original American legislation relating to the atom, the Atomic Energy Act of 1946. That act created the Atomic Energy Commission and, concerning the responsibilities with which the Congress charged the new agency, none was more explicit than the one that it should guard zealously and well the secret technologies of what was still a monopoly.

There was to be no further exchange of information with other countries—not even Great Britain and Canada, both of which had helped us cross the threshold. As for the further development of our own advantage, it was to be done by the Federal Government alone, and under civilian control.

It would not serve us here to debate again the wisdom of that first decision. No doubt, the hope was that there would be ample time, in a world at peace, to deliberate over how best the new force could be put to the service of the world at large—the act indeed began with language indicative of its tentative nature. But the alternative courses that were open to us, at the time, were anything but inviting.

The trouble was that the locks on the door were not strong enough and, in any case, there were other entrances to the vast establishment that we had so lately gained. Within 3 years, by a variety of means—by skill which was indiginous plus the fruit of widespread and successful espionage—Soviet Russia was solidly established inside the empire of the atom. Not long afterwards the United Kingdom qualified as a nuclear weapon power, and France was weighing the advisability of following suit. Meanwhile, too, the key to peace had been mislaid. In the common danger, old friends were drawn together again, and the new circumstances carried us to a second threshhold of decision.

By 1954, it was clear that the benign uses of atomic energy for power, for industry, medicine, agriculture, and countless other purposes, were not nearly so far away as had originally been assumed. Out of a profound and compulsive desire to share the peaceful atom with the other nations, and to reduce the threat of an atomic holocaust President Eisenhower composed his famous Atoms-for-Peace proposal and laid it before the General Assembly of the United Nations.

By means of new legislation which Congress then enacted and which opened the door to a room hitherto kept closed, the Atomic Energy Commission was given a new precept. It was empowered to make available to other nations a broad range of technical information, as well as material and equipment, concerned with the peaceful uses of energy. At the same time, by authority of Congress, it became possible, for the first time, to share with our allies certain information bearing on the military effects of

nuclear weapons, which had meanwhile been under rapid development.

Here, to be sure, the door was not thrown wide open. Certain important discoveries relating to the composition and design of weapons were held back and I, for one, felt this had to be, under the conditions then prevailing.

Few will question the beneficial results brought about by these 1954 changes in the law. They have strengthened our NATO alliance; they have invigorated the sense of interdependence that underlies the alliance. For example, in the search for the means of controlling power from the thermonuclear reaction—the fusion of light elements which, uncontrolled, is the hydrogen bomb—the United States has renewed its nuclear partnership with Britain, in a manner consistent with our broad objectives. A vast amount of technical information, running into scores of volumes, has been removed from secret categories and made available to the rest of the world. In the field of radioactive isotopes for use in medicine, industry, and agriculture, the progress has been far more rapid than even the optimists judged possible only a few years ago.

The International Atomic Energy Agency, suggested in the President's atoms-for-peace speech, has been set up and is functioning, with headquarters in Vienna. A large quantity of United States fissionable material—running into the thousands of kilograms—has already been committed for peaceful use by other nations. (I might add parenthetically that the Soviet contribution—or better, pledge—has so far totaled 50 kilograms.)

We, too, have been pushing forward the peaceful exploitation of atomic energy, on the national account. The Commission is itself developing a number of experimental power reactors. Nine have been built, 2 are building, and 7 more are planned. Private industry has built 1 experimental, is building 4 advanced prototypes, and planning 5 more. On the 26th of this month, the President will dedicate, at Shippingport, Pa., what is the largest single power reactor that has come into being—a product of the enlightened cooperation of the Federal Government and private industry. Industry is everywhere casting about for more efficient uses of the atom. It will not be long, in my judgment, before we shall witness nuclear explosives being used in situations where, because of the physical magnitude of the task, conventional explosives are not practical. The mining, petroleum and engineering fields will begin to use a great revolutionary new tool.

Yet, while we have made good progress in outlining the peaceful potential of the atom, we have made no visible headway in our efforts to control it as an instrument of war. And it is because of this that we find ourselves at yet another threshhold of decision—in some respects the most difficult decision of all. It is difficult for the reason that, at an hour when the strategic situation argues for a much broader sharing of the nuclear advantage with our NATO allies, our Government is under tremendous pressure, not alone of Soviet inspiration, to stop further development of nuclear weapons. We Americans must now make up our minds about two quite different matters, although they do, in fact, bear heavily one upon the other; and it is these matters that I propose to discuss in the minutes remaining to me.

It is fresh in our minds that Mr. Khrushchev has said that he will bury us. Without wishing to add melodrama to a situation that is already wearing on the nerves, let me note merely that we may take the statement as an earnest of his ambition, if not of his immediate intention or means. The means he has, however, are already quite enough to give us pause.

With their enormous manpower advantage, the Russian capability for limited war along the Soviet periphery has always been formidable. But that capacity could never be decisive, in a world sense, so long as they had no effective means of canceling out the United States deterrent.

Do they now feel themselves in possession of such means? Is this a possible explanation for their sudden announcement of a suspension of further tests? One can never be altogether sure about such things. Nevertheless, their announcement came after a series of tests that were unusual both for duration and number.

Nor was the timing of the Soviet announcement itself necessarily the product alone of chance—or of a new trait of tender regard for human life. It came when, as was well known, because we had announced it, the United States was about to begin a series of tests looking essentially to the perfection of warheads for defensive purposes against both bombers and missiles and weapons with drastically reduced radioactive fallout. It came, too, at a juncture when the United States was beginning to discuss the sharing of its nuclear arsenal with our NATO allies, under conditions that seemed to us equitable and reasonable for mutual defense against aggression.

The effect of the Soviet action has been to place us within a quandary inside a dilemma. Shall we now follow the Soviet example and stop testing before we have extended the nuclear power into the defensive side of the military equation, without waiting for comprehensive guaranties as regards detection, inspection, and the other elements of a meaningful disarmament? And, in another connection, do we meanwhile go forward with our declared intention of providing our allies with the nuclear techniques and means they need and want?

I assume that you may care to hear my views on these two propositions, and I shall give them. They are my personal views; I do not, and cannot, speak for the Government. The most that I can expect is that my views will be taken as those of one who has labored long and conscientiously in the vineyard, and whose most ardent hope it is that neither my own country nor any other shall ever experience the horrors of nuclear war.

Where do I stand on the proposition of limiting or ceasing nuclear tests? I have always been for that proposition—and not adamantly against it as sometimes reported. I am for it as part of the proposal which our Government has made which stipulates assurances adequately monitored and inspected that will make evasion as difficult as modern technology can devise—a proposal which also, and importantly, looks to constructive disarmament in its other aspects. For we must not lose sight of the fact that the danger which the world faces is not from nuclear testing but from nuclear war. Those who think otherwise, I submit mistake the shadow for the substance. The ending of tests applies no brake upon the ever-increasing speed with which the arsenals of nuclear weapons are growing.

Happily it is a central element of United States policy that disarmament can and must be negotiated—that we will persist in our efforts to achieve it—but a disarmament in which we and the rest of the world can have confidence.

Meanwhile, we would all do well, I believe, to take a long, hard look at the problem of defending our country against nuclear attack. The targets of the attacker are huge—our cities and our major installations. The targets that the attacker would present to our defenders are in contrast very small indeed—they are the attacker's aircraft and missiles. Our weapons for defense will need to be more sophisticated, more accurate, more numerous than his. Since they will be used in all likelihood over our own and friendly terrain they must also be as free from radioactive debris as we can make them. The skill and ingenuity of the dedicated people who work in our great laboratories offer us the promise of realizing all these aims.

I come, now, to the second proposition that calls for decision—the question of a wider sharing of our nuclear advantage with our free world allies. The President has proposed a much broader cooperation in the area of atomic energy to improve allied defensive capabilities. He has proposed that with regard to those allies already contributing materially to our overall security, we make certain available information which would permit them to use our nuclear warheads. He has requested legislation which with regard to a nation that has achieved a substantial nuclear weapons capability would permit mutual cooperation to prevent useless duplication and waste of scientific and technical efforts. He has stipulated, however, that these understakings be accomplished only where such action will clearly promote and not unduly risk the common defense and security.

The decision thus to move out of our present policy of extremely limited cooperation in the field of nuclear weapons is a fateful one. The subject is one which should be and is being carefully studied and debated. Yet the logic and compulsions of a system of common security seem to leave us no reasonable alternative. It will gain us nothing to stand aloof and apart while our strongest allies expend limited capital and scientific resources to achieve a nuclear status which their prestige, not to mention their need of security, demands. And by sharing with them what they are certain to have in due course, what our possible enemies surely know and what is essential to a true partnership in mutual security, we shall be contributing, as Secretary Dulles has already suggested, a more compelling incentive for the balanced and multilateral limitations of armament which the Soviet Union has thus far evaded.

I have reached the end of my notes.

This, gentlemen, is the ground on which I stand.

AEC Chairman Lewis L. Strauss' Press Club Questions and Answers

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. HOSMER. Mr. Speaker, following AEC Chairman Lewis L. Strauss' formal speech at the Washington Press Club on May 8, many interesting questions were asked him by members of the press. The questions and answers were as follows:

QUESTIONS FROM THE PRESS AND ANSWERS

Question. Admiral Strauss, someone here wants to know, don't you think the world would have a more sympathetic view of our tests if the press were given greater latitude to cover them and to explain their specific purposes?

Admiral STRAUSS. That is an interesting question.

The information which is given to the press about the Russian tests, of course, comes entirely from the Atomic Energy

Commission. I believe there have been two occasions when they have announced their shots.

To announce the purposes of the tests in detail would be to bare ourselves to our possible enemies. We have announced their general purpose, and, as in the case of the tests at Eniwetok on a previous occasion, we had made arrangements, even with the limited accommodations available on that small atoll, to take representatives of the press to a shot this summer. The tests in Nevada we are able to cover more fully.

Question. The next question is: You and Dr. Libby have both made public statements on the question of banning tests. Can you tell us whether Mr. Floberg and the commissioners agree with your stated position?

Admiral STRAUSS. I believe, although Mr. Floberg and Mr. Vance are here, and Mr. Graham was unavoidably prevented from attending, that the position of the commissioners on this subject is unanimous.

If it is not, you will see a show of hands.

Question. Sir, the aim of the current nuclear tests is to produce a so-called clean bomb. What thought is being given to furnishing the Soviet Union with the sanitizing formula?

Admiral STRAUSS. That is only one of the aims of the current series of tests, Mr. Chairman, and I cannot say that there is a sanitizing formula.

The weapons which are being developed with drastically reduced radioactive fallout involve matters of design and construction which also relate to their effort in many other respects besides cleanliness, if you will pardon me the use of that objectionable word, and it is not possible at this juncture, in time, at any rate, to reveal anything concerning their construction. It is against the law among other things.

Question. Would you say, sir, precisely what is the yardstick in measuring a clean or dirty bomb?

Admiral STRAUSS. The earliest, let us call them, conventional atomic weapons, produced a certain amount of radioactive fission products per ton of yield.

Weapons which produce a smaller percentage per ton of yield would fit the category that you have described, and I think the President stated last June, I believe this is the last authoritative statement on the subject, we had informed him that it was now feasible to produce weapons in certain ranges in which the amount of radioactive fission products had been reduced by as much as 95 or 96 percent in relation to the yield.

Is that an accurate statement, Dr. Libby?

Dr. LIBBY. Yes.

Question. Senator ANDERSON says that you made bombs dirtier by inserting something. You denied this. Were they made dirtier when you improved them?

Admiral STRAUSS. I would like to stand on the statement that I made in my letter to Congressman DURHAM which was released to the press, I think last Saturday.

This, incidentally, was not a charge that Senator ANDERSON leveled at the Commission.

I believe he said the military had done this, and the Department of Defense has itself replied to that statement.

Question. What can you tell us about the first tests of the current series?

Admiral STRAUSS. Only the fact that as we stated, I believe on yesterday, there had been the test of a very small device, I think 10 days ago, or 8 or 10 days ago.

There will be announcements of other tests of any significant nature as they occur.

Question. Admiral, someone wants to know, what about Congressman PORTER's statement in today's paper, that you told him that the present test would not be announced.

Admiral STRAUSS. I suppose that statement was as astonishing to Mr. PORTER as it was to me, since I believe this is the first time I ever had the pleasure of seeing the Congressman, and I have not yet had the pleasure of speaking to him.

I think the Congressman was undoubtedly misquoted.

Question. Sir, do you think France has reached, or is going to reach, sufficient nuclear capabilities to receive atomic secrets and materials from the United States?

Admiral STRAUSS. I would like to be able to answer this, but I am sorry to say I cannot. I do not know enough about the status of the progress of France in reaching a nuclear weapons capability. This is a matter on which, unfortunately, I have no direct knowledge.

Question. Admiral, has there been more than one unannounced test to date in this series?

Admiral STRAUSS. No comment.

Question. Sir, the Commission's proposed authorization legislation for fiscal 1959 has not yet been submitted to the Joint Committee on Atomic Energy. Will the Commission be recommending a substantially accelerated power reactor development program or does the Commission expect that the Joint Committee, as Chairman Durham said in Chicago in March, will come up with an accelerated power reactor program of its own?

Admiral STRAUSS. I believe the schedule, Mr. Chairman, is that we will be able to present a budget for authorization to the Joint Committee some time next week. In that event it will be sent down by the President, the facts and figures will be public, and I think it would be out of order for me to comment in any detail in advance of its presentation to the Joint Committee concerning its content.

I would say, however, or I would express the hope that the Joint Committee will find our program an acceptable one.

Question. Sir, does the AEC have enough interest in outer space activities to warrant continuing atomic energy and outer space in one Government agency?

Admiral STRAUSS. We have testified in support of the bill, I think it is Senate 3016, which seeks to establish a single agency for exploitation of outer space development.

The Atomic Energy Commission has been active for a considerable time in the development of nuclear power for propulsion and in other matters that have a direct bearing on outer space development.

We have said, and we believe, that the selection of the specific agency is important but not so important as is the principle of a single unified responsibility in one place for the job.

Question. Sir, there are a couple of related questions. Can you say under what terms the United States will provide atomic fuel for Euratom, and can you say anything about negotiations between the AEC and Euratom concluded this week?

The other question is: Has AEC firmed up its plans regarding either United States-Euratom cooperation or the civilian nuclear-power program?

Admiral STRAUSS. The Euratom negotiations have not been concluded. There was a very fruitful session for the last 10 days with the negotating team which came over from the 6-country group. This was a negotiation which had actually been begun by a team of our own that we sent to Luxembourg the month previously.

I would suppose that the end of these negotiations, which is still some time off, will result in an agreement on all points, but since they have not been settled, I cannot tell you what they are.

This is not secretiveness, this is fact that concurrence has not been reached, and it is for that reason that I am not able to be more specific about them. I will say this: The moment that they are reached they will be made public, because there is nothing secret in the entire relationship with the Euratom community. This is a development of 6 European nations for the peaceful exploitation of atomic power in 6 friendly European countries, to free them from the dependence under which they suffer today for imported fuel that could be cut off at any time.

Question. Admiral, this may be a "stop beating your wife" question, but here it is: Why does the commission give information about mining prices and licenses to other nations that is not available to American producers?

Admiral STRAUSS. I am not aware that that is the case. I would be very embarrassed to find it was. My first reaction would be to say that it is not the fact. I shall, however, with your permission, take this question and put it in my pocket in order to see what color there is to it.

Question. Can you tell us, sir, whether seismographic instruments in the United States or elsewhere detected the April 28 shot at Eniwetok?

Admiral STRAUSS. I don't know, but there will be in due course a report on all of these matters. I would like to address that question to Dr. Libby who has been following that. Has any report on that come to you?

Dr. LIBBY. I don't know of any.

Admiral STRAUSS. I think we have not reached such intelligence as yet.

Question. This questioner says that to the best of his knowledge, there has been no formal dedication of the Shippingport atomic electric plant. In view of the much-needed good publicity that we would get from that, through such a ceremony, why not hold one?

Admiral STRAUSS. I announced a few moments ago that this would take place on the 26th. The circumstances are that as the President had broken ground for the plant on Labor Day, in 1954, the people connected with it were extremely anxious to have him participate in the dedication.

His consent to do so was received about a week ago but instead of being able to stage it instantly, we were told it would require about 3 or 4 weeks in order to stage the event properly. I imagine quite a show will be made of it. I hope to go myself. Admiral Rickover and I are flying out on the evening of the 25th, and I hope that some of you will be there, and it ought to be very interesting.

The plant incidentally was completed within a period of time comparable to the best performance in building a conventional powerplant.

Question. If Congress were willing, would you be in favor of giving our allies independent nuclear strength, that is missiles and warheads under their own control?

Admiral STRAUSS. I have stated my position on this subject in testimony before the joint committee. I am in favor of the administration proposal which is on the table before the joint committee. I think it goes as far as is desirable or necessary at the present time.

Question. Scientist Landis Pawling is leader of an international group which is suing you and the other AEC members in Federal court to stop nuclear tests. Do you feel this is a matter for court decision?

Admiral STRAUSS. I am no lawyer, but I believe that if I am the defendant in a suit that the less I say about it while it is in process the better.

[Applause.]

Question. Admiral, are there any conditions under which you would reengage Dr. Oppenheimer?

Admiral STRAUSS. I was waiting for that. I have said and the President has said that the

case of Dr. Oppenheimer could always be reopened by the submission of substantial new evidence to the Commission.

Question. All right, sir. Do you favor the promotion of Admiral Rickover to Vice Admiral?

Admiral STRAUSS. I think that is definitely out of my sphere. I have nothing whatever to do with the promotion system in the Navy and I never found it worked in my own case. I wouldn't know whether if I were to say I would favor it I would help him or hurt him. I think under the circumstances, I will pass on that.

Question. Does Russia have a counterpart of AEC, and who is the head of the Russian agency corresponding?

Admiral STRAUSS. I only know the name of the ex-head, a man by the name of Larentia Berea. They have a very efficient method there of changing administrators, and I don't correspond with them.

Question. Admiral, this sums up a number of questions and of course is a very popular one: What is your decision on reappointment and how did you make it?

Admiral STRAUSS. Are my answers too short? I was looking for that question, too, Mr. Chairman; the situation is simply that my term of office expires the end of June, and as I said, the President had done me the honor of saying he wished me to take reappointment, and there are a number of considerations to be weighed, and it is under consideration. I have reached no decision.

Question. Sir, for quite some time now the atomic-energy industry with the support of some Members of Congress, have been urging a reappraisal of our policies and more precise definition of the policy objectives in the Atomic Power Development program, both from a domestic and international standpoint. Can you tell us whether the Commission plans to make or when it will make such a reappraisal and definition, or whether such action will be taken before your first term as chairman expires.

Admiral STRAUSS. The power program of the Commission is not static, and it is under a condition of constant and continuing appraisal, and reappraisal. The position of the Commission has been plainly and repeatedly stated, both with respect to the domestic program and the foreign program. They are quite different. Overseas we have friends who are power hungry. They are in countries where there is a very limited or in some cases no indigenous fuel supply. Some of them are actually dependent upon the whim of Mr. Nasser, as to whether their fuel should be shut off or not.

In respect of those situations, we are active in the sponsoring, the development, and the assistance of power programs to build a large number of kilowatts for them, and help them to build a large number of kilowatts, within the shortest possible time. In the United States we have a very different situation. Despite the enormous power requirements that we have, and the fact that they double about every 10 years, due not only to the increase in population but to the per capita increase in electric power consumption as well, we still have so great a supply of coal and oil on hand that we see no foreseeable early pressing demand for the production of nuclear power.

We have, therefore, engaged in the Commission in a large power program designed not to produce the maximum number of kilowatts but to find those types of reactors which will be the most efficient. The cheapest and the safest. For that reason we have a much more comprehensive power program than any nation, and we can afford it, and there are as I indicated a few moments ago in the course of my notes, a considerable number of prototype reactors, large ones, some as much as 270,000 installed kilowatts, and others as small as 2 or 3,000, building or built, out of which we believe or we hope will come the answer to the question of the best possible powerplant for the United States.

That is, I believe, and my colleagues share this belief, a constructive and progressive program.

Question. Admiral, before we ask the last question, I want to present you on behalf of the National Press Club, this certificate of appreciation for your service here today. (Applause.)

A man here wants to know, do you tell dirty stories?

Admiral STRAUSS. No, only stories with no fallout. I would like to tell one Commissioner Vance told me last night, with your permission. He was bracing me against this ordeal and he told me about a friend of his who had spoken at an organiaztion in South Bend, and had received the encomiums of the audience, and he also had been introduced by the toastmaster in very glowing terms, not as a shoe salesman. At any event, as he rode home, he said to his wife, "You know, I am impressed by the fact that there are really quite a number of extraordinarily able people in the world." And his wife said, "There is one less than you think."

Question. Thank you very much.

(Whereupon, the question period ended at 2 o'clock.)

TV—To Pay or Not To Pay

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. SANTANGELO. Mr. Speaker, the television industry has been undergoing close scrutiny from many sides here in Washington in recent months. The question of subscription television and the Federal Communications Commission's examination of the recommendations of the Commission-appointed network study staff have prompted searching analysis of whether the public interest, convenience, and necessity might be better served by a system of broadcasting other than the present system of television free to the public and deriving its financial support from advertising revenues.

In considering whether the best interests of the public are served by broadcasting in the form that has brought television the great popularity it now enjoys, it is well to bear in mind such public-spirited projects as that of the Westinghouse Broadcasting Co., Inc., in sponsoring and producing a week of performances by Benny Goodman and his orchestra in the American Theater at the World's Fair in Brussels. This series of performances of American popular music, one of our greatest cultural exports, will be the first in-person presentation in the American performing arts program at the fair. I feel that its sponsorship by a broadcasting company speaks well for the dedication to the service of the community and the Nation that is to be found in the radio and television industry.

The Westinghouse Broadcasting Co. has shown genuine concern and leadership in the whole broad area of public service. Last year more than 200 educators, religious and civic leaders, and broadcasters, representing a cross section of the radio-television industry, assembled at the invitation of this company for the Boston conference on local public service programing. The success of this Boston meeting, dedicated to improving and broadening service to the public through broadcasting, can be judged from the fact that a second such conference was held this year, March 5 to 8, in Baltimore, with an attendance of more than 325.

The significance of these efforts has been recognized in the form of major awards and in the editorial praise of the members of the press who covered these conferences.

The Baltimore Sun on March 12, 1958, carried this report on the Baltimore conference, written by Donald Kirkley, the paper's radio-television editor:

[From the Baltimore Sun of March 12, 1958]

LOOK AND LISTEN

(With Donald Kirkley)

The conference on local public-service programs held here last week was, on the whole, a remarkable and encouraging thing which reflects great credit on all who had a part in it. Held under the auspices of the Westinghouse Broadcasting Co., it was a prime example of the good which can be done by such firms when they are conscious of their obligations toward the public which makes their commercial operations profitable.

During the 4 days of what will be known as the Baltimore Conference, the 300-odd participants, many of whom came long distances to attend, showed, in many meetings, as in informal conversation, an understanding of the big, important problems faced by this branch of television and radio broadcasting. They displayed an awareness of the impact of sputnik I on American society, and they agreed that it is up to the various stations, as well as the networks, to place greater emphasis than ever before on the education and enlightenment of their vast audiences in matters vital to the security and well being of the Nation. This theme was vigorously stated by Donald H. McGannon, president of the WBC in his keynote address.

The speakers were aware of this, too; and among them were some of the country's foremost scientists and teachers. Stressed in many speeches and discussions were the weaknesses of the school system and the means of strengthening it. Dr. Frank H. Baxter discoursed, in his warm and witty way, on the large areas of ignorance, even on simple matters, which should be corrected; one of his hobbies, he said, is listening to radio quizzes, and he quoted one woman who, asked to name six States bordering on the Mississippi, said she knew only one—Ohio.

Dr. Bergen Evans declared that if television hopes to function on the same level as the colleges, it will be appealing to no more than perhaps 10 percent of the total audience. This, he pointed out, means that large ratings cannot be expected and this, in turn, means trouble with sponsors.

There is a second paradox, he said. If the purpose of higher education is to get at the truth, the viewer must be taken behind the scenes and taught to question many things believed by the majority. Patriotism, for instance, is valuable, he said; among other things, it makes people easier to draft and more willing to pay taxes. But, he added, if all the factors behind it are to be studied, they soon lead to "ideas which reach and transcend national boundaries, and then, of course, you get screams. Higher education requires a man to unlearn much that he

learned as a child. The question is, can you do this in public?"

Dr. Evans also warned that the teaching of science alone is not enough. Scientists must learn the humanities—must be aware of what goes on inside a man, otherwise their rapidly increasing power over external things—and other men—may be dangerous. "Scientists," he declared, "Are the kind of people who do what politicians tell them to. They have the power to destroy us."

This was strong talk, and there was more like it. There were also many instances given of excellent programs on the air here and there and the growing sense of responsibility of broadcasters, some of whom are beginning, even, to editorialize. It was a serious-minded, hardworking meeting of minds, and the consequences will be manifested over large areas in the year to come.

Heikkila Case in Perspective

EXTENSION OF REMARKS
OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. HILLINGS. Mr. Speaker, much has been said and much has been written about the sudden deportation of William Heikkila of San Francisco to his native Finland for being a part of the Communist conspiracy in the United States.

I believe it is time that this case is brought into proper perspective, remembering that Heikkila has never proved his right to citizenship in his 52 years in the United States.

Perhaps the best way to bring this case into the sharp focus of our times when Communists are undermining the historic relationship between our country and Latin America by threatening the lives of Vice President and Mrs. Richard Nixon on their good-will tour is to cite at this point editorials from three newspapers.

On Thursday, April 24, 1958, the San Francisco Examiner said, in part, editorially:

The Immigration Service asked the United States attorney's office whether a legal restraint was pending, was told there was none, then carried out its swift deportation—10 years, 3 months, and 18 days after it had started deportation proceedings. * * * We repeat that the Service erred grossly in the manner of handling the Heikkila case. Had it, within hours of Heikkila's deportation, supplied the public with the full facts reviewed above and with legal basis for acting the storm never would have blown up.

From my own inquiry as a member of the House Judiciary Subcommittee on Immigration, I wholeheartedly agree with the Examiner's viewpoint.

Then on Saturday, April 26, 1958, the People's World, the Communist newspaper published in San Francisco, clamored editorially for:

A no-holds-barred congressional investigation of the Immigration Service.

Immediate dismissal of Bruce Barber, San Francisco immigration director, and all others directly responsible for the Heikkila outrage.

Repeal or revision of the Walter-McCarran Act—

Which was termed in the editorial "infamous."

You will note that not once did the Communist People's World in its high state of indignation call for a congressional investigation of its fellow traveler, William Heikkila.

Then on May 7, 1958, the Oakland Tribune had this to say, in part, editorially:

The debate about the manner in which Heikkila was picked up, placed aboard a Government plane, held overnight in Canada, then put aboard a plane for Finland no doubt will continue. * * * The findings by Representative HILLINGS will not still the loud voices of those who have design to aid special purposes rather than those interested chiefly in democratic processes and fair treatment * * * the full story of the Heikkila case has not yet been told. * * * When it is, the probability exists that justification other than that voiced by Representative HILLINGS for the Immigration Service also will be revealed.

Like many Americans I was concerned by the allegation that Heikkila had been arrested by Immigration officers and hustled out of the country in the dead of night without being given the opportunity to contact his wife or attorney.

Upon inquiry I am convinced that Heikkila had every opportunity to place a call to his wife or his attorney but, instead, he chose to tell a coworker at his place of employment who happened to be passing by at the time of his arrest by Immigration officers to call his wife to tell her that he had been taken into custody by these officers as a result of a deportation order that had been outstanding for almost 11 years.

I emphasize that after almost 11 years of litigation over this deportation order, Heikkila was aware of his rights at the time he was apprehended by Immigration officers. If he had wanted to call his wife or his attorney he would have been allowed to do so.

As the result of inquiry requested by my distinguished chairman of the House Judiciary Subcommittee on Immigration, the Honorable FRANCIS WALTER, of Pennsylvania, I am convinced that the Immigration Service moved on absolutely legal grounds and was guilty only of faulty public relations.

I am so reporting to Mr. WALTER in a personal summary of my findings recently in San Francisco.

I talked to Bruce Barber, the director who was maligned by the Communist People's World, and I found him to be of the highest type of public servant, a man who is dedicated not only to his important job but to his country. There is no more loyal and patriotic American than Bruce Barber.

There is no doubt in my mind that the Communists seized upon the initial public shock of Heikkila's swift deportation to make a "cause celebre" of this case to suit their own selfish, vicious purpose.

It was not pointed out during the public outcry attendant to the Heikkila deportation that as late as December 1956, he took refuge behind the fifth amendment in refusing to answer a House Un-American Activities Subcommittee sitting at San Francisco on the question of whether he was or is a member of the Communist Party.

Yet, Heikkila has been quoted by newsmen as saying that he left the party in 1939 since his return from Finland.

During the course of the subcommittee's questioning of Heikkila, he resorted to the 1st or 5th amendments or both 20 times on questions relating to his connection with the Communist Party and as to whether he had applied for naturalization and as to whether he has ever left the United States since he came to Minnesota with his parents from Finland at the age of 2½ months.

This is a matter of public record.

The full story of the strange case of William Heikkila has not been told.

I predict that evidence will be turned up within a matter of weeks, possibly days, that will give an entirely new light to the William Heikkila case and fully justify his immediate deportation as a threat to the security of our country.

I further am convinced that this new development which is expected to break momentarily will shock and astound even those innocents who have been bewitched by the case and now are defending this poor, defenseless alien.

Shrill Barks—Wrong Tree

EXTENSION OF REMARKS
OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. ARENDS. Mr. Speaker, I call your special attention to an editorial which appears in the Washington Evening Star with respect to the President's order of American troops to the Caribbean area after the Caracas incident when the life of our Vice President and his wife were in grave danger.

I am sure this editorial expresses the sentiment of the vast majority of the American people. Whatever the political faith of our President and our Vice President, in their respective offices they are the embodiment of the American people themselves. Any insult to either of them is an insult to all of us. To whatever danger they may be subjected we must and will endeavor to protect them.

The sending of our troops to our own bases in the area was simply a precautionary action—to make certain that the host Government of our Vice President would have available to it, if needed, adequate protection for the American people's representative. The editorial expresses my view. It follows:

SHRILL BARKS—WRONG TREE

With all deference, we venture to suggest that those Democrats who are trying to capitalize on the President's dispatch of troops to the Caribbean after the Caracas incident have embarked on what will prove to be the most unrewarding political venture of this generation.

Mr. Eisenhower ordered the troops sent to American bases within easy flying range of Venezuela as a precautionary measure. It was made clear at the time that they would not be sent to Caracas unless the Venezuelan Government requested assistance in protecting Vice President and Mrs. Nixon from the mobs.

This is very upsetting to some of the Democrats. The Morse subcommittee is going to investigate the action. And the Oregon Senator will be considerate enough to let Mr. NIXON testify if he wishes. Senator SMATHERS says the worst thing we could do would be to send in the Marines. He thinks that would play into the hands of the Communists. Senator JACKSON predicts that the Russians will play up the move as "Yankee imperialism." Senator KEFAUVER thinks it will damage the relations of the United States with its neighbors to the south.

To all of which we say: Sheer nonsense. Let's remember that the troops were sent to American bases to await a possible call for help from the Venezuelan authorities. Let us also remember that Mr. Eisenhower, at the time, did not know whether the Venezuelans would be able to protect the Vice President and Mrs. Nixon from serious injury.

Perhaps the President should have waited to see whether the mob was going to storm the American Embassy and drag Mr. and Mrs. Nixon into the street. But we don't think so. And we don't believe the American people will think so, either.

If the Communists can make any propaganda capital out of the President's decision, they are welcome to it. We don't think they can, but they may try to capitalize on what the Democrats are saying about that decision.

Transworld Airlines Leads the Way

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. BOLAND. Mr. Speaker, the action of Trans World Airlines in hiring its first Negro flight stewardess is applauded by all who decry inequality in job opportunities. It paves the way for similar action by other major airlines. Both Trans World Airlines and the smaller Mohawk Airlines are to be commended for their positions with respect to personnel practices. I ask unanimous consent that an editorial commenting on this matter from this morning's Washington Post be inserted in the RECORD.

BREAKTHROUGH

The news that Trans World Airlines has hired Margaret Grant as its first Negro flight stewardess is a major human breakthrough every bit as significant as recent scientific advances in air travel. TWA's action marks the first time that a major air carrier has breached the unwritten, outmoded employment code among the scheduled passenger lines. A smaller carrier, Mohawk Airlines, led the way 6 months ago in erasing color limitations by employing the country's first Negro stewardess. We are confident that TWA will win widespread applause for its decision to change its policies rather than content an employment discrimination hearing in New York.

The action by TWA sets a challenging example for the Nation's Capital, where "Equal Job Opportunity Week" is now being observed. The Washington Urban League has made some encouraging progress in opening up new jobs for Negroes in many concerns (including airlines), but there is a natural reluctance to the be the first. Yet neither the conscience of the community nor the spirit of the laws support arbitrary bars on opportunity.

The Bold Stroke—Income Tax Rate Reform

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an editorial that appeared in the May 17, 1958, issue of the Saturday Evening Post. This editorial discusses the recession in the light of needed tax action and concludes that the legislation (H. R. 9119) which I have introduced and which has also been introduced by my friend and colleague on the Ways and Means Committee, Representative ANTONI N. SADLAK of Connecticut, is not only long overdue, but, in contrast with hastily conceived action, would provide a real and lasting stimulant to the economy.

The editorial follows:

Millions of words have been written and spoken about the current economic recession, and many of the commentators might well take to heart President Eisenhower's advice to use some commonsense and not just get a sputnik attitude about everything. With the Democrats doing their best to give the economy the count down for political reasons, and the Republicans, for the same reason, attempting to show that the recession will disappear as soon as people stop talking about it, commonsense is an infrequent ingredient of current discussion.

A man out of a job can be forgiven a sputnik attitude. Like the soldier forced to risk his life in a strategic retreat which has no immediate bearing on the issue of a war, the unemployed man is the victim of a conflict for which he has no responsibility. In the days before income tax took from the humblest worker's income somewhat more than his father was able to save, the unemployed could often sweat it out on their savings. Even as things are, savings the country over are high. Nevertheless the majority of the unemployed must depend on unemployment-insurance benefits. Extension of the number of payments in areas where they have been exhausted seems an inexpensive way to assist the victims of economic recession through a disastrous period.

Most of the more grandiose recommendations, however, are to be viewed with suspicion, especially those which involve vast made public-works projects financed on borrowed money. After all, one of the reasons we have a recession is the fact that consumer debt has been overtaking income. When the installment payments creep up too close to the paychecks, the family decides that a new car or a color TV will have to wait. Hence unemployment and depression in the industries affected. Hence also a spate of ill-conceived antirecession measures, many of which would probably make matters worse, but which few politicians care to oppose lest they be accused of indifference to the plight of our millions of unemployed. The probable major contribution of most public works projects would be an even higher national debt and a dollar still weaker than the one we now have.

Tax reduction, if undertaken as real tax reform, as proposed in the Sadlak-Herlong bill, and not as a mere cry-havoc effort to give the taxpayer a few temporary dollars with which to buy, buy, buy something, makes more sense. Unforutnately the administration appears to regard tax reduction as a life preserver that might be thrown to a man overboard, but only as he is about to go down for the third time. Presented as a last resort, the psychological impact of tax reduction might be similar to the effect on a hospital patient when they wheel an oxygen tent into his room.

Really stimulating would be the news that a basic reform in taxation and Government spending was to be undertaken—not as an emergency measure, but as a long-overdue effort to correct at least one of the major drags on our economy. Such an effort might well turn out to be the bold stroke that routed the recession.

State Convention of the Knights of Columbus Held at Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 2, 1958, on the recently concluded State convention of the Knights of Columbus that was held at Wilkes-Barre:

KNIGHTS OF COLUMBUS STATE CONVENTION

For the first time since it was organized 60 years ago, Wilkes-Barre Council 302, Knights of Columbus, is about to play host to the State council and delegates representing its 60,000 members. The convention will be formally opened at a solemn pontifical mass on Sunday at 11 a. m. in St. Mary's Church, South Washington Street. The program will be continued with a banquet on Sunday night at the West Side Armory at 6:30.

Anniversaries of the State and Wilkes-Barre Councils coincide. Both were organized in 1898. When the Wilkes-Barre Council celebrated its 50th anniversary, attention was directed to the fact that the first grand knight was Thomas P. Ryder, at the time a member of the Record staff and in that year this newspaper's correspondent with the Ninth Regiment at Chickamauga in the Spanish-American War.

One of the memorable occasions in the history of the Council was the visitation in 1946 of John E. Swift, at that time the supreme knight. On the present occasion a highlight will be the presence of Ambassador Jose Maria de Areiliza, Spain's envoy to the United States, who will be the principal speaker at the dinner on Sunday night. Then on Monday another highlight will be the presence of Gov. George M. Leader at a luncheon at Irem Temple. The chief address will be given by Congressman DANIEL J. F. FLOOD.

With the present reservations near or in some cases exceeding the capacity of the hotels and with the convention committee

presently turning to the motels for further accommodations, a large attendance at the convention is assured, and the number of visitors from near and far is expected to be in the thousands.

In its religious and civic aspects, the Wilkes-Barre Knights of Columbus Council has been a well-established entity from the beginning. Through the 60 years of its active history, the council has participated in a wealth of church and community undertakings. Its convention is properly a subject of widespread interest, and we find this evidenced by the fact that central city streets have been expressly festooned with welcoming banners for the first time, so City Hall declares, in many years.

The Communist Party in the Abuse of the Vice President—Students Trained and Organized on Worldwide Basis

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. BOLAND. Mr. Speaker, the United States is justly shocked and angered over the deplorable treatment accorded Vice President and Mrs. Nixon in several of the South American nations. There are several factors that contributed to the abusive actions directed against the Nation's second highest public official. But primarily, the Communist movement must and will be held to blame. That a great part of the demonstrations were planned and organized is crystal clear. I direct the attention of the Members of the Congress to a searching analysis on student activities in this kind of a situation. It is written by Barry Farber, a delegate to several student conferences behind the Iron Curtain and in South America, as a correspondent of student newspapers. With this kind of experience, he knows whereof he speaks.

Mr. Speaker, the article appeared in the Washington Star of May 14, 1958, and I ask unanimous consent that it be printed in the RECORD.

ANTI-NIXON RIOTS CAP 10-YEAR PRAGUE DRIVE

(By Barry Farber)

NEW YORK, May 14.—There is jubilation today in No. 3 Vocelova Street in Prague, Czechoslovakia, as reports come in from the widely separated cities of Caracas, Lima, and Beirut telling of violent anti-American demonstrations.

No. 3 Vocelova Street is the headquarters of the International Union of Students, a 12-year-old Communist-front youth group. It is the place where techniques of damaging and embarrassing the United States are hatched, rehearsed and propelled into ugly action in every part of the world.

If newspaper reports of Peruvian and Venezuelan students spitting at and stoning Vice President NIXON and of Lebanese rioters burning United States Information Service libraries caused dismay in the United States, in Prague the reaction was doubtless satisfaction for a job well done. Not that the IUS is solely responsible for the outbursts; rather, it has exploited existing situations to the full.

The Prague-based IUS has invested millions of Moscow dollars convincing young people from Lima to Lebanon that America means warmongering, poverty, racial discrimination and support for dictatorships, while Soviet Russia and local leftist parties hold the only real key to peace and plenty.

TEN-YEAR TARGET

Ten years ago Moscow pinpointed Latin America as a juicy target for IUS penetration, first under the leadership of a Czech student, Josef Roman, and now under his successor, 35-year-old Jiri Pelikan, a former member of the Czech Parliament.

Pelikan's lieutenants have been such agitators and organizers as Mr. Chauduri, of India, who made a circuit tour of South America in 1957; Seadati Babak, of Iran, who attended a Latin American student conference last year in La Plata, Argentina, representing the IUS; a Mr. Alvarez, who has just returned to his native Ecuador after a year in Communist Europe as an IUS vice president, and Berard Bereanu, a Rumanian who is believed a key figure in the IUS program for South America.

The IUS sailed into business on two levels in South America. One was completely above deck. Well-dressed, well-mannered IUS representatives traveled from campus to campus enlisting sympathy and offering membership to everyone interested in fighting imperialism and poverty, war and nuclear weapons, prejudice and discrimination, dictatorship and suppression of civil liberties. Before long, most South American student federations had affiliated with the Prague body.

VACATIONS IN RUSSIA

Funds swiftly became available for student leaders in South America to take vacations in Russia and eastern Europe. Latin American universities were bombarded with scholarship offers for Prague, Budapest, Warsaw, and Moscow. Brisk exchanges of student, artist, dance, and sports groups sprang up.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mrs. BOLTON. Mr. Speaker, May 10 is a day warmly remembered in the hearts of American citizens of Rumanian descent. Selected as Rumanian Independence Day, May 10 stands for the achievement of national unity, freedom, and independence. In my own city of Cleveland, as indeed elsewhere throughout the Nation, the day is commemorated by an inspiring public rally, attended by the many friends of Rumania.

Regrettably, the people of Rumania can not join in public observance of this historic date as their Communist masters forbid demonstrations in the cause of freedom. The Communist regime has endeavored to expunge this scared day from Rumania's proud history. No longer can her people sing their national anthem or raise the Rumanian flag on independence day. Celebrations have been shifted by the Communists from the 10th to the 9th of May, the anniversary of a Soviet victory, in order to alter the significance of this memorable day. Although flags are raised on the ninth, the Rumanian people celebrate in their hearts the following day, patiently awaiting restoration of their freedom.

During their long history Rumanians have always stood up against aggression and repression. They have been oppressed many times before, but their will remains unbroken. Through these dark years of Communist domination, the Rumanian people have kept alive their courage and their faith. They know that freedom cannot be destroyed.

Our Government does not accede to the Kremlin's wish that the status quo be finally accepted in regard to Eastern European nations and peoples. The United States rejects the permanent enslavement of Rumania and other states by the Communists, and looks forward with them to the day when they will again live in freedom and independence. With Rumanians everywhere we join in prayer to Almighty God that that day will not be far distant.

Restore Employment and Create Incentive

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. BOW. Mr. Speaker, the bill to restore employment and create incentive for new enterprise has had a response favorable beyond my highest expectations.

I refer to H. R. 12350 and similar measures sponsored by Senator CAPEHART and by the gentlemen from Wisconsin [Mr. O'KONSKI] and California [Mr. SCUDDER] and myself.

Many of my constituents have written to me in support of the measure and advise that they are writing also to members of the Committee on Ways and Means.

They share my belief that this bill provides the best and quickest method of stimulating our economy and providing employment for every man and woman who seeks a job.

I was pleased that the following editorial comments of the Canton (Ohio) Repository show the relationship between this bill and the proposal of the Business Advisory Commission.

HOW THE PIECES FIT TOGETHER

Similar proposals introduced by Representative FRANK T. BOW of Ohio in the House and Senator HOMER CAPEHART of Indiana in the Senate would carry out a policy favored by the Business Advisory Commission.

The BAC policy, in turn, would have direct bearing on a problem which most economists believe is one of the root causes of the downturn in business—a decline in the rate of spending by business, itself.

This decline is not only one of the immediate causes of unemployment but is worrisome because it will handicap business in its ability to make the most of the coming boom in the 1960's, which will be caused by population growth and technological progress.

The BAC policy, which the bills introduced by Representative Bow and Senator CAPEHART would put into effect, is liberalized tax writeoffs for new plants and machinery.

Through these accelerated depreciation allowances, business enterprise would be encouraged to prepare for the next boom in business that is expected to restore full employment.

McGraw-Hill publications currently are pointing out to their readers that the country now is in a transition from the postwar boom based on deferred demand to a new boom in the 1960's based on dynamic population growth and a revolution in technology.

The publications also are saying that more than half the machine tools now in United States factories are over 10 years old and should be replaced for the sake of bringing down operating and maintenance costs.

The pieces all fit together, and they would fall into place automatically if Congress ever came to be of one mind on the purpose of taxation. Its purpose should be to increase the vitality of the goose that lays the golden eggs, never to shorten its life with harassment. Unfortunately, in recent years, Federal taxes have been used to harass, not help, the sources of the Nation's wealth.

Legislation Entitled "First Strengthening of State Governments"

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. REED. Mr. Speaker, I have today introduced legislation that would return to the States the primary responsibility with respect to certain governmental services and that would make available to the States revenue now utilized by the Federal Government. I have introduced this legislation as the ranking Republican member on the House Committee on Ways and Means at the request of the administration so that it may be available for public study and consideration. My sponsorship should not be construed to indicate that I have determined my position in regard to this legislation.

The administration has recommended this proposal as a consequence of a study and recommendation made by the Joint Federal-State Action Committee consisting of representatives of the executive branch of the Federal Government and governors who were appointed to the committee by the chairman of the governors' conference.

The President of the United States outlined the purposes and objectives of this committee in an address before the conference of governors in Williamsburg, Va., on June 24, 1957. At that time the President stated as follows:

I suggest, therefore, that this conference join with the Federal administration in creating a task force for action, a joint committee charged with three responsibilities:

One. To designate functions which the States are ready and willing to assume and finance that are now performed or financed wholly or in part by the Federal Government;

Two. To recommend the Federal and State revenue adjustments required to enable the States to assume such functions; and

Three. To identify functions and responsibilities likely to require State or Federal attention in the future and to recommend the level of State effort, or Federal effort, or both, that will be needed to assure effective action.

I strongly support sound efforts to bring about a reallocation of governmental responsibility among the Federal-State and local echelons of government so as to retrench from our posture of the present tremendous centralization of power at the Federal level. I am convinced that many of the governmental goods and services now made available by the Federal Government could be more efficiently and meaningfully made available through State or local governmental activities. The administration-recommended legislation that I have today introduced purports to take modest steps in that direction. It is my expectation that the careful study the legislation will receive as a consequence of its introduction will permit a determination as to whether or not the suggested approach set forth in the legislation is a sound and proper one.

Test of Character

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. HARVEY. Mr. Speaker, under the leave to extend my remarks in the Appendix of the RECORD, I include the following editorial:

[From the Washington Daily News of May 15, 1958]

TEST OF CHARACTER

Rocks in South America, burned libraries in Lebanon, and Algiers. We've given military aid, economic aid, Marshall plan aid, point 4 aid, famine relief, flood relief, disaster relief. We've spent billions on the military to keep the commies off their neck, and ours. Why is it so few seem to love us well-meaning Americans? It's easy to understand Russian motives, but what about the others?

There are several ways to look at it:

We are the world's rich relative and who ever heard of a generous relative getting much if any credit?

The United States is, through force of circumstances, trying to bring peace and prosperity to the world, trying to help people help themselves to independence and dignity. This is a tough job, posing some impossible problems. Since we're in charge we get blamed for everything that goes wrong. If we're so smart, why did we let it happen? The good we do is taken for granted.

America is the world's policeman, having inherited the job from faltering Britain. A policeman traditionally attracts rocks from the criminal element for being too tough, from the law-abiding, tax-paying element for not being tough enough.

It is a hard, thankless job which has been thrust upon this Nation, due to our great material progress and our successes in two world wars. Then why, since our reward is mainly abuse, not skip the whole business and let the rest of the world go for itself?

Because that would mean anarchy, war and slavery to the Communists who eagerly seek the job of world policeman and penitentiary warden. It would men chaos in which even the great United States of America must inevitably be engulfed.

We are an idealistic people, resenting injustice and deploring poverty, anywhere in the world. But basically, we act in our own interest.

World events force a severe test of character in this, our inadvertent hour of greatness. Our grandchildren will be able to judge, by their lot in life, how well we lived up to it.

Cape Cod National Park

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. BOLAND. Mr. Speaker, on Monday of this week my colleague, Congressman O'NEILL of Massachusetts, and I introduced identical bills that would authorize the establishment of a Cape Cod National Park at the Greater Outer Beach of the Cape in the Commonwealth of Massachusetts.

With permission to extend my remarks, I would like to have printed in the RECORD editorials supporting this proposal that have appeared in the Boston Globe on May 10, the Boston Traveler on May 12, and the Boston Herald on May 13.

TO SAVE CAPE COD

The bill introduced in Congress to make a national park of the outer beach of Cape Cod from Provincetown to Nauset inlet or even as far as Monomoy Point offers Massachusetts its last chance to remedy a situation already intolerable and getting worse. One of the most densely populated of the States of the Union, Massachusetts, has only 187,000 acres of State park land and has no national park. New York State has 1 park which alone contains 2 million acres. Maine, New Hampshire and Vermont all have national parks and more State park area than Massachusetts.

Recent development of beach areas has taken away thousands of acres of seashore and woodland and threatens to take more. There is no sense in denying that all Cape Cod is in danger of being Jerseyized unless steps are taken by local, State, and national agencies.

Massachusetts is within a 12-hour drive of 50 Million Canadians and Americans. Cape Cod's Great Beach is within 300 miles of the 6 New England capitals and metropolitan New York.

Commissioner Francis W. Sargent of the Department of Natural Resources is wholeheartedly in favor of making a national park of Great Beach. He points out that it has been demonstrated that national parks bring revenue to a section by preserving natural charm. In North Carolina and Tennessee, tourists visiting the Great Smokies National Park left $28 million in a single year.

Of universal concern is the sacrifice of beach and coast line to commercial interests. Of the 3,700 miles of Atlantic and gulf coast from Calais, Maine, south, only 240 miles are federally or State-owned for public recreation uses. The Department of the Interior has recognized Cape Cod as the stretch of shore most worth preserving. Massachusetts should do the same.

SAVING THE CAPE

The way things are developing, Cape Cod may be the site of the Nation's next national park.

The preserve would be along the cape's Great Outer Beach stretching some 33 miles from Orleans to Provincetown.

This scenic strip of seashore has been the subject of an almost-concluded year-long survey by the National Park Service. And the Interior Department says the beach is in the highest priority for selection as a national park.

Meanwhile, two Bay State Congressmen have filed legislation that would speed up the preservation of the area.

Measures by Representatives EDWARD P. BOLAND and THOMAS P. O'NEILL, both Democrats, provide that anyone who now owns a home on the beach included in the proposed park, would be allowed to remain there.

Another thing the measures do is to eliminate the necessity of the Federal Government taking the land by eminant domain.

We'd like to see the natural wonder of the cape saved. Great Outer Beach is one of last remaining untouched strips of seashore along the Atlantic Coast. But it's being threatened by commercial development. Once it goes commercial, the spell of the sheer cliffs and the allure of the dunes and surf will be lost to the public. And when an area starts downgrade, it's difficult to catch the public's interest.

Legislation aimed at creating a national park is aimed at saving the cape in more ways than one.

A NATIONAL TREASURE

Do we know the priceless possession we have in Massachusetts?

The tourist brochures list some of it—the miles of gleaming beach, weathered scrub pine, sand dunes, the immense sweep of sky and ocean where flocks of gulls hang against the blue, and the ground trembles with the shock and shudder of surf. This unspoiled terrain is the essence of New England, a landscape without peer, forever fresh and beguiling.

But have our own eyes become so dulled by habit that we take the tangled wildness of Cape Cod for granted?

At the present rate of development and growth, the great outer beach of the cape is in danger of going the way of similar beaches along the Atlantic coast. In another decade it may present a different aspect—cluttered by cottages, illuminated by neon signs, paved by asphalt and plowed under by the gaseous advance of the urban sprawl.

In view of the shortness of the time left to the cape beaches, the proposals filed in Congress by Representatives EDWARD P. BOLAND and THOMAS P. O'NEILL, Jr., take on special significance. These bills would make a national park extending for 33 miles from Provincetown to Chatham; and they focus countryside attention on the clear and present danger to the cape.

Although Massachusetts is paying, with the other States, for the National Park Service, we have no national parks within our borders. Here is the place to begin. The great beach of Cape Cod is in every sense a national as well as a local treasure.

The sentiment of the Massachusetts Legislature, which has memorialized Congress to make a national park out of the area, is on record. But cluttered development of the outer beach is proceeding at an alarming rate. Even the balance of nature is being affected. The destruction of marsh grass resulted, during the winter storms, in sending a section of the Eastham parking area toppling into the sea.

Instances of such mishaps can be multiplied, and the survival of the cape's natural resources is not merely a matter of esthetics. From the economic standpoint the towns affected would be reimbursed at the State's average tax rate for the land acquired. They would benefit by the reimbursement and, moreover, by preserving the cape in its natural state, gain tourist revenue that will go elsewhere if the beaches are razed and given over to unbridled private enterprise.

Thoreau could wander on the great outer beach of Cape Cod and meditate on its clean and untouched beauty. A man can do that today. The great beach is still a sweeping and sun-drenched space where one can confront nature and exalt the spirit. It is being eroded by time and progress far swifter than the tides that lunge at the sandy barrier.

Atomic Energy Commission's Physical Research Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a press release which I issued on May 13, 1958, expressing concern over the inadequacy of funds being made available for the Atomic Energy Commission's physical research program in the budget for fiscal year 1959.

In recent hearings of the Subcommittee on Research and Development of the Joint Committee on Atomic Energy, it was developed that there is a requirement of 50-percent increase in support of basic research for the Atomic Energy Commission's program if this program is not to deteriorate to a point of disastrous proportions in relation to our competition in basic research with the Soviet Union.

Supporting the views of the top scientists within our program who testified before our subcommittee, I include also with my remarks a letter from Dr. Warren C. Johnson, dean of the division of physical science, University of Chicago, and chairman of the general advisory committee to the Atomic Energy Commission.

The address and letter follow:

Representative MELVIN PRICE, Democrat, of Illinois, chairman of the Research and Development Subcommittee of the Joint Committee on Atomic Energy, today labeled the 1959 authorization request for the AEC physical research program as "shockingly low" and a "wanton neglect" of this country's needs in the field of basic research. Funds requested in the budget proposal were limited to two projects of $500,000 each and represented improvements of existing research facilities. No new construction funds were requested to cover requirements in the three major physical research areas, i. e., nuclear physics, chemistry, and metallurgy.

"This is a sorry commentary," he said, "on the negative approach of the executive branch toward the Nation's scientific needs and provides shocking proof of the short-sighted attitude which exists in the AEC Controller's Office and the Budget Bureau. This is not true economy," he declared, "it is the costly road to decay and defeat."

"It is high time," he went on, "that the administration stop paying lip service to the importance of basic research and back its words with adequate financial support of our research effort. Without such support we cannot hope to meet the Soviet challenge nor can we long remain a first-class scientific Nation."

In referring to recent public hearings which his subcommittee held on the AEC physical research program, Representative PRICE observed that the great majority of witnesses, comprised of top scientists from our laboratories throughout the country, had emphasized the need for an increase of at least 50 percent in the overall level of support of the program.

"This view is confirmed," he said, "by many eminent scientists whom I have met in the field and by the distinguished members of the General Advisory Committee upon whom the Atomic Energy Commission relies heavily for guidance."

"It is interesting to note," he added, "that the chairman of the General Advisory Committee wrote Admiral Strauss in February of this year stating that the present level of support of the physical research program is 'greatly inadequate' and recommending that the level of funding of the program over the next 4 years be progressively increased by amounts ranging from 50 percent to 150 percent of present levels.

"It is abundantly clear," he added, "that prompt action must be taken to increase the level of support of the AEC physical research program if we are to avoid disastrous consequences in the future. The success of our entire scientific effort in the years to come rests squarely on the fundamental knowledge which is developed today in our research facilities. It is vital that we give this work wholehearted support. If the executive branch is unable or unwilling to provide the necessary leadership, the Congress must."

THE UNIVERSITY OF CHICAGO,
Chicago, Ill., May 1, 1958.

The Honorable MELVIN PRICE,
Chairman, Subcommittee on Research and Development, Joint Committee on Atomic Energy, United States Capitol Building, Washington, D. C.

DEAR MR. PRICE: Due to the fact that I was detained in Chicago on account of illness during the hearings on the Physical Research Program of the Atomic Energy Commission, scheduled for February 14, 1958, at the request of your Committee I am enclosing a copy of the letter dealing with this subject and addressed to Mr. Lewis L. Strauss, Chairman, United States Atomic Energy Commission, dated February 20, 1958:

My statement is as follows:

"During the past few months I have given considerable thought to the problem of financial support for the activities of the Division of Research of the Atomic Energy Commission. It is becoming more and more evident that the present level of support, namely, about $71.5 million for fiscal 1958 and fiscal 1959, is greatly inadequate. Furthermore, unless considerably more support is forthcoming within the next 2 or 3 years, we shall find ourselves in a difficult position.

"For the support of this conclusion, I would like to present a few facts pertaining to some of the programs under the sponsorship of the Division of Research. At the present time about $16 million is devoted annually to the support of high energy physics. Nevertheless, these funds do not enable the cosmotron at the Brookhaven National Laboratory and the bevatron at the University of California Radiation Laboratory to operate on a full schedule. In addition, these leboratories have been in a position to accept only about 40 percent of the requests that come to them for the use of the accelerators for worthwhile experiments, and many other physicists and teams in universities throughout the country do not even apply for machine time, since it is apparent that none is available. Four new high

energy accelerators are now under construction and will go into operation during the period 1960–1962. These are the 25–30 Bev AGS machine at Brookhaven, the 12.5 Bev accelerator at the Argonne National Laboratory, the 3 Bev synchrotron at Princeton and the Harvard–MIT 6 Bev electron synchrotron at Cambridge. It has been carefully estimated that when these machines go into operation, about $50 million will be the annual operating and experimental expense to maintain them on a full time basis. We are certain that when this time arrives there will be even more demand for the use of the machines than available machine time will permit.

The estimate made here is based on present-day dollars; any inflationary trend will increase the operating costs. It should also be pointed out that other high energy machines, such a cyclotrons, linear accelerators, etc., that are included in this program are not being used to capacity. If one considers it important to use our manpower as efficiently and effectively as possible, then there is the need to maintain all of our experimental devices in the field of high energy physics at full capacity. In other words, it appears to me that our manpower resources should take precedence in our effort to maintain leadership in the field of high energy physics. This statement applies equally to all other fields in the atomic-energy program.

"Another field that deserves increased attention is what one might call in general terms "the science of materials." Included in this expression are such areas as chemistry, metallurgy, solid-state physics, high-temperature thermodynamics, ceramics, the behavior of materials in a radiation field, etc. Our efforts in the fundamental sciences pertaining to these areas have been greatly inadequate. In fact, the difficulties we have experienced in the development of different types of reactors, not only for power but for military propulsion purposes, as well, have been due in a large measure to lack of fundamental knowledge in these fields. Due to the unrealistic time schedule, we have spent relatively large sums of money for pieces of hardware without knowing what components would be contained within them. By lengthening the time schedules for completion of some of our reactors for both military and nonmilitary purposes, it will be possible to devote more attention to the fundamental problems inherent in the behavior and use of materials than we have in the past. In fact, these fundamental problems must be solved before we are able to complete the programs. It is therefore recommended that considerable additional funds be devoted by the division of research to this area for the support of fundamental research in the laboratories of the Commission, the universities, and institutes throughout the country.

"A number of other activities sponsored by the Division of Research need additional support. However, in my opinion, the two general areas previously mentioned demand the greatest attention. What I would like to emphasize is that our greatest asset is well trained scientific and engineering personnel and that we should give them full support in order to enable them to carry out their work to the capacity of their talents. I would estimate that the annual operating budget of the Division of Research at the present time should be at least $100 million to accomplish these objectives and that within the next 4 years this annual budget should rise to $150 million or $175 million to make the fullest use of our manpower and facilities commensurate with the needs and objectives of the Atomic Energy Commission's program."

Very truly yours,

WARREN C. JOHNSON,
Dean, Division of the Physical Sciences.

Yearly Review of the Freeland, Pa., Industrial Development Corp.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Hazleton (Pa.) Plain Speaker on May 2, 1958, concerning the election of officers and the yearly review of the Freeland Industrial Development Corp.:

LAMBERT BROAD ELECTED BY FIDC; REVIEW YEAR'S INDUSTRIAL CONTACTS

Lambert E. Broad, Mining and Mechanical Institute president, was elected president of the Freeland Industrial Development Corp., and other new officers and five directors for 3-year terms were elected at the annual meeting of the membership and board session which followed.

FIDC officers for 1958–59 are as follows:

President: Lambert E. Broad.

Vice president: John D. Kresge.

Secretary-financial secretary: Attorney Martin J. O'Donnell.

Treasurer: John D. Kresge.

Directors: Emerson Berger, Al Corazza, John Watahovich, Joseph Kopski, and John Zrelock, Jr.

The new FIDC president is a charter member and veteran board member of the FIDC, and has held various offices on the board, including that of financial secretary, in years past. He also served as head of various committees, including the building committee in recent years, and has been a member of the important industrial contacts committee.

Kresge, also a veteran board member, is the first FIDC officer to hold a dual role. He served as treasurer last year. Kresge is employed on the office staff of the Jeddo-Highland Coal Co. and also serves as an officer and board member of the Freeland Borough Municipal Authority.

O'Donnell, who was reelected to the posts of secretary and financial secretary, has held the positions for a number of years. He also serves as the FIDC solicitor, a post similar to that which he holds in Freeland Borough, and with the Foster Township Supervisors, and Citizens Bank of Freeland.

Four of the five directors named were reelected, with the new board member being John Zrelock, Jr., of Green Street.

Zrelock, the representative of the Freeland Post 5010, Veterans of Foreign Wars, is a past commander of the VFW and serves as president of the Foster Township School Board. He is a local carpenter contractor.

Reelected as board members were Berger, local building contractor; Corazza, official of the Free-Land Dairy who heads the FIDC's sites committee; Watahovich, Freeland police chief; and Kopski, local garage owner.

Peter Funk, garage owner who served for the past 2 years, is the outgoing FIDC president.

Zrelock replaces Joseph Collins, also the VFW representative, on the board of directors.

ANNUAL PROGRESS REPORT

Reports of the past year's activities were presented to the members during the annual session by President Funk and Edward Sharp, industrial contacts committee chairman.

Funk listed in his reports the following activities engaged in by the FIDC in the past year:

Installation of an 8-inch waterline to serve both FIDC buildings, the plant of the Display and Construction Units, Inc., and the plant shell No. 2; also installation of a fireplug between the buildings, one-third of the cost of which was borne by the FIDC. He pointed out that the improvements enhanced the buildings protection factor and made possible a lower insurance rate.

Support, both verbally and by letter, was given by the FIDC to the cause of the shortway and other highway construction in the anthracite region.

The FIDC joined with individuals and other town organizations in the movement to save the Freeland Mills in town, prompted by the possibility of saving 200 jobs here. The FIDC at the time contributed $1,000, along with similar contributions of money by Stanley Genetti, the Freeland Chamber of Commerce, and Citizens Bank, in an effort to secure a Small Business Administration loan to sustain the Freeland Mills operation.

These efforts met with failure, Funk reported, as is known now, but he added that hope is being held high that a tenant for the two buildings now empty will be had in the not too distant future, and he disclosed that efforts are being made now by the building owners to revive the employment potential existing there.

The sites committee, headed by Al Corazza, had accomplished much in the past year, including completing initial steps on procuring an ideal plot near a railroad in the St. Ann's sector owned by the Speal family. An option to buy the land, which could provide space for possibly two buildings, is held by the FIDC.

In industrial contacts, Funk added that the full report will be made by Sharp, but he stated that much accomplishment had been recorded here despite the fact that an industry had not been secured here in the past year.

Explaining the Capitol Products matter, he added that the FIDC's efforts aided in no small way in having the Harrisburg area firm located in Hazleton, and that indirect benefit to Freeland will result.

Explaining the land title matter affecting the public park site on which sits shell No. 2, he stated that the title problem came about because of the fact that conveyance was not accomplished with proper consideration from Freeland borough, and that the land originally was dedicated for use as a park. All these matters are being cleared up and in fact, title clearance procedure has been filed with the courts and favorable action is expected shortly.

Sharp told the board that we have had many prospects, easily 25 or 30 in Freeland looking over our building in the past year.

In spite of recession talk, Sharp added, prospects are coming to Freeland and he expressed confidence that successful results will follow.

Citing as some of the reasons why prospective industries have not located here, he added that in a number of the cases, the faults were not those of the FIDC, but that actually the industries were not desirable from many standpoints and were not encouraged to locate here.

His report also paid high compliment to the Lehigh Valley Railroad, which, he stated, in a recent industry case, offered full-scale cooperation to fulfill railroad car needs, but that the industry likely will not locate here because of it being unacceptable for loan provisions because of a financial standpoint.

He added that the Freeland building is being constantly advertised by various means through the State industrial authority, and that prospects are being contacted and actually are coming here for inspection trips on the basis of at least two per month.

Action of the board of directors in the past year was ratified by the membership.

ADD NEW MEMBERS

The following were added to the FIDC membership rolls: Gerge Kasaba, Philip Dominic, George Fellin, John Trelock, Nicholas Bellezza, Steve Yenshaw, Charles Reczkowski, and Steve Kistulentz.

Sixty members comprised the roll of the FIDC up to last night's meeting, with the bylaws allowing for a total membership of 75.

For the election of directors, the nominating committee consisted of James Ferdinand, L. E. Broad, and Jack Kresge. In addition to the five elected, Reczkowski and Kistulentz were nominated. Nicholas Bellezza and Joe Falatko served as tellers for the directorship elections.

The summary of the financial report for the past year, from April 30, 1957 to April 30, 1958, was submitted by Kresge, and accepted. It showed a beginning balance of $5,111.13; receipts of $12,186.10; disbursements of $14,654.49; for a balance on April 30, 1958, of $2,654.04. The annual audit will be made according to the bylaws.

DIRECTORS SESSION

Immediately following the membership meeting, the board of directors convened for its reorganization session, with the officers for the years being elected.

By official action and with a rising vote of applause, the board extended its thanks to outgoing president, Peter Funk, for his work in the past year.

In his closing talk, Funk stated that while tangible evidence was lacking as far as securing an industry was concerned, he was certain that the cooperation and work of the board during his tenure as president had paved the way for success soon to be realized. He thanked all board members and especially the various committees for their cooperation and devotion to their work in the past years.

Also praised for their tireless efforts and expenditures of much time personally were Attorney O'Donnell and Sharp.

Vito Poleri, Dr. O. R. Hoch, and Sharp comprised the nominating committee for FIDC officer candidates.

Eisenhower Administration Has Reduced Atomic Power Program

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the St. Louis Post-Dispatch of May 13, 1958, which is entitled "From Agreement to Cipher":

FROM AGREEMENT TO CIPHER

The Eisenhower administration has reduced the atomic-power program which had been agreed upon by the Atomic Energy Commission and the Congressional Joint Committee on Atomic Energy to about as near nothing as possible.

The plutonium-producing reactor, needed for national defense, has been thrown out. The natural-uranium reactor, needed for the building up of an export market, has been cast aside. Of the critical projects only the gas-cooled reactor has been left in, and even there the President is determined to do nothing unless private business does something first.

The gas-cooled reactor, which the AEC has long opposed and the Joint Committee has long advocated, is attractive to many other countries and to publicly owned power systems. The coolant is cheap and convenient; and the low fuel cost outweighs the high capital costs for distribution system with low fixed charges.

The Democratic majority on the Joint Committee, and all others who believe the United States should play a dynamic rather than a passive role in the world's development of atomic energy, have hardly any alternative now to joining battle. What the agreement failed to do, a bill may yet do. When that bill comes up, it will be interesting to see what the AEC does about it. Can it in good conscience oppose as a bill what it had accepted as an agreement? The answer will supply new substance to the growing conception in the public mind of the character of the AEC.

CAMG Operations in Atomic Age Warfare

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 15, 1958

Mr. MARTIN of Pennsylvania. Mr. President, our distinguished colleague from South Carolina [Mr. THURMOND] has written a very fine article which was published in the Military Review of January 1958 on the the subject CAMG Operations in Atomic Age Warfare.

Since General THURMOND is a high-ranking officer in the Reserve and has made a very exhaustive study of this important subject, I ask unanimous consent that the article be printed in the Appendix of the RECORD, and I sincerely trust that all my colleagues will read and study it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAMG OPERATIONS IN ATOMIC AGE WARFARE

(By Hon. STROM THURMOND, of South Carolina)

From the time the infantry first penetrates enemy-held territory, whether through an overseas, overland, or airborne movement, the commander is an occupier under the terms of international law.

Decisions must be made immediately by the commander regarding the people, government, and economy, not only to comply with the obligations imposed by international law and agreements, and to implement United States policy objectives for the area, but also to exploit for his direct benefit the potential of available resources in supporting and facilitating his combat operations.

To achieve combat success, he must destroy the enemy—and this includes the combat elements, the resources mobilized in their support, and the political agency which directs the effort against him.

Destruction is essential to winning a war. However, reason dictates that force must be applied with discrimination. Destruction must be measured and limited to actual requirements existing at the time. Hence the force applied need not necessarily be massive, neither need the destruction be total.

The application of even such controlled force as is required to win a war has a tremendous effect upon the civil population. The reaction of the affected civil population, in turn, can have a tremendous effect upon the commander's ability to continue the application of the required force.

Consequently, the commander's decisions are influenced not only by his own and the enemy's relative combat power, but also by the civil characteristics of the area of combat operations. In his estimates of the situation he carefully weighs civil affairs and military government (CAMG) factors along with those dealing with personnel, intelligence, operations, and logistics.

CAMG planning must be constant, continuous, and in full coordination with all other planning in order that CAMG operations may best contribute to the overall mission of the commander. The objective of CAMG planning is to insure support of tactical and logistical operations, as well as to resolve the civilian problems which handicap or interfere with tactical and logistical operations.

Equally valid for atomic-age warfare is Clausewitz' summation of the overall objectives of warfare. These objectives are threefold: (1) To conquer and destroy the armed power of the enemy, (2) to take possession of his material and other sources of strength, and (3) to gain public support. These objectives are inherent in the mission of the Army, which is "to defeat the enemy forces in land combat and gain control of the land and its people."

However, as the scope of warfare enlarges with the appearance of atomic weapons of increased destructiveness, so the scope of the commander's CAMG responsibilities to the population becomes correspondingly intensified. Modern military operations, even if carried out with measured discrimination, will create civilian problems of unparalleled magnitude.

ATOMIC-AGE CAMG PROBLEMS

It would be well to examine some of these problems, essentially civilian in nature, which will confront a commander in the conduct of his military operations on the atomic battlefield.

Civilians, in larger numbers perhaps than ever encountered before, will suffer the effects of war in personal loss, injury, deprivation, and lack of the barest essentials of life. In addition, they will lack the guidance, assistance, or control normally provided at the local levels of government.

Continuing damage will contribute to mass hysteria and tend to convert the previously normal populace into an uncontrolled horde. The populace of an area devastated by atomic weapons will seek to flee further injury with their possessions still intact, and they will obtain, by any means possible, that which is necessary to remain alive.

From the commander's point of view, what will be the effect of the problems posed by these civilians on his combat operations? The answer is apparent.

They will clutter the roads and interfere with or prevent the essential movement of troops and supplies. Often they are injected directly into the combat operation either deliberately by the enemy or by their attempts to evade being engulfed by the enemy and to escape from enemy-held territory.

These civilians will require amazing tonnages of military supplies merely to be kept alive, and can compel a diversion of combat troops to protect lines of communication and supply installations from their pilferage tendencies in order to survive. They can require a similar diversion of troops to neutralize guerrilla action, fomented by undetected enemy agents among them.

They can do all these things and more.

They can almost stop a military operation, unless proper action is taken to anticipate and plan in advance, as a part of the military action, the CAMG measures that will effectively counteract these otherwise probable conditions.

CAMG MEASURES

The commander's CAMG operations are not limited to civil control and relief measures. His courses of action are extremely varied in scope and in possibilities, as the following paragraphs serve to illustrate.

In coordination with counterintelligence agencies, civilians are screened to insure the detection of enemy agents and the prevention of sabotage and rear area disorders. Significantly, the extensive CAMG organization, functioning constantly at the grassroots level in enemy territory, constitutes an effective source of political and military intelligence, including technical intelligence which is important to the combat effort.

Local civil defense and damage control activities, including personnel and equipment, are coordinated with those of the United States forces. Steps are taken to enforce directives regarding such matters as blackout, curfew, and civilian circulation, and to maintain a condition of public order and safety among the civilians.

Information mediums are exploited to inform the civil populace of the purposes and aims of the United States effort, and to improve the relations between our forces and the people of the country with which we are at war.

Resources of the country are mobilized in support of military requirements, as well as to meet minimum essential civilian needs and thereby avoid a drain upon United States resources.

HUMAN NATURE UNCHANGED

The civilian problems of the future combat commander will confirm the fact that "Although weapons change, human nature remains the same."

It is evident that modern nuclear weapons and highly technical military forces will require mobilization of the full industrial and resource potential of a nation involved in war. It is evident, also, that the threat alone of the use of atomic devices affects nations as well as international balances. Consequently, under such conditions it is even more evident that the combat commander must conduct his operations with full recognition of the effect upon the population involved and their political, economic, and governmental structures, if ultimate victory is, in fact, to be achieved.

Throughout history, successful military commanders—such as Julius Caesar and Alexander of Macedonia—always have recognized the problem of controlling the populace, and took measures appropriate to the state of weapons development of their time to handle the civilian problem. On the other hand, outstanding examples of less sagacious military leaders are Napoleon I and Hitler in their Russian campaigns.

A forecast of atomic warfare reveals that the combat commander's mission will contain new elements derived from the vast numbers of human beings affected by the extent and the intensity of his operations when nuclear weapons are used.

Meeting such conditions demands the development and use of the most efficient CAMG organization which can be devised and in which is inherent two characteristics in atomic warfare organization. These characteristics are:

1. Balance and flexibility which recognizes the importance of the Army gaining postwar objectives and places greater reliance on air transportability.

2. Continuing need for conventional forces and means while recognizing the necessity to be prepared to cope with aggression of varying forms.

In addition to the foregoing characteristics implicit in atomic warfare organization there are three concepts which will apply on the atomic battlefield of the field army. These concepts contribute to achieving maximum combat effectiveness and have a direct relation to CAMG operations.

FIRST CONCEPT

In the atomic age the battlefield will be of much greater depth and width than ever before.

Because of this consideration a greater land mass and larger population concentration will come under the sphere of influence of the combat commander. As a consequence, social, economic, and political problems of a greater scope will be his concern. To avert using combat-trained troops, the commander will have an increasing need for personnel skilled in CAMG combat-support operations.

However, manpower available for control of these lands and the populations therein will be limited. This highlights the necessity to increase our combat effectiveness through developing CAMG technological proficiency to the maximum.

With respect to the development of new CAMG techniques, the task ahead in the systematic development of the "CAMG science" is a challenge which can and will be met. The availability to our combat commanders of qualified CAMG personnel will serve to minimize the many problems inherent in this field.

SECOND CONCEPT

Under atomic conditions basic combat units are small integrated battle groups of all arms, which are semi-independent, self-contained, and capable of operating over extended distances on a fluid battleground for prolonged periods with minimum control and support by higher headquarters. Extreme mobility inherent in such battle groups gives them the added capability to concentrate rapidly, attack hard, and disperse quickly.

Such tactics will call for a greater measure of self-dependence on the part of our commanders, their staffs, and their men than has been required heretofore. The demands on leadership due to dispersal and the employment of complex weapons systems will require full utilization of the capabilities of the CAMG organization to assist in the accomplishment of the mission.

Such utilization will require the use of G–5 staff sections; effective deployment of CAMG units; the thorough education of officers and men in the role and capabilities of the CAMG organization; and making provision for carrying out CAMG functions in those lower echelons which are not authorized CAMG staff sections.

In this respect it is significant to note that current CAMG doctrine is adaptable to the requirements of the atomic battlefield. It is not old; it has emerged since World War II and is derived from the lessons of history. Four basic characteristics of this CAMG doctrine are:

1. CAMG units are the flexible cellular type capable of being tailored with CAMG functional specialists and CAMG officers necessary to meet the requirements of the area in which deployed.

2. CAMG units, specially trained for both overland and airborne field operations under combat conditions, are assigned or attached to armies, corps, and divisions to give CAMG support to the command.

3. In a mobile or unsettled situation, decentralization of command authority ("operational chain of command") over all CAMG units, supplementary to those providing direct support of combat, assures that the demands of dispersal can be met.

4. Aid to battle groups operating over extended areas for prolonged periods is the primary function of CAMG operations to insure maximum utilization of the resources of the area for the support of the combat forces.

THIRD CONCEPT

Staggered tactical formations of the atomic battlefield, dispersed in great depth, place heavy emphasis on reconnaissance and surveillance to cover unoccupied void areas, as well as increase the need for accurate and timely intelligence in order to reduce to a minimum all uncertainty regarding enemy actions in the unoccupied void areas.

The vital part which CAMG intelligence plays in keeping the responsible combat commander informed of the political, economic, and population effects on courses of action open to him has been recognized, and it is incorporated in Field Mannual 101–5, Staff Officers' Field Manual, Staff Organization and Procedure, as the CAMG estimate of the situation. The purpose is to develop a systematic procedure which will furnish the combat commander with the type of intelligence he needs regarding the people in his area. He will thereby be able to take action to preclude the economic, political, and governmental reactions of the population from erupting into threats to the security of his forces or the accomplishment of his mission.

The accent on dispersal presents critical problems in the surveillance, intelligence, and security of lightly held or unoccupied areas. For some time it has been recognized that the main factor for effectively gaining control over guerrilla forces is the restoration of public order and safety coupled with a basic economic stability.

For lightly held areas the task is primarily one of generating confidence among the population in the local government's ability and willingness to function. This is done by furnishing government services such as communications, employment, relief, and protection.

Unoccupied void areas present a more difficult problem. This problem can be overcome also by extension of local governmental influence into these areas with particular attention to extending local public safety personnel and agencies under CAMG supervision into the unoccupied void areas to act as a guerrilla and subversive force deterrent.

MEETING CAMG REQUIREMENTS

Consistent with the thoughts thus far presented, following are some specific proposals for meeting the CAMG requirements of the atomic age:

1. G5 staff sections and CAMG units must be included in the combat commander's force. This has several corollaries.

(a) Military personnel throughout the services must be indoctrinated in CAMG capabilities in order to provide the balanced force needed to carry out the commander's mission. In this connection all branch service schools must give greater emphasis to CAMG orientation.

(b) The operational nature of CAMG activities must be reflected throughout military doctrine so that the G3–G5 relationship will be understood fully by commanders and planners.

(c) CAMG plans, units, and staff sections must be included in all maneuvers and command post exercises in order that organizational and doctrinal developments may provide the combat commander of the future with a tested capability to handle his CAMG responsibilities.

(d) There must be an appreciation of the need of the field commander for clearly defined national objectives and policies.

2. G5 representation should be established in all military assistance advisory groups in order to develop a capability within the armies of our allies to conduct CAMG operations. Close liaison must be maintained with governmental agencies such as the Foreign Service, the International Cooperation Administration, and the United States Intelligence Agency in order to make maximum use of techniques developed and to smooth out transition of authority problems when occupied areas pass from military to civil control.

3. Development of a viable doctrine to counteract Communist propaganda must be encouraged. Maximum use must be made of the free intellectual and religious traditions of the United States in combating communism and gaining our postwar objectives.

4. The technological proficiency of CAMG personnel must be increased by:

(*a*) Maintaining a continuing research program in order to develop new techniques, procedures, testing criteria, and detection of new research areas.

(*b*) Placing emphasis during CAMG training on such subjects as the role of CAMG in combat operations; development of plans, orders, and annexes; problem-solving methods and techniques; cultural and environmental factors affecting the relationship between our military and local governments and peoples, and procedures for allocating manpower and resources.

5. Because of the wide areas of great depth which are contemplated for atomic age warfare, the problem of preparing CAMG personnel in area characteristics and language will be magnified greatly. Consequently, area documentation must be kept current and extremely concise. The designation of areas of deployment must be made early in order that language training requirements may be met. In addition, increased emphasis must be placed upon CAMG intelligence training, including the estimate of the situation, and intelligence collection planning.

6. Operational planning must give greater emphasis to refugee control in order to prevent interference with ground mobility. The local public-safety organization, under CAMG supervision, should be extended throughout the unoccupied void areas as far as practicable to act as a guerrilla and subversive force deterrent.

CONCLUSION

The critical point of atomic warfare will hinge on the combat commander's ability to exploit the advantage gained from the use of the weapon. With the chaotic conditions envisioned, his ability to handle the multitudinous problems—technical, ideological, logistical—posed by the population among whom he is operating may mean the difference between success or failure.

Social Security Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. McINTOSH. Mr. Speaker, yesterday I introduced legislation to make changes in the Social Security Act, which, in my opinion, are very necessary at this time.

The first bill, H. R. 12503, would lower to age 62 the minimum retirement age at which both men and women may start receiving full benefits. The second important provision of the bill would eliminate the requirement that an individual attain 50 years of age in order to be eligible for disability-insurance benefits.

The purpose of the second bill, H. R. 12504, is to clarify the meaning of the term "disability" so as to overcome the strict administrative interpretation that has been given to the social-security disability provisions.

The third bill, H. R. 12505, would liberalize the provisions of the act on outside earnings and would increase from $1,200 to $1,800 the amount that may be earned annually by individuals receiving social-security payments.

Everyone is well aware that our social-security system is far from adequate to meet present-day living costs. Although we have made much progress in the 23 years since the original enactment of social-security legislation, we still have a long way to go in improving and liberalizing our system. The changes recommended in the bills I have today introduced are conservative and merit the early attention of the Congress. Persons living on social security have been forced to lower their standards of living, and I am hopeful that the Congress, when it studies proposals to improve our social-security system, will also give consideration to the need for increasing present benefits.

Norwegian Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. MULTER. Mr. Speaker, on May 17 the people of Norway celebrate their 53d anniversary as a fully independent people and as a sovereign nation. The celebration recalls the final dissolution of the union of Norway with Sweden and the establishment of a constitutional monarchy in 1905.

This does not mean that Norway is one of Europe's younger states. On the contrary, she is one of the oldest kingdoms in Western Europe with a political history going back more than a thousand years. The early history of these Scandinavian people was the history of proud seafaring men who roamed the world in search of adventure and conquest. About the 14th century, however, a period of decline set in, brought on by economic difficulties and the ravishes of the Black Death. During a prolonged period of catastrophies Norway became united with Denmark. For more than 400 years, although united with stronger neighbors, Norway preserved her national identity. After the long slumber, Norway awoke during the early 19th century with hopes of national independence. After the Napoleonic Wars, during which the Dano-Norwegian monarch sided with France, Norway became one of the unfortunate spoils to be distributed to the victorious powers. By the Peace of Kiel, Norway was ceded to Sweden. The brave Norwegian people rose in arms and refused to abide by the peace terms. Thereupon, they declared Norway to be a free and independent nation.

The Norwegian and the American people share much in common, but above all they share a love of liberty. A national assembly, meeting on May 17, 1814, gave Norway a democratic constitution, based on John Locke's doctrine of the sovereignty of the people, from which our own Constitution is derived, and on Montesquieu's principle of the division of powers. The people of Norway honor this historic occasion on their Independence Day.

The period of Norway's first independence was short lived. The political fortunes of Norway did not then favor independence. The balance of power in Scandinavia and in Europe made it impossible for Norway to retain full independence. She was finally forced to accept a union with Sweden, on the principle of complete equality and with the retention of her newly acquired democratic constitution. This constitution, in subsequent years, became the symbol for the Norwegian people in their struggle against the authority of the Swedish Crown. Norway remained in union with Sweden for over a century, but, finally in 1905, the Norwegian Parliament declared that the Swedish King had ceased to function as the King of Norway. The union with Sweden was thereby dissolved without bloodshed.

On this occasion it gives me a deep feeling of honor to praise and to pay my respects to the people of Norway and the people of Norwegian descent in this country. The American people happily join with the Norwegian people in celebration of Norwegian Independence Day.

Foreign Trade: Challenge to Americans

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mrs. KELLY of New York. Mr. Speaker, the renewal of the Reciprocal Trade Act of 1934 is considered one of the most controversial bills before the Congress. To me, the extension of this act is not only economically sound, but diplomatically sound. I believe the following article entitled "Foreign Trade: Challenge to Americans," by the Reverend James L. Vizzard, S. J., is one of the most profound writings on this subject. Father Vizzard is a professor of economics and his article portrays a firm understanding of the subject. It clearly points out the need to adopt a trade policy that is true to our national principles and responsive to our national interests:

FOREIGN TRADE: CHALLENGE TO AMERICANS
(By James L. Vizzard, S. J.)

For many years the Catholic Association for International Peace has supported the principle of international cooperation through expanded world trade. In 1945, for example, in appealing for renewal of the Reciprocal Trade Act of June 1934, the CAIP subcommittee on economic life pointed out that the free flow of trade was of primary importance in postwar reconstruction plans, declaring:

"The recovery of our broken world and its future peace depend * * * on the cordial

atmosphere that derives from international economic cooperation and the free and easy movement of goods between the nations which the trade treaties aim to bring about. Economic barriers and resulting discords have been fundamental in creating antagonism between nations."

The principle embodied in this brief passage has been emphasized anew in the statement on United States foreign-trade policy released this month by the CAIP committee on economic life. This most recent statement endorses, directly or indirectly, the following recommendations:

1. Extension of the President's authority to negotiate the reciprocal reduction of tariffs for a period of not less than 5 years;

2. Expansion of the President's authority: (a) To reduce tariffs by 50 percent below present levels but not to exceed 10 percent in any 1 year, such reductions to be made on a selective basis and through cooperative arrangements with other countries; and (b) to reduce to 40 percent existing tariffs in excess of 40 percent (whether specific, ad valorem, or a combination), to be proclaimed either unilaterally or in consequence of trade agreements, such reductions to be made after taking into account the prospective impact on the domestic economy and to be limited to a maximum of 10 percentage points in any 1 year;

3. Authorization of United States membership in the Organization for Trade Cooperation;

4. Provision for assistance to injured domestic industries in the transitional phase.

The reason for these recommendations is simple. Action along such lines is necessary to our national well-being—to our basic economic, political, and security interests.

There are those who disagree. Those opposed to the traditional trade-agreements program will be opposed also to the type of authorization here urged. In fairness, however, it must be conceded that the opponents base their position on the same ultimate considerations claimed by the CAIP committee in support of its own; namely, the public and national interest. That in itself is good.

In trade policy, as in other matters in the realm of government, it is not uncommon that there should be difficulty in determining precisely what measures, in the particular times and in the context of the particular circumstances, do in fact promote the public interest. It is good, therefore, that advocates and opponents of a liberal trade policy agree that the issue should be resolved by adoption of the course which will best serve the common good. Congress, in discharge of its necessary and unique responsibility for promoting the public and national welfare, must make the final decision.

On what issues, then, do the opposing parties differ?

Because pertinent and comprehensive data on foreign trade are readily and abundantly available from the executive agencies of the Government, it is not necessary to duplicate such evidence here. Nevertheless, in order to identify the area of conflicting views, it may be useful to direct attention to two conclusions, the validity of which is overwhelmingly demonstrated by such data: (1) That United States commercial exports, currently at an annual rate in excess of $19 billion, directly or indirectly benefit the entire American economy; (2) that imports are at least as valuable as the $13 billion Americans are currently paying for them; otherwise there would have been no sufficient inducement to cause their importation.

Fortunately, the export side of foreign trade is relatively uncontroversial; evaluation of the conflicting views is thereby simplified. It is generally recognized, for example, that the plight of the American farmer would be relatively desperate, were we to lose our agricultural export markets. This is not to imply that other Americans would not also suffer from the resulting contraction of our economy; they would. It is also a matter of common knowledge that exports of the great volume and variety of the products of our mines and factories account for billions of income to the American economy annually. American farmers, miners, and other workers are the best customers for each other's products. So when any of them increases his earnings from overseas sales, he increases his purchasing power for other domestic products and vice versa.

Thus the benefits of export earnings spread throughout the economy. The residential builder and the construction worker, for example, do not produce for export. Some of the earnings from our export trade, however, go into good or better homes and schools, even courthouses and churches. By and large, therefore, there is little complaint against exports. To deny the benefits derived from them is rather futile. If one is opposed to liberal trade, it is more effective merely to ignore the obvious benefits of exports.

EFFECT OF IMPORTS

The situation with respect to imports, however, is quite different. Imports do not enjoy popular esteem comparable to that enjoyed by exports. There are many reasons which account for this difference. We shall limit ourselves to commenting briefly on the two which seem most reasonable and, therefore, most important.

The first of these is reflected in the proposition that imports deprive Americans of employment opportunities. If valid, this would be a most persuasive consideration. As it stands, however, this proposition is simply false. With their earnings from the goods they sell to us, other countries buy our exports.

Hence, if we did not import, we would soon so impoverish our overseas customers that they would be unable to purchase our products. Consequently, our exporting industries, which are heavily dependent on foreign markets if they are to continue to operate at full or nearly full capacity, would inevitably go into decline. Widespread unemployment would occur in these industries. Some of it might be offset by increased employment opportunities in those industries whose products compete with imports. Yet the general contraction of purchasing power in the economy, resulting from the loss of our export markets, would tend to diminish domestic demand for these products also. The result would almost certainly be net unemployment in the economy as a whole, which could easily precipitate a general depression.

Moreover, such jobs as would be created in the sector of our economy which competes with foreign producers for our domestic markets would certainly add less value to our national product than the jobs which would be lost through the suspension of exports. Generally speaking, the pattern of our exports and imports is determined by the principle of comparative advantage. We export the things which we can produce at the lowest factor cost and we import the things whose factor cost to us would be higher had we produced them at home rather than bought them abroad. No doubt we could produce domestically many of the things we import. But to do so we would have to divert domestic resources to less productive uses. By importing these goods, we free our productive resources for more efficient and better-rewarded employment.

Through foreign trade American labor gets more higher-paid jobs.

To put the argument somewhat differently, imports provide Americans with goods at less cost than similar goods can be produced domestically. This involves no loss of productive employment opportunities; quite the contrary. To the extent that imports meet the wants of American consumers more economically and make United States production more efficient and less costly, imports enlarge American purchasing power. Expenditure of the enlarged purchasing power generates new income, stimulates further production and productive employment. Moreover, American dollars spent for imports are not lost or diverted from the American economy. Ultimately these dollars come back home to the United States in payment for the great variety of American goods the peoples of foreign countries need and want. Thus, imports expand both our domestic and foreign markets. By restricting imports we impair the ability of fellow Americans and of foreign customers to buy the products of our own industry. This is neither good economics nor good politics.

The other principal basis for opposing imports and, therefore, a liberal trade policy stems from the assumption or apprehension that imports undermine American wage and living standards. The argument is that American wage rates are high and are supported by legally enforced minimum standards. Ostensibly low-wage foreign imports have such a great competitive advantage that our higher standards will be undermined in the effort to meet this competition. This argument has the appearance of being reasonable; hence, it deserves detailed consideration.

WAGES NOT ONLY FACTOR

It is true that American wage standards are high, the highest in the world. But many factors, in addition to wages, enter into production costs and help to determine competive advantage or disadvantage. Among these are: the availability of raw materials, the cost of their development, climate, the size, quality and proximity of markets, the skill of workers and the competence of management, investment resources, the utilization of technology, etc. Insofar as labor is a factor of production cost, the measure of that cost is not the wage rate per hour or day; rather, it is the labor cost per unit of production. High wage rates and low labor costs commonly exist together. Low labor costs and high productivity are the usual basis for high wage rates.

The importance of the distinction between wage rates and labor costs is illustrated and emphasized by the fact that the United States, although it has the world's highest wage standards, is the world's largest exporter. The lowest-wage countries in the world provide markets for American exports. It is American high-wage industries which generally tend to meet foreign competition most successfully in world markets. On the other hand, the low-wage industries of the United States tend to be most vulnerable to import competition. That high wage standards do not automatically result in competitive disadvantage is perhaps most dramatically evidenced by the fact that the major barrier to even higher levels of American exports is not foreign competition but the inability of other countries to earn the dollars to pay for them.

CONSUMER BENEFITED

In the face of these facts, advocates of protectionism are sometimes driven to oppose only those imports whose price is lower than the price of comparable American products. This position is, of course, less defensible than the first. In essence it is tantamount to advocating a trade policy which removes the sole incentive for trade between nations. Why buy a foreign product if it costs more than it would to produce an equivalent item at home? Obviously, if other countries pursued a like policy the market for United States exports would be closed.

Nor is this position made more tenable by the qualification that only "competitive" goods need be excluded. Foreign goods will be able to compete successfully in our domestic markets only if their prices are lower than comparable home-produced products.

Are American consumers to be denied the opportunity to buy what they want more cheaply, simply in order that some domestic producers may reap windfall profits? Conceivably an enterprising American might undertake to grow coffee in greenhouses and supply it to the domestic market at $5 a pound, on condition that the "cheap" foreign product be kept off the American market. His success in excluding foreign coffee and selling his own high-cost product would clearly be a gain to him. It would certainly be a great loss to those of us who like coffee, as well as to those workers and producers whose markets would shrink because, in order to subsidize our own coffee industry, we had to cut back our outlays for other domestic products.

No nation is rich enough to afford that kind of trade policy. As a nation, the United States cannot afford such a luxury any more than most individual Americans can afford the luxury, say, of making their own household furniture instead of buying it from those who can make good furniture economically.

Certainly there may be occasions when imports constitute a threat to particular American industries. Frequently, however, the threat is more apparent than real. To find out whether it is real, each such situation must be carefully examined. Examination will often indicate a source of difficulty other than import competition.

For example, the root of the trouble may be domestic competition, or changed consumer preferences, increasing costs resulting from depletion of resources, dwindling need for dray wagons, buggy whips, etc. An industry's difficulty may also result from a different form of domestic competition than that found in the market where the product is sold: e. g., from competition for capital and labor against expanding American enterprises—say, textiles versus aircraft. In any such situation, tariff "protection" will not really cure an ailing industry. The false remedy will, moreover, unnecessarily burden the rest of the economy.

It is to be expected, of course, that significant tariff reductions will hurt domestic industries whose products compete with imports, supposing that labor costs are actually a large factor in the unit cost of producing these products. Labor is cheaper in most foreign countries than it is in the United States. This fact does not weaken the force of the argument in favor of freer trade even in this restricted area. It merely means that American resources in these industries are underemployed.

Our expanding industrial economy has bid the price of labor, relative to other inputs, steadily upward, until it has become the most expensive factor of production in the American economic system. Labor-intensive industries tend in consequence to be high-cost industries. This means that the capital and labor tied up in these industries could be more productively employed in other uses. If these resources were withdrawn, recombined in more efficient proportions and used to produce capital-intensive goods, they would add much more to the national product than they do in their present application. In our export markets these capital-intensive goods could be exchanged for more labor-intensive products than we could have produced at home with the same resources.

In this situation the erection of high tariff walls serves only to perpetuate the present uneconomical use of our factors of production. To reap the benefits of a wider division of labor through freer trade, our economy must be kept flexible enough to respond automatically to precisely such shifts in comparative advantage. Tariffs create artificial rigidities which prevent normal and natural adjustments from taking place in our use of resources. And they do so at a high cost to the economy as a whole.

SOLUTION SUGGESTED

The solution, then, does not lie in the multiplication of import restrictions. It lies in measures designed to shift capital and labor out of industries in which they are underemployed and into more productive uses, with the least possible cost to all concerned. Unemployment insurance, employee training and placement programs, fast tax write-offs, etc., would facilitate this transfer of resources and make such moves attractive. The benefits to the whole economy accruing from the resultant flexibility and efficiency in the use of our productive resources would more than compensate us for the temporary and relatively trifling dislocations affecting the few declining industries in question.

No matter how the foreign trade situation is viewed, the existing facts or future prospects afford no justification for increasing tariffs to levels above those that prevailed in 1934, even in relation to so-called escape-clause actions. No reasonable person can deny that many trade relationships have profoundly changed since 1934. To authorize an increase of traiffs to rates above those that prevailed then, on the grounds of maintaing the ratio of tariff incidence, is to introduce a radical and dangerous principle into public policy. It would accord to private persons a vested right in perpetuity to a particular degree of economic subsidy by the American people; and this, not because that subsidy is needed for the national good, but because it once existed in the past.

This would be Government interference of a vicious type. Adoption of such a proposal could open a Pandora's box of claims for Government protection of a multiplicity of private economic advantages of a bygone day. In an era of unprecedented change, it would seem to require better reasons than have been presented to warrant the use of Government authority to preserve the status quo, not merely of a tariff, but of the degree of protection. Adoption of such a proposal would also be a warning signal to foreign countries that their efforts to develop American markets might be frustrated by the sudden imposition of an unexpectedly high tariff.

Compared to national security, domestic prosperity is a lesser good. Our foreign trade is a vastly more important servant of our security than it is of our economic well-being. But security and economic strength are not alternatives. Military strength is based upon economic strength.

INTERDEPENDENT WORLD

The United States and the other free-world countries are economically interdependent; they are even more interdependent for their mutual security. Notwithstanding the fact that the United States exports and imports more goods than any other nation, foreign trade is significantly more important to our principal allies than it is to us. It represents a relatively greater proportion of their total production. One need only consider, for example, the island economies of England and Japan to begin to appreciate that high levels of foreign trade are in a most literal sense necessary to their survival. Even Canada, with its vast area and extensive natural resources, is more dependent on foreign trade for its economic health than we are.

And as in our own case, so in that of each of our allies, economic strength is the foundation of military strength.

Whether we like it or not, our responsibility as a Nation is proportioned to our power. The United States is the economic giant of the free world. We have the power to help or to hurt the other members of the free-world community. When we impose unjustified restrictions on their trade, we unjustly hurt them: we impair the maintenance and expansion of their economies, of their military strength and, in consequence, of our own security.

"An American depression is the fear of our friends and the hope of our enemies." This expression conveys something of the importance of the United States as a market and source of supplies to the free world. Because of the diversity of our exports, as well as of our overall production, we can easily underestimate the unique value of our market. Many countries must rely on 1 or 2 export commodities as the source of their foreign exchange. Restrictions on the flow of one of these can accordingly have severe and far-reaching repercussions on their domestic economies. Hence the saying that when the United States economy sneezes, the rest of the world catches cold.

The division of the world resulting from the cold war has made the United States and its economic policies even more important to the free-world countries than they would otherwise be. Trade between the United States and the countries now under Communist domination was never significant to our economy. It was, however, to many of our allies. The effect of trade controls with Communist countries has been more costly to them than to us.

Thus, the economic preeminence of the United States makes our conduct and trade policies matters of major concern to our allies; indeed, our power conditions to a considerable extent what they can do for themselves and for our common objectives. Unnecessary trade restrictions on the part of the United States also have political repercussions. They strain our alliances. While it is perhaps conceivable to our allies that the American people may be unaware of the harm resulting from our conduct, we expect too much when we ask these allies to believe that the American Government—responsible as it is obliged to be for our security—is in reality so ignorant. Even were our friends able to regard such ignorance as blameless, it must inevitably undermine their trust in our capacity for leadership and in our basic reliability as a partner.

Could we plead ignorance, even to ourselves, were we to reject a policy which so overwhelmingly serves our national interests? Such a decision would not be ignorance but willful self-deceit. Such a rejection would not only be contrary to acutely urgent national requirements, it would be contrary also to the heritage of American traditions and history, to the lessons of two world wars, and to the fundamental values which we so frequently characterize as the American way of life.

What, in fact, is a liberal trade policy except the reflection in our international conduct of what have long been the principles of our internal conduct? True, customs receipts were once a main source of Federal funds but restrictionism is not being urged today for reasons of revenue. It cannot be denied that a time-honored philosophy advocates protective tariffs on behalf of infant industries unable to stand the rigors of international competition. Yet even this philosophy was grounded on considerations of public good; it was formulated before the United States became the world's chief creditor Nation as well as its greater exporter. That philosophy did not contemplate protection from infancy to senility.

ELEMENTS OF TRADE POLICY

Consistent with national attitudes in economic matters, the chief elements of a liberal trade policy are simply these:

1. To encourage private enterprise.

2. To minimize Government interference with and domination of economic production and distribution.

3. To make possible the fruits of free and fair competition.

They are the counterparts of political freedom.

These fundamental values are reflected in our Constitution and in major legislative enactments over the past half century. These values have been explicitly championed by the United States throughout the world. Against the background of war, we invoked them in the most heroic program ever undertaken by any nation for the benefit of all humanity. It is useful and wholesome to recall the declaration of policy by the Congress of the United States in the legislation authorizing the European recovery program:

"Mindful of the advantages which the United States enjoyed through the existence of a large domestic market with no internal trade barriers, and believing that similar advantages can accrue to the countries of Europe, it is declared to be the policy of the people of the United States to encourage these countries * * * to exert sustained common efforts which will achieve speedily that economic cooperation in Europe" [which is essential for lasting peace and prosperity.] [1]

[Matter in brackets added.]

This position was not an expedient. It was a policy. It was not done thoughtlessly but was the product of profound deliberation. Similar declarations have recurred many times: in the Bretton Woods legislation, the Point Four legislation, the mutual security legislation. This is the kind of policy that comes naturally to us. Such policy still reflects the requirements of lasting peace and prosperity. The essential change wrought by the passing of time is that the requirements are more imperative and the urgency more pressing than ever.

What of the arguments of the restrictionists in relation to our international and security interests? Those applicable to the domestic aspects fail to take into account all the relevant facts. Those applicable to international considerations run directly contrary to fact.

It is said, for example, that United States participation in the General Agreement on Tariffs and Trade (GATT) constitutes a surrender of sovereignty. What is the fact? The GATT is an agreement through which the participating countries seek to improve living standards by cooperation in the reduction of tariffs and other unnecessary barriers to trade. In origin and characteristics it is conspicuously American. It was conceived, planned and initiated by the United States. Its objectives conform with legislative authorization. It was founded upon those typically American concepts:

1. Private enterprise,

2. Exclusion of government, insofar as possible from economic production and distribution,

3. Free and fair competition. Surely these principles have not become "un-American." Their incorporation into international agreements, far from being a surrender of sovereignty, was in fact an exercise of sovereignty.

GATT AND OTC

The great, almost incredible achievement of GATT is that over 30 countries, accounting for some 80 percent of world trade, have actually subscribed to these American principles as the basic code for their conduct of foreign trade. This is a tremendous tribute to the integrity and soundness of the principles; for they have not been part of the historic tradition and practice of many of these countries, as has been the case with us. In light of all the facts, including particularly the labyrinth of government restrictions which almost strangled trade in the period between the wars, United States initiative and participation in GATT have proved a most prudent exercise of sovereignty.

Perhaps the worst that has been said about the Organization for Trade Cooperation is that it is the product of bureaucratic global planners. In reality, it is quite the opposite. It is more likely to be an obstacle to the global planners. The OTC is a procedural instrument which would have to do, not with the making of policy, but with its execution. Its purpose is to make more efficient the pursuit of those policies and principles embraced in GATT, that is to say, the principles specifically designed to prevent and to avoid the necessity of government and global planning of matters best left in private hands. The need for such an instrument as the OTC is clearly evident from the fact that so many countries are participating in the GATT; it is important that the GATT function promptly and with a minimum of expense.

Because the foreign trade of the United States constitutes so large a proportion of the total volume of world trade, there can be no OTC without the United States. Such developments as the European Economic Community, the prospective European free trade area and other moves toward regional economic groupings, all these emphasize the need for the kind of administrative efficiency that the OTC could bring, particularly since there is not even the promise of a worldwide economic trade association other than GATT. In view of the magnitude of the American interests at stake, we might well ask ourselves whether the refusal of the United States to join the OTC is not an abdication of sovereign responsibility.

Failure of the United States to pursue a liberal trade policy, in good faith and with vigor, is to invite tragic consequences. It would be a betrayal of what we have professed as our basic principles. To betray such principles without the honesty of denying them, without even making the effort of identifying and developing standards to take their place, would liken us to an immense floundering mass of matter and energy, a menace to our friends as well as to ourselves.

The consequences are far-reaching and fearful. The danger has, if anything, been understated. Our trade policy does not exist in isolation. It is an integral and inseparable part of our national policy. The United States is face to face with a mounting crisis of far greater magnitude than any other confronting our generation. United States trade policy must be consistent with and made to serve the national interest. We cannot blind ourselves to the relationship between trade policy and NATO objectives without danger of frustrating the latter. We cannot afford to ignore the extent to which the success of all our foreign aid and mutual assistance programs are contingent on a sound and healthy trade policy. We must recognize that if we are to succeed in encouraging American capital to invest abroad, we cannot impose trade restrictions which, in effect, prohibit the recovery of the capital as well as any fruits of the investment.

It is true that the United States does not face this crisis alone. Yet, because the United States has power and might beyond that of any of its allies, it also has the responsibility above all others to choose the right measures affecting the welfare of all. Failure to choose can be as fatal as choosing the wrong measures. To stand still in this crisis is to lose ground. We have already lost too much time.

"If we fail in our trade policy, we may fail in all. Our domestic employment, our standard of living, our security, and the solidarity of the free world—all are involved." These words were addressed to the Congress by President Eisenhower on April 14, 1955, when he initially recommended authorization of United States membership in the OTC. They were true then. Events since then have emphasized their truth and added urgency to the necessity of moving forward.

We must adopt a trade policy that is true to our national principles and responsive to our national interests.

[1] Public Law 472, 80th Cong., 2d sess., S. 2202, approved April 3, 1948. See A Decade of American Foreign Policy: Basic Documents, 1941–49. Government Printing Office, Washington, 1950, pp. 1299, 1322.

Counterpart Fund Expenditures

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. DAWSON of Utah. Mr. Speaker, during the debate on my amendment to require the budgeting and accounting of expenditures of counterpart funds by congressional committees, many members indicated that they did not quite understand how this matter was presently handled. As a result, I have prepared a short fallacy-fact statement which, I hope, will clear up some of their doubts. I hereby submit this statement for the RECORD:

1. Fallacy: That local currency or counterpart funds are "funny money" and consequently should not be accounted for like other public funds.

Fact: These foreign currencies are paid for usually at a rate of 10 tax dollars to $1 foreign-currency equivalent and they can and are used to pay legitimate costs of the United States Government in the countries where these expenses occur.

2. Fallacy: That members of the executive branch can spend these funds without restriction and my amendment would discriminate against Congress in this regard.

Fact: Congress has prohibited executive agencies from spending counterpart funds unless the currency is purchased with dollars appropriated to the agencies by Congress. For every dollar of counterpart funds spent by an executive agency a dollar is returned to the Treasury by that agency.

3. Fallacy: That my amendment would require complicated budgeting procedures involving shifting exchange rates of different foreign currencies.

Fact: No change in budgetary methods would be required. Congressional committees would simply anticipate how much money they need and request Congress for that amount in dollars. They would be required to purchase foreign currency just as in the case of executive departments now.

4. Fallacy: That my amendment would discourage use of counterpart funds.

Fact: It would not discourage legitimate expenditures of counterpart funds. It would just require members to justify and report them.

5. Fallacy: That counterpart fund expenditures by individuals are secret.

Fact: These expenditures are secret only so far as Members of Congress and the press are concerned. Officials and employees in various embassies throughout the world who issue the funds know how and by whom they are spent. Critics of Congress (and there are many in the State Department) gossip and exaggerate every instance of abuse or waste and since the press through fear of libel does

not identify the offending Member when reporting the alleged abuses, the finger of scandal points at us all.

6. Fallacy: That adoption of my amendment would disrupt current committee plans.

Fact: This amendment would not disrupt present operations. It would not become operative until the next Congress.

Gus Jones—American Citizen

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. HOSMER. Mr. Speaker, I do not know my fellow citizen C. Augustus Jones, but after reading his letter to the editor of the Long Beach Press Telegram printed May 12, I would like too. Apparently Citizen Jones was born with a keen sense of humor and somewhere along the line acquired a very sharp pen. With the latter in hand, he took a figurative peek in the American mirror with the following "if the shoe fits, wear it" result:

JOHN Q. CITIZEN LOOKS IN MIRROR

We, the people of the United States of America, seem to be having a great deal of trouble these days. Through the press, in our parlors and on street corners, we are hurling accusations of blame in all directions.

We blame the administration and damn it if it does something and damn it if it don't. We blame the Soviet Union and cast fearful eyes in that direction. We blame the corporations for trying to make money and blame the union leaders for trying to stop them. We call the youth of today a bunch of juvenile delinquents. We blame the scientist for splitting the atom and hurling us out in space, and we blame them for not making faster progress so we can keep ahead of our enemies. We blame the weather, the doctor, the lawyer for our discontent. We blame everyone and everything except ourself.

For a change, let's have a look at ourself. A true self-analysis will give you a picture something like this:

I want something for nothing. I prefer not to work at all and blame it on recession. As I stand in line at the Department of Employment, I'm not worried about getting a job. I want my employment check with the least delay possible.

A few days ago I was in the half-block-long line for the cashier's window at the Department of Employment and a truck driver stopped and offered me a job, helping him unload his deliveries, and I turned him down flat. For that matter, everyone turned him down and we made a pretty good joke of his coming to the wrong place to find a laborer.

If I am working, I demand top wages. I received top wages during the war and I intend to receive the same in peacetime. I don't care anything about the law of supply and demand. I want higher wages and lower taxes.

I want the Government to keep ahead of the Russians. I yelled so loud they could hear me in Moscow when sputnik was aloft and the Government couldn't get one of ours above sea level. I don't care how much satellites cost, but I don't want to pay for them.

I'm afraid of this radio-active business so naturally I don't want any more bomb trials but I want us to have weapons far superior to the wildest dreams of any possible enemy.

I'm 100 percent for a summit meeting but I hope the Government is smart enough not to believe a word that's said at that meeting.

I want cheaper food price and cheaper rent, but I intend to keep my cattle and corn off the market until prices go up.

I want more discipline in the schools, but I don't want anyone to lay a hand on one of my kids.

I don't want socialism but I want free medical attention and more help from the Government for highways, schools, my farm, my business, and myself. I repeat I want lower taxes, city, State, and Federal. I want all I can get and I want it for nothing. I expect the Government to take care of me.

I seem to remain totally ignorant of the fact that the Government is me. I can't seem to get it through my flat, fat head that when I cost the Government a dollar, that dollar comes out of my own pocket; that the defense, the education system, recession, or prosperity is my own responsibility or decision. If I can possibly comprehend that the Government is not some vague mass of other people or a rich uncle, then I'll have sense enough to see that I must work and pay for what I want; that I must sell for less if I want to buy for less; that I must pull myself up by my bootstraps, for the good or bad of this fantasy, the Government, is a reflection of me.

I am the Government so maybe I'd better quit cussing myself and behave the way I, the Government, should—like a conscientious, industrious man and not like a selfish, indolent moron.

C. AUGUSTUS JONES.
(Alias John Q. Citizen).

LONG BEACH.

Mutual Security Act of 1958

SPEECH
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12181) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. KING. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I am obliged to be for the amendment offered by the gentleman from Florida [Mr. SIKES] for reasons other than have been mentioned in the last 4 or 5 minutes. If the amendment be construed precisely and its terms followed, practically all European arms manufactured years ago or manufactured today being based on an action that was originally a military action, I am sure that the customs officials of our country will meet with an imponderable situation when they read the provisions of this section and attempt to enforce the customs laws of the United States.

Mr. SIKES. Mr. Chairman, will the gentleman yield?

Mr. KING. I yield to the gentleman from Florida.

Mr. SIKES. I do not want to interrupt the gentleman's statement, for he is making a good statement, but I should like to recall to the Members of the House the fact that the gentleman is an authority on these matters and is a national director of the National Rifle Associaion, the organization which more than any other one organization speaks for and represents the sportsmen of America.

Mr. MORANO. Mr. Chairman, will the gentleman yield?

Mr. KING. I yield to the gentleman from Connecticut.

Mr. MORANO. The substitute I have offered has met the objections of the National Rifle Association. That is why I have offered it.

Mr. KING. I was not aware that the National Rifle Association had voiced objection.

Mr. SIKES. If the gentleman will yield further, just a few minutes ago I talked by telephone to the executive director of the National Rifle Association, and here is what he told me: Yes, he had seen Mr. MORANO's substitute language. It is better than the original language of the bill. A hand with one finger is better than a hand with no fingers, but not much better. The members of the National Rifle Association do not want the original language or the substitute language.

Mr. MORANO. Mr. Chairman, will the gentleman yield?

Mr. KING. I yield to the gentleman from Connecticut.

Mr. MORANO. The fact of the matter is that the National Rifle Association does not object and has favored the new language. They say one thing one day and they may say another thing to the distinguished gentleman another day. I am not going to dispute him, but I just want to point out this one thing about the Carcano rifle. The latest edition of the National Rifle Association Book of Small Arms, volume II, Rifles, by W. H. B. Smith, whom I am sure you know, states:

The safety system (of the Carcano) is an Italian design, and is inherently dangerous as shattering or shearing of a fragile holding lug will let the firing pin blow back out of the bolt.

In addition, another high expert in this field makes the same statement.

Mechanically, these are essentially the same. They both blow.

Then another man, Jack O'Connor, writing in the Rifle Book, says:

The less said about the French Lebel the better; they are terrible. So are the Italian Mannlicher Carcano actions which have a coy habit of blowing the firing pin out into the shooter's face.

Do we want that kind of gun imported into this country?

Mr. SIKES. Mr. Chairman, will the gentleman yield further?

Mr. KING. I yield.

Mr. SIKES. I would like to say only this: The question I asked specifically of the National Rifle Association was: "Do you favor the original language or that of the substitute?" The answer was, "No." I said, "Do you object to either of these versions?" They said, "This organization is not in a position to object. We cannot object to what the Congress, in its wisdom, does. We have to accept what the Congress does." I repeat the National Rifle Association

does not favor and has not approved the Morano language.

Mr. KING. I might say to the gentleman from Connecticut that the technical section of the National Rifle Association has determined that the firing pin mechanism of the Italian piece is not unsafe and that Mr. Smith's article was in error in that particular reference. But, to go on, Mr. Chairman, I have determined that the Arms Manufacturers Institute has not to date ever brought its plight to the Tariff Commission. If it is being injured and these imports are damaging this industry, it would seem that their first avenue for proper relief should be at least explored. To date they have not approached the Tariff Commission with this problem.

The CHAIRMAN. The time of the gentleman from California has expired.

The Case of Ezra Pound

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. BURDICK. Mr. Speaker, in connection with the articles on Ezra Pound which I have previously inserted in the RECORD, I have here a clarification of the remarks of my colleague, the Honorable EMANUEL CELLER, which appeared recently in a Washington newspaper:

THE CASE OF EZRA POUND

(Supplement to The Medical, Legal, Literary, and Political Status of Ezra Weston Pound—Selected Facts and Comments by H. A. Sieber, research assistant, senior specialists division, the Library of Congress, Legislative Reference Service, March 31, 1958, revised April 14, 1958.)

On April 7, 1958, the Washington Post and Times Herald reported that Representative EMMANUEL CELLER, of New York, chairman of the House Judiciary Committee, had protested the release of poet Ezra Pound from St. Elizabeths Hospital. In an article by Paul Sampson, staff reporter, the Washington Post reported: [1]

"Representative EMANUEL CELLER, Democrat, of New York, chairman of the House Judiciary Committee, protested yesterday the planned attempt to dismiss the treason indictment against poet Ezra Pound and obtain his release from St. Elizabeths Hospital.

"CELLER said: 'I don't care how long he's been in there. Maybe we want to keep him in a little longer. * * * I can't understand how they'd let him out scot free. I can't conceive of that.

"'Many of our men lost their lives as a result of his exhortations.'

"CELLER was referring to Pound's vitriolic denunciations of the democracies over the Italian radio in World War II."

The Washington Post report of Representative CELLER's remarks was quoted and was the subject of editorial comment by other newspapers.

[1] Sampson, Paul, Plan To Free Ezra Pound Is Protested—Move for Release from St. Elizabeths Stirs Representative CELLER, the Washington Post and Times Herald, April 7, 1958, p. 1.

STATEMENT BY REPRESENTATIVE CELLER, APRIL 30, 1958

After noting the citation of the Washington Post article in The Medical, Legal, Literary, and Political Status of Ezra Weston (Loomis) Pound (1885–) Selected Facts and Comments, a report prepared in the Legislative Reference Service, Representative CELLER released a statement that "the statement that appears in the Washington Post of April 7, 1958 * * * is only a portion of what I said."

The full text of Representative CELLER's statement dated April 30, 1958, follows: [2]

"Unfortunately, my statement on Ezra Pound was given to the Washington Post reporter under rather trying circumstances. I was engaged in conference and tried to conduct two conversations at one time. In effect, the statement that appears in the Washington Post of April 7, 1958, and quoted on page A3897 of the CONGRESSIONAL RECORD of April 29, is only a portion of what I said. It should have been coupled with the additional conditional statement that anybody, however, in Ezra Pound's state of mind must be examined most carefully to see whether he could comprehend and understand intelligently the court process that was to be taken against him. This, unfortunately, was omitted from the newspaper report. I also said if he could not comprehend fully, then he could not be brought to trial."

Representative CELLER's references, in the above statement to page A3897 of the CONGRESSIONAL RECORD is to the Legislative Reference Service report on Mr. Pound which was reproduced in the CONGRESSIONAL RECORD in four installments: Installment 1, pages A3894–A3899, April 29, 1958; installment 2, pages A3899–A3901, April 29, 1958; instalment 3, pages A3941–A3945, April 30, 1958; and installment 4, pages A4172–A4174, May 6, 1958.

Contributions Made by Residents of Plymouth, Pa., in Time of War

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following historical matter submitted by William H. McAlarney, of Plymouth, Pa., relating the roles played by residents of that town during past wars:

PLYMOUTH, PA., *April 28, 1958.*

Hon. DANIEL J. FLOOD,
Washington, D. C.

DEAR CONGRESSMAN: Will you kindly autograph the enclosed first day cover on its face. They belong to a historical collection in our town library.

This village sent 85 men to Washington's Army in December 1776, who fought in the battles of Brandywine, Germantown, and Bound Brook, and were at the surrender of Cornwallis at Trenton—the company reduced to 62 men. It sent 65 old men and young boys to the Indian massacre at Wyoming, 5 miles east, on July 3, 1778, it being attacked by 700 Indians. Also sent men to the War of 1812.

The 143d Pennsylvania Volunteers from this valley was the first on the field at Gettysburg on the morning of July 1, 1865, where it fought 3 brigades of the Confederate Army under Gen. Robert E. Lee, including 2 charges of General Pickett's Louisiana Tigers against Missionary Ridge; it supported Colonel Rickett's battery from Wilkes-Barre, our county seat. This was the high water mark of the Civil War.

In the Spanish-American War, Company I of the 109th Regiment from here was the only company of over 8,000 men of the Pennsylvania National Guard that brought every man home from the typhoid fever camps, owing to care given by its company officers.

Same outfit as the 109th Light Field Artillery, 28th Division, it was sent to the Mexican border in 1916 under Gen. John J. Pershing, and on its return fought in France. My nephew was captain of Battery C and this Battery C was selected as the personal escort of the King and Queen of Belgium on their entry into Brussels at the end of World War I, Adnah Kostenbauder.

This small anthracite mining town sent over 600 boys and girls to the service in World War II, including my youngest son, 1st Lt. Wm. J., who convoyed overseas for the whole period.

The 109th Light Field Artillery, 28th Division, fought in France in World War II, and was caught in the German push along the Our River on December 16, 1944, with heavy losses.

Anthracite coal was first shipped from here to market in 1837, down the Susquehanna River to the Chesapeake Bay in flat-bottomed scows with square ends.

I thank you in advance for this courtesy, and wish you and yours the very best of everything.

Very truly yours,

WILLIAM H. MCALARNEY.

STATE CAPITAL,
Harrisburg, Pa.

Mr. W. H. MCALARNEY,
Plymouth, Pa.

DEAR SIR: In answer to your letter regarding the 109th Field Artillery Battalion along the Our River in World War II.

On December 16, 1944, the 110th Infantry Combat Team, comprising the 110th Infantry Regiment, the 109th Field Artillery Battalion, and Company B of the 103d Combat Engineer Combat Battalion, was holding a line 12 miles in width, along the Germany-Luxembourg border. This defensive position was on the high ground overlooking the Our River, the boundary line between the two countries. The German Siegfried line was on the German side. The 110th Combat Team had just been brought out of the Hurtgen Forest where it had had a terrific battle and many casualties.

At 5:45 on the morning of December 16 the Germans put down on all positions of our defensive sector a heavy artillery concentration and immediately launched the big drive against the Americans. They stormed over the river rapidly and into the thinly held lines of the 110th Infantry and on to the positions of the 109th Field Artillery Battalion. The word went out to small troops to hold at all costs for there were no reserves or reenforcements in our rear. Five German divisions, 3 tank divisions and two infantry divisions, struck on the front of the 110th in an effort to break through to Bastogne, miles to the rear. Almost immediately the infantry units and artillerymen at gun positions had to fight for their lives and for 4 days held off the enemy by fighting hand to hand. The artillery was used to fire direct fire point blank at the oncoming enemy tanks and infantry units.

On the fourth day what was left of the artillery joined with what was left of all other troops to make a last stand at Wiltz, the

division headquarters, 7 miles to the rear. Finally after the job of the 110th was done, and ammunition gave out, Wiltz fell and remnants of the troops escaped in small groups to Neuchateau, Belgium, 35 miles to the rear and through German lines which had swept on toward Bastogne where the 101st Airborne Division had moved.

When it was all over, out of the 110th Infantry Combat Team, consisting of about 5,000 men, only 37 officers and 492 men were left, the rest had been killed, wounded, or captured. The 109th Field Artillery Battalion stood its ground well and took to infantry fighting after every gun was lost, destroyed, or captured. A group of about 500 men of the infantry, artillery, and other remnants stood their ground at Neuchateau until December 29 when troops from Patton's army in the south moved up and released our men.

The heroic stands made many times by small groups of artillerymen and infantrymen were simply marvelous and will long be remembered.

DANIEL B. STICKLER,
Brigadier General (Former Commander of the 110th Infantry).

THE 143D PENNSYLVANIA VOLUNTEERS, CIVIL WAR

The 143d Pennsylvania Volunteers, recruited at Camp Luzerne here in Luzerne County, Pa., Wilkes-Barre, the county seat, with 1,100 enlisted members, left over the Delaware, Lackawanna & Western Railroad on November 7, 1862, commanded by Col. E. L. Dana, for Camp Slocum, of East Washington, to fight in answer to President Lincoln's call, in the Civil War, the camp being located in a muddy cornfield, many sickened and died. My brother-in-law was a member of this 143d, S. U. Shaffer, Burgess, Plymouth.

It was assigned to the First Army Corps, 3d Division, Grand Army of the Potomac under Gen. Joseph Hooker in February 1863. The first under fire was below Fredericksburg, May 1 to May 6, at the Battle of Chancellorsville.

The corps, after severe marching, was the earliest in the field at Gettysburg on the morning of July 1, 1865. In severe fighting General Reynolds was mortally wounded, General Doubleday assumed command of the corps and Colonel Dana, of the 143d, took command of the brigade, which fought 3 brigades of the Confederate, including Pickett's 2 charges of the Louisiana Tigers against Missionary Ridge. The supported Colonel Rickett's battery from Wilkes-Barre, Pa.

Colorbearer Sgt. Ben Crippen, of the 143d, was shot while shaking his fist at the advancing Confederates; Major Conygham then gave the command, "143d rally on your colors" and with a rush the colors were saved, and their position on Missionary Ridge was secured. A monument depicting this occurrence is on the battlefield.

After a series of severe marches the Army went into its first winter quarters at Culpeper in 1863 and the shattered regiment was recruited to 850 men. On the night of May 3, 1864, the regiment broke camp and crossed the Rapidan and fought in the Battle of the Wilderness on the 4th, 5th, and on the 6th. Col. E. L. Dana was wounded and captured. On the 8th, 9th, and 10th charging and countercharging, lines wavering, ammunition exhausted, the cartridge boxes of dead and dying, the men searched for supplies, repulsing the enemy with bayonets. Finally relieved by the 53d Pennsylvania Volunteers, the 143d was 1 of the 3 regiments that suffered the greatest loss. General Wedsworth and Lieutenant Colonel Mercer mortally wounded and Major Conygham and Major Hughes severely wounded.

The 143d fought next at Spottsylvania, North Anne, Bethesda Church, Cold Harbor, and at Chickahominy, crossing the James River on June 15, reaching Petersburg on the morning of the 17th, participating in the 3 days' fighting along the Weldon Railroad; next battle was at Hatchers Run; and went into winter quarters in the rear defenses of Petersburg. Another brother-in-law, aged 14 years, member 187th Pennsylvania Volunteers in Second Battle of Bull Run, blowing up of Fort Hell and along the Weldon Railroad. He was an honor guard to President Lincoln's body in City Hall, Philadelphia, Joseph W. Campbell, contractor, Plymouth.

Early in February the 143d was engaged in a campaign for 10 days. It fought in the Second Battle of Bull Run where Captain Gaylord, from Plymouth, was killed while leading a charge at the head of his Company D. A large monument to his memory and deeds is in our Shawnee Cemetery.

WM. H. MCALARNEY.

PLYMOUTH, PA.

GENTLEMEN FROM HELL

(By Pfc. R. G. Ogborn, 112th Infantry)

They were formed in Pennsylvania
Joined by men from every State
With the keystone for their emblem
They were called the "Twenty Eighth".

They hit the beach at Omaha
Crossed the hedges row by row
Where the Jerry learned to hate and fear
The Keystones ruddy glow.

Fire and movement were their watchwords
As they climbed up Hill 210
Wrote a bloody page in history
In the woods of Compeigne.

A victory march in Paris
Ever forward with the dawn
Through Belgium, France and Luxembourg
The "Twenty Eight" rolled on.

The Siegfried Line has seen them
All along its mighty wall
From Aachen to the Alsace
Where they fought at Colmars Falls.

There are towns they'll long remember
Vossenack, Schmidt and Kommerscheid
And the breakthrough in December
When they slowed the German tide.

With blood and sweat they carved the niche,
In history's hall of fame
With deeds of valor shining bright
And victory was their aim.

In Valhalal's Halls their heroes live
Who fell along the way
They're resting now awaiting call
To march on judgment day.

When my last recall is sounded
May I go there to dwell
And march again with the legions
Of the gentlemen from hell.

Another Southeastern Ohio Pottery Free-Trade Casualty

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. HENDERSON. Mr. Speaker, another industry in southeastern Ohio has fallen victim to a ruthless trade policy which has in so many cases favored the industries of nations where workers are paid a starvation wage, at the expense of our home industries.

This is the second pottery to close its doors in as many months. Hundreds of pottery workers have been affected. The following editorial from the Morgan County Herald tells the story in detail:

ANOTHER SOUTHEAST OHIO POTTERY FREE-TRADE CASUALTY

The Pope-Gosser China Co., of Coshocton, ceased operations a week ago Saturday. Company officials gave as a reason for the suspension, inability to compete with pottery-ware manufactured abroad, especially in Japan. The president and treasurer of the company has called for a shareholders' meeting to liquidate the business.

Pope-Gosser was founded in 1902 by I. B. Pope, jeweler, and Charles Gosser, Coshocton businessman. It specialized in high-grade chinaware which could successfully compete with finer grades of dinnerware and ceramics which at that time were largely obtainable only from abroad. The late B. F. Matson, of McConnelsville, was the first and oldest salesman for this company.

From the start, the plant was a success. Mr. Pope, the jeweler, was the designer. Mr. Gosser was an excellent businessman. They had the goods plus successful business management. Coshocton people were rightfully proud of a high-class institution such as Pope-Gosser, the excellence of whose product gave it a nationwide reputation.

For years Pope-Gosser added to the wealth of this up-river thriving and prosperous community. During its more than half a century of existence, millions of dollars of new money were poured into Coshocton and Tuscarawas County from this source. It was a typical example of the manner in which industry has built America. The enterprise of I. B. Pope and Charles Gosser was encouraged by the Government. They were given protection against cheap imports from abroad and an incentive to devote their energy and their ability in something which would add to their own success and at the same time add to the wealth of Coshocton.

No need to rehash why this pottery—or any pottery—cannot compete in ceramics products under existent world conditions. The Jap or the pottery employee of any other nation in the world commands but a small fraction of the wage of the American worker. Our taxes are outrageously high and growing more and more confiscatory. The cost of doing business increases daily.

Pope-Gosser followed the Crooksville China pottery, which ceased to exist, a few weeks since, and closed its doors for the same reason. At Crooksville, 160 employees lost good jobs. At Pope-Gosser, 150 casualties resulted when this plant closed down. In these two clay industries which we know about right here in this section of Ohio, 310 employees will no longer produce wealth. This number will be added to the unemployment and relief rolls. Both communities and everyone living in them will be directly or indirectly injured—the merchant by loss of trade—the property owner by a general decline in values, through loss of wealth and loss of people who must move elsewhere to obtain employment.

Senator MALONE, of Nevada, recently wrote a book, Mainline. In this volume, the Senator points out the idiocy of a trade policy, which builds industry abroad through foreign aid, and allows the products of cheap labor overseas to drive the American manufacturer out of business. The Senator also points out that under the General Agreement on Tariffs and Trade (GATT), "over 55,000 concessions have now been made to freeze or lower American tariffs. An average of 68 percent is now in effect, and our tariffs are the lowest of any major trading nation in the world."

There, in a nutshell, is the story of Crooksville China and Pope-Gosser potteries. Already hundreds of thousands of American

laborers in other industries have been displaced in a similar manner and for the same reasons. The pottery business in southeastern Ohio was built on a protective tariff. Other potteries, as time goes on, will be compelled to close their doors, if the reciprocal trade agreements, now under fire in Congress, are extended when they expire this year.

We are in the midst of what is called a recession. Congress has been battling over an extension of the 6-month period allowed in compensation for the unemployed. It seems to us that an American policy which encouraged American enterprise to build factories and employ American workmen, so that they will produce, instead of consuming, wealth, might bring the Nation farther along on the road to recovery. Every time a factory closes, the Nation's economy is that much impoverished; the number of unemployed is increased instead of decreased; recovery is just that much delayed. How closing down American potteries and throwing additional thousands of men out of jobs is going to get us anywhere in efforts to restore prosperity, is not apparent, even to those who are accustomed to almost anything in a strange period of government.

The Courage of Mr. Nixon—An Inspiration to the Free World

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I have recently read a reprint of an editorial authored by William Randolph Hearst, Jr., which appeared in the May 11, 1958, issues of Hearst newspapers. It is captioned "Two Statesmen Show Courage." It is a timely pat on the back for two of our outstanding citizens who are presenting our country and the free world so well in combating the Communist menace.

In discussing the Peruvian incident the author says:

They did not reckon on DICK NIXON'S courage. They did not reckon on the shock this outrage will produce among decent men and women of other Latin American countries. It will lead them, I believe, to a reappraisal of the danger of Communist infiltration, its contempt of their independence and their heroes who symbolize it, and to a better understanding of the good intentions of the United States.

DICK NIXON'S courage is an inspiration to the free world. As our country's representative he has added new luster to the cause of freedom throughout the world.

In placing this editorial in the RECORD I do so with appreciation to Mr. Hearst for his timely commendation and expression of faith in our dynamic leadership:

TWO STATESMEN SHOW COURAGE
(By William Randolph Hearst, Jr.)

Two happenings this past week recalled to mind Senator JACK KENNEDY'S excellent book, Profiles in Courage (free advertisement—cheerfully given). It deals, as you probably know, with Senators in our history, who, with their political fortunes at stake, displayed the moral and political courage of their convictions.

JACK was writing about the past.

I am writing about the present.

The two men who exemplify it today are not Senators, but I would recommend their inclusion in contemporary history under some such title as "Statesmen of Valor."

They are Vice President DICK NIXON and Secretary of State Foster Dulles.

In the long run—and perhaps not so long at that—I think the courage of DICK NIXON in walking into a Communist student mob outside San Marcos University in Lima, Peru, will boomerang against the Communists. Even as I write this, officials and newspapers in Peru are expressing a sense of shame and shock.

The Vice President had been advised by the Peruvian Government and our own Embassy in Lima not to go to the university. He did go, because not to have done so would have handed the Communist anti-American agitators a victory by default. And it wasn't for reasons of personal glory that Mr. NIXON dared the violence of the mob. He was the envoy of the good intentions of the United States. As he explained later:

"It was important not to allow a minority element to appear to have power."

He was grazed on the neck by a stone. He was spat upon. To compound these insults, the Communists then desecrated the United States flag, by ripping out flowers that formed it, in a wreath Mr. NIXON had laid at the statue of Jose de San Martin, Peru's greatest hero in the fight for independence in the early 1800's.

This is the kind of violence that does far more ultimate injury to those who perpetrate it than to those against whom it is directed.

As DICK NIXON reasonably commented:

"This was not a Peruvian affront to me. When, for example, one demonstrator spat in my face, he was spitting on the good name of Peru, he was spitting on the memory of San Martin, he was spitting on men who through the years fought and died for the right of free expression."

Having failed in demonstrations against the Vice President in Uruguay, Argentina, and Bolivia, the Communists decided to make the big try in Peru because of the traditional Peruvian-United States friendship. They figured that if they could explode an anti-NIXON, anti-United States outburst there, they could show other Latin-American countries that even Peru's long-time friendly relations with us were on the skids.

They were stupid.

They did not reckon on DICK NIXON'S courage.

They did not reckon on the shock this outrage will produce among decent men and women of other Latin-American countries. It will lead them, I believe, to a reappraisal of the danger of Communist infiltration, its contempt of their independence and their heroes who symbolize it, and to a better understanding of the good intentions of the United States.

On our side of the border DICK NIXON'S courage should make us realize the role we must play in our hemisphere.

For one thing Communist footholds in South America would not be as strong as they are if we had interested ourselves more in the problems of our neighbors.

Occasional expressions of friendship are not enough.

We should lose no time but get going on a realistic, considered Western Hemisphere policy which will be to the mutual advantage of everyone, except the Communists.

I think President Eisenhower in his message to DICK NIXON expressed the thoughts of many of us when he wired him:

"Dear DICK: Your courage, patience, and calmness have brought you new respect and admiration in our country."

It has done the same thing for him in very many countries, I would add.

In the face of open hostility and half-hidden derision, Foster Dulles held onto the courage of his beliefs in dealing diplomatically with the Russians, particularly the steps to be taken toward a summit conference.

Commentators and cartoonists, both in this country and abroad, variously depicted him as frozen solid, hypnotized rigid, and cemented in unreasoning obstinacy.

Our papers, I am pleased to say, did not go along with this opinion. I recall remarking, in an editor's report written when Mr. Dulles was at his lowest ebb of esteem, that we do not choose a Secretary of State to win an international popularity contest. We choose one to represent the best interests of the United States, which Mr. Dulles has done consistently and admirably.

At the NATO meeting in Paris last December the Secretary was under terrific pressure from our European allies, and equal pressure of public opinion, to agree to take a flying leap onto the summit on the off-chance that the Russians might be sincere, for a change.

He replied with a quiet "No." He argued that nothing could come of a flying-leap meeting, mostly on Russian terms, but a Soviet propaganda show with the West appearing in the unfortunate posture of a hat-in-hand supplicant of peace.

The Dulles position was that to have any prospect of genuine accomplishment a summit meeting would have to be prepared carefully in advance at the diplomatic level, and there would have to be general agreement on what would be discussed. So the consensus among our allies, and also among the pseudoliberals here at home, was that Mr. Dulles was an inflexible fuddy-duddy.

Well, time marches on (to coin a phrase), and the meeting of NATO foreign ministers in Copenhagen last week ended in solid support behind Mr. Dulles' views. Observers report his prestige in European diplomatic circles has never been higher.

It is not that the foreign diplomats have suddenly succumbed to Mr. Dulles' charm. It is that events since December have proven him right. These include the dreary record of Soviet letter writing, the endless Soviet propaganda maneuvering, and the increasing evidence of insincerity, climaxed by the Russian veto in the U. N. Security Council of President Eisenhower's plan for Arctic inspection against surprise attack.

An old baseball saying is that you're a bum one day and a hero the next. The same apparently applies to statesmanship. In both professions, having the courage of your convictions will help you regard either status with equanimity.

Resolution Adopted by the Council of Kingston, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution that was adopted by the Council of Kingston, Pa., relative to the subject of social security for borough police and firemen:

Whereas Representative JOHN DENT, of Westmoreland County, has introduced H. R. 11497 which would allow borough police and firemen to be included in social security

which would be optional with each borough and each individual policeman; and

Whereas the passage of such legislation is deemed desirable: Now, therefore, be it

Resolved by the Burgess and Town Council of the Borough of Kingston, Pa., That the Borough of Kingston go on record as favoring the passage of H. R. 11497, which has been referred to the House Committee on Ways and Means.

Adopted at an adjourned regular meeting of the Town Council of the Borough of Kingston, Pa., held the 22d day of April, A. D. 1958.

RALPH M. BROWN,
President.

Attest:

THOMAS J. REESE,
Secretary.

Approved this 29th day of April 1958.

WM. I. MARTIN,
Burgess.

To Destroy the Reciprocal Trade Program Would Be a Disaster

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of May 13, 1958:

WHO STANDS FOR AMERICA?

It seems incredible but the United States is on the verge of dealing itself a staggering blow in the cold war. It is a long-haul blow the like of which the Soviet Union could not inflict on us.

It is a blow that could turn our recession into depression quicker than almost anything else we could do.

It is a blow that will surely start us down the road to economic war—not against Russia but against ourselves and our allies. And that road to economic war could carry us as well in the direction of hot war.

Why should America be so short-sighted at this critical moment in history as to swing a haymaker at its own jaw?

Why should America have learned so little from recent history that it will elect to travel a path that led us to disaster and, as many believe, to war only a few years ago?

The answer is obvious: It is because too many Americans are considering only their own selfish, short-range interests; too few Americans are considering what is good for America.

Congressional leaders have warned President Eisenhower that if his reciprocal trade program were put to a house vote in its present form it would be defeated by a majority of 61 votes.

They have warned the President that unless the administration is prepared to compromise, this program, which has served the Nation and the free world well for 24 years, will be scrapped.

This would represent a return to isolation. Its effect would be to disarm the United States as effectively for cold war purposes as would the scrapping of our bases, the bringing home of our forces and finally the dismemberment of our Military Establishment.

Nothing could better please Nikita Khrushchev. Nothing could better insure the eventual triumph of world communism.

Supporters of the reciprocal trade program have tried harder than ever before to hammer home the facts of life in an interdependent world to Americans. Secretary of State Dulles made a gallant effort to do so in Minneapolis Sunday.

We have pointed out repeatedly that:

We sell goods abroad worth $8 billion more annually than the goods we buy abroad.

The job of 4.5 million Americans depend on our foreign trade.

Only a freer international trading system can insure the steady flow to America of raw materials our economy and security demand but which we no longer produce.

If Americans only could realize the fact that high tariffs rarely protect for very long even the industries for which they are established. As the Wall Street Journal said recently of protectionism:

"It impedes competition and growth. It keeps prices high, penalizing the consumer. In the long run it doesn't even help the protected ones; the crutch finally fails to support the imaginary cripple."

Can this impending self-inflicted disaster for America be avoided? Only if Americans in vastly greater numbers than have yet appeared will demand that their Congressmen stand fast for the national interest.

Are there Americans at this moment who will speak up clearly for America?

A Man Loved by the Whole Town

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that was featured in the Wilkes-Barre Sunday Independent of May 4, 1958, on Rev. Anthony G. Ezerskis, pastor of St. Francis Lithuanian Church of Wilkes-Barre who on July 13 will mark his 50th year in the priesthood and his 30th year as pastor of St. Francis:

A MAN LOVED BY WHOLE TOWN—FATHER EZERSKIS OF MINERS MILLS A PRIEST 50 YEARS

(By S. C. Wintermute)

"He has the same vim and vigor he had when he came to town 30 years ago."

That 17-word statement by a neighbor best tells the story of the beloved Rev. Anthony G. Ezerskis, pastor of St. Francis Lithuanian Roman Catholic Church, Miners Mills, who on June 13 will mark his 50th year in the priesthood and his 30th year as pastor of the 45-year-old Miners Mills parish.

To Catholic, Protestant, and Jew, young and old, he is "Father" as he walks and rides about the North End community that he admittedly "loves with all my heart."

An orphan boy of 18, he arrived in America from his native Lithuania in 1898—during the busy days of the Spanish-American War.

He went to Chicago to reside with an uncle, Karol Ezerskis, following the death of his father. His mother died when he was 12.

He was born in Stulgi, Lithuania, the son of Anthony and Praxeda Ezerskis, and completed grammar school there.

AIDED BY UNCLE

Upon his arrival in Chicago, his uncle enrolled him in St. Stanislaus College.

From childhood he had a strong desire for a religious life and his uncle joined in helping him fulfill this calling. He went to St. Mary's Seminary in Cincinnati, Ohio, and on June 13, 1908, was ordained to the priesthood by Bishop Quigley of Chicago.

For 10 years he served as pastor and assistant pastor at numerous parishes in Illinois and then was assigned to Pennsylvania. He served at St. Mary's, Eynon, and St. Anthony's, Forest City, before being named to St. Francis Church where for 3 decades he has served as pastor and his community efforts have won him the undying admiration of residents of all faiths.

WIPED OUT DEBTS

St. Francis Church was built in 1923 and a mortgage of more than $50,000 faced Rev. Father Ezerskis when he arrived in 1928 to take over parochial duties.

Ten years later the mortgage was paid in full and the parish was free of debt.

In 1934 he invited the Sisters of Jesus Crucified to his parish and a modest property was obtained for use as a convent.

Not only a scholarly man, but also a handy man with tools, the 78-year-old priest during his 30 years of service in the parish has been personally responsible for many of the improvements made to the church, rectory and convent.

During his years in Miners Mills, Rev. Father Ezerskis guided improvements to the parish cemetery, complete renovation of the convent, interior and exterior improvements to the church and the erection of a rectory.

NEVER TOO BUSY

Probably the greatest tribute ever paid to this kindly man, who has never been known to be too busy to hear or aid any man, woman or child coming to the rectory door with a problem, was his selection by the North End (Miners Mills) Civic League for the first life membership ever granted by that group.

James Moran, president of the civic league, said the life membership was approved "not only unanimously by the members, but the whole town practically insisted that Father Ezerskis be given recognition for "his untiring service to the community and his kindness to all regardless of nationality or creed."

The parish will honor Reverend Father Ezerskis at a testimonial in June to mark his 50th year as a priest. Although details are still being arranged, it was reported by parish leaders that "just about 100 percent of all the other groups in Miners Mills have asked to be permitted to participate."

Repeal Excise Taxes Now

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. OSMERS. Mr. Speaker, the time has come for the House to take decisive action on repealing excise taxes. Prompt action will stimulate business at all levels and really help end the recession.

I have introduced a bill, H. R. 12508, which repeals excise taxes on automobiles; automobile parts and accessories; jewelry; furs; cosmetics; ladies' handbags; luggage; electric, gas and oil appliances; electric light bulbs and tubes; photographic equipment; telephone and telegraph; and transportation of persons and property. Some of my views are contained in a letter I have written to the Honorable WILBUR D. MILLS, chairman of the House Ways and Means Committee.

I strongly urge every other Member of Congress who feels as I do to express his views to the committee. Under unanimous consent, I include the letter, in its entirety, in the Appendix of the RECORD:

HOUSE OF REPRESENTATIVES,
Washington, D. C., May 15, 1958.

Hon. WILBUR D. MILLS,
Chairman, House Committee on Ways and Means, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: The grave economic condition of our Nation prompts me to address this letter to you urging that you and your committee give early and prompt consideration to my bill pending before your committee which in my judgment would contribute immeasurably to the economic recovery and stability of our country. I have reference to H. R. 12508 introduced by me on May 14, 1958.

This bill is designed to repeal the excise tax on automobiles and automobile parts and accessories retroactive to March 1 of this year. It also repeals, effective July 1, the excise taxes on the following: jewelry; furs; cosmetics; ladies' handbags; luggage; electrict, gas, and oil appliances; electric light bulbs and tubes; photographic equipment; telephone and telegraph; and transportation of persons and property.

I know of no quicker nor more effective way to help small merchants and consumers than to reduce the price of retail merchandise by repeal of the excise taxes provided for in my bill. This will give manufacturers and retailers a nationwide shot in the arm without causing inflation. This is a practical, immediate proposal to end the recession.

The economic plight of the automobile dealers and manufacturers is being almost daily compounded by the remarks of Members of Congress and other responsible Government officials which indicate that the reduction or removal of the automotive excise tax is a subject likely to be considered at this session.

Every auto dealer I meet tells me that there will be no marked pickup in automobile sales until such time as a final decision by Congress on this all-important matter is reached. It's watch and wait with thousands of potential buyers. Even a flat refusal by Congress to repeal the tax would clear the air and be better than no action at all.

The automobile industry plays a dominant role in the Nation's economy. Take 1956 for example. This industry purchased 42 percent of the total United States consumption of sheet steel, 24 percent of bar steel, and 23 percent of stripped steel. Additionally, the automobile industry purchases 65 percent of the United States consumption of natural rubber and 61 percent of the synthetic variety.

Insurance premiums paid by motor-vehicle owners run near the $5-billion mark, and some kind of installment credit is used to buy about 6 out of 10 new vehicles. About 1 out of every 5 patents issued each year is for an automotive device. Automobiles also contain unusual products like beeswax, sugarcane, resin, cork, and iodine.

The new-car purchaser of today pays considerably more for his automobile than his father did for his, but a good portion of the purchase price of today's new car is hidden in taxes—27 cents of every auto dollar. Of the total cost of a $2,500 car delivered in 1956 to a resident of Michigan, taxes were responsible for $599, with other States about the same.

So the Federal Government, to a large degree, prospers when the auto industry experiences boom years, and suffers, through losses in tax revenues, when car sales experience a slump.

States, too, reap benefits from the automotive industry, receiving 30 percent of their total tax revenues from motor-user taxes. In 1956 alone the 48 States collected almost $4 billion from motor-vehicle fuel and license taxes.

The American people have the money and want to buy 1958 automobiles. Savings are at an alltime high. The new models have been well received. It seems to me that the time has come for us to act promptly and decisively to end the paralysis in the giant auto industry, where unemployment is so prevalent.

One of the important things to remember is that all of these taxes were either imposed or increased as a World War II measure. The war ended 13 years ago. It's about time we repealed them.

If these excise taxes on automobiles and merchandise are repealed, the income taxes that the Government will receive on increased profits and earnings resulting from greater sales would more than make up for the loss of the excise-tax revenue. Since the taxes on transportation and communication are in many instances charged against business income, the revenue loss from their repeal would also be offset by increased income-tax receipts.

Delay in the enactment of H. R. 12508 will prolong and deepen the recession. In the national interest, I strongly urge that your Committee report out this bill immediately.

Best regards.

Sincerely,

FRANK C. OSMERS, Jr.

The Alaska Statehood Bill Needs a Conservation Amendment

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. PELLY. Mr. Speaker, the majority leader announced earlier today that the Alaska statehood bill is scheduled for consideration next Wednesday.

Recently I sent all Members of the House a mimeographed copy of testimony I had hoped to present to the Rules Committee on H. R. 7999. Since it is doubtful if such an opportunity to testify will develop, I include that statement hereinafter in case the copy sent direct went astray or escaped notice:

TESTIMONY OF HON. THOMAS M. PELLY, OF WASHINGTON, PREPARED FOR PRESENTATION TO THE HOUSE RULES COMMITTEE ON H. R. 7999, STATEHOOD FOR ALASKA

Mr. Chairman, thank you for the opportunity of appearing in connection with H. R. 7999, a bill to grant statehood to Alaska.

In principle, I support statehood, and I feel a personal moral obligation as a Republican to support my party's platform. But passage of this bill without amendment to safeguard the broad public interest by providing for sound management and administration of fish and wildlife resources should not be undertaken. So, to make my position here clear, let me say I urge an open rule, and I hope when I have pointed up the lack of protection in this bill that in any debate on the rule when it is taken up on the floor that members of this committee will emphasize the need for an amendment. My purpose in appearing here is to gain support for a conservation amendment which I intend to offer.

I might say, Mr. Chairman, that I come before you with encouragement of several national conservation organizations who feel that the House Committee on Interior and Insular Affairs in reporting out H. R. 7999 ignored the testimony of C. R. Gutermuth, vice president of the Wildlife Management Institute, as it appears in the printed hearings (pp. 375, 415, 476) and, therefore, this measure contains no safeguards for the future welfare of the Territory's fish and wildlife resources. Indeed, in addition to the Wildlife Institute, whose president is Ira N. Gabrielson, the American Nature Association, the Izaak Walton League of America, the National Parks Association, the National Wildlife Federation, Nature Conservancy and the Wilderness Society have just issued a joint letter to all Members of Congress saying that adoption of the statehood bill, without a clarifying amendment, would jeopardize those invaluable resources upon which a major part of the Territory's economy is based. So today, Mr. Chairman, I appear in the interest and with the blessing of organitions whose memberships exceed 3 millions of American citizens who reside in all of the 48 States and also, may I add, many of whom reside in Alaska.

The basic resources of Alaska are timber, minerals, and fish.

As to timber, with the major forests remaining under the permanent management of the Federal Forest Service on a sustained yield basis, I see no danger on account of statehood of discrimination or lack of control against special interests.

As to mines and minerals, with the new State of Alaska allowed a choice of lands, article VIII, section 3, of the proposed Constitution, provides for common use of natural resources. In my own State of Washington, the State was given a choice of lands in 1889 and I don't believe it has finished selecting all the sections it is entitled to yet. In filing on the public lands for oil leases in the Anchorage district, there has been favoritism under Federal management and, I believe, there may have been fraud. Insiders have had access to information in the land office, and frankly I think I was responsible for the transfer of the manager of the Anchorage land office because of information furnished by me to the Secretary of the Interior. My constituents' applications were held back and one group was favored as against another.

However, I am not qualified to suggest any provision to H. R. 7999 to allow all citizens equal participation on a fair basis. That is a matter for the proper officials of the new State to administer. Of course, I recognize the fact that these situations are possible under either Federal or State management where you do have incompetent or dishonest officials.

And now coming to the item of Alaska's fishery resources and when we consider turning over the management to the Alaska Fish and Game Commission, as presently constituted, it is a "stacked deck," and there should be no transfer until the way is open for an honest deal.

This resource is absolutely vital to Alaska's economy—it is her major industry, the wholesale value of its annual production averages about $80 million a year, and employs seasonally about 25,000 persons.

The conservation witnesses testified at the hearings and have since strongly reiterated that the stage already is set in Alaska for the commercial fish interests to take over the administration of the valuable fishery resources if this legislation is passed.

It is true the proposed Constitution calls for common use of natural resources and section 15 of article VIII reads: "No exclusive right or special privilege of fishery shall be created or authorized in the natural waters of the State."

However, under a law passed last year by the Territorial Legislature commercial inter-

ests are assured of complete domination over the Territory's fish and wildlife resources on the advent of statehood.

Let me say that it is in the public interest to insure that neither nonresident nor resident commercial groups, both of which have been in contention over a long period, should gain the power of administration of the Alaska fishery. Special interest control has been sought by legislation both in Congress and in the Territorial Legislature over many years. Such attempts failed and thousands of nonresident fishermen many hundreds of whom, by the way, live in my district have not been excluded from equal participation in that public resource; but I see now what conservation groups have pointed up—statehood would offer a new beachhead of attack. As is evident, the purpose of all that discriminatory legislation could be accomplished by the device of regulation once the management of Alaska fisheries is turned over to its Fish and Game Commission as that Commission is now constituted.

As to this commission, let me simply read from the hearings (p. 419). This is from the testimony of C. R. Gutermuth of the Wildlife Management Institute:

"Senate bill 30, which is now a law, does exactly what I predicted last year. The conservationists had hoped that Governor Hendrickson would veto that bill, which will place the administration of much of the Territory's natural resources in the hands of the users when Alaska becomes a State.

"Senate bill 30 calls for a 7-member Alaska Fish and Game Commission. Three of the commission members will be commercial fishermen, one a fish processor, one a trapper, and one each representing sport fishing and hunting. The commercial fishermen and fish processor representatives now serving on the Alaska Fisheries Board will be blanketed into office on the new commission for fixed terms of years. Some of them will be 'taken care of' in grand style; one term runs to 1964. Furthermore, by requiring appointments to the commission by districts, occupations, and interests, it means not only turning the administration over to the users, but bars all other citizens from serving on the commission.

"Mr. Chairman, the provisions in that new law will serve only one purpose—they will freeze the present commercial fishermen in office for several years, and assure the carryover of current administrative policies and philosophies. Yes; to overcome any possibility, however remote, that any less commercially dedicated commissioners might get in office. Commercial fisheries is the industry of Alaska, and this law certainly sets the stage for looking after everything but the public's interest."

As to how the commercial fishing interests of Alaska feel about conservation, let me quote from the statement of Jim Downey, secretary-treasurer of the Bering Sea Fishermen's Union, and agent of Resident Cannery Workers' Union, No. 46, AFL. This appears on page 22 of the 1955 hearings on Senate Resolution 13 of the Senate Interstate and Foreign Commerce Committee, 84th Congress. This witness said:

"For conservation purposes, it is our firm belief that fishing should be limited to residents of Alaska."

And speaking of conservation, our colleague, the Delegate from Alaska [Mr. BARTLETT], stated at that same hearing:

"I should say that in a general way we feel that the industry itself has exerted an undue control in the matter of regulations which govern and guide the industry; and that the best policies of conservation for maintenance of the fish run have not always been followed."

That quote is from page 4 of those same Senate hearings, and certainly Mr. BARTLETT ought to know. In fact, apparently the commercial fishing interests of Alaska have pressured him in this very way against conservation because I noted in the testimony of the witness from the Bristol Bay Resident Cannery Workers evidence of this.

"In 1953," the statement reads, "we successfully fought a closure order for the Nushagak fishery." He went on to point out that when 5 cannery superintendents were in Washington in support of the closure order, with the help of Delegate BARTLETT, a compromise 2-day-a-week commercial operation was permitted.

You can imagine that there are pressures on our Federal Division of Fish and Wildlife, but with commercial fish interests in control of Alaska's Fish and Game Commission the regulations will hardly be objective or in the interest of conservation. The national conservation organizations are not opposing statehood as such, and their opposition to the pending statehood legislation could be removed entirely if the Commission setup were changed. Conservation groups believe that the responsibility for managing Alaskan fish and wildlife resources should not be relinquished by the Federal Government until the new State legislature makes provision to protect the broad national interest. And I strongly support their position because, at the same time, an impartial setup in the management of our Alaska fishery would give some hope of protection against forces which would limit fishing to residents of Alaska by manipulation of regulators.

In this connection, I support an amendment to the pending bill to stipulate that the fish and wildlife resources be turned over to the new State as soon as the Secretary of the Interior can certify to the Congress that the Alaska State Legislature has made adequate provision for the proper administration, management, and conservation of those fish and wildlife resources. And by proper I mean that no special interest, either from outside or inside Alaska, would control.

As to the financial ability of the new State, I simply point up that the 1958 Federal budget asked for $876,955 for management and enforcement, $524,170 for vessels, and $165,425 for aircraft. The Division of Resource Management presently operates 7 patrol vessels and 9 aircraft. That is a total budget of $1,594,000.

I would trust that the Committee reporting this bill is satisfied that the new State could finance this extensive operation. Of course, 70 percent of the net proceeds of the annual sale of fur sealskins will accrue to Alaska, but under the new treaty, I understand, Canada's share goes up and, of course, the price of furs is down. Roughly, I figure Alaska would get about three quarters of a million dollars, so Alaska taxpayers would be required to pay an additional tax of about $750,000 a year to carry on in the way the Federal Government has administered the fishery in the past. This will be a burden and I wonder if Alaska's share in the annual fur sealskin sale should not be increased. Here, I might point out the testimony of the conservation director, Charles H. Callison, of the National Wildlife Federation; in a statement appearing in the hearings on H. R. 7999 on page 494 in which he referred to a resolution adopted by the federation at its annual convention in 1957 which "stressed the need for more adequate funds for fish and wildlife management in Alaska." This is the position of State wildlife federations and sportsmen's leagues and includes the Alaska Sportsmen's Council. So, as I say, it is going to be a heavy burden on Alaska taxpayers to maintain proper management and administration at the previous level to say nothing of increasing the amount.

Incidentally, this organization, the National Wildlife Federation, opposed the Alaska law, Senate bill 30, which established the special interest control. And since the law passed, its repeal or revision has been urged. That is what is needed—then let us consider transfer of the Fish and Wildlife Service to the State.

Finally, Mr. Chairman, the conservation organizations whose names I gave earlier have asked me to support the amendment to which I referred earlier and which I propose to introduce if and when the Alaska statehood bill is brought up. The statehood bill should never pass without this safeguard amendment.

In conclusion, I quote from a letter dated April 25, 1958, which is self-explanatory.

"There obviously is some objection to that portion of the proposed amendment suggested by certain conservationists which would require Congress to approve the certification of the Secretary of the Interior. That objection could be overcome by the following, which would satisfy the many people who are insisting upon a protective amendment:

"'*Provided*, That the administration and management of the fish and wildlife resources of Alaska shall be retained by the Federal Government under existing laws until the first day of the first calendar year following the expiration of 90 legislative days after the Secretary of the Interior certifies to the Congress that the Alaska State Legislature has made adequate provision for the administration, management, and conservation of said resources in the broad national interest.'

"Congressman PELLY, the millions of conservationists in Alaska and in all of the State are indebted to you for working so tirelessly to protect the life-sustaining resources and basic economy of Alaska and the Nation. They must rely upon you and the other conservation-minded Members of Congress to see that proper safeguards are included in any statehood legislation."

With this, I conclude my testimony and thank the committee again for the opportunity to appear here today.

Acts of Violence Against Two Jewish Community Centers and a Synagogue

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Wilkes-Barre Lodge of B'nai B'rith concerning the recent bombings of 2 Jewish community centers and a synagogue:

S. J. STRAUSS LODGE 139,
Wilkes-Barre, Pa., May 1, 1958.

The Honorable DANIEL J. FLOOD,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN FLOOD: You are no doubt aware of the recent bombings of the Jewish Community Center in Nashville, Tenn., and synagogues in Miami and Jacksonville, Fla., and the attempted bombing of a synagogue in Birmingham, Ala.

I know you realize that much more is involved than merely an overt act of violence to the Jewish centers and synagogues. These acts of violence are assaults upon law and order, the principles of democracy, and the very foundation of the Judaeo-Christian heritage. We join with the members of our

lodge in respectfully urging you to use your good office to prevail upon the Attorney General of the United States to authorize and direct the intervention of the Justice Department into this matter. Certainly, these bombings, and attempted bombings, which have occurred in several southern States, indicate a concerted plan and effort which is interstate in nature, and affords ample basis for the Justice Department to assume jurisdiction, and to use the full investigatory powers of the Federal Bureau of Investigation.

Very truly yours,

MURRAY MACKSON, *President.*
SOL LUBIN, *A. D. L. Chairman.*

Tide Turning for the Free World in the Far East

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

Mr. JUDD. Mr. Speaker, the Far East has long been a prime objective of the Communists. For years things went their way, largely because the free world underestimated Asia's importance or was too preoccupied elsewhere. When they finally did wake up, many Americans were defeatist. They were pessimistic on Korea, Formosa, Vietnam, even Japan. They counseled that we accept a supposedly inevitable Communist victory, and come to terms with Red China—as if that were possible on any honorable or livable basis. Others of us urged steadfastness in support of free peoples, no matter how shaky their governments seemed at the time, and resolute resistance to anything that would build up the Communist regimes. That policy is beginning to pay off. A Pulitzer prizewinning reporter finds significant changes in Asian attitudes. Here is Relman Morin's on-the-scene assessment.

TIME NOW ON SIDE OF FREE WORLD—SEATO CONSIDERED EFFECTIVE—JAPAN THE KEY

(By Relman Morin)

TOKYO, May 10.—On a warship in southeast Asian waters recently, a top military commander was asked to appraise the battle for Asia as it stands today. Without hesitation, he replied:

"Time is working for us and against the Communists now. A few years ago, it was just the reverse."

Recently, the United States ambassadors in the Far East met on Formosa to exchange information on the same question. The consensus of the conference, as three of them reported it to this correspondent:

"The picture looks good. You can't tell about Indonesia, of course."

In March, the foreign ministers of the Southeast Asia Treaty Organization (SEATO) met in Manila. This conference, too, ended on a note of optimism. And Associated Press correspondent reported:

"SEATO is now considered to be a going concern, capable of standing up to communism militarily and economically."

CHANGES ARE VITAL

Does all this mean that the tide finally has turned in the Far East? Has the Communist drive been checked?

To consider the question, think back less than 4 years:

The Reds had just destroyed Dien Bien Phu, the French fortress in Indochina; the entire country looked ripe for the taking. Thailand was threatened. Communist guerillas were operating over a wide area in Malaya. Where would the Reds strike next?

SEATO did not exist. There was no organization for pooling the military resources of the free nations, standardizing their equipment, providing joint training.

In Japan, as United States procurements dwindled after the Korean war, there was deep concern over the problem of maintaining the economy.

In war-torn Korea, the people suffered from cold, hunger, and disease. To make matters worse, they were openly critical of almost every aspect of the United States aid program.

Today, the changes that have taken place in the Far East seem almost magical. The picture looks bright, indeed.

These are the most significant factors in it now:

Japan holds the key position. It is the industrial powerhouse of the Orient. The furious energy and dynamism that once were channeled into war and preparations for war now are going into economic expansion. The standard of living is high. The export-import position seems sound. You may even see small size Japanese automobiles competing in the American market soon.

The military outlook, however, is cloudy. Japanese leaders doubt that any forces comparable to the powerful prewar machine will be recreated in the near future. To permit it, a constitutional change is necessary and the majority of the people seem wholly opposed.

Japan has become the Communists' No. 1 target.

Far Eastern observers believe Russia and Red China will step up the effort to detach Japan from the alinement of free nations, to neutralize her, and finally to bring her into the Communist bloc.

The free nations are growing steadily stronger.

Take the two showcase nations, South Korea and South Vietnam. They have common frontiers with the Communists. Here the two systems compete at close quarters. What are the outstanding results?

KOREA ON THE RISE

The Koreans have made spectacular economic gains. They are eating more, living better, looking happier. They have stabilized the currency, held wholesale prices in line for 18 months, controlled inflation. They are beginning to make a modest start toward exporting. Here, American money has been put to highly effective use.

Meanwhile, the former bitterness over the United States aid program has evaporated entirely.

In South Vietnam, the prime development has been political rather than economic. President Ngo Dinh Diem—one of the most unusual personalities on the world stage—is firmly in power now. He won a rough struggle with dissident elements and liquidated a situation that might well have opened the gates to the Communists. The country is at peace now, getting American military and economic aid, moving ahead steadily.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

Developing All Our Resources

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address that I made to the annual meeting of the Tennessee Municipal League, in Nashville, Tenn., Tuesday, May 13, 1958. In this address I discuss the need for a continuation of the basic TVA program and for cooperative action at all levels of Government toward the end that all our resources—human, natural and industrial—might be developed.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege for me to meet with you here today to discuss some of the interrelated economic and political problems that confront us as public officials. I believe the theme for your convention, Economic Survival for Tennessee, is well chosen and indicative of the crucial decisions that need to be made. It is indicative that we realize troublesome economic conditions disappear only after decided effort and that the best treatment for declining economic activity is preventive treatment designed to stop the decline and reverse it.

It is refreshing to be among you municipal public officials. When one goes to Washington, it is possible to lose perspective on problems and to lose the sense of immediacy which comes to those who actually operate programs that affect our everyday lives. For this reason I take every opportunity afforded me to return to Tennessee and learn what you are thinking here. I am certain that I will learn as much or more from listening to you discuss your problems and aspirations than you will from hearing me.

STATE AND MUNICIPAL PROBLEMS

I want to assure you that many of us in Washington are acutely aware of the growing problems of the States and municipalities. We have been striving against some opposition by the administration to take steps to counter the recession. As you know, the President vetoed the rivers and harbors bill recently and thus eliminated the chance of starting on many worthy and necessary flood control and harbors projects. I would like to think otherwise, but I doubt very much that Congress will be able to override his veto. The Senate recently passed the community facilities bill, which I cosponsored, to expand the lending facilities for local public agencies and at lower interest in order that they might expand their efforts to improve physical conditions in their areas. The House has yet to act on this measure, but I am confident that it will pass. We have passed measures to speed up the highway program and the housing program. The Democratic members and some Republicans are ready to take all necessary action to assist the economy regain its stability.

I think that we are at a critical period in this country's history. Of course, every period is critical in some ways, but I think that this one is especially important because of the changing nature of our society. Not too many decades ago we were primarily a rural people with a majority of our people on farms. Recent studies have revealed that no more than 12 percent of our population now lives on farms and that the future holds further decreases. As you well know, this means that many of the people now living on farms will leave them to come to the city, and most of our children will find their livelihood there.

OVERCROWDING CITIES

I have heard eminent students of municipal problems state that the biggest national, and I emphasize national, problem for the future will be that involving large concentrations of population. As our people gather even closer together, using up some of our most fertile farmland, overtaking our highways, crowding our parks, requiring increasing amounts of electricity, gas, and other natural resources, we are going to have to face the fundamental political, economic, and social problems that such concentrations of population bring. We have not faced these problems adequately as yet and there are few signs that we will. It is a lamentable fact that we so frequently recognize our problems only when they reach scandalous proportions. The National Government should be planning to assist the States and the localities in providing for the necessary adjustments and expansion of facilities because these metropolitan areas far exceed the ability of any single community and often even any State to support. In many instances, the metropolitan region itself crosses State boundaries.

Your organization is one of the most important instruments in the improvement of community conditions. Your members have the experience and first hand knowledge of municipal problems. You know what it means when you talk about substandard housing, crowded streets, inadequate water supplies, poor zoning and planning, air and water pollution, and the myriad other conditions that people in urban areas experience. I believe that it is your responsibility to come up with ideas for meeting our problems. The Federal and State Governments may be effective instruments for assisting in projects beyond the financial resources of the local governments but they have no monopoly on ideas. Your leadership, your guidance, and perhaps even more important, your goading and pressure can make things happen and make them happen in such a way that they actually lead to suitable solutions to your problems.

NEED FOR PLANNING

I have dwelled on these general conditions at length, because I feel it is necessary to take the long view in considering our resources—human, industrial, and natural. We cannot plan our utilization of resources in traditional ways, becase the traditional society no longer exists. That is what some of our standpat friends refuse to recognize. They would have us treat a kitten and tiger the same way, because they are of the same family. I would suggest that the cat and the tiger are essentially different from each other, whatever their similarities, and that handling of them must be somewhat different. In the same way, large numbers of people living in a small area need essentially different kinds of programs or "handling" than they do when they are spread over an extensive area, in spite of the fact that they remain people. And we must keep in our minds the one fact that perhaps outweighs all others, and that is rapid increase in population. Present estimates indicate that the population of the United States will reach 212 million by 1975. And most of these new souls will be crammed, stuffed, squeezed, herded, and polluted in cities unless we make the necessary efforts and, although it is painful to everyone to mention it, the necessary expenditures.

TVA—EXAMPLE OF FORESIGHT

We have had in the Tennessee Valley one of the most farsighted resource programs that any nation or region has ever undertaken. The dream of the late George Norris, brought into being by the imaginative Franklin D. Roosevelt, the program is now 25 years old. It has virtually altered the face of the earth and certainly has altered the nature of our economy and our way of living. I do not have to tell you what the Tennessee Valley Authority has meant to all of us here and to the United States as a whole. But I am going to tell you, anyway, just so the record is clear in our minds. The TVA tamed a savage and unpredictable river that threatened every community, its property, and citizens every year. It made this river a thing to be used for the betterment of the people of the valley in countless ways. Instead of wreaking havoc, the waters of the river became a broad liquid highway to transport our goods to and from the markets of the Nation. Our citizens no longer feared the river but used it as a place for recreation and relaxation. And in cooperation with the Corps of Engineers, much the same thing has been done with the Cumberland River.

Certainly not the least important product of the TVA was the power produced at its dams. This relatively inexpensive power altered the economic system both on the farm and in the city. Where only 3 percent of our farms received electricity before TVA, now 95 percent of the farms receive it. New industry was attracted by our lower power rates and the burgeoning population of our cities was served with electrical energy. We are familiar, of course, with the extensive defense industrial development that was created owing to TVA power.

These direct benefits are enlarged immeasurably when one considers the collateral effects of TVA—the reforestation, the soil conservation, the advances in health, and other programs undertaken by the TVA in cooperation with the local and State governments. In sum, they constitute one of the greatest achievements in the history of the United States and provide a prototype for other regions which are beset with similar problems.

RESPONSIVE TO NEEDS

At the risk of belaboring the obvious, which is always the privilege of a speaker, I want to point out some other well-known facts. The Tennessee Valley Authority is unique in that it is a Federal agency not operated from Washington. Its headquarters are located in the valley, close to the going operations and the people who benefitted from its work. Thus, it was responsive to the needs of the communities and purposely set out to coop-

erate in a joint effort to alleviate suffering and improve economic and social conditions.

Secondly, the TVA takes unified approach to the natural-resource question. While other areas continue to suffer from jurisdictional disputes and differences in opinion regarding policies, the TVA resolves whatever differences there are within itself and approaches all of its resources programs on a unified basis. Here is a clear recognition of the fact that resources, soil, water, tree, and human are interrelated and that they must be approached with a recognition of their interaction.

Admittedly the TVA has run into obstacles that have prevented it from realizing the full measure of its being. This has been particularly true during the past 5 years under a relatively unfriendly administration and an extremely unfriendly Bureau of the Budget.

As a result of these obstacles, some people are urging other alternatives for carrying forward the programs formerly expected of the TVA, particularly in relation to the production of power. Some are proposing that municipalities, States, and power districts take on the responsibility. I feel this will be ultimately self-defeating because it destroys the very assumptions on which the TVA has operated and takes too short a view of human affairs. I am convinced, and I am sure many of you share the conviction and surely the hope, that the climate in Washington will not always be as negative toward TVA as it is at present.

BALANCE OF RESOURCES

The more serious question relates to the effect on unified basin development if we accept some of the schemes that have been proposed. As I stated before, the TVA and its programs has recognized the essential unity of all the elements of the basin—human and natural. The entire valley's resources were managed to provide for a maximization of man's benefit. While protecting the resource base, the TVA had a clear understanding that a variety of man's needs required satisfaction. Here was balance of resources management because of the integrated approach.

Why was the TVA able to accomplish this? I do not think that we can find the answer in either the kind of men who staffed the TVA or the form of organization alone, although these contributed heavily to its success. The essential fact was that the TVA was and is a national instrumentality reaching into many States affecting the lives of millions of people. TVA thus took a broad view rather than a narrowly parochial view concerning the development of resources. The valley and its people constituted its realm and no arbitrary boundaries or special localities determined its decisions. And I think we have all benefited from this point of view.

Other alternatives invariably involved the assumption of responsibility by a locally constituted organization representative of the major political and economic units receiving benefit from the TVA system. And usually such alternatives center their attention on power, without consideration of the other facets of TVA's program. I would like to ask one or two questions about such schemes.

CONFLICTS WOULD ARISE

First, what would become of the broad viewpoint I have discussed here? Let me tell you from many years of experience in legislative bodies that the ultimate result would be a splintering of the unity that has so characterized our efforts heretofore. Each unit represented would consider first—what is in it for me—rather than—will this proposal meet the needs of people throughout the valley? There would be a tendency, not necessarily out of selfishness but more out of unfamiliarity with the problems of others, to be concerned about local interests rather than the public interest. One power district or REA or municipality claiming that it is not receiving its share of power. The power interests claiming that the river was being managed for navigation to the detriment of power production. The shipping companies claiming that there was insufficient recognition of their needs.

Conflicts of this sort have arisen in the past of course. But they have been settled because the public interest was always kept in the foreground and the local and private interests were required to meet the standards which the public interest imposed. I am extremely fearful that we will be giving up this public spirit that has so stimulated our efforts in this valley. For contrast, one need only see what has happened in other major river valleys where there has been less than the public interest in view. The States of the upper basin and lower basin of the Colorado and States within the two basins are constantly in conflict over the terms of the Colorado River compact. The various interests along the Missouri, alined with their governmental spokesman, are never in agreement on Missouri River development programs. Other instances could be cited. I do not think we want to endanger our future by adoption of such programs which invite dissension.

FATE OF TVA?

Another important aspect of the problem relates to the ultimate fate of the Tennessee Valley Authority itself. If its power functions are stripped away, will the Authority continue its work in flood control, soil conservation, reforestation, navigation, and other activities? I have my doubts. The elimination of its power functions would be the first step in the dismemberment of TVA and its eventual destruction—a goal long sought by its enemies these many years. Power rates themselves would go up, up, up. Strong pressures would be created to return to the piecemeal approach to resource development and many of the existing programs would be reduced or eliminated entirely. The States of the valley would be required to undertake a much larger share of responsibility for resource development than is presently the case.

As you all know, all the valley Senators and Representatives, have sponsored what we consider to be the better way: self-financing for the TVA. The self-financing bill is now before the House of Representatives after having passed the Senate last year. I have every hope that such a bill will pass the House and be enacted into law. This bill would allow the TVA to issue revenue bonds for the construction of added power installations. Such a plan would allow the TVA to support its own expansion without having to obtain appropriations from Congress with all of its attendant difficulty. And certainly expansion is needed in view of the projected power needs of the valley. The TVA would remain intact as an organization and would continue to perform its many integrated programs. With appropriations, for its other related activities, we could expect a bright future for the valley.

FUTURE IN OUR HANDS

We all recognize that the Tennessee Valley Authority and other agencies of the Federal Government cannot insure prosperity of our State. They can and have contributed heavily to our well-being, but in the long-run our economic security lies in our own hands through the full development of our human and natural resources. We have perhaps done less than is possible to develop our resources and take adequate measures to meet our growing problems.

This meeting is evidence that there is a reawakening and desire to make up for lost time. I note that there has been considerable discussion of State and community planning and development programs at these sessions.

I note also that the Tennessee Municipal League has gone on record supporting larger appropriations for the department of economic development, the establishment of a Tennessee industrial building financing plan, and creation of a Tennessee dock authority. These activities are badly needed.

We have many serious economic problems in Tennessee. With coal mining and agriculture declining in economic importance, it is imperative that we find industrial outlets for our working population. We have a rapidly growing population, with many young people who are in need of opportunity here in Tennessee. It is a lamentable fact that so many of them are finding it necessary to leave the State in order to make a living. All of the States of the Union are in competition to obtain industry and we must take steps to insure that we are not deprived of our share of industrial expansion.

A DYNAMIC GOVERNMENT

In conclusion, I would like to encourage you in your efforts to use your Government at all levels to stimulate and expand your economic base. We have a tendency in this country to feel that governmental activity is somehow evil or a last resort. I think we should recognize that our governments have been instrumental in developing this Nation throughout our history: the railroads, atomic energy, technical assistance in agriculture, airlines, and many others. We should use our governments today to assist private enterprise in fulfilling its basic responsibility always maintaining sufficient safeguards to prevent abuse to provide the means of support for our expanding population and for higher standard of living. If our State government and the cities will develop the means to consult, to finance and administer cooperative programs, there is no reason why we cannot look to the future with confidence. You may be sure that if the States and municipalities do their share, the Federal Government will be forced to do what is necessary to supplement their efforts. I will certainly do all within my power to assist you from Washington.

Death of B. H. Peace, Greenville, S. C., Newspaper Publisher

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. THURMOND. Mr. President, the death of Mr. Charlie Peace last Thursday brought an untimely end to the career of one of South Carolina's finest citizens and ablest newspapermen. He was a man of rare vision and foresight who contributed a great deal to his community and region. He was an extremely friendly man and he had a great number of devoted friends who mourn his death.

I ask unanimous consent that there be printed in the Appendix of the RECORD three editorials which express the sadness felt over his passing throughout South Carolina. The editorials are: Newspapers Are People—Charlie Peace, from the Greenville News of May 6; Charlie Peace, from the Columbia State of May 17; and Charlie Peace, from the Charleston News and Courier of May 17.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greenville (S. C.) News of May 16, 1958]

NEWSPAPERS ARE PEOPLE—CHARLIE PEACE

(By Wayne W. Freeman)

Throughout most of his career as a newspaper executive, Charlie Peace was concerned primarily with the business and mechanical side of the complex publishing operation. Since his days as a youth in his late father's commercial printing plant, machinery had fascinated him.

As vice president and general manager of the News-Piedmont Co., he had personally shopped for most of the multitude of machines required to produce the two newspapers, and he probably knew more about them than anyone other than the men who operate and maintain them.

But as valuable as was this contribution to the common task and as much as it was appreciated, it is the memory of another side of his character that his associates will cherish as long as they themselves live: Charlie Peace, the generous, hearty, fun-loving, understanding, and compassionate human being.

In discussing newspapers and what makes them, Mr. Peace almost invariably would observe, "newspapers are people."

For all of his preoccupation with other matters, he never forgot nor let anyone else forget that the men and women who write and edit the copy, run the machines, and produce and deliver the final product were the most important element in the success of the paper as a community institution.

Thus it is that in the death of Charlie Peace the officers, executives, and employees of our publishing company have lost more than a business and professional associate. The greater loss is that of a close and beloved friend.

Part of this characteristic, too, was his boundless love for children and, invariably, children who came within range of his radiant affection for childhood returned his love.

His friends of all ages were literally legion, not only in this community and State but throughout the United States and even in Canada, where he had many dealings with manufacturers of newsprint. Wherever newspapermen gathered in their professional conferences, Charlie Peace was known. Usually he was there and, when he wasn't, members of the News-Piedmont staff were greeted on all sides with, "How's Charlie?"

Mr. Peace was a newspaperman from his boyhood. As a youth, he and his brothers were instrumental in their father's acquiring The Greenville News to make it a forceful influence in the Piedmont Carolinas. From the old Peace Printing Co., he went to the News as a proofreader and set out to learn all phases of the operation.

It was natural that he should move gradually into the business and production side exclusively. He played a big part in the steady growth in the circulation of the News and in the renovation and expansion of the Piedmont after the company acquired it in 1927.

Production, however, was his first love, and as the years passed he devoted more and more of his time to the expansion and improvement of the mechanical plant. He literally roamed the country in search of new ideas, better techniques and better machines for doing the job.

And wherever he went, on a business trip or to the beach home he loved, each edition of the papers was sent to him and he read them meticulously.

As far as we know, Mr. Charlie never wrote an editorial or a news story, but he knew when they were done right and he was quick to spot a mistake. Reporters and editors alike found him a kindly critic and a strong backer when controversy arose or the going otherwise got a little rough.

After the News-Piedmont Co. acquired the Asheville Citizen-Times Publishing Co., he became its president and gave to that responsibility the same sort of devotion he had given to the Greenville operation. His basic tenet there, as here, was that the newspapers belonged to the community and that the publishers should give the community the kind of newspapers it wanted and needed.

Although the press was his great love, Mr. Peace gave much of himself and his substance to the community and region in other ways. Many were his acts of charity and philanthropy, and as often as not those who benefited never knew the identity of their benefactor.

Many years ago he saw the importance of aviation to Greenville's future. He accepted appointment to the Greenville Airport Commission. He participated in the vision of a modern airport which became a reality with the cooperation of other officials and the public. And with his colleagues he was looking to the age of the jet transport.

Such at a glance was the 54-year lifespan of a man who loved life more and lived it more fully than most who are spared long beyond the allotted three score and ten.

Those of us who lived with him, worked with him and played with him are conscious of a great loss. We are comforted by the knowledge that the loss is shared by the community and that he might say, in the words of George Crabbe in The Village:

"Life is not measured by the time we live."

[From the Columbia (S. C.) State of May 17, 1958]

CHARLIE PEACE

Charlie Peace was a newspaperman by inheritance and by love. He came from a newspaper family; he would have been unhappy in any other work.

Jovial—given to being in a happy mood—he was nonetheless serious when the occasion demanded it. His fellow journalists recognized his leadership by making him president of the South Carolina Press Association; he held important committee appointments from the Southern Newspaper Publishers Association, and his own family called upon him to assume responsible executive duties as vice president and manager of the Greenville News-Piedmont, and president of the Asheville Citizen-Times.

In the last year or so, ill health had curbed Mr. Peace's activities, but this did not lessen his keen interest in successful operation of the newspapers, and other properties with which he was identified, nor did it cause him to lose his enthusiasm for Greenville and for South Carolina, in which he had so much faith, and in whose upbuilding he had done his share.

There are many to mourn the loss of Charlie Peace. He was a friend, indeed; a man with a big heart whose fine qualities were appreciated by those of us who had the privilege of knowing him and evaluating his real worth.

May God rest his kindly soul.

[From the Charleston (S. C.) News and Courier of May 17, 1958]

CHARLIE PEACE

Three sons of the late B. H. Peace have carried on the newspaper business he bought in Greenville and expanded it through the years. The death of Charlie Peace at the age of 54 has removed one of the brothers from a successful family enterprise.

Jovial of manner and friendly in approach, Charlie Peace was well known among newspaper people not only in South Carolina but elsewhere in the profession. He had been assigned to all departments of the Greenville News and Piedmont, and was general manager of the two papers since 1939. When the Asheville Citizen and Times were bought in 1953, he became president of the enterprise. Mr. Peace also was a director of the company operating the Peace radio and television stations.

Fond of jokes and a good time, Charlie Peace was good company when newspapermen got together. We shall miss him.

The Secretary: Today and Tomorrow

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1958

Mr. SPARKMAN. Mr. President, recently the National Association and Council of Business Schools held its nationwide contest to select the outstanding secretary of 1958. In many parts of the country these contests were held until at last the three finalists were brought to Washington. These three who entered the final contest here were: Mrs. Mary M. Smith, Huntsville, Ala.; Miss Johanne Curran, Washington, D. C.; Miss Leatrice U. Youth, Hawaii.

The final requirement in the contest was a brief comment on the subject assigned to them on short notice. The subject on which each one was asked to speak was The Secretary: Today and Tomorrow. At the conclusion of the three short talks the final vote was taken. The one chosen as Miss Secretary of 1958 was Mrs. Mary Matthews Smith, of Huntsville, Ala.

Mrs. Smith is the very competent secretary to Mr. Joseph Pelham, chief of the test and inspection department of the Thiokol Chemical Corp., Redstone Division, Huntsville, Ala. This company's work is an essential part of the great missile program that is being carried on at Redstone Arsenal.

Huntsville and that whole area are proud of Mary Smith and were delighted to see her crowned as Miss Secretary of 1958.

I believe all of us would be interested in the brief speech made by Mrs. Smith on the subject The Secretary: Today and Tomorrow. Accordingly, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE SECRETARY: TODAY AND TOMORROW

Today, the secretary holds a unique position in the American business world. She is not included in the vast rank and file of office workers nor in the echelons of management; she hangs suspended between these two factions. She types, takes and transcribes dictation, and files (all tasks of her clerical sisters). Equally often, she accounts, originates correspondence, and manages the office (all tasks of her management brothers). She has long strived for recognition of her unique position as a profession. One of the movements for this recognition is the certified professional secretary program. Under this program, CPS certificates are issued to candi-

dates in the secretarial field who pass a 12-hour battery of examinations. CPS is to secretaries what CPA is to a accountants.

The secretary of tomorrow will, of course, benefit in many ways from the efforts being made today toward professionalization. It is my opinion, too, that the secretary of tomorrow (and I refer to the very near future) will leave her suspended position and move upward into the ranks of the recognized junior executive. If she is to have this recognition—she must merit it. I believe the most expeditious way in which she can prepare for this elevated status is through specialized training—training offered by our business schools.

And so, ladies, and gentlemen, I present this challenge to you: Give her the training she needs and she will be a credit to you, to your schools, to your firms, and to the National Association and Council of Business Schools.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. NEUBERGER. Mr. President, as a longtime supporter of statehood for Alaska, I was pleased and proud to be a member of the Senate Territories Subcommittee which favorably reported to the Senate the measure which would make Alaska the 49th State of the Union.

In recent weeks editorial comment throughout the country has pointed up the widespread support of the American people for legislation granting statehood to our great northern Territory. Because the Senate and the House will soon have an opportunity to vote on this issue, I want to bring to the attention of my colleagues an excellent editorial which succinctly expresses the compelling reasons in favor of Alaska statehood. The editorial, entitled "Statehood for Alaska," appeared in the Northern Virginia Sun, Arlington, for May 14, and I ask unanimous consent, Mr. President, that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Northern Virginia Sun of May 14, 1958]

STATEHOOD FOR ALASKA

It is extremely probable that Congress will decide on the question of Alaskan statehood before the end of this month. The decision in part rests on the abilities of Representative CLAIR ENGLE (Democrat of California), and Representative LEO W. O'BRIEN, Democrat of New York, to untangle the redtape wrapped around the issue by the powerful House Rules Committee, headed by Virginia's Representative HOWARD W. SMITH, of Broad Run, who is unalterably opposed to the idea.

The arguments for Alaskan statehood, we think are numerous and logical; the arguments against not so numerous and not so logical.

Free enterprise in Alaska squirms under the provisions of musty outmoded laws which are hardly based upon the presumption that Alaska is an integral part of this Nation's future. For example the fishing industry, and 1 of every 3 Alaskans makes his living from the seas, has chafed under the control of the United States Fish and Wildlife Service, a control which does not apply in the fashion to the domestic fishing industry.

Alaska is important to us because of its mineral wealth. Of 33 metals the United States considers strategic, 31 exist in great quantities there, as well as untapped oilfields, abundant farming land and a host of valuable raw materials.

The opponents of statehood for Alaska defend their view with such general arguments as "it's not ready for statehood," or "it's too small and sparsely populated," and "it's not contiguous to this country, being separated from the State of Washington by British Columbia.

These, however, do not reveal the real reasons for the Congressional opposition to Alaskan statehood, most of which comes from Congressmen and Senators who fear that the new Representative and the two new Senators that the new State of Alaska would send to Congress might not share either their political philosophy or their political party affiliation.

It seems a pity that such wholly political considerations should overshadow the fact that Alaskans share in rich measure the pioneer spirit that built this Nation. Congress, it seems to us, should recognize that spirit by granting Alaska the statehood she so richly deserves.

Anti-Semitism Disturbs South

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include a news article and an editorial from the Memphis Commercial Appeal, which I hope will clarify any misconceptions about anti-Semitism in the South.

The article and editorial follow:

ANTI-SEMITISM DISTURBS SOUTH—JEWS HAD CLOSE LINK WITH CONFEDERACY—HISTORY BOOKS CITED

(By Milton Friedman)

WASHINGTON, May 8.—Millions of southerners sentimentally linked with the Confederacy are fighting mad. They are angered by the use of the name "Confederate Underground" by hoodlums dynamiting synagogues.

Southerners with authentic attachment to the Old South are indignant that the new self-styled Confederates are giving the Confederacy a bad name. By dynamiting Jewish religious institutions, including synagogues founded many years ago, the unknown terrorists have offended southern sensibilities.

VOICED IN EDITORIALS

Such sentiments have been voiced in newspaper editorials throughout the South. They have been reflected in official Washington by southern Members of Congress. Most southerners oppose the integration of Negroes in public education. But to them, such violent anti-Semitism is alien to the southern tradition.

Southerners have mustered history books to support a case that the Confederacy was freer of anti-Semitism than the "Abolitionist" North. There is evidence. Horace Greely's Abolitionist New York Tribune read like the "Der Sturmer" of its day. Anti-Semitism among Abolitionists was such that the northern Jewish leader, Simon Wolf, sought action against these (anti-Semitic) manifestations radiating from the highest official circles.

A scholarly Jewish study of the Civil War concluded that "the volume of Abolitionist anti-Semitism exceeded southern bias, and its proponents were sometimes men of stellar prominence."

HARANGUE WAS PROTECTED

An anti-Semitic harangue delivered in the Senate in Civil War days was such that the Jewish community of Washington held a mass protest meeting. The speech was made by Senator Henry Wilson, of Massachusetts. Gen. U. S. Grant, northern commander, was ordered by President Abraham Lincoln to withdraw an anti-Semitic order issued to troops. The anti-Semitism of Yankee Gen. Benjamin Butler was notorious. Jews under his command were court-martialed in the manner of France's Dreyfus trial.

Like Americans of all faiths, Jews were found on both sides in the Civil War. Loyal to their region, the Jews of the South served the Confederacy to the extent that a Jew was Secretary of State and later actually Premier of the Confederacy. He was Judah P. Benjamin.

The Memphis Daily Appeal reported in 1861 that "the Israelites of Memphis are behind none in showing their devotion to the South, both by liberal contributions and by taking up arms in her defense."

At the Battle of Seven Pines, a 19-year-old Jewish youth, Albert Moses, of North Carolina, seized the Stars and Bars from a dying flagbearer and rallied his company. He died heroically.

Judge A. T. Watts, of Dallas, wrote of MAX Frankenthal of the 16th Mississippi Infantry. He said that Frankenthal, "a little Jew, had the heart of a lion. For several hours he stood at the immediate point of contact, amid the most terrific hail of lead, and cooly and deliberately loaded and fired, without cringing. I observed his unflinching bravery and constancy." Frankenthal later became a leader of the United Confederate Veterans.

NO PART OF THE SOUTH

Abba Eben, Israel's Ambassador to the United States, will speak in Memphis on May 28 when the 10th anniversary of Israel's national birth will be observed.

Governor Clement, of Tennessee, will also speak.

The committee planning the celebration is made up of leading citizens of Memphis of both the Jewish and Christian faiths. All are Americans.

We cite this because of a false belief current in some areas that anti-Semitism is becoming more prevalent in the South. If it is, we haven't noticed it, and we try to make a point of keeping informed on all types of subversion.

Deeply impressed on the minds of Memphians a few days ago was the sacrifice of a young Jewish citizen who gave his life trying to save his Christian neighbor.

Anti-Semitism has never marred the Memphis scene and the South is not the fertile ground for its evil growth as other sections have been. We published some observations by Milton Friedman, of the Jewish Telegraph Agency, on this subject a few days ago, especially as it pertained to the Confederacy. He cited the South's anger over the use of the name "Confederate Underground" by dynamiters who have used schools and synagogues as targets.

He reminded us that a Jew, Judah P. Benjamin, was Secretary of State of the Confederacy. "The Memphis Daily Appeal," he said, "reported in 1861 that 'the Israelites of Memphis are behind none in showing their devotion to the South, both by liberal contributions and by taking up arms in her defense.'"

Mr. Friedman declares that millions of southerners sentimentally linked with the Confederacy are angered by the use of the name "Confederate Underground" by hoodlums dynamiting synagogues. He can be sure of that.

The South doesn't like hoodlumism in any guise, night-shirted or otherwise. It has driven the Klan into the jails and impotency. It will deal as vigorously with any self-styled "Confederate Underground" and doubly so because of the profanation of an honored name.

When Israel's Ambassador Abba Eben comes into the South, into Tennessee, and into Memphis he will find himself among people who have a special feeling for others with aspirations of freedom and the courage to strive for it. He will be among friends.

More Community Projects

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. PROXMIRE. Mr. President, I have letters from two officials of Wisconsin communities which give further proof of the need for speedy enactment of the Community Facilities Act, which already has passed the Senate.

One is from Mayor H. J. Wachsmuth of the city of Bayfield, a community with a population of about 1,000, who says that his city can comply with a requirement of the State of Wisconsin that it build a sewage disposal plant if the city can borrow the necessary funds at 3½ percent interest over 50 years' time. That is what the Community Facilities Act would make possible.

The second is from Village Clerk Bert Wester of the village of Belgium, who tells of several projects that his community can construct with Federal help.

Mr. President, I ask unanimous consent that these letters be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE CITY OF BAYFIELD,
Bayfield County, Wis., May 10, 1958.
Hon. WILLIAM PROXMIRE,
United States Senator,
Washington, D. C.

DEAR SENATOR: I thank you for your letter of May 2, and in reply the city of Bayfield has a problem that maybe you can help us on.

The State of Wisconsin is compelling the city to construct a sewer disposal plant. The plant will cost about $175,000. The Federal Government will give us a grant of $47,255.70 for said construction. Now, we have to sell bonds in the amount of about $121,000. The bonding company wants 5½ percent interest and will only give us $96 for a $100 bond, which will make our interest almost 10 percent.

The city now owes about $70,000 including some school bonds. Now, if we have to bond ourselves for the disposal plant we will owe near $200,000, our water tax of $27 per year and sewer tax of $6 will have to be doubled to pay for bonds.

We have about 340 homes of which about 60 occupied by 1 person, mostly widows who have a very limited income, and about 50 homes occupied by 2 people with small income.

I feel that Bayfield does not need a disposal plant. First, all our water comes from artesian wells; second, we have a very good current which takes all the sewage out into the laks, no sewage on the bottom or on the shores. Lake Superior is the largest disposal plant in the world.

Ashland and Washburn are on the bay where the sewage settles on the bottom and they drink the lake water after treated with chlorine. If we have to pay this heavy tax Bayfield will be a ghost town in a short time. The lamprey eel has ruined our fishing so that our income from that is cut 50 percent. The Bayfield Canning Co. will not operate any more, the only industry now operating is the All-Wood Manufacturing Co., which employs about 30 when they are operating.

If we could sell bonds on a 50-year plan at about 3½ percent interest, we could put it on the tax roll, and pay same with real estate taxes. Your cooperation will be appreciated.

With kind personal regards, I remain,
Very respectfully,
H. J. WACHSMUTH,
Mayor, City of Bayfield.

VILLAGE OF BELGIUM,
Belgium, Wis., May 12, 1958.
Hon. WILLIAM PROXMIRE,
United States Senator,
Washington, D. C.

DEAR SENATOR PROXMIRE: In recent weeks we have noticed articles in the newspapers referring to legislation which the Government is contemplating to provide aid to municipalities which are in need of various projects, such as, sewer, water works and municipal buildings.

At our last general election, a referendum authorizing municipal water works for the village of Belgium at a cost of $160,000 was defeated. Village officials felt the reason for defeat of the referendum was the fact that we have a $55,000 indebtedness on the sewer at the present time. This plus the cost of the water works would encounter too large a tax rate increase. Our present evaluation is $1,287,000.

Now it becomes evident that the village of Belgium is also greatly in need of a municipal building for village offices, fire department housing, and recreational facilities.

The village board feels that if Federal aid is restored, these projects could be undertaken.

Kindly let us know what has been done in this regard and what is required of the village of Belgium to obtain aid of this kind, if such legislation is approved.

Respectfully yours,
BERT WESTER,
Village Clerk, Village of Belgium,
Belgium, Wis.

The Agricultural Dilemma

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 14, 1958

Mr. MARTIN of Iowa. Mr. President, one of the ablest students of American agriculture is the dean of the College of Agriculture at Purdue University, the Honorable Earl L. Butz. He was formerly Assistant Secretary of Agriculture.

Agriculture is experiencing a technological and scientific revolution. The productivity of our farms is increasing at an astounding rate. Today's agriculture has required a great increase in the investments in tools and equipment for each individual farm. Dean Butz shows that on many of our more efficient farms, the investment per worker is as high as $75,000 to $100,000. The capital investment per worker in American industry is approximately $15,000. The agricultural revolution will progress regardless of political considerations.

Dean Butz presented a review of the problems confronting agriculture in an address at the 46th annual meeting of the Chamber of Commerce of the United States last month. I found his analysis of such interest that I ask unanimous consent that it may be printed in the Appendix of the RECORD.

Mr. President, I have been informed by the Public Printer that the text exceeds 2 pages, and would make 3 pages, which would cost $243 to print in the Appendix of the RECORD.

Mr. President, I ask unanimous consent that, notwithstanding the additional cost, the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AGRICULTURAL DILEMMA

(By Earl L. Butz, Dean, College of Agriculture, Purdue University, former Assistant Secretary of Agriculture)

Agricultural technology and farm belt politicians have squared off for a major tug of war.

Modern agricultural science and technology are bringing far-reaching sociological and economic changes. This, of course, calls for adjustment in our whole agri-business complex. And adjustment is always painful.

Many farm politicians direct their energies essentially toward maintenance of the status quo. This will be increasingly true during the next decade, as cries of pain from inevitable economic and sociological adjustment reach sensitive political ears along the Potomac.

The main effect of many governmental programs in agriculture is to slow down adjustment to change that would take place in the absence of such programs.

Agriculture is in the midst of a far-reaching scientific and technological revolution which is shaking the very foundations of its traditional institutional patterns.

We are now experiencing the third great agricultural revolution in this country. The first came in the middle of the 19th century, when we substituted animal power for human power. This change permitted a significant increase in productivity per man on our farms. It caused the dislocation of some farm workers, but the change took place slowly enough that adjustments were accomplished without political interference.

The second great revolution in American agriculture occurred beginning in the 1920's, with the substitution of mechanical power for animal power. This change likewise brought a tremendous increase in productivity per worker. Again the change occurred slowly enough that we were able, in the main, to take it in our stride.

Agriculture is now in the midst of its third great revolution. It is changing from a way of living to a way of making a living. It is changing from a business of arts and

crafts to a business undergirded with large amounts of science and technology. Productivity per worker on our commercial farms is increasing phenomenally. Still greater increases lie ahead, as we substitute more capital and technology for labor.

THE DILEMMA WE FACE

The dilemma we face, therefore, is this: Will the people who man the farms of America be permitted to share fully in the benefits growing out of modern science and technology, or must they live with a ceiling over opportunity imposed by governmental programs designed to maintain small, inefficient, often peasant-type production and living units on the land?

The industrial revolution of the past half century bypassed much of agriculture. The agricultural industry, even though mechanizing and increasing its output per worker remarkably, still remained organized typically around the relatively small entrepreneurial family-type unit. In this respect the industry was, and still is, fairly unique among the major industries of America. A large number of these individual units—perhaps more than half of them—are so small or so inefficient as not to yield their operators a living standard generally regarded as adequate. Yet they have survived, one way or another. The traditional institutional pattern of owner-manager-operator, combined in a single person, has not been seriously challenged by developments associated with the industrial revolution.

The present agricultural revolution, resting on basic science and closely allied with the widespread advance of automation in both production and distribution, is threatening the traditional pattern of owner-manager-operator all wrapped up in a single person.

This is the very basis for much of today's social and political unrest in agriculture.

FACETS OF AGRICULTURAL ADJUSTMENTS

There are five fundamental characteristics of the current agricultural adjustment which bear on the problem under discussion. These adjustments are the inevitable result of the scientific and technological revolution in modern agriculture. The pressure behind these adjustments is building up each year.

1. Capital requirements for agriculture will grow, in total, per farm, and per man. Capital requirements have now grown to the extent that it is becoming increasingly difficult for an individual, during his productive years, to accumulate a sufficient amount to finance an economically sized operating unit. This will become increasingly true in the decades ahead.

Many family commercial farms today have total capital investment exceeding $100,000. It's not uncommon to have capital investment approaching or exceeding $200,000 on family commercial farms in the Corn Belt.

Last year a group of 273 family commercial farmers throughout central Indiana kept records in cooperation with Purdue University. Their average size was 280 acres. They had a total capital investment per farm that exceeded $95,000. These farms used labor so efficiently that they averaged only 1¾ men per farm on an annual basis, including the operator. This means that on these farms there was an investment per worker in excess of $55,000. Many of the individual farms had an investment per worker that went up as high as $75,000 to $100,000. But the average for the entire group was $55,000 per worker. A comparable figure for investment per worker in American industry is approximately $15,000. This means that it takes between 3 and 4 times as much capital investment to create one agricultural job on our good family commercial farms in central Indiana as it does in American industry.

As agricultural science continues to advance, it is inevitable that the business units in agriculture will get bigger and bigger with still larger amounts of capital required. This trend cannot be stopped. Nor should it be. We must adjust our farm institutions and our farm programs to it, so as to capture such benefits as will flow from it.

2. The trend toward larger and fewer commercial farm units will continue. Machines will continue to displace men on our farms. We will produce more with fewer farms and fewer workers than at present.

This is not a new trend. It has been going on for decades. It has only been accelerated in the present decade. It will accelerate still more in the decade ahead. All the power of government and politics cannot stop it. Nor should it. It can only confuse the issue.

As our farms become larger and more specialized, with total investment per unit pushing hard against a quarter of a million dollars, there will be growing pressure on the combination of owner-manager-operator in one man, as the typical institutional pattern of farm operation.

We have departed from this pattern in the majority of other major business sectors of America. Time was we had many family entrepreneurial foundry shops, tailor shops, bootmakers, corner grocery stores, and yes, even automobile assembly plants. These have given way, in the main, to larger units, with more capital, with higher levels of management, with more specialization of labor, and, if you choose, with a higher degree of integration. In the main, when such changes have occurred, opportunities for profit and for higher living have increased for owners, for managers, and for workers. Some individuals were injured in the adjustment, but on the whole, society gained.

It is not necessary to dwell at length on the difficulty of passing a $200,000 farm unit intact from father to son, without pausing at least to catch one's breath as he passes the tax collector.

Moreover, if the son has to face the prospect himself of getting on top of this kind of capital structure, perhaps by paying off 2 or 3 other heirs in the family, he may choose to spend more of his current income in living and less in saving, than his father before him chose to do. This means that he will be not only willing, but anxious, to enter into some kind of financial arrangement whereby a third party puts up some of the capital, or perhaps becomes a financial partner, on a permanent basis, at the time of father's death.

Managerial capacity is even more difficult to pass from father to son than is accumulated capital. Management is now the critical factor in successful farm operation, and this means a highly specialized kind of management.

Fathers do not necessarily breed managerial capacity into their sons. A generation or two ago it was not difficult for son to apprentice under father and take over the family farm, provided son had a strong constitution and a propensity for hard physical work. The latter factors are no longer limiting. The limiting factor now is managerial capacity.

It is equally true that fathers don't necessarily breed vocational preference into their sons. With the growing tendency for farm youth to be educated beyond the high school, many farm-reared youngsters will have their vocational preference tipped away from the 3-in-1 farmer their father was. They might prefer to train themselves for manager, for manager-operator, for part owner-operator with some integrator supplying part of the capital and part of the management, or for some combination of these.

The point is that economies that inevitably come from specialized, well-financed, and well-managed farm units of this kind will make it increasingly difficult for the undersized, undercapitalized, undermanaged, quasi-self-sufficient farm unit to survive in the competitive struggle. The operator on such a farm will be under increasing pressure to improve his lot in life and better provide for his family by making vocational adjustments rather than agricultural adjustments.

This kind of vocational shift has been going on for generations. It will accelerate in the decade ahead.

3. Management has become the key factor in successful farm operation: This is in sharp contrast to a generation or two ago, when the farm unit was much more self-sufficient than now, with much less capital involved, with much less science applied, and with many fewer critical managerial decisions to be made.

The typical cycle of farm ownership and operation under our present system of fee simple ownership by individuals is essentially the life cycle of an individual. In the main, our farms need to be rather completely refinanced each generation. But still more important, with the process of refinancing usually comes a shift in management and operation. This is seldom accomplished without considerable disruption of the farm as a going concern. This disruptive process in transfer will increase as the size of unit grows, as financing becomes more difficult, and as the importance increases of maintaining a unit large enough to be economically efficient.

Industry has met this problem by having divisible shares of ownership which in many cases are not even remotely related to management or to operation. This permits passing ownership from one generation to the next without disrupting management or operation. This permits the accumulation under single management and single operation, or under single management and multiple operation, of units so large as to be beyond the capacity of the ordinary individual to accumulate in his productive years, and yet large enough to attain the economies associated with scale of operation.

The pressure is in this direction in commercial agriculture.

This does not necessarily mean the growth of corporate farms. This may be accomplished in a number of ways. We shall see the growth of family shares of ownership of the family farm, instead of placing the farm in an estate to be sold as a unit. The family shares will be transferable, so that one of the heirs, wishing to convert his inheritance to some other form of property, may sell his share to a third party who may be entirely outside the family. But in this way the farm unit will remain intact. Thus what starts off as essentially a family-owned farm may end up as a farm under group ownership, but still as a single unit and single operation, with single management for the entire unit. Increasingly, on units of this kind, management will be provided by a professional management group, standing between the individual owners and the operator of the farm. This is, of course, a kind of integration we have seen develop in recent years, although we haven't called it by that name.

Another way of meeting this problem is single operation of multiple tract ownership. The operator may be either a part owner or a complete tenant. In either event, he shares with others part of the traditional owner-manager-operator function. He surrenders certain freedoms and privileges in the process, but he gains greater rewards in return.

It is obvious from the above analysis that we will continue to develop a professional management group in agriculture. This

won't necessarily be at the level of the general professional farm manager. The big growth will be in enterprise managers. After all, integration generally involves single enterprises, not whole farms.

Witness the managerial arrangements in contract broiler production, fruit and vegetable production under contract with canneries or freezing plants, and other specialized types of agricultural production where management can be easily separated as a package and assigned to someone other than the producer himself.

This may alter the traditional entrepreneurial, risk-taking function of the individual farmer. It may even move him in the direction of a quasi-riskless, semiguaranteed wage earner. But this is not necessarily bad, per se. He may be, and frequently is, better off this way than he was before.

We often pride ourselves on being a nation of entrepreneurs. But we really aren't. We are no longer a Nation of self-employed people. Of our total personal income payments in this country, more than two-thirds now come from salaries and wages. Less than one-sixth comes from rents, interest, and royalties—payment for ownership of property. Likewise, less than one-sixth arises from entrepreneurial income. In this are included farmers, small shop owners, self-employed artisans, and the like. The percentage of our income from entrepreneurial sources is constantly decreasing. But this doesn't make us a poorer Nation. We grow constantly wealthier, in the aggregate and on a per capita basis, as this shift progresses. Therefore, we should not automatically condemn as bad for agriculture a change which has really been beneficial to the rest of the economy.

4. The commercial farm will increasingly assume the characteristics of a manufacturing establishment. In these farm units the manager will spend much of his time and energy assembling packages of technology which have been produced by others on a custom basis. The share of total farm receipts spent for production items will increase still further, the gross margin per dollar of receipts will become narrower, and profits will depend increasingly on growing volume. This will place still more pressure on the smaller and less productive farm units.

5. Our countryside will be "rurbanized." Our modern science and technology have made it possible for farm and city folk to live alongside each other in our newly "rurbanized" communities. The effect of the resulting intermingling has been that there is no longer a clearly defined farm population and an industrial population, especially within 40 or 50 miles driving distance of our big industrial centers, and that includes practically the whole eastern and central parts of the country.

Today the commercial farmer not only takes on the financial aspects of a big businessman, but because he now associates with businessmen and laborers who live nearby him in the country and whose children go to the same school, increasingly this farmer is beginning to think like they do.

For many years in our city communities the doctor has lived beside the lawyer, beside the machine operator, beside the bricklayer, beside the schoolteacher, and each has lost his vocational identity as a member of his community. So it will tend to be with our commercial farmers in the newly "rurbanized" communities. The farmer-businessman will live beside the urban businessman, the urban industrial worker, and the urban professional man, with a decreasing emphasis on vocational differences among them.

Ultimately they will lose their vocational identity as members of the community. At this point farming will no longer be a way of life, but will be a way of making a living, just the same as other business enterprises.

THE POLITICAL PREFERENCE FOR SMALLNESS

Political leaders will resist the trend toward large, well capitalized units in agriculture, both in their oratory, in their congressional hearings, and in their legislation. The philosophy of the small, owner-operated family farm is deeply ingrained in our social and political mores. The controversy over this issue is often more emotional than economic. Political pressures will continue to be on the side of maintaining small family farms, even though modern technology dictates strongly that family farms become larger.

Witness, for example, the language in the report of the Subcommittee on Agricultural Appropriations of the House of Representatives issued March 28, 1958, as report No. 1584. I quote from page 4:

"ELIMINATION OF SMALL FARMER NO ANSWER

"A job in town is no answer to the problems of the low-income farmer. * * * Yet the principal efforts of the department (U. S. D. A.) during the past few years have been directed toward urging farm families to obtain off-farm employment and to move off their small farms.

"To leave the farm for town under present conditions would only swell the unemployment rolls. * * * As a matter of fact, it may soon be necessary to start thinking in terms of moving people back to the farms where they can at least find food and shelter.

"Further, moving the small farmers off their farms will have very little effect on the level of agricultural production. The small farms contribute very little if any to surpluses. * * *

"Therefore if all small farmers were removed from their farms, and their land were allowed to remain idle, the maximum possible reduction of surpluses would be 9 percent. It is probable, however, that land released from small farmers would be added to larger producing units which, being more efficient, would increase production on that land and thereby further increase surpluses."

Seldom has the language been plainer in any congressional report that political influence will be on the side of preserving small, inefficient, low-income units on the land, even though it is clearly indicated that agricultural efficiency would be increased by reversing the trend and even though it has been clearly demonstrated that farm families who find themselves in this situation and who can make vocational adjustment usually improve their economic status.

There is no prospect that ambitious politicians in Congress will stop demagoging the emotionally explosive family farm issue, any time in the foreseeable future.

On the other hand, we are all familiar with the fact that something over half of our farm units in the United States are so small or so inefficient that they don't yield their operators a decent standard of living. It's economically impossible for them to do so.

LET'S BE SENSIBLE, NOT EMOTIONAL

We must help the marginal farmer and the operator of an undersized acreage to become a better and more efficient farmer, or failing that, to find opportunity in other fields where he is better suited and where his income opportunities are larger.

There are some people who just weren't cut out to be farmers, just as other people don't make successful machinists, carpenters, or salesmen.

It is not at all coldblooded to suggest to a farmer that he seek other employment if he can't make a good living in farming. It is really coldblooded to attempt through legislative programs to keep him tied to a farm which everyone knows is inadequate to provide a decent living for himself and his family. People in other jobs and in other professions take this kind of healthy competition in their stride. And they usually improve their lot in life. Many low-income farmers can and will do the same if they are given the opportunity, and if the politicians will stay out of their hair.

In many areas of the country, in the years ahead, there will be a job waiting in industry, a job with good pay, for the farmer or member of his family who finds that farming is not his long suit. And if his children want to go into engineering, into medicine, into teaching, or into the skilled crafts in the city, they'll find a position there when they finish school. There's nothing dishonorable about this kind of vocational shift. It has been taking place ever since the founding of the Nation. Without it, our high level of living would have been impossible. We would have been a nation of peasants, with each family tied to its small acreage of land. We would have advanced little beyond the current status of major agrarian populations in the Near East and the Far East.

Most of our low-income farm families on our more than 2 million small-scale, part-time, or residential farms get little or no direct benefits from price support and commodity stabilization programs. They are almost completely bypassed by the expensive commodity price-support programs the Government operates. Likewise, the Soil Bank doesn't have much to offer them. By the same token, their hope does not lie in easier and less expensive credit.

A large share of these farm units, although classified in agriculture, are operated by farm people who really need more opportunity to improve their situation either through enlargement of the individual farm business or by additional employment off the farm. Many of these people are so situated that the solution of their problem must be found outside agriculture. Indeed, for all practical purposes, many of them have already left agriculture. We just haven't stopped counting them. They are increasingly turning to off-farm employment as their principal sources of income. Yet, unprincipled politicians will continue to agitate their nostalgia for the smalltime farming of yesteryear.

At the end of the Civil War, President Lincoln instructed General Grant to disband the Army and see to it that every soldier who wanted it could have 40 acres and a mule.

A CEILING OVER OPPORTUNITY

The modern counterpart of this philosophy is found in the politics of equal shares, when the Government rations the right to produce wheat, cotton, rice, tobacco, peanuts, and corn—the six basic commodities.

It becomes increasingly difficult for the individual operator effectively to apply sound management principles and to take advantage of advancing science and technology available to him.

Consider for a moment what production allotments are doing to some of our farmers. The rationing of the right to produce among smaller and smaller production allotments results in a large number of relatively inefficient production units. This tends to raise unit production costs for the entire production. As a result, important sectors of agricultural production, in our most sicentific and mechanized agriculture in the world, now find they are being undersold in foreign markets by underdeveloped areas of the world.

In attempting to eliminate the risk of price variation, the system of high price supports we have been following for our basic crops has sacrificed income stability. In other words, we are in danger of sacrificing income security for the illusion of price security.

This is a risk agriculture cannot afford to carry. Yet it is a path inevitably trodden by the high price-support politican. Under this system, increasing numbers of growers who are efficient, ambitious, and capable, must live with a ceiling over opportunity imposed by their Government.

When we have relatively little Government interference, and the dollar bill is used as a ration ticket, each individual is issued tickets roughly in proportion to his contribution to society. There is a strong incentive for everyone to maximize his personal contribution in order to secure a greater claim against the total product of society. But when Government takes over and rations the right to produce or the right to consume, a new criterion is established in the distribution of such rights. Politics dictate that we move in the direction of equal shares for everyone. Under this system we experience a gradual impairment of the individual incentive to produce and to grow.

Because prices and quotas are nearly always fixed with reference to a historical base, it is difficult if not impossible to maintain the flexibility in fixed prices necessary to permit desirable adjustments to changing technology. This nearly always means less efficient utilization of resources than would occur under a free pricing system.

Let us sit for a moment alongside producers of our so-called basic crops and think through their problems. Many such producers have so small an allotment that they find it difficult to meet operating and living costs with production so curtailed.

A cotton farmer with his 3-acre allotment, a tobacco farmer with his half-acre allotment, or a wheat farmer with an allotment of only 60 percent of what he used to grow, needs something besides 90 percent of parity. One hundred percent of parity won't solve his problem. There isn't much that any kind of price support program can do for him. His big need is for an opportunity to expand production. But his Government prevents him from producing enough to make a decent living.

A GOVERNMENT PERMIT TO FARM

Let us consider for a moment the case of a wheat farmer and his son. This is a farmer who has high yields, high quality, and low-production costs. He is a good wheat farmer.

He has taught his son how to be a good wheat farmer also. His son decides he wishes to become a wheat farmer, and follow the vocational footsteps of his father.

How can he do that in America in 1958? There are 3 ways, and only 3 ways:

1. The son can take over the production quota assigned his father, as his father retires from the wheat business.

2. The son can purchase the neighboring farm and take over the quota assigned to that farm, as his neighbor retires from the wheat business.

3. The son can marry a quota, as father-in-law retires from the wheat business.

There is no other practical way for a young man to get started in the wheat business in this country today, or the cotton business, or the tobacco business, or the rice business, or the peanut business.

This means that, for all practical purposes, such a young man must get a permit from his government before he can follow in the vocational footsteps of his father.

This is not the way to encourage the beneficial adoption of cost-reducing technology in agriculture.

This is the pathway that inevitably leads toward a peasant agriculture.

TECHNOLOGY WILL WIN IN THE END

Many agricultural and political leaders are frightened by the technological changes taking place in agriculture. They should not be any more wary of these changes than of other economic and sociological changes occurring in modern society.

Change is the law of progress. The challenge which faces us is to direct the change along constructive and beneficial channels. There is much good in the changes occurring in modern agriculture. With proper direction, they will result in increased production and distribution efficiency, added control of quality, a more even flow of product seasonally and geographically, less risk of price and income variation to the producer, more rapid adaptation to scientific and technological innovations, and increased per capita incomes to those producers who are able to grow along with the dynamic agriculture of our day.

It is clear from the preceding analysis that the forces of economics are and will continue to be on opposite sides of many of the broad changes engulfing agriculture. In this engagement, politics will fight a delaying action. They will neither stop nor reverse the economic trend. They will only delay and confuse it. In the final analysis, the economic forces working in this process will be overwhelming.

Our problem, therefore, becomes one of intelligent analysis and direction of the future, not cowering fear of it.

None of us would want to live under the economic institutions which prevailed just a short 20 years ago. Yet I am confident that some of us in this room, 20 years ago, vigorously resisted changes which were then occurring in the patterns of production, processing, and distribution. As we look back now, we wonder why.

Likewise, 20 years from now we'll look back on 1958 and be a little amused that we were so fearful of change, rather than directing our energies toward channeling change down beneficial pathways.

It has been said that the proponents of the status quo are often the villains of history.

Those who resist inevitable change frequently perish in the process.

Those who manage our agricultural production, processing, and distribution firms are challenged to give intelligent direction to the changes ahead, so that our great food and fiber industry will function even better than now.

Those who man the political battalions in our legislative halls should be challenged to do likewise.

False Race Propaganda, Hurting United States Overseas, Spread by Our Own Side

---

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1958

Mr. THURMOND. Mr. President, it has been a popular thing in some areas to say that racial separation customs in the South have inspired much anti-American propaganda overseas.

The News and Courier of Charleston, S. C., has been diligent in exposing the fallacies of this argument and in pointing out that an honest and undistorted presentation of the facts would be of great service to American interests abroad.

I ask unanimous consent that an editorial entitled "False Race Propaganda, Hurting United States Overseas, Spread by Our Own Side," printed in the News and Courier for May 15, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FALSE RACE PROPAGANDA, HURTING UNITED STATES OVERSEAS, SPREAD BY OUR OWN SIDE

Antisouthern propaganda, which brought bayonets to Little Rock and which still threatens chaos to public school systems of Southern States, is backfiring against the United States as a whole on the international scene.

Evidence is mounting that the racial issues stirred up for domestic political purposes are being turned against American interests abroad. Instead of playing up the benefits enjoyed by the Negro race in the United States—far greater than those enjoyed by Negroes elsewhere in the world—the antisouthern propagandists have ground out horror stories to inflame northern voters.

Now the propagandists are trying to undo the damage. Efforts to patch up the reputation of the United States will be made, according to a dispatch to the New York Herald Tribune, at the forthcoming International Labor Organization session at Geneva. The dispatch says that Secretary of Labor Mitchell will present a brighter side of race relations, stressing the progress made by Negroes in literacy and earning capacity. More Negroes own automobiles in the United States, for example, than are owned by all 216 million Russians.

Heretofore it has been popular to say that racial separation customs in the South have been a cause of anti-American propaganda overseas. Much of that propaganda has been circulated by Americans themselves.

The News and Courier in the past has pointed out fallacies in the argument that racial separation should be abandoned on account of the effect it might have on the people of Africa, Asia, and other lands. Those peoples well understand the differences among races, for they have experienced the same thing themselves. The caste system persists in India and elsewhere.

Of greater significance was the use of bayonets at Little Rock to suppress southern resistance to Federal orders. Subject peoples over the world at once recognized this use of naked force. Even Mr. Nehru of India said he thought the United States Government made a mistake.

Corroborating our viewpoint was a recent dispatch from Versailles, France, by our correspondent, Warrington Dawson. From his vantage point Mr. Dawson could see the effect of American propaganda overseas.

"At the moment when violent trouble broke out at Little Rock," he said, "the propaganda circulated by services under the control of the administration but paid for by American taxpayers was bitterly and aggressively partial. Such considerations as American national interests and the influence of the United States in Western Europe were ruthlessly swept aside for the sake of proclaiming to the world the purity and righteousness of the administration. This policy did lasting harm to America as a whole."

Some of the current wave of hatred, Mr. Dawson says, thus was started against Americans by themselves. When the facts of race relations in the South are viewed without distortion, the falsity of the propaganda becomes as obvious as the harm it has created.

A New Look at the Budget

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by the Honorable Maurice H. Stans, Director of the Budget, before the National Rivers and Harbors Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NEW LOOK AT THE BUDGET, ADDRESS OF MAURICE H. STANS, DIRECTOR OF THE BUREAU OF THE BUDGET, BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C.

I have been Director of the Budget for a very short while, as most of you know, a bare 2 months, to be explicit. I wouldn't have believed it possible, if anyone had told me that a budget so carefully and conscientiously compiled in January would be hardly recognizable a few weeks later.

Now, you and I know that in a dynamic economy the factor of change is always to be reckoned with. The budget is both a long-range estimate of income and outgo, and a work program for the Government sector of the Nation's economy. In any private business, the best laid plans are likely to be upset by shifts in consumer preferences, market conditions, and unforeseen requirements over and above a normally adequate cushion of reserves.

This is what has now happened to the Federal budget. Our income is down, our defense costs are up, antirecession measures are underway, and deficits of serious proportions confront us. Simple prudence compels us to rethink our work program and look critically at each one of the additional expenditure proposals being urged upon us.

I have said we must reckon with the factor of change. This does not mean that we either propose to fight change or be overwhelmed by it. Rather, it means that we have to accept it within a perspective that measures its meaning, its needs, and its probable duration. This is far from a do-nothing psychology; we are doing plenty, but we are doing it with our eyes open.

In my meeting with you today, therefore, I want to tell you something about the budgetary situation the country is facing at this time and its implications for the years to come. I hope that by doing this I can help to clarify some of our fiscal problems and how we might best approach them. Within this general setting, I want to talk about our public works programs, and more specifically about those concerned with water resources.

A year ago, a great deal of indignation was voiced throughout the country about a Federal budget totaling almost $72 billion. A lot of pressure developed to cut back the budget and get Government spending down below $70 billion in the next fiscal year.

Then last fall, while we were working on the 1959 budget, came the sputnik and increased awareness of Soviet technological progress. This resulted in a substantial stepup in our expenditures for defense purposes.

Of course, we too had been making great progress in shifting to modern weapons and reshaping our military strategy over a period of years before the sputnik. Significant changes in emphasis were taking place and are continuing to occur in our defense programs. For example, over three-quarters of our procurement funds in 1959 will go for types of equipment which hadn't been developed or weren't being brought in production quantities as recently as 1955, the first full fiscal year after Korea. Our spending in 1959 for missiles will be about 4½ times greater than in 1955, while spending for military equipment of declining importance is decreasing substantially.

Because of our efforts during the past few years, we can now take advantage of the successful developments thus far and are adding immeasurably to the power of our forces.

Since the 1959 budget was prepared, we have found that certain high priority military activities can effectively be speeded up even more. The President therefore recently requested $1.5 billion in additional funds from the Congress, and defense expenditures are now expected to be higher than the $40 billion estimated in the budget.

With over half of the budget going for defense, we are determined to assure that this spending is devoted to sound and essential purposes and that pressures for pump-priming do not lead to unnecessary military expenditures. But there is no escaping the great budgetary cost involved adequately for the security needs of this country, given present world conditions. This is a cost we certainly must meet.

Even more striking than the increase in defense costs is the way in which the current economic setback has changed the budget outlook. The early signs of an economic downturn were just appearing at the time we prepared the 1959 budget last fall. We now have a better measure of the recession we are in and have taken various actions to help reverse it.

Substantial programs have been enacted, such as the new housing bill and the Highway Act. Authority has been granted to enable civilian agencies to speed up planned purchases of supplies and equipment. The executive branch has acted to accelerate defense contracting, housing programs, repair and modernization of Federal buildings, civil public works (about which I will say more in a few minutes), and various other activities. Various proposals are now pending, including those to extend present periods of benefits for the unemployed and to assist areas of high and persistent unemployment.

These actions and proposals mean rising expenditures. Therefore, with lower tax collections as well, the deficit in the current fiscal year will be bigger than we anticipated. Similarly, a large deficit—in the general range of eight to ten billion dollars, according to present tentative estimates—is in prospect for next year instead of the surplus we had planned.

Although we accept these deficits as inevitable now, if the Government is to do its part in promoting economic recovery, we can't close our eyes to what's ahead. Pressures are continuing for vast new programs which would commit the Government to large expenditures for years to come. Many of the proposals call for large-scale new public-works programs, even though these programs are already at a high level, and it would take a long time to get new projects started. Let's look briefly at this portion of the budget.

Here, a little perspective may be helpful. In the early 1820's, about the time the rivers and harbors program was started, Federal expenditures for public works amounted to about half a million dollars. By the early 1900's, when the National Rivers and Harbors Congress was founded, spending for public works came to about $40 million a year, with rivers and harbors work accounting for about half of this amount. Fifty years later the annual amount for all public works had reached more than $2 billion. In fiscal 1957, the total was $4½ billion. This increase of more than one-hundred-fold since the turn of the century far exceeds the general growth in national production.

The upward trend is continuing. The 1959 budget estimated more than $6½ billion for public works, including highway construction. This estimate is higher than any previous year's total except during World War II, when military construction hit a peak.

Now let's look more specifically at the water resources programs. They account for the largest segment of civil public works except for the Federal-aid highway program. Over the years the Federal Government has made large investments in navigation, flood control, irrigation, and related power developments. From the early 1820's through 1957, the Government has spent $11 billion for projects of the Corps of Engineers and the Bureau of Reclamation alone. More than half of this investment has been made in the last 10 years. By the end of 1959, the total investment will reach around $12½ billion. These are capital expenditures for construction only. They exclude the substantial amounts spent for operation and maintenance of the projects.

In the 1959 budget, construction expenditures of these 2 agencies were estimated at almost $700 million—higher than in any of the 5 preceding years. Recently, the Corps of Engineers and the Bureau of Reclamation were directed to provide for an orderly speedup of their rates of construction in 1958, and the 1959 budget was amended to provide additional appropriations to continue the expanded rates in 1959. Such actions reflect the belief that speeding up projects already underway can provide employment more promptly than new starts would. The result will be to increase expenditures in these years over the budget figures.

To complete the projects now underway will require expenditures of about $5 billion in the next few years. By 1960 and 1961 annual construction expenditures by the Corps of Engineers and the Bureau of Reclamation may well reach a billion-dollar level, even with no new starts. The completion of going projects will, of course, pave the way for new starts at a later time.

This administration is vitally interested in the orderly development, conservation, and use of the Nation's water and land resources. The President has continuously sought, with the cooperation of other public and private interests, to strengthen and improve resource programs at the Federal, State, and local levels. Recently he regretfully withheld his approval of an omnibus bill authorizing appropriations for rivers and harbors and flood control improvements. While the bill included many worthwhile projects, it included some which did not meet the requirements of sound projects. The President dislikes vetoing legislation. But he feels that he must meet his responsibility to follow an orderly and legally established process under which a project authorization is sought only after basic investigations have indicated its economic justification. Moreover, there should be adequate local cost-sharing to reflect local benefits resulting from the project.

Over the 50 years of its existence, the National Rivers and Harbors Congress has contributed toward the orderly development of our water resources. With your background of information and experience in this field, I am sure that you can be most helpful in the coordination of efforts to secure enactment of legislation—such as the President recently recommended in his letter of April 26 to Senator KNOWLAND and Representative MARTIN—which carries out these principles.

There is now a backlog of almost $8 billion of authorized river and harbor, flood control, and irrigation projects which have

not been started. Through mutual efforts of all interested groups, other justifiable work will be authorized within the framework of sound overall budgetary policies.

As you know, the budget as a whole includes a large variety of programs. We have programs for national security, for agriculture, for veterans, for natural resources, and for a host of other competing needs. Of necessity, these must all be weighed against each other and priorities must be determined on the use of the tax money we all pay. In that way we can plan to meet our urgent national responsibilities while keeping our financial position sound.

At the present time, with so many programs being considered as antirecession measures, we are moving rapidly toward $80 billion budgets, just a year after the loud outcry about a budget of $70 million. This could well mean extended deficit spending. Then the pendulum will swing the other way again and there will be great demands for economies and cutbacks in Government programs.

I am sure you will agree with me that it would be far better in the long run if the problems of the country could be dealt with on a more rational and consistent basis. To accept and deal with change does not necessitate violent ups and downs from year to year in an atmosphere of crisis over temporary conditions.

That is why I want to urge upon you that we must keep a sense of perspective about our national problems and the budget. The current recession should not be allowed to stampede us into hasty, ill-considered actions which will add unnecessarily to our future burdens. Let's not forget that the course of our type of economy depends in the last analysis on millions of economic decisions by individuals and businesses, made freely every day. The role of Government in this economic system should be to stimulate rather than to try to dominate private activity.

To perform this role wisely, the Government needs the understanding and assistance of everyone—individuals, business organizations, and local, State, and National groups. As citizens and as members of this Rivers and Harbors Congress, your continued cooperation can play an important part in helping to assure that our Federal investments in resources are devoted to those projects which contribute most to meeting national needs, with due consideration for our total fiscal situation. In this way, you will be making a vital contribution to the present and future strength of America.

Current Scientific and Political Issues: Russian and the United States

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1958

Mr. MARTIN of Iowa. Mr. President, Donald R. Wilson, the assistant publisher of the Albany Times-Union made an important contribution to our understanding of the current scientific and political issues involving Russia and the United States before the Women's National Republican Club in New York City on May 1. Mr. Wilson stressed that sputnik did not represent a new level of scientific achievement on the part of the Russians, rather it was a direct propaganda stroke.

Mr. Wilson said:

The Soviets, in launching sputnik, had not uncovered any new principles through basic research or theoretical science or mathematics. All the theoretical scientific principles needed for the launching of satellites had been developed years before.

I repeat that Russia merely saw the propaganda advantage of beating us to the satellite punch which we had already announced.

Mr. Wilson presented the political issues which must be resolved before a summit conference could contribute to the peace of the world.

I ask unimous consent to have Mr. Wilson's address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CURRENT SCIENTIFIC AND POLITICAL ISSUES: RUSSIA AND THE UNITED STATES

(Address by Donald R. Wilson, Assistant Publisher, the Albany Times-Union, Before Women's National Republican Club, New York City, May 1, 1958)

The scope of this subject, believe me, is more appalling to me than it is to you. After having worked with it for a little more than 6 weeks, the thing that surprises me most is that, in a moment of intellectual relaxation, I had the temerity to suggest it to Vada Horsch.

In picking such a subject, I am reminded of the knight of olden times who was said to have mounted his charger and to have ridden off in all directions at once.

Having embarked on such a hazardous project, however, I have no alternative but to try to reduce it to manageable proportions. In doing this, as I warned Miss Horsch from the beginning, I shall try to confine myself primarily to a mere analytical discussion. To announce hard and fast solutions to all problems would be not only a species of unjustifiable presumption upon the spirit and purpose of this occasion but could easily constitute a scaffold from which, in this distinguished audience, my political immaturity and naivete could be hanged for all to view and ridicule. However, at whatever risk, I shall be unable to avoid stating certain conclusions. Valid or not, they may at least serve the purpose of stimulating some discussion.

I must plead for patience, indulgence, and tolerance. More than that, however, I plead for your critical appraisal of the issues and for your own constant endeavor in conscientiously searching for their solutions as a part of the great democratic process which spares no citizen from the challenge of his Nation's problems, nor from the responsibility of thinking his way through to their solution.

We are now at the crossroads of civil destruction and divine destiny. Two segments of mankind are trodding these roads. One segment, under the evil genius of Societ amorality, is dedicated to the erasure from the face of the earth of every vestige of man's partially successful efforts to move closer to the divinity which created him and gave him the potential of governing himself in his personal, political, economic, and social relationships. The other segment, represented by the United States, seeks to dignify mankind and exalt him in his organized efforts to pursue these relationships under law and in peace.

If you can picture these crossroads and if you can picture these two segments of mankind walking these two roads, you can envision a meeting at the summit having nothing to do with letter writing or foreign ministers' meetings. This summit is inexorably created by the clash of ideologies.

This is the ultimate issue. It is an irreconcilable one. On this there is no room for negotiation or compromise. One or the other of these two ideologies will be destroyed. To paraphrase Lincoln, the world cannot exist half-slave and half-free; it must be all one or all the other.

We frequently lose sight of this ultimate issue. We frequently forget that on this we must either win or lose. By forgetting, our judgment of other issues (which are only byproducts of this fundamental one) and our role with reference to them becomes distorted and absurd.

It is, therefore, imperative that we so bear ourselves that we never weaken either our material advantages or our moral and ideological supremacy.

With this grim thought constantly before us, we have a frame of reference within which to place and by which to measure all the current scientific and political problems between the United States and the Soviet Union.

It is true that, in this day, scientific issues cannot be isolated from political ones. There is always an interplay between them. They are also intertwined with military and economic problems. The totality of them is a maze which must often appear impenetrable to those who carry the awesome responsibility of guiding our destinies. It is a tribute to them that they do not despair.

Prior to October 4, 1957, it would not have occurred to any of us to emphasize scientific issues between the Soviet Union and the United States. With the first sputnik, however, we immediately attached new importance to Soviet scientific creative abilities. Sputnik served to dramatize an assumed Soviet genius.

The first flurry of excitement all over the world led many to believe that we had suffered a major scientific defeat. Many immediately said that we had lost our scientific superiority. There were instant cries for a complete revamping of our entire educational process. Some inaccurate observers suggested that, although we were still tops in applied science, we had lost the lead in theoretical science and mathematics and so-called basic research.

The fact of the matter is that sputnik not only didn't prove any of these allegations, but it didn't even indicate them. The only defeat handed to us by sputnik was not a scientific one in any sense of the word. It was merely a propaganda one.

The Soviets, in launching sputnik, had not uncovered any new principles through basic research or theoretical science or mathematics. All the theoretical scientific principles needed for the launching of satellites has been developed years before. Sputnik was not a triumph of Soviet production genius. We, too, had developed a satellite and the means of placing it in orbit. These things being so, it could hardly be proved that sputnik constituted a victory over American education or technology.

I repeat that Russia merely saw the propaganda advantage of beating us to the satellite punch which we had already announced.

The only scientific issue raised by sputnik was resolved at the moment it was raised. It consisted merely of serving notice on us that the Soviets were working hard and competently in the field of science and should not be regarded as scientifically backward.

It has taught us not to assume blindly and erroneously that all things come to us first. It has taught us the truth of the old saw that brains are where you find them, and it has made us aware of the fact that there are some brains in Russia as well as elsewhere around the globe.

We are now alerted to the importance and the potential of space. We are aware of its military, its psychological, and its historical significance. We are aware of the power of science to influence our destinies and lift

our horizons. We realize now that we must constantly march in the vanguard of science. Our imagination must be stirred to its military consequences. Our lives depend upon it. But even more important than that, we must constantly seek its civil uses. Our future as human beings depends upon it.

That is the truly great scientific issue between the United States and the Soviet Union. Which of the two nations, while not neglecting the military indispensability of science, will progress most, in both theoretical and applied science, in making the powers of science available for the betterment rather than the destruction of mankind. Which will do the most to turn the talents of science to the use of mankind in providing new and better fuels, food, clothing, medicines, and all the host of other improvements to prolong life in dignity and prosperity.

Perhaps, I am wrong. Maybe this issue is not a scientific one. Maybe it is an issue of the humanities. Perhaps it is a mixture of both. I am sure of only one thing—progress in science will be made in both Russia and the United States. Victory and immortality will go to the power which makes science serve humanity best.

And just as that must be the role of our scientific competition, so must it also be the role of our international political behavior.

On international political issues, we are separated from the Soviet Union by wide chasms.

The major issue today is not whether there shall or shall not be a meeting at the summit. A meeting is merely a form. I don't believe that either President Eisenhower or Secretary of State Dulles have any tendency whatsoever to exalt this or any other mere form. Their constant preoccupation must be with the maintenance of the right against the wrong. They must seek honor rather than expediency. They must raise freedom to victory and cannot succumb, in spite of all pressures, to blandishments which they know will only increase the power of tyranny and exalt enslavement.

As I told you earlier, the ultimate political issue between Russia and the United States is an historical one. Will the peoples of the world choose freedom with all its problems or will they choose the masquerade behind which hides enslavement with its moral, spiritual and physical death?

I am not here concerned with a description of the different geographical areas of the world in which this conflict rages. I am concerned with trying to distill the essence of the current issues which reflect this conflict in all geographical areas.

For example, one manifestation of this conflict concerns the importance of the roles being planned and played by both Russia and America in encouraging the inevitablity of the economic advancement of underdeveloped areas of the world.

Now, it is not my purpose to outline current arguments either for or against President Eisenhower's foreign-aid proposals. They are as well-known to you as they are to me.

My purpose is to emphasize that this is a realm in which we are committed whether we like it or not.

I think it is unwise to fix on the term "underdeveloped areas." I would rather hear them described as "developing areas." It would be wiser of us to describe them in terms of their aspirations rather than in terms of their present and passing conditions.

Make no mistake. They will develop. The only two economic forces in the world great enough to feed their aspirations are Russia and the United States. They must and will turn either to us or to Russia. Russia has already issued a challenge to us. The issue, then, is not whether we shall respond to the challenge but how, in responding, we not only serve the material aspirations of these developing areas but also demonstrate to them that, material growth alone, without personal, political, and economic freedom can end only in disaster. If we would truly serve them, we must find a method of binding them to the way of life which has made us strong enough to help them. If we divorce our material aid from our political ideology, we will have turned them over, regardless of all else, to Soviet enslavement. We cannot assume that they will see and adopt the greatness of our philosophy. It must positively be conveyed to them as a part of the whole package.

This is only one facet of Russia's economic challenge to us. By barter and trade arrangements she is assaulting our supremacy among all nations. She is trying, by getting a stranglehold on the economic throats of other countries, to drag them into political orbit.

Here again, there is no alternative to accepting the challenge. This is a part of the competitive area from which we must emerge victorious. We must demonstrate that our theory of life and government has produced an economic strength of sufficient greatness and with enough resilience to enable us to overcome the economic tricks of the Soviet Union.

We who are the world's greatest traders, manufacturers, producers and financiers must prove to a fearful world that our theory of economics will profitably operate to the advantage of the other nations and ourselves. This may necessitate a revision of some of our prejudices and thoughtlessness. If so, I say "good." This battle will not be won by adherence to old prejudices. It will be won by bold and imaginative measures based on our fundamental theories but enlivened by modern needs and circumstances of competition for economic markets and political opinion.

This, in part, also involves the issue of the reunification of Germany and political and economic freedom for Russia's satellites. It seems almost impossible to resolve these political issues. But the problem is not that of resolving the conflict of views; it is that of being victorious in maintaining our view. We cannot expect Russia to unloose her satellites voluntarily. This would be political and economic suicide for her. Our problem, then, is that of keeping such constant worldwide political and economic pressure on Russia proper, through every possible means, that Russia will find it impossible to sustain her satellites, and her satellites will find it economically and politically unprofitable to sustain Russia.

This would seem to call for our skillful usage of established institutions such as the United Nations, our progressive employment of financial and trade potentials, the constant strengthening of our political and economic theories and practices, and our never-ending effort to exploit fully the skills of propaganda.

If we succeed in all this, we shall make Russia desperate. As we do this, we increase the risk of driving her to resort to war. This is a risk we must take. In taking it, we must resolve to keep ourselves overwhelmingly strong militarily. We may dream of disarmament, but Russia has given us no reason to believe that she will seriously compromise the last hope she has in the event that all other competitive means to destroy us should fail.

Of course, Russia would like to trick us, if she could, into yielding advantages which we possess in this important field. That is why she announces abandonment of nuclear tests but scoffs at the idea of inspection to assure compliance. Pyramiding on that, she would like to get us to renounce our forward and indispensable military bases and to liquidate our association with other powers for the common defense of all. That is why she proposes banning nuclear weapons but insists that we dissolve our regional defensive arrangements and withdraw our troops from the advanced positions which they occupy under them. She would like to make fear of nuclear destruction a paralyzing condition precedent to political absorption. That is why she makes such menacing threats and then suggests nuclear-free zones first in central Europe, then in Scandanavia, next in Italy and Albania, and finally in all of Asia. She would like for the free world to wallow in the luxury of false security. That is why she suggests nonaggression pacts.

You may think that these are military issues. They may ultimately be. However, at the moment they are in their political phase. For that reason, we must be guided by realities. We must know one fear greater than the fear of nuclear attack and that is the fear of not being able either to meet it or retaliate against it. We may seriously consider disarmament, but only under conditions of such complete inspection that our security and that of our friends is in no way diminished.

We must not overlook the awesome power of conventional armaments, and with reference to them we must in no way diminish our capacity to spring to the defense of ourselves and our friends in the event of Russia's disposition to launch an attack with conventional armaments alone, either in localized or widespread aggressions.

In all this, we must stop crediting deceptive Soviet announcements as propaganda victories. They are not propaganda victories except insofar as we proclaim them to be. They are mere opening propaganda salvos. We must meet the Russian lies with American and free world truth, and we must believe in the conquering power of that truth.

The scientific and political issues between Russia and the United States are many. They add up to life or death. How shall we respond?

I say we shall respond with honor for ourselves, truthfulness in our utterances, confidence in our abilities, courage in our actions, without fear for the future, and with belief in the inevitability of our ultimate victory.

See Nothing, Hear Nothing

SPEECH

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12428) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1959, and for other purposes.

Mr. MULTER. Mr. Chairman, it is appropriate that in connection with the enactment of appropriations for the State Department, attention be directed to the administration of that Department.

It is putting it mildly to say that both in its policymaking and in its execution of policy there can be much improvement. No program can be successful unless properly administered, and every dollar appropriated will be wasted unless we do get better administration.

I cannot believe that the files of our State Department are not and were not filled with reports, all foreshadowing the sad events on the international scene about which we have every right to complain.

While we are made monkeys of, our State Department sees nothing and hears nothing, and what it says amounts to nothing.

The column written by Walter Lippmann which appeared in the Herald Tribune of May 15, 1958, succinctly expresses what most of us are thinking.

For instance, he said:

Once the Vice President and his wife are back home, and after all the official regrets and apologies have been received and accepted, the immediate question before us is how it happened that the Nixons were exposed to these outrages. It is manifest that the whole South American tour was misconceived, that it was planned by men who did not know what was the state of mind in the cities the Vice President was to visit. For what has happened should never have been allowed to happen, and those who are responsible for the management of our relations with South America must answer to the charge of gross incompetence.

It is essential that this charge be investigated either by the Foreign Relations Committee of the Senate, or, perhaps preferably, by a panel of specially qualified private citizens. We must fix and we must correct the causes which led our officials into this fiasco—into what it would not be exaggeration to call a diplomatic Pearl Harbor. Unless and until this is done, there is no chance that we shall profit by the lessons of this bitter experience. We must know why the planners of the trip were so ignorant, so ignorant about so many countries, so ignorant of what it is suitable and what it is not suitable for the Vice President of the United States to do when he goes abroad.

Before we can do anything to improve our position in Latin America, we must deal with those who have made such a mess of our position.

The situation in Latin America is as bad as it is in other parts of the world. With reference to the situation in the Middle East, Mr. Lippmann said:

It is almost certainly a coincidence that simultaneously there are crises in Lebanon and in Algeria and that in each there have been violent manifestations against the United States. In South America the hostility which has been shown is directed primarily at our own acts of omission and commission. In Lebanon and in Algeria we are not principals but are entangled in the quarrels of others.

About Lebanon the evidence is not clear but there are grounds for suspecting that there are Syrians and Egyptians who are intervening in a bitter internal struggle which centers on the reelection of President Chamoun. There are reports that as many as 500 have infiltrated themselves into Lebanon. The violence they are perpetuating has a strong resemblance to the raids—for the present suspended—against Israel.

So far as we are concerned, it is clear enough that the Eisenhower doctrine, which has a lot of fine print underneath its resounding declarations, does not apply. The Lebanese case is one for the United Nations, it may be for a special session of the General Assembly.

The events in Algeria are the most important of all. They may well be the central crisis in the North African story, the crisis which leads either to catastrophe or to the beginning of recovery. Until now there has never been a government in Paris which was strong enough to win the Algerian war or strong enough to negotiate a settlement of the war. The center parties in France, which lie between the Communists on the left and the semi-Fascists on the right, have been paralyzed by a very powerful minority composed of the French settlers in Algeria, the vested interests in France which do business there, and portions of the French Army.

In the present crisis, the adventurous and extremist wing of this minority have seized power in Algeria and are attempting to impose their Algerian policy on the government in Paris. It is hard to see how this issue can be compromised, as it was a little while ago when the Tunisian town of Sakiet-Sidi-Youssef was bombed and the Paris government did not dare to disavow the act. For then the defiance of the French Government was concealed. Now the defiance is open and avowed.

So there is at issue now the sovereignty of the French Republic.

I hope that the State Department will learn from the lessons of the last few days.

Retirement of Edwin B. Fred, President, University of Wisconsin

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. PROXMIRE. Mr. President, the president of the University of Wisconsin is retiring this year. President Edwin B. Fred has been a dedicated scientist and a splendid university president. Personally, I have particular admiration and respect for the thoughtful, courageous, and persistent fight Dr. Fred made at the University of Wisconsin for freedom of speech and freedom of thought and action. Dr. Fred's presidency has coincided with an era of Wisconsin politics in which freedom of expression in our State suffered its most serious challenge. During the time of trouble this quiet, scholarly, dedicated man could always be found battling for full freedom of thought and expression.

Mr. President, I ask unanimous consent that an eloquent editorial from the Milwaukee Journal entitled "Dr. Fred: Gentleman, Scholar," written on the occasion of Dr. Fred's retirement, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DR. FRED: GENTLEMAN, SCHOLAR

In an expression of respect and affection, retiring President Edwin B. Fred is being honored at a University of Wisconsin student dinner in Madison today. Nothing just like this ever happened at the university before.

Always and above all, Dr. Fred is the real gentleman and real scholar, and sincerely modest. When he was offered the university presidency 13 years ago the regents had to press him to accept.

He had distinguished himself at Wisconsin as a scientist. Among students and Wisconsin people generally, however, he was almost unknown.

Reluctantly, almost apologetically, he took on the ardous duties of the presidency of a huge public university. He was hesitant, cautious, painstaking and humble almost to a fault. His way was the way of the research scientist—to get every available fact from every available source, and to weigh them thoroughly and deliberately before venturing a conclusion.

Dr. Fred never liked public appearances and speechmaking, and still shuns them. He confided that he dreaded the struggles with budgets and the legislature. He has, however, demonstrated exceptional ability to cope with both administration and legislators. It was his dogged insistence, for example, which finally won for the university the new library it had so long needed.

His straightforwardness, sincerity and personal charm all have had great part in winning support for the university, not only from the legislature but from industry, alumni and other sources. Dr. Fred's efforts have been as tireless as his patience has appeared inexhaustible. He has been unfailingly courteous, kindly, and fair.

No wonder students have grown unusually fond of him. Among all who know Dr. Fred at all well, who hasn't? So there are very many Wisconsin people who would like to add an extra flower to the deserved bouquets Dr. Fred is receiving at the time of his retirement from the presidency, and are hoping that, as president emeritus, he will still be long with us.

Banking and the Rural Redevelopment Program

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. MARTIN of Iowa. Mr. President, a very significant booklet has just been issued by the American Bankers Association. The title is "Banking and the Rural Development Program." This is the program now underway in some 30 States, where there are small farms, underemployed farmers, and low family incomes. Mr. President, I ask unanimous consent that the contents of this booklet be printed in the Appendix of the RECORD.

One of the distinguished bankers of Iowa is chairman of the agricultural commission of ABA that issued this constructive and useful statement. I refer to Harry W. Schaller, president, Citizens First National Bank, Storm Lake, Iowa.

This emphasis on the importance of the rural development program becomes especially impressive when the list of the able bankers on the commission is studied, along with their advisors.

There being no objection, the booklet was ordered to be printed in the RECORD, as follows:

LIST OF BANKERS AND ADVISERS

S. E. Babington, president, Brookhaven Bank & Trust Co., Brookhaven, Miss.

Frank W. Black, executive vice president, the Peoples National Bank of Barre, Barre, Vt.

Richard H. Clark, assistant vice president, Walker Bank & Trust Co., Salt Lake City, Utah.

William C. Clary, Jr., president, the Bank of Toccoa, Toccoa, Ga.

John H. Crocker, chairman of the board and president, the Citizens National Bank, Decatur, Ill.

L. R Driver, president, the First National Bank in Bristol, Bristol, Tenn.

Charles K. Johnson, president, the First National Bank, Artesia, N. Mex.

Royal L. Mullins, president, the Wolfe City National Bank, Wolfe City, Tex.

John W. Scott, president, Valley Bank of Grand Forks, Gilby, N. Dak.

Roy G. Shaull, vice president, the Harrisburg National Bank, Mechanicsburg, Pa.

Rex B. Stratton, assistant vice president, Security Trust & Savings Bank, Billings, Mont.

ADVISERS

Dr. Van B. Hart, professor of farm management, New York State College of Agriculture, Cornell University, Ithaca, N. Y.

Dr. O. B. Jesness, professor and head emeritus, Department of Agricultural Economics, University of Minnesota, St. Paul, Minn.

W. A. Sutton, director, agricultural extension service, University of Georgia, Athens, Ga.

Dr. Tyrus R. Timm, head, department of agricultural economics and sociology, Texas A. & M. College, College Station, Tex.

Dr. G. B. Wood, head, Department of Agricultural Economics, Oregon State College, Corvallis, Oreg.

E. T. Savidge, deputy manager, American Bankers Association, New York, N. Y.

Lawrence E. Kreider, assistant secretary, New York, N. Y.

BANKING AND THE RURAL DEVELOPMENT PROGRAM

Most of us don't realize that a majority of American farmers earn very little income from their marketings. Fifty-six percent of our farms produce only about nine percent of marketed farm products. Families on these low-production farms receive little help from traditional programs of price support.

More than anything else, these farm families need greater opportunity—opportunity to upgrade their skills, to find work supplementing farm income, to obtain capital permitting them to make fundamental changes in farm production.

Put another way, their long-term prosperity depends on local job opportunities, community services, especially in the fields of education and health, and progressive local leadership that can aid them in adjusting to modern-day trends in farm production and family living.

Agricultural improvement alone will not solve the complex problems of this one-half of the farm population.

THE CHANGING RURAL ECONOMY

The past decade has witnessed tremendous changes in many of our rural areas: industry expanding and moving into previously all-rural counties; greatly increased job opportunities for farm people; better schools and training programs; improved farming, using new methods and producing higher value products; and rural community planning and long-range programs of economic betterment.

All these activities make up a little-known little-heralded farm program that is improving, permanently, the living standards of people in hundreds of rural counties throughout the Nation.

Rural development is speeding up these vital improvements and widening their impact to include rural areas with many underemployed people—those who don't earn much money from either farming or nonfarm employment. Secretary of Agriculture Ezra Taft Benson has said the rural development program has three basic aims:

1. To strengthen industry in low-income rural areas and widen the range of off-farm job opportunities.

2. To help families who want to stay in farming gain the tools, land, and information that will permit them to farm successfully.

3. To help all people in these areas arm themselves with adequate training and good health.

This fundamental approach to the farm problem has now been started in 62 counties and 8 trade areas (2 or more counties each), in 30 States, in all regions of the Nation. The program is on a demonstration or pilot basis, to gain experience and information which will help all Americans interested in the welfare of rural people obtain a clearer picture of what can be accomplished to improve their living conditions.

President Eisenhower said recently in a special message to Congress, "Though only about 3 years old, the rural development program has already achieved much, and with the increased emphasis planned for the coming year, progress promises to be more rapid in the future."

NOT A GOVERNMENT PROGRAM

Local leaders in agriculture, business, banking, civic groups, church affairs—they are the vital element, the make-or-break core of the rural development program. For rural development is not just another Government farm program. Success depends on the initiative and willingness of leaders in rural towns and farm areas who contribute their skills and resources to this work. Rural development has been termed a people's program. And this it is, organized, guided, and made successful by those with the greatest stake in the economic and social development of the areas in which they live.

Take Choctaw County, Okla., for example. This is a rural county in the southeastern part of the State, with many families on small, low-income farms. The Choctaw Rural Development Committee is made up of leaders representing all major areas of the economy, including farmers' organizations, the chamber of commerce, banks, the city planning commission, schools, the ministerial alliance, and newspapers.

It's the policy of State and National Government agencies to cooperate with and support the work of citizen committees, such as the Choctaw County group. Bringing local people into day-to-day planning and project development that involves many different agencies is a unique feature of rural development.

WHAT'S BEING ACCOMPLISHED

In a report published late in 1957, Secretary Benson cited more than 350 new development projects in agriculture, forestry, marketing, industry promotion, health, and vocational training which are going forward due to the initiative or support of rural leadership in the pilot countries. Here are a few typical projects:

A boat manufacturer has started a small factory in Perry County, Ind., which has resulted in jobs for 50 rural people.

Vocational training in such skills as welding, electrical wiring, and plumbing for 500 people in isolated Kentucky rural counties.

Employment for 130 people in a new poultry processing plant in a Texas trade area.

Increased poultry production on farms in Chesterfield County, S. C., bringing 58 new job opportunities to the county.

Interviews of more than 1,000 farm families in Arkansas' 3 pilot counties to obtain accurate information on the need for off-farm employment.

A 2-day exhibit of handicrafts produced on small farms in Missouri's Taney County which brought visitors from 7 surrounding States and sales to several major buyers.

Production and marketing of peppers, the first commercial crop in an isolated Tennessee community, which grossed $40,000 for farmers the first year.

Reforestation in a Mississippi county, principally through the work of young people who helped set 200,000 pine seedlings.

Community organization is the basis of rural development. Many of the problems such as market development and industrial expansion, however, cannot be solved on a community or county basis. These can best be solved on an area or trade area basis.

Bankers play an important role in area development because of their trade area interests. As a result of an area organization, a country banker who was chairman of a dairy committee led a group of over 150 dairymen and other interested persons on a tour to processing plants in the area. The dairymen were impressed with the importance of the dairy industry to the entire area and heard the processors indicate that they could use more milk.

Industrial expansion has continued at a rapid rate and many new industrial plants have been located in areas that were mainly agricultural in the past. Such activity has increased the off-the-farm employment opportunities and has tended to insure a balanced economy between agriculture and industry.

A United States Chamber of Commerce report on the relationship between industrial growth and general community development measures the effect of new industrial jobs to a community.[1] The report indicates that 100 new factory workers meant the following to their communities: 296 more people, 112 more households, 51 more schoolchildren, $590,000 more personal income per year, $270,000 more bank deposits, 107 more passenger cars registered, 174 more workers employed, 4 more retail establishments, $360,000 more retail sales per year, 31 fewer agricultural workers.

IT'S A BANKER'S BUSINESS TO KNOW THE ECONOMY

In many rural development counties and areas, officials of banks are serving on development committees and councils. Leaders in the economic life of their communities, they are in a unique position to see both agricultural and industrial potential. It's their business to know what can be done (and, just as important, what can't be done), given the resources of their community and the skills of the people there. Through the leadership of a country banker, a poultry-processing plant was built at Dobson, N. C. Over 100 persons are employed in operating the plant. Several million dollars per year is being paid producers of broilers in the local bank's trade area.

The banker, along with the minister, the educator, the farm organization leader, and the county agent is a key person. A local program stands or falls on the interest and initiative of these people.

Through a variety of activities, State and local bankers and their organizations can join with others in the rural development program and other area programs to promote long-range agricultural and industrial improvements in underdeveloped rural areas.

In many States, representatives of State bankers associations are participating in the meetings and discussions of State committees formed to help coordinate the work of agencies and organizations which are contributing to projects in demonstration counties.

Representatives of State bankers associations might cooperate on a review of business and industrial needs in underdeveloped rural areas. Such a review could lead to a better understanding of the situation in these areas.

---

[1] What New Industrial Jobs Mean to a Community, Chamber of Commerce of the United States, Washington, D. C.

It might also produce guidelines for business loan policies of banks and encourage greater participation in local development programs.

Where they have not already done so, bankers in rural development counties should volunteer their services to councils and committees guiding the program.

One of the first tasks in unified, county-wide development is to get the facts on manpower, resources, business needs, education, etc. Some banks will already have some of this data, and their employees often possess important skills needed in compiling and evaluating related statistical information.

Often, rural development will open up sound credit possibilities in farming, marketing, and nonfarm enterprises which did not exist previously. For example, a Tennessee strawberry-growing project last year gave local market outlets new opportunity to increase sales. A boat plant in Indiana stimulated expansion of a small firm selling boat parts. Through their credit resources, bankers can help their neighbors take advantage of new opportunities.

Charles N. Shepardson, member of the Board of Governors, Federal Reserve System, addressing a group of Tennessee bankers, summed up the crucial role of bankers and their services when he said, "The initiative in development must always lie in the hands of local community leaders. Traditionally, we have looked to our bankers for leadership in such programs."

In the same speech, Governor Shepardson said it was encouraging to see interest in the rural development program. "It is properly aimed at drawing off the surplus farm labor which has had a depressing effect on our whole farm economy. At the same time, it is aimed at providing local employment that permits people to continue to live in the rural environment that they prefer and to contribute not only to the maintenance but to the actual upbuilding of the rural community."

A RURAL BANKER COMMENTS

One of the many credit officers taking part in the rural development program is C. T. Welch, president of the Citizens Bank in Savannah, Hardin County, Tenn., a heavily rural area on the Mississippi border. Mr. Welch is chairman of the county rural development committee. He has this to say about the program:

"As a businessman, I see in the rural development program the greatest concentrated, realistic approach to the problem of the low-income farmer that has been made in our time.

"Our problem is primarily one of agriculture," Mr. Welch continues, "but one which will not be solved by an agricultural approach alone. The area which approaches the solution of this problem by strictly agricultural means is doomed to failure from the start.

"The success or failure of any undertaking depends more upon the mental attitude of its leadership than on any other factor," he continues.

"Whether a pilot area moves toward its ultimate objective will depend largely upon the leadership. People from all segments of our society and from all the agencies of our communities have joined hands in this great undertaking to try to provide opportunities for the development of the social, educational, religious, and economic welfare of the areas in which they live and serve. Never have I observed an undertaking in which so many agencies and individuals have been united on one team to undertake to solve a problem as far-reaching and with such implications as this one which faces us of opening wider the doors of opportunity for the good of our country and all our people."

State Department News Curb

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1958

Mr. PROXMIRE. Mr. President, there is no more dangerous threat to democratic government than secrecy. The prime requisite of democracy is that ultimate decisions are based on the informed wisdom of all the people.

When the people are not told what is going on their decisions cannot be informed, and are likely to be dangerously in error. The State Department has dropped a black curtain of secrecy over many of its activities and decisions which do not relate to military or delicate diplomatic actions. Competent reporters have protested that new instructions given by the State Department to its officers are seriously restricting the free flow of news.

Mr. President, we will never solve our problems, particularly our challenging problems in foreign relations, unless we understand them. We will never understand them unless we have the pertinent facts. Ever since President Eisenhower's news conference admonition that the French and Lebanese situations were too delicate for comment, the State Department has blacked out the American people by shutting off information to the newspapers on which the American people must depend for that information.

Mr. President, this is a seriously mistaken policy. I ask unanimous consent that an Associated Press article by Warren Rogers, Jr., describing the situation as both grave and ridiculous be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT NEWS CURB IS FELT

(By Warren Rogers, Jr.)

WASHINGTON, D. C.—Strange things are happening at the State Department.

Old friends pass you by. And others act like the three wise monkeys—see no evil, speak no evil, and hear no evil.

The situation, as it concerns keeping the American people informed on United States foreign policy, is both grave and ludicrous.

The grave view was taken this week by reporters who cover the State Department.

They protested to the Department that new instructions to its officers were restricting and limiting the free flow of news. The Department denied there was any gag on news.

Department spokesmen said old regulations, long winked at, had been put back in force. They declined to say why. But it was an open secret that top State Department officials were disturbed about recent news leaks.

OLD RULES REVIVED

This is nothing new. There always have been leaks, but this time something was done about it. The old rules were dusted off and the word went around to officials at the various levels:

1. Refer all news queries to the Department's Public Affairs Section, if possible.

2. Alternately, have a public affairs officer with you when you talk to reporters.

3. If this is not done, make a memo of all conversations you have with reporters and pass the memo around the Department.

4. Don't talk about anything outside your immediate "area of competence."

These instructions went out by word of mouth usually, about 2 weeks ago. But Hugh Cumming, head of the Department's Research and Intelligence Section, put his instructions to his staff in writing, it was reported.

That was when the strange things started to happen.

"I DON'T KNOW YOU"

One day a reporter went to lunch with a State Department official. Next day he called him up and was told flatly by the official, "I don't know you."

A State Department official went out to welcome Vice President NIXON back to Washington Thursday and commented that he thought NIXON handled himself well during his Latin American difficulties. Asked by a reporter to identify himself, the officer said he was not talking to any newsman unless accompanied by a public-affairs aid.

A reporter telephoned a State Department contact and was told, "I can't talk to you." The reported said that was all right, he just wanted him to listen. The reply was, "I can't listen * * * they cut off my ears as well as my tongue."

SOME IGNORE CURB

A veteran reporter stormed into the Department's news division saying, "What's going on? I grew up with Mr. X and now he says he can't talk to me without a public-affairs officer at his side."

In some cases, veteran officials have ignored the newly enforced rules. In others, especially among young officers, the rules are followed to the letter.

Added to the imposition of the new rules was President Eisenhower's news conference admonition that the French and Lebanese situations were too delicate for comment. Reporters checking the State Department on these two big stories found themselves referred time and again to Mr. Eisenhower's words while officials clammed up.

Need for Post Office in City of Carthage, Tex.

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1958

Mr. YARBOROUGH. Mr. President, recently I received a copy of a resolution adopted by the board of directors of the Panola County Chamber of Commerce relating to the need for a Federal building in the city of Carthage, Tex., to house a post office and other Federal offices.

As the resolution points out, the rate of growth in the city of Carthage has been 6.14 percent per year for the past 17 years and postal transactions have increased 55 percent during the same period. Also, Carthage is the only city of its size in the immediate area with a

first-class post office that does not have a Federal building.

Here is a clear case of the need for immediate construction of the post office building, and I trust that the Post Office Department will take action soon to begin construction of a post office in Carthage.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution which was adopted by the board of directors of the Panola County Chamber of Commerce.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

At the regular March meeting of the board of directors of the Panola County Chamber of Commerce, the following resolution was passed:

"Whereas the population growth of the city of Carthage, from 2,200 in 1940 to 4,571 in 1950, and to 6,230 in 1957, and the postal receipts of the Carthage post office, from 12,000 in 1940 to 42,000 in 1950, and to 60,000 in 1957, show the paralleled growth of Carthage and its postal transactions; and

"Whereas the rate of growth of the city of Carthage has been 6.14 percent per year for the past 17 years and postal transactions have increased 500 percent during the same, and the projected population of Carthage, based on the past rate of growth will be 7,200 in 1960, 9,700 in 1965, and 23,800 in 1980, and the projected postal transactions will total 238,000 by 1980; and

"Whereas Carthage will shortly outgrow its present post office facilities; and

"Whereas Carthage is the only city of its size with a post office of first class in the immediate area that does not have a Federal building, housing its post office; and

"Whereas the many Federal officers badly need proper housing facilities and office space and the facilities they are now occupying in the county courthouse is needed for county purposes of Panola County; and

"Whereas the new Sabine-crossing highway will increase the service area of Carthage by 500 families: Therefore be it

"*Resolved by the Panola County Chamber of Commerce*, That the United States Government, the Federal postal authorities, and the congressional representatives be requested to take appropriate action for the construction of a Federal building in the city of Carthage for a new post office and offices of Federal officers and employees."

J. S. BUNYARD,
President, Panola County Chamber of Commerce.

Attest:

LLOYD A. GOODIN,
Secretary.

The Importance of Transportation to the Growth and Development of Minnesota

---

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. HUMPHREY. Mr. President, one of the finest articles I have yet read on the history of Minnesota concerns the importance of transportation to the growth and development of the State, and Minnesota's increasing importance as a transportation hub as we enter our second century of statehood.

This article by the distinguished professor of history at the University of Minnesota, Dr. Philip D. Jordan, appeared in most Minnesota newspapers during the centennial celebration recently.

I ask unanimous consent to have printed in the Appendix of the RECORD, the article entitled, "Two Hundred Restless Years of Transportation in Minnesota," by Philip D. Jordan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO HUNDRED RESTLESS YEARS OF TRANSPORTATION IN MINNESOTA

(By Philip D. Jordan)

Minnesota today stands on a technological divide separating the wilderness past of primitive transportation from the wonders of contemporary land and air travel and the benefits to come with the completion of the St. Lawrence seaway.

Changes are dramatic. Rutted pioneer roads, dusty in summer and snow clogged in winter, have become ribbons of concrete; and such highways rapidly are giving way to toll roads and freeways. Where once a solitary stagecoach lurched and jounced, today thousands of sleek automobiles and freight-laden trucks jostle one another to pose problems of which the frontiersman never dreamed.

Minnesota's first railroad, running between St. Anthony and St. Paul in 1862, was the forerunner of a vast network of rails operating within the State and connecting it with the outside world. The dome car of today is a far cry, indeed, from the wooden day coach of Civil War vintage, with its grimy windows and wood-burning stove.

River traffic has altered also. A hundred years ago, the upper Mississippi literally was clogged with steamboats, bringing immigrants to homes on a new frontier and supplying them with the necessities of life. Today the passenger vessel has disappeared. Yet, with the completion of a 9-foot channel, the Mississippi once again is an important carrier for barges laden with coal and grain. And high above Minnesota's forests and lakes and streams thunder planes, modern today and obsolete tomorrow, that throw giant shadows over waterways which in an earlier day knew only the voyager and his canoe.

Growth of Minnesota's transportation follows a well-defined pattern. The matrix, in turn, was determined by the area's geographical location, by Federal land policy, the influx of settlers, and by the State's economic activities—farming, lumbering, mining.

WATER ROUTES

Thus, the period prior to 1823, when the *Virginia* was the first steamboat to navigate the upper river, largely was a formative one. This does not mean, of course, that it lacked the picturesque. No Minnesotan ever can forget the lucrative traffic in pelts and the farflung transportation system of the French and English fur companies or even the extensive excursions undertaken by trappers themselves. But it was not until Minnesota became a territory in 1849—some quarter of a century after the *Virginia* whistle shattered the peace in the vicinity of Fort Snelling—that attempts were made at systematic transportation.

Territorial legislatures urged road construction, stimulated the establishment of ferries, incorporated railroads. The Federal Government laid out military roads reaching into the interior. Mail stage lines were established. Three trails carried creaking Red River carts to the St. Paul market.

Yet, despite all these efforts, from 1823 to well past the Civil War, the steamboat was the very backbone of transportation. In 1858, 1,090 boat arrivals were recorded in St. Paul. Steamers with tremendous tonnage—vessels like the *Hawk-Eye, Phil Sheridan, War Eagle* of later years—puffed into port laden with eagerly sought commodities. They carried barrels of apples, rolls of carpeting, tons of coal, flax seed, live hogs, oysters, oranges, stoves, window glass, wagons, and sleighs. More than 2 million pounds of agricultural implements were unloaded in 1873.

Nor was river traffic entirely one way. Minnesota also exported down river, sending its wealth throughout the Middle West. Locally manufactured items and regionally grown and processed products included buffalo robes, flour, furs, ginseng, sheep pelts, and deerskins. More than 107,000 bushels of wheat and 250,000 feet of lumber were exported in 1867.

No one knows exactly how many new Minnesota residents were brought in by river boats, but everyone agrees that the number was large. Year in and year out, people surged through St. Paul like the floodwaters of a river during spring runoff. Many, after claiming their luggage and household goods at the levee, purchased wagons and teams to carry them into the interior. Fully 10,000 horse-drawn settlers moved north of the Minnesota River during 1867, and some 40,000 land seekers located in the northern portions of the State.

CLAMOR FOR RAILS

Although the steamboat rendered an invaluable service and was of significant value in the development of the area, it had its disadvantages. There were months when the river was frozen over and traffic could not move. Always there was danger of river accidents. And even the fastest boat was slower than a train. It was even more important that trains could run anywhere a track could be laid down, while boats must keep to waterways.

It is little wonder, then, that from Territorial times a clamor went up for railroads. An early editor called railroads indispensable. Governor Ramsey urged their chartering and construction. In 1857, the Federal Congress made liberal land grants to five Minnesota railroad companies, but stipulated that construction be started promptly and provided that a certain amount of progress must be shown before the land should pass into their possession. Unfortunately, the panic of 1857, a depression that blighted the Nation, withered plans for building. Not even a $5 million loan by Minnesota kept the program alive. On the eve of the Civil War not a mile of track was operating in the State.

During the war years, however, new companies were chartered and construction commenced. On a proud August day in 1870, the Lake Superior & Mississippi Railroad, connecting Duluth and St. Paul, was opened for traffic. It was destined to haul vast quantities of wheat to Duluth, to be shipped via the Great Lakes to eastern markets. Some 2,000 miles of track, serving about 15 railroads, were in operation by 1872. Although the panic of 1873 slowed, it did not halt construction. James J. Hill rose to fame as an empire builder. By the middle 1880's, railroads were doing what steamers originally had performed—furnishing the Northwest with necessities, hauling away local products, connecting Minnesota with eastern and western points.

The Northern Pacific was completed to the Pacific coast in the autumn of 1883; the St. Paul, Minneapolis & Manitoba was traversing the developing wheat area of the Red River country; the Wisconsin Central was operating into St. Paul by 1885. The St. Paul & Duluth Railroad brought the North Shore and the Twin Cities closer together. There was heavy traffic on the Chicago, St. Paul & Omaha, the Chicago, Milwaukee & St. Paul, and the Minneapolis & St. Louis.

GROWING TRAFFIC

"It is difficult for a traveler, as he alights from his train at the union depot and sees the ceaseless bustle of the thousands of passengers going and coming," said a St. Paul businessman in 1885, "to realize that it is not yet 23 years since the first rail was laid in Minnesota, nor a score since the first all-rail connection was made with Chicago and the east."

The chamber of commerce spoke glowingly of the expansion of St. Paul trade: "The opening of the Northern Pacific as a through line to the Pacific coast, and the extension of several other lines into Dakota and Wisconsin, have given great impetus to the wholesale trade of the city."

This also was true of Minneapolis, where the board of trade had characterized Minnesota as a thoroughfare between the East and the Pacific coast. Its wholesale trade, largely because of railroads, increased from more than $5 million in 1876 to more than $68 million in 1886. More than 25,000 car lots of freight were received in 1876 and more than 120,000 in 1882. But the railroad did much more than haul freight, ore, and passengers. It carried mail, stimulated the growth of towns, battled with embittered farmers over freight rates, established line elevators.

Between 1880 and World War I, when the village depot and telegraph office were a source of gossip and news, many smaller roads were absorbed by larger companies, and relatively few miles of new track were laid. A 1920 traffic map of Minnesota looked much like it does today. Now there are 8,287 miles of track. This mileage is more likely to diminish than to increase in the future. The number of trains operated has declined and will continue to do so.

RAILWAYS TO HIGHWAYS

By the 1920's railroads were facing a new and stern competitor. At first the automobile did not appear too fearsome. After all, the horse and the surrey with the fringe on top were sure and safe for short trips; and the train, although it frequently was late, nevertheless was reliable. No passenger ever "got out and got under" when riding the coaches. Yet the new-fangled automobile, with the introduction of the pneumatic tire and the beginning of mass production, annually increased in numbers on Minnesota's expanding network of roads.

Automobile licenses were first issued by the State in 1907 and the first stretch of concrete road was laid down near Red Wing in 1912. By 1920, more than 300,000 cars were licensed and this number doubled during the next decade. Each year has seen an increase in the total number of passenger cars in the State. Today more than 1,300,000 vehicles carry Minnesotans more than 30 million miles daily over a total of 121,000 miles of roads and streets.

COME THE TRUCKS

Of particular significance is the development of trucking, a business which has provided intense competition for the railroads. From a small beginning about 1916, with a registration of 4,000 trucks, the number has increased to 241,170 in 1957. These trucks give employment to a sizable army whose annual earnings amount to more than $525 million. Almost 5,000 filling stations today cater to Minnesota's restless motor cavalcade.

Not until 1920 did the State, as the result of an amendment to the constitution, provide for a planned system of highways. Today there is a total of 109,257 miles of highways and major rural roads. With the increase in the number of passenger cars, trucks, and buses, it is estimated that over a billion dollars will be needed within the next decade for highway repairs and improvements.

It is of interest to note that the Nation's bus lines, now hauling millions of passengers annually, had their beginnings in Minnesota. The Messaba Transportation Co. was organized in 1915, and from it emerged the great Greyhound system. As early as 1917, bus lines carried some 15 million passengers throughout Minnesota. In 1957, Greyhound transported 2,200,000 passengers within the State.

THEN THE AIRWAYS

Perhaps the most spectacular change in Minnesota's transportation took place not on the ground but in the air. The first passenger plane to fly from St. Paul to Chicago made its historic flight in 1927, the very year that a Minnesotan, Charles A. Lindbergh, flew nonstop from New York to Paris. A year later the Wold-Chamberlain field became a municipal airport. Ten years later there were some 35 airports throughout the State, increasing to 336 by 1950.

Today, many airlines fly into the Twin Cities, annually carrying more passengers than did all the railroads of the State 70 years ago. Some 1,428,000 persons arrived at and departed from Wold-Chamberlain field in 1957. Airfreight shows an annual increase, reaching more than 18 million pounds in 1957. There is every evidence that planes will become bigger and faster, and that they will haul increasing hordes of passengers in the future. A major problem of tomorrow is to make airfields more easily accessible to the traveling public. It is probable that helicopter service from urban centers to outlying fields will prove helpful.

SEAWAY SIGNIFICANT

Traffic on the Great Lakes long has been a major factor in Minnesota transportation. Even before the first shipment of iron ore in 1884, Lake Superior was an important artery of trade. Transportation was made easier by cutting a canal through Minnesota Point in 1871, by improvements of the Duluth Harbor in 1887, and by a channel through Rice's Point in 1890. Lumber, wheat, and ore constituted the bulk of the cargoes. Today the port tonnage of Duluth and Superior is second only to that of New York City. Ninety-two percent of lake exports is iron ore, and 80 percent of lake imports is coal.

The St. Lawrence seaway, moving toward completion, will effect drastic changes. Minnesota may benefit industrially as a result of lower costs of shipping raw materials and manufactured products. Grain can be moved directly from Duluth to coastal and foreign ports in oceangoing vessels. The seaway may firmly establish the steel industry and prevent it from moving to Atlantic coastal ports. It likely will increase the State's service to ships in the form of repairs and furnishing supplies. Finally, it is said that the seaway will benefit the defense of the region and the Nation because the Great Lakes may serve as a fourth seacoast for the movement of industrial products and raw materials.

Although specific changes cannot be pinpointed for Minnesota's system of transportation, one thing seems certain: The State, a hundred years from now, will be as different from today as we are in comparison with that gala day in 1858, when Minnesota entered the Union.

The Record of Marion B. Folsom

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1958

Mr. OSTERTAG. Mr. Speaker, several days ago it was revealed that one of the leading citizens of Rochester, N. Y., and this city would leave the President's Cabinet in the next few months. I speak of Marion B. Folsom, the esteemed Secretary of the Department of Health, Education, and Welfare.

Mr. Folsom has been the first Rochester citizen to serve in the President's Cabinet and we are all proud and pleased at the outstanding service he has rendered to the Nation in his position.

Marion Folsom has a long record of outstanding service to his community and the country. As an official of the Eastman Kodak Co. of Rochester he pioneered in creation of industrial welfare and pension programs 30 years ago. Later he put his knowledge and experience at the service of the entire Nation as a member of the President's Advisory Committee on Economic Security to help draft the original Social Security Act of 1934.

Before assuming command at HEW in 1955, Marion Folsom served 2 years as Under Secretary of the Treasury. There, in 1953, he again demonstrated his acute social and economic awareness by participating in the first complete revision of our Federal tax laws in 79 years. This legislation provided the largest tax reduction ever granted the American people and corrected many gross inequities. It ranks as one of the major accomplishments of this administration.

More recently, Mr. Folsom has been instrumental in presenting plans to strengthen our education system. Here again he has exhibited a great understanding of the historical responsibilities and needs in this area. In addition to these accomplishments, he has been instrumental in creation of hospitalization and medical plans in the Rochester area and has served on many other important Federal, State, and local boards and agencies. Mr. Folsom's interests have always been directed toward programs which made a better life for others.

Now, for personal reasons, he wishes to return to private life. I would like to take this means to pay tribute to the knowledge, understanding and ability of Marion Folsom and express our appreciation that he has used these talents for the benefit of all our people. His contributions are monumental in his field.

The Rochester Times-Union has printed an eloquent editorial in praise of Mr. Folsom in its edition of May 7, 1958, and I request unanimous consent to include this editorial in the RECORD.

FOLSOM TO LEAVE RECORD OF FINE ACHIEVEMENT

The forthcoming resignation of Secretary Folsom from the President's Cabinet should not be regretted, since it means his return to Rochester, but we do regret it.

After all, Mr. Folsom was the first Rochesterian to be named to the Cabinet. He has never ceased to be a source of pride to his home city.

Five years is considerably longer than Mr. Folsom expected to stay in Washington when he went there in 1953 as Under Secretary of the Treasury in the President's first administration. But after piloting through Congress the first general revision of the tax laws in many years, he was named Secretary of Health, Education, and Welfare, and stayed.

Now, he is expected to revert to his former status as a frequent commuter to

Washington. As an author of the original social-security statutes, his testimony was always sought by every succeeding Congress on social security matters as well as on economic legislation. That demand will continue. He has always advocated participation in Government by business executives.

It would be difficult to assess now which was his greater contribution, as Under Secretary of the Treasury or as Secretary of the Health, Education, and Welfare Department.

As Under Secretary his principal field was tax matters and the tax revision bill of 1953 was a monumental piece of legislation. It not only made the largest reduction in taxes ever made in a single bill but it also took out of the tax code the most glaring inequities that had crept in during years of piecemeal revisions.

But at the same time, Mr. Folsom will be considered for all time the creator of the Health, Education, and Welfare Department. He was not the first Secretary of the new Department which was created under President Eisenhower, but he gave it the form it will probably retain for many years to come. Again he was active in revision of the social security laws which extended coverage and increased benefits, though he was defeated when he opposed bracketing disability pensions into the social security system.

One unfinished task on which he extended great energy was the matter of Federal aid to school construction. The Democratic Congress first defeated his effort to equalize educational opportunity through Federal aid to school building and then defeated its own substitute bill.

Mr. Folsom will leave the Department in good hands. The expectation is that the President will appoint Dr. Arthur S. Flemming, president of Ohio Wesleyan University. Dr. Flemming has been in and out of government service almost as long as Mr. Folsom and for 6 years was Director of the Office of War Mobilization.

Florida Sweet Corn

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. MATTHEWS. Mr. Speaker, last week the Florida Fruit and Vegetable Association and the Florida congressional delegation had the happy privilege of making available some of Florida's choicest sweet corn for Members and their guests to enjoy.

Many of my colleagues have asked me for the best receipts for the preparation of sweet corn. I am happy to furnish these recipes through the courtesy of Mrs. Kathleen Vandegrift, whose husband is Mr. Roy Vandegrift, Jr., the president of the Florida Fruit and Vegetable Association.

I think it is interesting in this connection to point out that the sweet corn feed growers of Florida are spending somewhere between $50,000 and $75,000 in money that they have raised themselves to promote more purchases of our Florida sweet corn. Last week in Florida the price to the producer of this corn was $1.25 per crate. The farmers estimate that of this amount they only received about 3 cents per crate to pay for the cost of production. This illustrates the difficulty again of the farmer getting a fair share of the consumer's dollar. Florida sweet corn last week was selling in the Washington markets at 5 ears for 29 cents, or a little bit less than 6 cents per ear. This amount is not an excessive cost for the housewife, and yet the producer does not receive his right share of that cost because of what we might call the in-between processes from the farmer to the consumer. The recipes sent by Mrs. Vandegrift follow:

RECIPE FOR BOILING FLORIDA SWEET CORN

Cook 8 ears at a time flat in a heavy skillet with a tight cover. First, put three-fourth of a cup of water in the skillet, add one-half teaspoon of sugar, and 1 teaspoon of salt. Bring to a boil. Then add eight ears of the cleaned corn. Add pepper to taste. Add a sprinkle of paprika (for color only), and two generous pats of butter for each ear. Turn down heat. Cover and cook for 3 minutes. Turn with tongs, very gently, and cook 3 minutes more. Remove from heat.

RECIPE FOR FRIED FLORIDA SWEET CORN

Cut corn off the cob. Add salt, pepper, sugar, and butter to taste. Put on medium heat, no cover. When hot through the corn is ready to eat.

Summer Fellowship Program for Secondary-School Teachers

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a brief news article which appeared in the San Leandro (Calif.) Morning News just recently. The article is brief, but to my mind, it is significant.

It states how one industrial company—the Maxwell House division of General Foods Corp.—is giving a helping hand to local high-school teachers in San Leandro, Calif.

Sidney L. Feener, Jr., the plant manager of the local Maxwell House operation, calls the program the summer fellowship program for secondary-school teachers.

His program, which is comparatively simple and inexpensive, strikes directly at an area of our educational system which has been of deep concern to us recently. It involves providing a grant or grants to secondary-school teachers to take advanced courses of study during the summer months at little or no expense to themselves.

It is my understanding that Mr. Feener's parent organization, General Foods, is going to expand this high-school teacher grant plan to many more of its plant communities. The program will become effective this summer.

The need to improve the quality of teaching in our secondary schools has been apparent for some time, and recent world events have added emphasis to this. One of the main reasons for our great teacher shortage is low pay, and this grassroots method of alleviating some of the teachers' financial burden is certainly welcome at this time. Furthermore, this novel program of teacher-aid will benefit the teachers themselves academically as well as benefit the local school system by strengthening it in areas where greater teaching skills are needed.

It is a source of personal satisfaction to me to know that an industry in my district of California is taking a lead in so practical and effective a plan to help teachers and hence the community school system.

I would hope that other industries, other communities, civic groups, and educators, would study this General Foods high-school teacher fellowship program, for this is an area in education which certainly needs to be helped at this time.

Statehood and the Fishery

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BARTLETT. Mr. Speaker, objections have been made to the Alaska statehood bill, schedueld to be considered by the House later this week, on the grounds that the State government would discriminate against nonresident fishermen. This objection has come principally from the State of Washington. No more effective rebuttal could be given than that which appeared in an editorial in the May 1 issue of the Fishermen's News published at Seattle, Wash. Entitled "Alaskans, We're With You," the editorial reasserts the paper's support for Alaska statehood and upholds the contention of many Alaskans that Washington State itself discriminates against fishermen from elsewhere. I take pleasure in calling this editorial to the attention of the House:

ALASKANS, WE'RE WITH YOU

The hue and cry for hearings on Alaska statehood has become a big issue in the current Congress as battlelines are drawn once again in this dispute which began back in 1916 with the introduction of the first statehood bill by Republican James Wickersham.

Sometimes the issue has been fought on straight political lines but seldom on the righteousness or justification of the citizens themselves. Representative TOM MURRAY of Tennessee on the House floor recently estimated that some 5,000 pages of printed testimony had been taken on the subject of Alaskan statehood.

Our interests are unquestionably guided to some extent by the hope for better fisheries management under statehood. There are many who feel that a change from Federal to local management would be the beginning of the end, but surely the record of United States management of the Terirtory's fisheries cannot be pointed to with pride. Perhaps the end is in sight, anyway.

Seattle Representative TOM PELLY, who has surely shown every interest in the fishermen's lot in the matter of the 12-mile limit problem, declares his position one of doubt for fear that Alaskans might take advantage of United States residents in their fishery management. This might be a valid argument in Washington, D. C., but in the State of Washington we are sure that our current license law tops any fishery discrimination we have seen.

Alaskans attempted, a few years back, to clobber nonresidents with exhorbitant license fees, but their plan was thwarted by the courts, just as such future efforts under statehood would be set aside. Keeping statehood from residents of the Territory because we fear what they might do with the authority and power is about as insulting a charge as could be presented.

We have long favored statehood for Alaska. We reiterated our thoughts early this year in one of our Statements of Purpose.

Beyond the fishery issues involved, the United States has a moral obligation in the matter. In the Treaty of Cession, signed March 30, 1867, the United States guaranteed Alaska citizens that "The inhabitants of the ceded territory * * * shall be admitted to all the rights, advantages, and immunities of citizens of the United States."

Amend Reciprocal Trade Act

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following letter and resolution 41, which I have just received from the American Legion. Both the letter and the resolution express sentiments closely akin to my own on the subject of the reciprocal trade agreements program.

As you will note, Mr. Speaker, the American Legion urges that we adopt a foreign-trade policy that will prevent injury to, and the liquidation of, industries essential to the defense and the economic welfare of our country. I certainly share with them the hope that such legislation will be enacted as soon as possible, and I commend both the Legion's letter and their resolution to the attention of every Member of the Congress:

THE AMERICAN LEGION,
NATIONAL LEGISLATIVE COMMISSION,
Washington, D. C., May 16, 1958.

To All Members of the House of Representatives:

Referring to the proposed extension of the Trade Agreement Act, I enclose a copy of Resolution 41 adopted at the April 30–May 2, 1958, meeting of the national executive committee of the American Legion, our governing body between national conventions.

This resolution urges Congress to enact legislation and the Government to adopt a foreign trade policy that will prevent injury to and liquidation of industries essential to the defense and the economic welfare of our country.

We would appreciate it very much if this resolution could be given favorable consideration by you at the appropriate time.

The American Legion supports a truly reciprocal trade policy, one which will not do mischief to our economy and defense potential.

Sincerely yours,
MILES D. KENNEDY, *Director.*

RESOLUTION 41

Committee: Foreign Relations Commission.
Subject: Amend Reciprocal Trade Act.

Whereas certain American industries, labor and segments of our agriculture, essential to our defense and the economic welfare of this country, are being injured by the provisions and administration of the Reciprocal Trade Act; and

Whereas the continuance of this act and its administration will seriously affect the defense of the United States; and

Whereas we are becoming more and more dependent upon industry, agriculture and raw materials located near Communist dominated countries and in easy reach of potential enemy army, navy and air forces: Now, therefore, be it

Resolved by the national executive committee of the American Legion in regular meeting assembled in Indianapolis, Ind., on April 30–May 2, 1958, That the American Legion urge the Congress to enact legislation and the United States Government to adopt a foreign trade policy that will prevent the injury to and liquidation of industries essential to the defense and the economic welfare of this country.

Minnesota Centennial

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ogden Standard-Examiner of May 7, 1958:

MINNESOTA CENTENNIAL

On May 11 the people of Minnesota will celebrate 100 years of statehood. Already Senators and Representatives from Minnesota are telling their colleagues in House and Senate what a splendid State they represent. And they are right. It is a wonderful State.

Minnesota has a population of 3,313,000. Its people produce abundantly of manufactured goods, ore, and farm products. The manufacturing payroll is over $1 billion a year, wholesale and retail businesses $750 million a year in wages.

Minnesota ranks first among the States in the amount of iron ore shipped, second in butter manufacturing, third in sweet corn for processing, fourth in the production of calendars.

We have long known that Minneapolis is a great milling center. We were surprised to learn that the South St. Paul livestock market is the second largest in the world.

A great many other pleasant things can be said about Minnesota, and one of these is that the State produces a sturdy brand of men and women, many of whom have come to live among us in Utah. In fact, Minnesotans are to be found everywhere, and that is why the Minnesota centennial will be widely celebrated.

Conservancy District Off to Great Start

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. CHENOWETH. Mr. Speaker, an event of unusual importance to the Arkansas Valley in Colorado took place recently, when the Southeastern Colorado Water Conservancy District was organized by an order of the district judge at Pueblo. This district comprises the land to be served by the Fryingpan-Arkansas water diversion project, which is now pending before the House Interior and Insular Affairs Committee.

This district was organized under the laws of the State of Colorado, which provide for an assessment to be levied upon this land in order to raise funds for the district. The law also calls for the naming of a board of directors to handle all matters relating to the district. Last week in the Pueblo district court an order was entered appointing 15 men to this board. The directors elected Mr. J. Selby Young, of Colorado Springs, as their chairman.

The board of directors are empowered to sign a contract for the repayment of the costs of the Fryingpan-Arkansas project when the same is authorized and ready for construction. This is the first time that the sponsors of the project are able to act as a legal entity under the laws of the State of Colorado. The organization of the district and the naming of the board of directors are significant and important steps toward the realization of the Fryingpan-Arkansas project. These people are willing to assume the full financial responsibilities imposed upon them by reclamation laws in the construction of this project, and will be ready to enter into negotiations with the Bureau of Reclamation for the repayment contract.

I include as part of my remarks an editorial from the Pueblo Star-Journal, as follows:

CONSERVANCY DISTRICT OFF TO GREAT START

Judge S. Phillip Cabibi appointed a board of 15 members of the Southeastern Colorado Water Conservancy District Tuesday that would be hard to beat.

The board represents fairly all parts of the district which runs from north of Buena Vista to land under the Fort Lyon Canal east of Las Animas, and including Colorado Springs and the agricultural regions north of Pueblo.

It is the largest conservancy district in point of acreage and valuation in the State of Colorado.

For the first time in the history of the Arkansas Valley, it is in a position to act as the legal entity representing all water interests in the valley. It provides the vehicle for focusing attention on the Arkansas Valley and requiring that water users in the valley be heard. This has not been the case in the past.

The occasion of the appointment of the board and its organization through the election of officers and appointment of committees is also significant because it will wind up

the principal efforts of the Water Development Association of Southeastern Colorado which was formed just 12 years ago. It accomplished the organization of a conservancy district for the benefit of all water users and the protection of their rights, and it has promoted a reclamation project for the use of Colorado's rightful share to the waters of the upper Colorado River Basin. The Fryingpan-Arkansas project now before Congress is the culmination of that effort.

The board of the conservancy district has a great responsibility. The district is not just another organization, as all board members well realize. We congratulate them and wish them well in the firm belief that they will receive complete and full cooperation from all interested parties in the valley.

Past Mistakes Have Made for the Tinderbox

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. LOSER. Mr. Speaker, in view of the indignities visited upon our Vice President and his wife in Latin America, and the insults showered upon us in the Middle East, I would like to call to the attention of my colleagues in the House an editorial appearing in the Nashville (Tenn.) Banner of May 16. It is enlightening and should be of interest to the Members of the House.

Under leave to extend my remarks, I include it herein. It follows:

[From the Nashville (Tenn.) Banner of May 16, 1958]

PAST MISTAKES HAVE MADE FOR THE TINDERBOX

There are tinderboxes all over the world—with a low flash point—upon which artisans of friction are showering the sparks.

Venezuela and Peru, with near explosions of most recent memory, and close to the United States; in the Middle East, Lebanon, undergoing internal trial by fire; in this hemisphere again, Bolivia forced by insurrection to proclaim a state of seige. Regradless of individual circumstances making for present unrest—or in cases for chronic unrest—what is the factor of almost simultaneous outbreak?

Realistic appraisal identifies the Red hand feeding and stirring that flame for its own sinister purpose; but it gets in a major blow only where conditions, by bungling stupidity or deliberate despoliation, are ready made for it. Both have occurred toward—and in—lands of Latin America. United States policy treatment in the past toward some of these has heightened the conditions on which Red exploitation and free lance riot have fastened.

These are facts assuredly to face, as they now are being faced, to redress grievances and act against the common danger.

There was bungling of the diplomatic responsibility, by dignitaries, some of them playing footsie with dictator regimes. Milton Eisenhower's role, as in the Argentine case, was a protracted blunder—a misbegotten conferment of tolerance and respectability on the foul tenure of Juan D. Peron. No less disgraceful was the sanctuary bestowed on that dictator, in the Washington Hotel at Colon, Panama, after he was called to account by his people and overthrown.

Henry Holland, the erstwhile Assistant Secretary of State for Latin American Affairs, likewise played his part in the policy of insufferable patronage. There was Rudolf E. Schoenfeld, too, Ambassador to Guatemala when the latter was in the throes of internal turmoil at the hands of the infamous Arbenz.

Their shenanigans disgraced principles of responsible stewardship by a nation standing for, and extolling the democratic concept. For the regimes tolerated, or inferentially endorsed by the charity of silence—or more, close diplomatic embrace—were the ones despoiling their lands, depleting treasuries, and impoverishing their economies.

That was an era of frivolity, compounding consequent problems. It began before a stronger hand took the United States policy helm—but phases of it were carried over all too long.

Dictators, whether in Argentina, in Venezuela, in Guatemala, Colombia, the Dominican Republic, or elsewhere, destroy the economic strength of their lands. They take money from the impoverished purse of their constituents, and food from their mouths; and hungry bellies make for riot and a ready surrender to enticing promises, even of communism.

Preachments of democracy, however eloquent, do not convert hungry people, particularly when accompanied by actions suggestive of tolerance and endorsement of their oppressors.

America has learned that fact of life—though there still are exdictators whom are are handling with ostensible hospitality and kid gloves.

Communism moves in upon a situation of want, unrest, and insurrection. It exploits and foments these. It has showered its sparks. The intent, characteristic of the Red conspiracy, is to set such a fire. It is the handiwork of infiltration for its own violence and pillage, and of turmoil to direct hate at the United States. And it comes at a time when Soviet Russia is concentrating a renewed cold war effort all over the world.

It is no mere coincidence that it is timed with the newly renewed sputnik extravaganza—which Khrushchev glibly used for his own propagandic twist; and revived mention of disarmament for pressure to compel summit discussions on Soviet terms.

International turmoil is a favorite Red device to weaken ties of the West, to subvert and alienate lands of mutual security arrangements with the United States; to incite suspicion and hate.

The danger is not wholly what communism in this connection has achieved to date—for even in Venezuela and Peru it did not succeed in destroying these ties. The danger is what it can achieve if these powers do not work together; and if, severally, they do not exert their own rightful responsibility to extinguish these sparks. At the same time they have the obligation to set their house in order for the maximum of economic and political strength, recognizing that communism capitalizes on weakness.

But a related fact to remember, and on which to fortify hemisphere action from here on is:

Dictatorial regimes, some of them overthrown, sowed the seed for this harvest of tempest and threat by their own pillaging. If the nationals of some of these lands will examine the record, they will see the cause of economic distress in those tenures which impoverished Argentina, for instance, will be paying for years for the debauchery of Dictator Juan Peron—who even now is striving for comeback. Gustavo Rojas Pinilla hopes to stage a coup to recover the reins in Colombia. Marco Perez Jimenez (now enjoying an undeserved sanctuary in the United States) was responsible for the state of affairs prejudicial to good will and on which Red conspirators fastened when Vice President NIXON visited there.

Cuba still is the target of internal unrest, anti-American despite claims that is wholly domestic. In Central America, Guatemala was redeemed from a regime that was Communist-infested, but its liberator was assassinated, and the Red-sympathizing Jacob Arbenz Guzman, reportedly in Mexico, hopes for return.

The United States has sought to shore up these economies for economic strength—though policies in the past have not been wholly employed as a stabilizing force. There have been, as pointed out, weaknesses and defects at points, and a misbegotten willingness to gloss over the derelictions of such as Peron. Still, Latin America has gained from the basic policy of mutual effort, and of American investments predicated on the program of hemispheric accord.

Strong, united effort—stripped of errant nonsense, and convincing of purpose—can meet both internal and external dangers.

Thinking leadership in these lands knows that it is not the United States that is the enemy, or that has ulterior designs upon them. They know the necessity of standing together—in their own interest and against a common foe.

Like the United States, they must know the meaning of these flareups—whether in the hemisphere—or across the ocean on the shores of the Mediterranean.

They must know also the imperative need of strengthening their own economy, and of putting out these political sparks—partly by eliminating conditions that make for a tinderbox.

Communism can be defeated. Only by going to sleep, and ignoring its obvious antics of infiltration, can the battle against it be lost.

Cherish the Federal Credit

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. SMITH of Kansas. Mr. Speaker, recently there appeared an editorial in the American Banker, a newspaper devoted to the interests of the American banks. Too many people, when they hear something said by a banker, are inclined to think it is said for a selfish personal reason. Banks exist basically for the welfare of their community. All laws made to regulate banks have but one basic objective—the welfare of the public.

I note that a great deal of recent publicity is designed to appeal to patriotism as the motive to "buy now campaigns." It seems to me, this patriotic appeal still further casts a doubt to the consumer that an appeal based on patriotism is a last resort. In other words, it shakes the confidence of the prospective customer still further. The consumer, after all is the ultimate cause of when the recession will end.

The article appended hereto clearly points out the necessity for the integrity of the dollar. The stability of the dollar is not something to talk about—it must be done.

The consumer of either credit or goods must have confidence in the future. When this confidence is restored in the consumer, the recession will end, and no

amount of Government boondoggling under fancy names will restore this confidence.

I commend the following article:

CHERISH THE FEDERAL CREDIT—FAILURE TO DO SO COULD TURN RECESSION INTO DEPRESSION

There is one way that we can really make this readjustment and recession period into a full-dress depression. Deficits and spending that dissipate the Federal credit will do it if we lose our heads and our guts.

How much deficiting and spending it will take to create fear where there should be confidence cannot even be guessed. But there is a breaking point for the credit of the United States. Congressmen who are being glibly importuned to cut taxes and add to United States spending should not forget this very important fact in attempting to control our economic future by the deficit method.

How could a breakdown of the credit of the United States come about? It could happen at any point that our foreign creditors get the idea that Treasury deficits and guaranties have piled up to such a point that another devaluation of the dollar is inevitable. Simultaneously, very likely, economically sophisticated people with money in savings institutions might very likely begin hoarding or sending their money abroad. Foreign holders of deposits in American banks in such a set of circumstances, would begin to withdraw them. Foreign holders of United States Treasury securities would become sellers, transferring the proceeds overseas.

Net result would be a vicious spiral of contraction of bank credit, pressure on the reserves of the Federal Reserve banks and epidemic loss of confidence in our money and credit system. It happened in 1932 and 1933, when the program of the Reconstruction Finance Corporation became interpreted as a commitment by the United States Treasury to underwrite the liquidity and refinance the losses of the American financial system, banks, insurance companies and, indirectly, big business. The breaking point then was much closer than realized by anyone who favored the RFC in February 1932. We were off the gold standard and into dollar depreciation by March 1933.

We can ill afford to risk approach now to a repetition of a similar undermining of the Federal credit in the guise of a recession cure. In the 1930's the cure was so evanescent, the aftermath so lasting, that we wonder that people have forgotten so easily the almost 10 years of lack of faith in our economy which followed dollar devaluation in 1933. The number of unemployed remained in the millions, industrial investment for expansion almost stagnated. World trade stayed in a slump and efforts to bring about international economic cooperation as a foundation for peace were torpedoed because of the insecurity of American business and politics. How long this depression cycle then would have lasted had we not let Europe blunder into World War II and get dragged in ourselves is anyone's guess.

Confidence is a big and important word in our economy today.

But in no area is confidence more necessary than in the soundness of our Federal credit, the value of the United States dollar and the stability of prices.

ABA President Welman, in his Georgia bankers' convention address, counseled "forbearance and willingness to do with less profits and wage and salary increases" to assure stability of prices, adding: "One thing which the public would understand clearly and to which it would respond quickly would be a cessation of the seemingly never-ending rise in the cost of living and the bringing about of some reasonable price stability."

Other observers have voiced like views; that is, that a buyers' strike against constantly rising prices is at the root of this recession, and people will begin spending again when they feel they are getting their money's worth for their not-so-easily earned dollars.

Stability of prices is the reward of the saver. Without it, sayings are not worth saving. Stability of prices is also the best guaranty of stability of the dollar and of maintenance of that international and national confidence which is so essential to keeping our recession from deepening into a depression characterized by worldwide fear of collapse in our credit and in the value of the United States dollar.

"Cherish the Federal credit," said George Washington in his Farewell Address. True in 1798, our first President's advice is as true and timely today as it was then.

Financial Aid for Small Business

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BETTS. Mr. Speaker, recently George J. Burger, vice president of the National Federation of Independent Business, as a witness before the House Banking and Currency Committee, presented some of his views on small business and some of its problems in the present economic situation. Since his statement represents the thinking of an important group on an important subject, I certainly feel it should have a place in the CONGRESSIONAL RECORD. Under leave to extend my remarks in the RECORD, I include Mr. Burger's statement, as follows:

FINANCIAL AID FOR SMALL BUSINESS

(Statement of George J. Burger, vice president National Federation of Independent Business, Before House Banking and Currency Committee, May 9, 1958)

I am George J. Burger, vice president, National Federation of Independent Business, 740 Washington Building, Washington, D. C. We are the largest business organization in the Nation. Our membership is made up exclusively of independent business and professional people. These people who are your independent-enterprise constituents — they alone set our stand on bills and issues by direct, signed votes, through our mandate polls, which they send to you. In that sense, when I speak here, I speak only through their collective voice, as though they were here before you to speak for themselves.

First, let me make one point clear, and that is, we have not polled our members on recent bills introduced to make equity capital and long-term credit more readily available to small business. Whether this will be instituted by the federation will depend largely on the overall correspondence we receive from our nationwide membership on this new proposal introduced by Members of Congress.

We want to be on record in complimenting the committee and its efficient staff for the splendid action being taken on the subject matter relating to small-business financing. It goes without saying such action is very encouraging to small business throughout the Nation.

We are not unmindful of the thoroughness of the committee and its staff in public hearings held during the 1st session of the 85th Congress on the expanded operation of the Small Business Administration. The committee took a very forward and constructive step in bringing about the improved, far-reaching legislation as recently voted by the House. It was our hope that by this time the Senate would have followed through with concurrent action. This in itself would have been another inspiration to small business throughout the Nation.

Mr. Chairman, last fall, by direction of our head office at Burlingame, Calif., I personally visited and conferred with regional directors and top staff members of the Small Business Administration in Chicago, Minneapolis, Seattle, branch office at Portland, Oreg., San Francisco, Los Angeles, and after my return east, with the regional office in New York City. In each instance the regional director was not aware of the firsthand information we desired on the operation in the various regions. In each instance the conference lasted close to 2 hours and, to be on the safe side, I made it mandatory that another person accompany me on these visits so there would be no conflict in our findings as to the operation in these various regions.

The information we were after was:

1. Applications filed in the regional office from its inception to June 30, 1957.
2. Loans approved in that period.
3. Loans disbursed.
4. Timelag between filing and approval.
5. Timelag between approval and disbursement.
6. Average amount of application.
7. Applications filed for certificates of small business. (a) Number approved. (b) Number denied.
8. Applications filed for certificate of competency. (a) Number approved. (b) Number denied.
9. Number of banks participating in the regional area.
10. Percentage of bank-participation loans.

Mr. Chairman, I have the complete recapitulation of the results of this extensive survey, and I believe it should be made a part of the record of these hearings. In each and every instance no attempt was made by the Government official to conceal any of the information requested.

Shortly after the Small Business Administration was constituted by the Congress I had personal visits with regional directors of SBA in San Francisco, Los Angeles, and Kansas City. Although SBA was at that time in the embryo stage I must confess it did not look very promising as to its help to small business. Shortly after those visits the entire operation of the Small Business Administration was changed for the better, and as I review the present operation of SBA it shows considerable advancement and progress, more in keeping with the intent of Congress.

I think it is most necessary for the committee to have this firsthand information, because such information coming from small business itself should be the determining factor as to whether there is any need for further financial assistance to small business.

These nationwide surveys made by us disclose some interesting action taken by the various regional offices. For example, in one area personal visits were made to all towns in that area 500 or over in population to acquaint the banks with the operation of the Small Business Administration. They believe such action brought greater interest from the banks in the area to SBA. They believe the 5-percent interest rate provided in the House bill would be a deterrent.

We found, in many instances, that regional offices of SBA were plagued with inquiries at the time of the announcement of the President's Conference on Small Business and the question was put to them: "Who selected the small business from this area?"

It was reported in many areas that chain banks may look more favorably on the operation of SBA if it is made a permanent agency. Then again, some regional offices maintained they should have a closing attorney which would, in a more effective way, speed the closing of loans. Additional help was needed in some of the regional offices, and in many instances complaints were made of the continual paperwork placed on the regional offices from the head office of SBA.

It was also brought to our attention that additional work is placed on the regional offices through loans issued by the Wildlife Service of the Department of the Interior, and in connection with Reconstruction Finance Corporation loans.

Criticism, in some areas, was leveled at the big banks for failing to cooperate with SBA.

Mr. Chairman and members of the committee, after my return to Washington I kept my ears to the ground to get the reaction from well-informed financial people as to what beneficial effects to small business would take place if the action of the House in the 1st session of the 85th Congress was finally adopted. The opinion was expressed that if this took place (and we hope it does) it would take away the dependency of small banks on the bigger banks. Now, bear in mind this was the opinion of well-informed banking officials heretofore with big banking institutions.

Mr. Chairman, we would be derelict in our obligation to small business if we closed our eyes to any action by the Congress which would give greater financial help to efficient small business, but there is a wonder in our minds as to the origin of this sudden action on the need for equity financing for small business. I stand before you today and can tell you without fear of contradiction that in the Washington office of the federation—where we have received hundreds upon hundreds of inquiries as to the procedure on SBA loan applications from small business—we have yet to receive any request for long term equity capital financing, except for what is provided in the present Small Business Administration Act.

We believe, from actual business experience of more than a quarter of a century, that where term loans of 5 to 10 years are granted to small business, this would serve the purpose. It might be possible for SBA's loan period to be extended to a 20-year period. That's for the Congress to decide. But there is one thing paramount in our minds, and that is, if a small-business institution could not qualify for a loan under SBA, then we ask the question: "How could they qualify for loans under the new proposal?" I think you will agree that makes sense. Credit standing of an applicant must be good or bad when it comes to loans either through SBA or through any other financial institution, private or Government.

Since congressional action has been instituted on this legislative proposal to make equity capital and long-term credit more readily available to small business we have explored every possible source to get factual information from competent banking authorities. By that we mean people who grew up in the banking field, from the ground floor up.

Let me quote from a communication dated as late as April 29, 1958, from the president of a bank in New York State. He states:

"First, I would be very much against the creation of another agency. Frankly, I think there are too many agencies already and they always seem to weaken the national effort rather than strengthen a cause. Second, I would definitely be interested in the consolidation of the proposed new legislation in the present SBA Association.

"At times I may be critical of the SBA in not pushing for more loans, but I do believe that concentrating all activities and creating one strong Small Business Administration will bring the national effort more prominently into focus.

"The most important thing, George, as I see it is to be very certain we do get some legislation as it is going to become increasingly difficult for the small-business man in America, unless something is done by Mr. United States Government. In fact, I think there should be one agency that should be almost a little czar."

A west coast banker, prominent in his field, advised our head office under date of April 28, that between programs by private banks and the Small Business Administration, the shorter term loan problem of small business is pretty well in hand and he thinks it necessary to continue the SBA lending program as it is now. He believes there is need for small business longer term loans. He is of the opinion that whatever is done should be done through the Small Business Administration. He further stated that there is uncertainty as to whether creation of another agency might, in the long run, undermine the Small Business Administration and its vitally needed programs. He doesn't want anything to knock the SBA and its program out of the picture. He makes a very important observation that the general feeling is it is sounder to perfect an agency that we already have than it is to go off and create a new one.

Another important observation was made by a bank president, and it is a very important one, when he said under date of May 2, "I would consider it very advisable to add aggressive and progressive, independent businessmen of experience to the Loan Policy Board: But only if their advice and suggestions were going to be considered. Too often the businessman is a front used by Government agencies without any real participation in the formation of policies and his value in that case is nil."

Mr. Chairman and members of the committee, in view of this it would be our belief that Congress should complete the work so ably instituted by the House in the 1st session of the 85th Congress, and if we in small business find that this agency of the Government is not serving the best interest of efficient independent business, we will be the first to be knocking on the door of every Member of Congress for the necessary legislation to protect and aid efficient small businesses.

Mr. Chairman, I have tried to present to you and the members of the committee the facts as we evaluate the situation through daily living with small business throughout the Nation.

Hon. Kenneth B. Keating's Birthday

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

Mr. CELLER. Mr. Speaker, I offer felicitations to KEN KEATING, of New York, on his birthday. We have been associated together on the Judiciary Committee for many years and I have grown to have a great respect for him personally. He does a splendid job as ranking member of the House Judiciary Committee. We feud and fend and battle each other and sometimes are as opposite as the poles, but never are we personal or abrasive in our opposing roles. Then too, we frequently close ranks, join forces and fight together, as we did on the civil-rights bill. It is heart warming to serve with KEN. He is intelligent, efficient, erudite, and kind. He could not do a mean thing. It is not in his nature to do so:

A man cannot speak to his son but as a father, to his wife but as a husband, to his enemy but upon terms; whereas a friend may speak as the case requires, and not as it sorteth with the persons. (Francis Bacon Essays xxvii: 1625.)

I wish KEN KEATING, on his natal day, good health and happiness. My felicitations also go to his family.

Statement by the AFL-CIO Executive Council on Defense and Disarmament

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the AFL–CIO executive council on Defense and Disarmament, Washington, D. C., May 1, 1958:

We desire, as do all people, to live in peace. We refuse, however, to allow our apprehensions of the total destructive character of modern weapons of war to blind us to the reality our Nation faces. Many wishful suggestions for relieving world tensions are currently receiving wide discussion, but we must point out the major responsibility for the acute tensions rests on the continued drive of Soviet communism for world domination and its opposition to all proposals designed effectively to prohibit the use of nuclear weapons and to reduce conventional military forces and armaments.

The executive council, therefore, feels that our defense and the safety of the free world require the reaffirmation of our belief that—

(a) There is no evidence that any change has taken place in the objectives and methods of world communism; on the contrary, there has been a return to a one-man dictatorship and a tightening of the Soviet grip over its satellites.

(b) No considerations of truth, consistency or honor govern the behavior of the Soviet Government representatives in their so-called peace offensive and in any negotiations which may take place.

In the light of these considerations, we reaffirm the resolution on peace and disarmament, adopted unanimously by the Tunis congress of the ICFTU, which stated:

"To date, the Soviet Government has vigorously opposed a system of control, inspection and supervision, without which any agreement on disarmament would entail the gravest dangers for the security of the free world. * * *

"While democratic nations must continue their vigilance and reject any disarmament proposals which would imperil the security of the free world, we support them in every effort to obtain the conclusion of an international disarmament agreement free of this danger.

"To be really effective, disarmament agreements should be paralleled by settlements of the most urgent problems affecting the peace of the world, such as the reunification of Germany, in accordance with the freely determined will of its people, and the estab-

lishment of genuine peace in the Middle East and in all other areas of tension, through direct negotiations on the basis of mutual recognition of territorial integrity and national independence."

We further endorse the resolution on the summit conference, adopted by the ICFTU subcommittee on March 18, 1958, which stated:

"Our fifth world congress clearly stated the responsibility for the tension and emphasized that disarmament agreements, to be really effective, should be paralleled by settlements of the most urgent problems affecting the peace of the world.

"This view still holds good; but the immediate dangers for the future of mankind resulting from the armament race have become so great that no efforts should be spared to bring about serious conversations, at least on certain limited agreements, especially in the field of nuclear weapons, which, while safeguarding the security of the democratic countries, would bring relief in the atomic armament race.

"The fact should not be lost sight of that last year the Canadian, French, United Kingdom, and United States Governments submitted concrete disarmament proposals to the United Nations Disarmament Subcommission and that by rejecting them the Soviet Government has paralyzed the work of the United Nations Disarmament Commission. If the Soviet Government means its declaration in favor of a summit conference seriously, there should be sufficient scope to resume negotiations in the light of last year's disarmament proposals of the democratic governments."

We believe that it is not enough to brand Moscow's recent announcement of provisional uninspected suspension of nuclear tests as propaganda. Our Government should take positive action in furtherance of genuine worldwide nuclear disarmament by arranging with as many powers as possible, through the U. N. Disarmament Commission, to reaffirm and carry out the unanimously adopted resolution 1 (I) of th First U. N. General Assembly which provides for international inspection to assure "the control of atomic energy * * * to insure its use only for peaceful purposes * * * the elimination from national armanents of atomic weapons and all other major weapons adaptable to mass destruction * * *" and "effective safeguards by way of inspection and other means to protect complying states against the hazards of violations and evasions."

Until this is achieved, we further urge that our Government should reinforce both the conventional and nuclear elements in the basic NATO defense system and continue its policy of acquiring missile bases abroad, and strengthen the Strategic Air Command in order to maintain a strong deterrent against aggression and to preserve peace.

The Great Drama of the Columbia River

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 19, 1958

Mr. NEUBERGER. Mr. President, in recent testimony before the Senate Interior and Insular Affairs Committee, that able public servant, Gen. E. C. Itschner, Chief of the Corps of Army Engineers, told us that only the Columbia among American rivers was a rival to the four great rivers of Siberia in hydroelectric-power potential. This is a significant statement from an eminent authority, particularly at a time of international competition between the United States and the Soviet Union in the realm of production.

One of the finest statements I have yet read on the vast resources of the mighty Columbia was delivered May 16, 1958, before the National Rivers and Harbors Congress here in Washington, by Marshall N. Dana, of Portland, Oreg., representing the commission of public docks of my native city. Its appropriate title is "The Drama of the Columbia River."

Mr. Dana is assistant to the president of the United States National Bank of Portland, he was formerly editor of the editorial page of the Oregon Daily Journal, and he was a member of the Pacific Northwest Regional Planning Commission during the administration of President Franklin D. Roosevelt, when the great dams at Bonneville and Grand Coulee first were started.

I particularly would call attention to that passage in Mr. Dana's address which emphasizes that skeptics once claimed the power never could be marketed, but that by today, the Bonneville Power Administration has sold 219 billion kilowatt-hours of energy at an average rate of 2.37 mills—one of the lowest in the land—and that gross revenues have exceeded $500 million.

I know that all supporters of wise and prudent river-development projects will want me to share with them Marshall Dana's informative speech, and for that reason, Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE DRAMA OF THE COLUMBIA RIVER

(By Marshall N. Dana, assistant to the president, the United States National Bank of Portland (Oreg.), representing the Commission of Public Docks, Portland, Oreg., and the city of Portland, before the National Rivers and Harbors Congress, Washington, D. C., May 16, 1958)

I

First, may I tell you that I acknowledge, with sincere appreciation, and a degree of pride, the opportunity to bring the Drama of the Columbia to this national platform.

Next, the introduction by Herb West executive vice president of the Inland Empire Waterways Association, not only confers lasting pleasure, but increases the confidence with which I undertake to speak of the destiny-laden region which we call the country of the Columbia. His is not like John the Baptist, a voice crying from the wilderness. His is the clearest of many voices heard from no wilderness, but from a great subnational area endowed with power and opportunity.

Trace the curvings of the Columbia River upon a map of the Pacific Northwest; the resultant form is that of a vast amphitheater.

Nature made the Columbia and its basin a setting for drama. In the beginning it was the drama of ice, the glaciers gouged deep into earth's crust. They spread between the mountain ranges, valleys broad and wide, and, far below, grooved some of the deepest canyons on the face of the American continent.

When warmth recaptured the land, came the drama of flood. The melting ice, the dissolving snow sent waves of unimaginable volume and height, sweeping into channels 5, sometimes 10 times greater than are known today, with no controls save the mountains that stood in their path. One waterfall was miles wide, carried the volume of Niagara multiplied half a dozen times, then for ages remained dry with no hint of former sound and fury.

As spectacular as the drama of flood was the drama of fire. Volcanoes, and we know not how many, spilled curtains of fiery ash. They built dikes and diversions. Over wide areas they spread mineral-filled soil that later was to ache with drought as the desert does, because the water, although in great abundance, flowed deep in mighty chasms.

It is not easy to tell what were the alternations of ice and fire and flood, but we know, as the ice cap melted, the floods poured down against the mountain ranges, backed up into spacious lakes, spilled over the crest so that the fluid cutting tools supplied by the source mountains carved deep gorges through which the Columbia might make its impatient race to the sea.

When the ages of ice and fire and flood had walked upon the stage and played their roles, the mountains and the valleys and the rivers flowing deep stood waiting. The curtain lifted upon the mightiest drama of them all, the drama of life.

During the warmer centuries strange life strutted the prehistoric stage. There are still found the fossils of the Eohippus, the four-toed horse, and the saber-toothed tiger. There were trees growing like the redwood, and the ginkgo, now found only in their petrified forms.

The eyes of pioneers, as of those who travel today, were awed and charmed by the titanic scenic outlooks. Especially notable is the gorge of the Columbia as it thrusts at right angles through the massive Cascade Range. The imaginations of aboriginal Indians were so stirred that they produced legends narrated around the cliffs, the waterfalls, the volcanoes, and the surging river. These legends rise to an imaginative level equal to the legends of the Greeks and the Norsemen.

Even the earliest boatmen would rest their paddles from fighting the rapids and spend long, breath-recovering moments looking upon the majestic scene.

They saw, as we see, the Gorge of the Columbia River, a mile-deep cleft cut transversely through one of America's major mountain ranges, the Cascades, by the Nation's second-largest river and greatest power stream. Its flowing floor is made of the waters that are gathered from a thousand lineal miles of the west slopes of the Rocky Mountains and concentrated in the narrow passage leading from the interior to the sea. The domed roof is the sky. The mile-high walls are bordered by monoliths sculptured through the ages by the wind, by the rain, and by the sheer passing and modifying influence of time. Waterfalls gathered in the upper places are like fleecy scarfs draped over the shoulders of beauty.

There is no other place just like the gorge of the Columbia in all of this land. In the gorge, the Columbia makes its last urgent leap before it widens into the harbor of Portland and the channel for the ships of the seven seas. It is a place to create a reverent heart and an uplifted mind.

The drama of people in the country of the Columbia requires three acts. First, the mountain men following the game trails—men like Joe Meek, Robert Newell, William Craig, and Cabot Williams. They came westward, rifle in the crook of the arm, gold pan dangling. There was great dramatic quality in the pageant of the covered wagon. Not since the *Mayflower* landed has the expansion of America for the sake of homes and

cultivated lands been quite so picturesque as the parade of white-bowed Conestoga wagons, ox-drawn, crowding to the shores of the Pacific. They carried civilization westward in little trees and rosebushes. Plows were strapped to the wagonsides. Cows followed. Women rode high-seated beside their men. It was their lot to bring to thrilling climax the old, long-extended period which contained the legends of the River of Kings with "shores of pure gold." Stories of the Oregon "which hears no sound save its own dashings" lured them to forests without boundaries, valleys of widespread rich soil, a great verdant basin made by the Creator's hand with tools of time, which became the setting of homes.

The covered wagon held under the American flag the territory found by Capt. Robert Gray, who entered the Columbia in 1792, and further explored by Lewis and Clark in transcontinental expedition at the direction of President Jefferson in 1804, 1805, and 1806.

No better adventure tale is told than that of David Thompson, the first white man to see the high source of the Columbia where a lake gives it birth. But there, through another tributary, water flows out of the Columbia ice fields, still the greatest mass of ice on the American Continent, from which also streams begin that ultimately discharge into the Arctic Ocean, and the Atlantic, through Hudson Bay.

Even earlier is the story of young John Ledyard, Dartmouth student, who saw the green shore of Oregon from Captain Cook's ship, that shore upon which he never was to set foot. Yet his enthusiasm found vent in letters that he wrote to the then-Ambassador to France, Thomas Jefferson, and much of the settlement—possibly the Lewis and Clark Expedition—resulted.

We witness the beginning of cities, Portland, with the first settlers, Lovejoy and Pettygrove, flipping a coin to see whether the city to be would be called Portland or Boston. Later, a magical line telling how a ton of gold had been unloaded from Alaska at a dock in Seatle, signaling a great gold rush, and marking, likewise, the emergence of the Puget Sound city into metropolitan status.

Dr. McLoughlin, Admiral Vancouver, Peter Puget, General Lane, Jonathan Carver, Captain Bonneville, are names to conjure with. There were also the pioneers of faith. Jason Lee, Father Blanchet, martyred Marcus Whitman.

Where homes are cut into the forest, with loaded rifles nearby to repel savage invasion, the church and the school soon follow.

Painted on the backdrop of history are other notable scenes. There was the great but bloodless boundary crisis of "54–40 or Fight." There was the historic gathering on the shore of the Willámette at Champoeg where the settlers in 1843 voted 52 to 50 to create a provisional government and remain under the American flag. There was the Astor Expedition which gave a name to the city at the mouth of the Columbia, and brought from Washington Irving, in his Astoria, some prophetic words: "As one wave of emigration after another rolls into the vast regions of the West, and our settlements stretch toward the Rocky Mountains, the eager eyes of our pioneers will pry beyond, and they will become impatient of any barrier or impediment in the way of what they consider the grand outlet of our empire."

Before there were railways, airways, and highways, the rivers were the principal routes of transportation. Upon them operated the fur-bearing bateaux of the French-Canadian voyageurs and the canoes of the Indians.

Into the river mouth came the sailing ships. The first river steamboats ran the shouting rapids in joyous abandonment of fear.

Thus, in quick and spreading strokes, the drama of life had its sequences in the greater drama of the Columbia. It is the play that captured the rapt attention of a national audience, and still does.

II

The country of the Columbia is built upon ample and flowing lines. The drainage area of this one great river system joined by the Snake is more than a quarter million square miles (259,000; 39,700 in Canada). This is an area four times that of the New England States, twice that of the British Isles and France.

The Columbia is the biggest powerplant on the American Continent. Its cataracts and falls provide for generating units at convenient service intervals. The Federal Government is the greatest developer of the Columbia's power, but there are other powerplants built by people's utility districts, electric utilities, and private capital. Netting them all in one regionwide service is the Pacific Northwest Power Pool, which takes energy from where it is produced in largest amount to where it is most needed, equalizing the distribution of power as the dams of the upper and lower rivers equalize and control the seasonal floods, and thus include the whole area in a zone of security and service.

The Snake, which brings half of the current at the Kennewick-Pasco meeting point of the two rivers, is, in its own right, a noble and scenic river taken in part out of the high ridges of Yellowstone National Park, yielding a contribution of its water for irrigation across southern Idaho, and roaring the rest through a gorge which is the deepest cleft on the American Continent, called Hells Canyon, well named for its controversy in the generation of power.

A year's flow of the Columbia would cover its whole basin 15 inches deep. It delivers into the Pacific, in the average of a 50-year period, 180 million acre-feet, which is 11 times that of the Colorado River, half that of the Mississippi. The secret of its power is found from the fact that its fall from the Canadian border to the ocean is 1,290 feet. The United States engineers have estimated that 11 dams would take care of 92 percent of the fall of the river generating 8 million kilowatts on the main stem, and 32 million with complete regulation and development of the Columbia system.

While the Mississippi is the mightiest of rivers, the Columbia is the most powerful, holding in its potential 40 percent of the total represented by other rivers. Two of its projects are the Nation's greatest. One, in power, Grand Coulee, which is the vastest steel and concrete mass ever laid down by man. The other, the Columbia Basin irrigation project, which holds a million acres within its ultimate development. Bonneville came first. "More power to you," said President Franklin D. Roosevelt, with Senator Charles L. McNary and Representative Charles H. Martin looking on.

Now in the Bonneville system are Hungry Horse, Albeni Falls, Detroit, Big Cliff of the Willamette; McNary, which started out as Umatilla Rapids; Lookout Point, Dexter, also on the Willamette; Chief Joseph, the Dalles, Chandler, Ice Harbor, Cougar, and Hills Creek.

At one time skepticism insisted that the power could never be marketed. But, in 20 years, the Bonneville Administration has sold 219 billion kilowttt-hours at an average rate of 2.37 mills per kilowatt-hour; gross revenues are more than one-half billion dollars; the transmission system has grown to 7,318 miles, 183 substations, and a transformer capacity of 10,777,915 kilovolt-amperes.

After two decades the Columbia River power system has 4,702,000 kilowatts of installed capacity, and is on the way, when Federal projects under construction are complete, to more than 7,700,000; and yet the demand is beyond the supply.

The one-time skepticism whether big power could be marketed has changed to worry whether development can keep up with demand. The argument still goes on whether the roaring rapids of the Columbia should be further developed by the Federal Government, or with the aid of private investment. To anyone who respects facts, the answer is clear: every dollar of capital investment from every legitimate source is imperatively needed merely to keep pace with necessity.

Once Bonneville was proposed as a yardstick wherewith to compare costs, operation, distribution, and service of a Federal plant with the powerhouses of the private utilities. And, in the public interest, we now can see the desirability of a double yardstick and a perpetual comparison of service and rates, public and private. It is the people who are to be served. The spirit of the power agencies and the regulative agencies of Government promise that they shall be served and served well.

III

Into the affairs of the Columbia Basin also enter the strange, ominous factor yet new to this planet. At Hanford on the Columbia and Arco on the Snake are the atomic energy plants which shared in the blasting of Hiroshima, and now share in the projects which have to do with eradication of disease, the stimulation of industry, the operation of submarines and airplanes, the generation of greater electric power, and the servicing of a thousand new and revolutionary enterprises that will be foremost in the nearing years.

The idea of use was generated long before the day of electric power.

Pioneer river men talked of the development of the Columbia for all of its uses. Some of them operated the open river line to maintain competition with the railroad. Some of them led the way in reclamation projects. Some of them installed the early nets and wheels when commerce turned to fishery.

It was not difficult under such a slogan of full development to include the powerplants. Nor is it difficult now to see how every agency, public and private, in cooperation and in joint endeavor will be needed as the growth and progress of the Pacific Northwest continues.

Of that continuance, have no doubt.

The population growth of the last census period in America was about 14 percent. In the Pacific Northwest it neared 40 percent. With California, and its 11 million added, the Pacific States markets have an increasing importance to the industry of the entire country.

One needs but to travel the highways, many of them fine, broad and new, of the Pacific Northwest to feel another throbbing of power in the enterprises converting into high living standards and security for the future, the forests and the minerals and the fishery of the region.

Tourism is a rising tidal wave. The big highway program will lure countless additional numbers. It only remains that the highways to rugged and beautiful scenes shall be equal to the traffic upon them, and the camps, the motels, the hotels and the lodges will provide accommodation.

Water is the controlling factor in our Pacific Northwest region, as it is in the Nation. The efficient combinations of water and land bespeak the growth of intelligence. We must go farther and speak of the water, the land, the plant, and the animal, all in harmonious combination. Not even then have we gone far enough, for we must combine water, the soil, the plant, the animal—and man.

The controls upon water are a part of its power and its service. Flood control not

only reduces raging destruction, as it was known in 1894, when Portland streets were traveled Venice-style—in boats; or in 1948, when 1,000 miles of the Columbia's shores knew turbulent flood and the city of Vanport, population 50,000, was obliterated; but flood control also equalizes and increases the annual yield of power, and radically reduces erosion.

Effective check to erosion is also one of the important objectives in the development of the Columbia for all of its uses. Often have I seen in the murky, tumbling flood, rich brown loaves of bread, which no one will ever eat, red apples, which no one will ever enjoy, and beautiful flowers which never will bloom, because the soil that would have nourished them is gone forever.

Look into the country of the Columbia today.

Broaden it to include Puget Sound in the entire scope of the Pacific Northwest. Reach into the mountain valleys and their strong rivers rising in western Montana, then let attention linger on the broad and fertile expanses of southern Idaho. What brought about this step-by-step development until forestry, agriculture, and recreation must be measured in billions of dollars annually? Much of it is due to initiative and hard work of the people themselves. The self-help precept is exultant in the motto of Oregon "She Flies With Her Own Wings."

But an essential animating principle in the growth and progress of the Pacific Northwest will be found in the very proper exercise of cooperation by the Federal Government.

An important group of Federal agencies, such as the Army engineers, the Bureau of Reclamation, the National Parks Service, the Forest Service, the Fish and Wildlife Service, the Public Health Service, the Coast and Geodetic Survey, the Agricultural Marketing and Research Service, the Air Force, the Coast Guard, the Bureau of Public Roads, and the Weather Bureau, do their assigned parts.

Since Maj. R. S. Williamson, in October 1866, tackled the serious Swan Island Bar in Portland Harbor, the Army engineers have built more than a billion dollars worth of river and harbor improvements in the region. They have dug the channel from Portland to the sea and are listening to pleas that the depth of 35 feet and the width of 500 feet shall be increased, depth to 40 feet and width to 750 feet, with a controlling harbor entrance depth that will permit, night and day, winter and summer, passage of inbound and outbound ships. They are extending their study of upper river to include excavation of a channel 9, 12, or 14 feet, 250 feet wide, along the 57 miles from McNary Pool to Priest Rapids Dam. They are looking at the navigation potential to Rock Island and to Chief Joseph Dams.

IV

In the not distant future, they will amplify what is known as the 308 Report of 1948, viewing considerably the appeals of more than a score port districts, a dozen of them up-river, to provide the depths and widths of channel and the security of navigation that will encourage further extension of the already-great barging outfits.

In the Columbia Basin, in Vale-Owyhee of eastern Oregon, in central Oregon and Klamath, in southern and northern Idaho and in Montana, the Bureau of Reclamation has stored water in the mountains, channeled it to thirsty acres, and permitted responsive citizens to develop the homes, the farms, the enterprises of a high-grade economic system.

In the next year after the act of 1902 passed, in the administration of Teddy Roosevelt, studies were started of the Umatilla project in Oregon, the Minidoka in Idaho, and the Okanogan and Yakima projects in Washington.

The first Federal power installation of Columbia Basin was made a part of Idaho's Minidoka project in 1909, and in 1910 power from Minidoka provided the first space heating in the Pacific Northwest.

In these reclamation projects, as of June 30, 1957, the Federal Government had invested approximately $880,997,000, and the gross value of the crops totals between three and three-quarters and four billion dollars. Last year there were 2,700,400 acres to which full or supplemental irrigation water had been provided. And, the average value of crops annually was slightly more than $108 per net acre.

The Bureau of Reclamation is also a power producer with an installed capacity of 2,434,900 kilowatts, producing 15,235,181,580 kilowatt-hours during the calendar year of 1957. The power revenues from reclamation in this area had amounted to more than $173 million as of June 30, 1957. Now I hear projects for river and harbor work by the Army engineers called pork barrel. I see a dubious administrative eye turned upon the further land and water development projects to be undertaken by the Bureau of Reclamation. In the same breath I hear the Army engineers and the Bureau of Reclamation extolled as among the world's finest building organizations manned by executives and engineers of the highest caliber.

What an anomaly is this contrast between the honor of the builders and the loose challenges to the honesty of their works.

The building agencies of the Federal Government and our Congress should be freed from such stupidity.

The Government as principal landowner in the Columbia Basin, as steward of great natural resources, and as cooperative agent in the growth and progress of an important subnational area, very appropriately joins with the forward looking, constructive groups of the region in orderly planning and accomplishment. Nor should shortsighted politics be allowed to interfere.

Seattle and Tacoma on Puget Sound have great developments at stake. Portland-Vancouver-Longview, and Astoria must depend upon the depth and safety of the harbor entrance, and the channel to the sea, as controlling factors in their own programs pressured by growth of population and industry.

Strong and rapidly growing cities of the interior which have the greater part of their accomplishments in their future ought to be made a studied part of the program. I think of Wenatchee, Yakima, The Dalles, Klamath, Pendleton, La Grande, and Baker; Walla Walla, Lewiston, Boise, Great Falls, and Missoula. I think of even newer towns in reclamation districts—Othello, Soap Lake, Ephrata, and Ontario.

By reason of the power of the Columbia, we built a billion dollars worth of ships during World War II. From the same source, the great aircraft industry of Pudget Sound is powered amply by electric energy.

Aluminum plants which are equal to half of the market requirements of the Nation are all made possible by Columbia River power.

Lights now spangle irrigation districts and towns because of power from the river of the West.

The size of ships that enter the Columbia, the volume of cargo, and the radiating service of docks heavily under construction, ship repair, and improved facilities and servicing will succeed or fail as projects are allowed and financed. So it is with the upper river where port districts getting ready for barges signal the mounting enthusiasm for a feasibly and economically navigated river.

The old-time slogan "The Development of the Columbia for All of its Uses" is limited by the extent to which new starts are authorized and the program of development in all of its parts is allowed to proceed.

V

We have stalwart friends. We give our gratitude to that warrior organization, the National Rivers and Harbors Congress, which battles always and effectively for the full development of our rivers and harbors and the commerce upon them, and, thus, for a sound and enduring national economy.

We pay tribute to the courage and aggressiveness of those Members of the Congress—Senate and House—who win for us the vitally essential projects of land and water development. Their vision and capacity for action open wider the door of American destiny.

Every dollar appropriated for power, reclamation, flood control, and recreation, will have its partners in dollars from private enterprise, and, together, these dollars will make many dollars more for the economic stability and the defense of America.

The people of the country of the Columbia are aroused in behalf of land and water development, and the conservation and use of natural resources.

Only an orderly program in which development and progress are steady, and the public rights and interests are protected, can attain the sound and great degree of accomplishment now so closely within reach.

But we vision an even further goal. The largest resource and the greatest promise of the country of the Columbia are its people. Just as the drama of the Columbia is made of the dramatic interludes of ice and fire, flood and power, we know that men and women are to grow tall like the trees and the mountains. And, are to attain the power of personality like that which rolls and surges in the greatest of all the power rivers.

Harness the Columbia for all of its uses, and you release the human mind for greater ideas and the unquenchable strength of character and citizenship..

The country of the Columbia is in its springtime and the white-maned horses are bending to the plow.

The river possesses the genius of the future.

The Trend of Exports and Imports

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. RAY. Mr. Speaker, under leave previously granted I am glad to place in the Appendix of the RECORD, for the information of my colleagues, a letter which I received from the Department of Commerce in answer to specific questions I have asked about the trend of exports and imports in recent years. I have since been informed that this information is not in the record of hearings on the Reciprocal Trade Agreements bill.

THE ASSISTANT SECRETARY OF COMMERCE,
Washington, D. C., May 9, 1958.

Hon. JOHN H. RAY,
House of Representatives,
Washington, D. C.

DEAR MR. RAY: In answer to your request of yesterday for information regarding the trend of exports and imports since our participation in reciprocal trade agreements, the following table will give you indications of these trends. Countries covered were selected at random and are indicative of typical countries with whom we trade.

[In millions]

Country	United States exports	United States imports		United States exports	United States imports
Canada, 1st full year of agreement, 1936	$391	$376	1957	$3,880	$2,901
Brazil, 1st full year of agreement, 1936	49	102	1957	468	700
Cuba, 1st full year of agreement, 1935	60	104	1957	610	482
United Kingdom, 1st full year of agreement, 1939	505	149	1957	1,096	766
Belgium, 1st full year of agreement, 1936	59	59	1957	416	270
Netherlands, 1st full year of agreement, 1936	53	50	1957	555	163
France, 1st full year of agreement, 1937	165	76	1957	582	259
Sweden, 1st full year of agreement, 1936	43	48	1957	226	119

The leading imports, as of 1957, from the countries listed in the chart are as follows:

Canada: Newsprint, woodpulp, and lumber; nickel, aluminum, and other nonferrous metals; crude petroleum; iron ore; various chemicals; fish, agricultural machinery; whiskey.

Brazil: Coffee, cocoa or cocao beans, iron ore and ferroalloys.

Cuba: Sugar, molasses (mostly inedible), tobacco, nickel oxide, copper, some coffee.

Imports from the European countries are rather highly diversified, but the following are among larger items in each case:

United Kingdom: Autos, machinery, whisky, diamonds, wool manufactures.

Belgium: Steel, diamonds, glass, a variety of textile manufactures.

Netherlands: Meat products, bulbs (e. g., tulips) and corns, tin steel.

France: Autos, steel, various textile manufactures, artworks and antiques, wines and other beverages.

Sweden: Wood pulp, machinery, autos, steel products (e. g., wire and wire rods), iron ore.

It will be remembered that in 1957 our exports, exclusive of military, were approximately $19.5 billion. During the same period our imports were approximately $13 billion. Out of the $13 billion, our studies indicate that no more than $3 billion is in any way competitive to American production. In other words, out of a total world trade of $32.5 billion, less than $3 billion is in a sector that could be considered competitive.

If you wish further information, I hope you will call us at your earliest convenience.

Sincerely yours,

HENRY KEARNS,
International Affairs.

Jaycees Endorse Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BARTLETT. Mr. Speaker, I take pleasure in calling to the attention of the House a resolution favoring statehood for Alaska and Hawaii which was unanimously adopted by the board of directors of the Connecticut Junior Chamber of Commerce when it met at Enfield, Conn., on April 9, 1958. In this connection, Mr. Speaker, I should like to express my appreciation and the appreciation of all other Alaskans favoring statehood to the Jaycees all over this land. That organization, locally and nationally, has been in the forefront of our supporters. Such support has meant, and means, much to us. Just so there will be no doubt about the matter, let it be recorded here that the Alaska Jaycees are battling for statehood every day of the year led by their president, Edward A. Merdes, Fairbanks attorney, who has made a great contribution to the statehood cause.

Here is the resolution from the Connecticut Junior Chamber of Commerce:

STATEHOOD FOR ALASKA AND HAWAII

Whereas in view of the fact that immediate statehood for Alaska and Hawaii has been adopted in the platforms of both major political parties and the national administration and hence is nonpartisan; and

Whereas the United States Junior Chamber of Commerce, in annual convention assembled, in Milwaukee, Wis. the 26th day of June 1957, unanimously resolved immediate statehood for Alaska and Hawaii; and

Whereas the people of both Territories have demonstrated their readiness and ability to assume and discharge the obligations of statehood; and

Whereas the people of these Territories have upon their own initiative and expense adopted by more than 2 to 1 majority a State constitution in conformity with the principles of American Government; and

Whereas the legislatures of these Territories have year after year passed memorials urging Congress to enact enabling legislation; and

Whereas the people of these Territories as United States citizens are denied the right to vote for the President and Vice President of the United States and have no voting representation in Congress; and

Whereas Territorial status in view of its temporary nature discourages investment capital and thereby hinders the economic development of the Territories; and

Whereas statehood for these Territories would result in a decrease of Federal expenditures for the operation of government in Alaska and Hawaii; and

Whereas Territorial status contributes to an indifferent and slothful attitude toward government while statehood encourages an active interest and participation in government; and

Whereas it is in accord with cherished principles of American Government to grant the responsibility and privileges of local government to American citizens who have suffered the hardships of frontier areas and developed the same; Now, therefore, be it

Resolved by the Connecticut Junior Chamber of Commerce at its monthly board of directors meeting, assembled in Enfield, Conn., this 9th day of April, 1958, That the President, the Members of Congress representing Connecticut, the Secretary of the Interior, the Delegates from Alaska and Hawaii be urged to support immediately, statehood for the only two remaining incorporated Territories under the American flag, Alaska and Hawaii; be it further

Resolved, That a copy of this resolution be sent to the President of the United States, each Member of Congress from the State of Connecticut, the Secretary of the Interior, the Delegates from Alaska and Hawaii, and the Jaycee presidents of Alaska and Hawaii.

We Are Caught in the Middle in Lebanon

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. LOSER. Mr. Speaker, one of the South's well-informed editors on the Middle East situation, the Honorable Creed Black, executive editor of the Nashville Tennessean, feels that internal politics and rivalry in the Arab world make the United States a target for Beirut rioters.

Mr. Black has just returned from a tour of the Middle East and speaks with authority on this troublesome situation.

Mr. Black has written a rather illuminating story for his paper, entitled "We Are Caught in the Middle in Lebanon," which I commend to the reading of the Members of the House. Under the unanimous rule, I insert the same in the RECORD. It follows:

WE ARE CAUGHT IN THE MIDDLE IN LEBANON

(By Creed Black)

Just a little more than 2 months ago, I sat in the American Embassy in Beirut—a beautiful new 8-story building that overlooks the peaceful Mediterranean—and heard an official there describe the little Republic of Lebanon as "probably the most pro-Western of all the Arab countries—our anchor spot in the Middle East."

Yesterday only the intervention of Lebanese troops kept an angry, jeering mob from storming that Embassy on the heels of the destruction of American libraries in Beirut and Tripoli.

Two months ago a spokesman for the Lebanese foreign ministry talked hopefully to me of his country's "mission as the promoter of peace, amity and concord among all the Arabs."

But now Lebanon has become the hottest spot in the Middle East, unable to keep peace and order at home, much less among its neighbors.

What has happened?

The answer is not hard to find as these statements of 2 months ago might indicate.

For even then the makings of crisis were apparent enough in Lebanon to warrant the statement in a report from Beirut, published in this space, that "powerful forces of unrest are at work both within and without" the country and that "real internal trouble" was threatening.

To understand the causes of this trouble, which has now erupted so violently, it is necessary first to understand something about Lebanon's unique position in the Middle East.

It is the smallest of the countries in that area, with an area about the size of Connecticut and a population of 1.5 million. But it is also the most prosperous, for it is the commercial, cultural, communications, and resort center of the Middle East.

Politically, its Government is delicately balanced—like the total population—between Christians and Moslems. But the present administration of President Camille Chamoun, a Maronite Christian, is strongly pro-West in its outlook and has tried to maintain a neutral role as "middle man" in the struggle between rival Arab blocs.

This would make for a volatile situation in any circumstances, but normal political

differences have been heightened in recent months by two major developments.

The first of these is the question of whether President Chamoun is going to try to amend the constitution so that he can succeed himself when his current 6-year term ends this year. Reports that he is planning such a move have greatly intensified the opposition to his government, which already was under heavy fire for being too closely tied to the West.

The other is the dramatic rise of Arab nationalism symbolized by Gamal Abdel Nasser, who has had a magnetic influence on Lebanese citizens—particularly the Moslems—who want to see their country linked with the United Arab Republic.

While Nasser was visiting in nearby Syria, for instance, thousands of Lebanese made the short drive across the border to Damascus to join the throngs welcoming the new champion of Arab unity.

And while I was in Beirut, his picture was displayed in many shops and taxicabs and his voice was frequently heard over radios tuned to Damascus or Cairo.

Even then, there also was a hint of the emotionalism that can grip Arab demonstrators and turn them into violent mobs. For a student march that started out as a protest against French actions in Algeria wound up as a pro-Nasser demonstration punctuated by shouts of "down with Chamoun."

Now those shouts—and worse—are being directed against the United States as well.

The propagandists who fire these mobs, of course, link us not only with Chamoun but with the imperialism the Arab world so bitterly resents. And though many—possibly even a majority—of Lebanon's people favor Western ties and a neuutral position in the struggle between the competing Arab blocs, even the government spokesmen join the criticism of our role in respect to Israel.

Thus has the United States been caught in the middle of thee Middle East conflicts—Labanon's own political struggle, the rivalry between competing Arab groups, and the Arab-Israeli feud.

How we will come out of it for the immediate future probably depends on the Lebanese Government's ability to restore order and achieve some kind of domestic political stability. And the odds on that, in any Middle Eastern country, are anybody's guess.

State, Justice, Judiciary, and Related Agencies Appropriation Bill, 1959

SPEECH
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12428) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1959, and for other purposes.

Mr. TABER. Mr. Chairman, I move to strike out the last three words.

Mr. Chairman, my friends on my right seem to have the idea that we should not, when we find out that we have a problem to solve, try to solve it and straighten it out and get the people in that part of the world thinking our way.

Now they refer to the situation in 1936. At that time the Communists had not progressed so far down the line after their recognition as to be a menace in South America. They developed to that extent since then as a result of grants-in-aid that have been made to them by the United States of America. We are up against that situation because that was done.

Mr. MORANO. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. MORANO. Certainly, the gentleman on the other side cannot take credit for correcting the situation in Guatemala.

Mr. TABER. No.

Mr. MORANO. We were able under this administration to overthrow a Communist government in Central America and bring about democratic rule there.

Mr. TABER. That is right.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. JUDD. Just a word in answer to the gentleman from California [Mr. Roosevelt] with respect to the Development Loan Fund. I heard him say over the air last night something to the effect that its money had been available for a year and a half and almost none had been spent. Actually, the President did not get to sign the bill authorizing the fund until early last September. It was, of course, the end of the year before the organization could be set up and its personnel selected, hired, and organized. Mr. McIntosh, its director and a man who has spent his life in foreign trade, did not take over the management of it until January. So, actually, when you consider that it has been in operation for only 4 months, it is completely unreasonable to expect that he could have made any loans on the applications received for projects all over the world unless he had followed the careless policies and practices of previous administrations by just giving handouts to almost anybody who asked for one. We would be the first to condemn him if he were to make loans before projects are adequately studied and demonstrated to be sound.

Mr. MORANO. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield.

Mr. MORANO. I just want to make one more point. Since 1946, at least 3 countries have now elected a democratic government under truly democratic processes, and they are Argentina, Honduras, and Guatemala. There has been the overthrow of a dictator in Venezuela. Now that is pretty good. I want to pay a compliment to the gentleman from Louisiana [Mr. Boggs]. Certainly, he has emphasized that we do have problems there and I agree with him, but I also want to say that we are getting at those problems and we are trying to solve them and we expect to solve them.

Mr. TABER. And we would not be doing any good if we did not try to solve them. That is what we must do. There is no sense in our making all these appropriations and giving these people all the considerations that we have in every way all along the line of legitimate trade and all that sort of thing and not expecting to get some good results. In these countries where they said we had trouble and people annoyed Mr. NIXON while he was going through, the majority of the people in those countries were not the ones who did that, but it was simply a small group of students and youngsters who were stirred up by Communists to make trouble. We have to face that situation. We have to find a way to reach the people so that that sort of thing will not happen. The Communists all over the world will do the best they can to make trouble for us. We have to fight all the way and those who say that we should not have tried to fight and to get this situation straightened out are making a mistake.

Socrates and the Farm Problem

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 19, 1958

Mr. HUMPHREY. Mr. President, recently the Minneapolis Tribune printed an article entitled "Socrates and the Farm Problem," written by Msgr. L. G. Ligutti, and published in the Des Moines Register.

Monsignor Ligutti is the executive director for the National Catholic Rural Life Conference. His article is deserving of the attention of everyone.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCRATES AND THE FARM PROBLEM

(By Msgr. L. G. Ligutti)

Let us imagine for a few moments that Socrates is appearing before a TV forum. The topic is "The Farm Problem." The panelists, editors, economists, labor representatives, big and little farmers, businessmen, university professors, Department of Agriculture personnel.

Socrates: What is the main farm problem of today?

Chorus: Overproduction creating a surplus which has been bought up by the Government (about $7 billion worth as of September 30).

Socrates: What do you propose to do?

Editors, economists, Department of Agriculture, etc.: Get rid of inefficient farmers (about 1,225,000 of them on 25.7 percent of United States farms) because their income from farm production is less than $2,500 a year.

Socrates: How much do they produce?

Statistician: Seven and one-tenth percent of total agricultural production.

Socrates: Who produces 58.2 percent of the total agricultural production?

Statistician: Five hundred and eighty-three thousand farmers that have an income of $10,000 a year or more (i. e., 12.2 percent of United States farms).

Socrates: Would it be easier and better to ask this efficient group to bring their production down 7.1 percent or to push off 1,225,000 smaller farmers?

Panelist: Silence.

Small Voice: I am Piccolo Pete. I was in an orchestra once upon a time. The diners complained we were making too much noise. The master of ceremonies with pontifical authority ordered off the scene all piccolos, all flutes and violins.

Socrates: Did the noise subside?

TV Audience: Not as long as the trombones, tubas, bassoons, saxophones, and drums remained on the scene.

Socrates: In the nether regions I was reading the New York Times for Sunday, January 12, 1958. It said, "United States jobless rise at steady rate. Survey finds conditions likely to worsen." If that is true, and the Times enjoy's good reputation even among us, where would you put the piccolos of agriculture?

Echo: Where?

Dr. Butz, dean of agriculture, Purdue University, one of the panelists, reading part of his speech as quoted in the Kansas City Times, January 8, 1958: We must stop using agriculture as an institutional burying ground for large numbers of underemployed human resources we aren't smart enough to use more productively elsewhere.

Chorus. Well spoken.

Socrates. Apparently your hearts bleed for the poor, low-income farmers.

Chorus. Yes, indeed! (Sobbing heard—not seen.)

Socrates. Who is a farmer?

Professors. Anyone who works on a farm.

Socrates. I have heard some gossip across the River Styx about United States migrant farm laborers—wetbacks, Mexicans, Okies and Arkies (over a million of them). Undoubtedly they are farmers because they work on farms. Are they in the decent-income bracket?

California Ranchers. Oh no, they are just farm hands. They are needed to carry on our big farming operations efficiently.

Socrates. Why not start moving them out of agriculture and train them for industry, and thus improve their standard of living?

Chorus. Silence.

Socrates. Would you advocate closing down any and all small business because of low income?

Businessmen. No, indeed. That would interfere with free enterprise.

Socrates. Are low-income farmers free enterprisers?

Piccolo Pete. Yep!

Socrates. Thank you, gentlemen.

Twenty-fifth Anniversary of TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. EVINS. Mr. Speaker, in connection with the 25th anniversary of the TVA, I include the following editorial entitled "Twenty-Fifth Anniversary of TVA," and published in the May issue of the Progressive, in the Appendix of the RECORD. The article follows:

TWENTY-FIFTH ANNIVERSARY OF TVA

We are devoting nearly all of this May issue of the Progressive to commemorating the 25th anniversary of the social achievement that represents, for us, the high tide of democracy in our century—the Tennessee Valley Authority.

It will be 25 years ago May 18 that President Franklin D. Roosevelt, in those first, frenzied days of the New Deal, signed the TVA Act that was not only to tame a wayward river and regenerate an ailing valley, but was to become celebrated the world over as a shining example of democratic planning.

The extension of the TVA idea, in our judgment, is an indispensable ingredient in any program for a resurgent progressivism in America. The middle-way TVA idea makes a shambles of the doctrinaire nonsense of both Karl Marx and Adam Smith. It has come to symbolize a deeply democratic alternative to both the law of the jungle and the tyranny of totalitarianism. The TVA idea, with its concept of national planning, regional administration, local participation, and individual freedom, has brought us a giant stride closer toward fusing two of the great goals of the American Constitution as expressed in the preamble—individual liberty and the general welfare.

The very essence of the TVA idea is the partnership of the Federal Government with the people of a great river valley to plan the unified development and maximum use of all the resources for the benefit of all the people. Countless experts from almost every country on earth have come to study TVA's extraordinary record of achievement. It isn't the dams that attract them, for there are bigger dams elsewhere. It isn't the public development of power, for this is the rule rather than the exception abroad. Nor is it TVA's remarkable record in flood control, navigation, reforestation, soil improvement, the minerals program, and the development of recreational facilities that draws them to the valley.

It is the unity of these in one all-encompassing planning operation that captures and parallels the oneness of nature—this is what has beckoned so many visiting statesmen and technicians hunting for new and creative methods of resource development. Mostly they come to see and study the physical plant, but they stay to be inspired by the unprecedented extent to which planning is possible without the surrender of freedom to an all-powerful bureaucracy.

For this is one of the glories of TVA—that it achieved so much by demonstration and inspiration, and not by command and regimentation. The seven States of the TVA basin, and the countless communities within them have found their rights and privileges undisturbed by the Federal agency planted in their midst 25 years ago, although many were fearful at first that TVA might be sent them from Washington as a superstate. As a matter of policy, TVA has worked closely with State and local agencies and has encouraged them to assume new duties and responsibilities. Again and again TVA officials have seen clearly what needed doing, and have had the legal power to do it, but they have preferred to wait until the idea caught on with the local people who then went ahead and did it. This is democratic planning in action.

Stuart Chase, in an article in the Progressive more than a decade ago, wrote: "A commercial civilization throws on the scrap heap the most constructive element in human nature: the instinct to cooperate with one's fellows in building up the community. The biological fact that man is a social animal is neglected, and a great storehouse of energy and enthusiasm wasted."

TVA has reversed the cheerless characteristic of commercial civilization without in any way undermining the system itself. Far from throwing cooperation on the scrap heap, it has made cooperation the heart of its way of doing things. Far from wasting energy and enthusiasm, it has recognized man for the social animal he is, or can be, and proceeded to harness his neglected instinct for cooperation in a great program of community building.

TVA was an experiment in its infancy. Never before in American history, or the history of any other nation for that matter, had a public agency been assigned the task of developing all the resources of a great river system. How successfully that experiment has proved itself is clearly presented in the documented articles that make up this special issue of the Progressive. They tell a graphic story of physical achievement and material success, but they emphasize, too, how it was done—which is part of the spirit of TVA.

From its very beginnings TVA was blessed with unusually able and dedicated officials and staff who caught and kept alive the vision of a great human enterprise. Their task has not been an easy one. They were faced from the outset with the relentless opposition of the power trust, which continues even now. During the past 7 years they have been obliged to contend with the ill will of the Eisenhower administration, which has made their task doubly difficult and has taken its toll of able personnel and struck at the morale of those who stayed on.

But TVA, we are confident, will ride out the present storm, just as it has fought its way over rough waters so many times in the past. When inexorable events lift this Nation out of the swamps of conventional conservatism and put us on the high road to a progressive program of democratic planning, TVA will be there to provide guidance and inspiration for the unified development of the other great river systems in America.

In Debate on Alaska Statehood, Stick With the Facts

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. PELLY. Mr. Speaker, I offer for printing in the Appendix of the CONGRESSIONAL RECORD a timely editorial which appeared in the May 13, 1958, Seattle Post-Intelligencer. Some of America's best fiction is written about Alaska, but myths and legends belong in literature and especially should be omitted from this week's debate on statehood. Misstatements can be repeated so often they come to be accepted as facts. Here is the truth about Alaska shipping:

THE FACTS

In the heat of pro and con debate on Alaska statehood, let's stick with the facts.

A national weekly May 5 said: "By terms of a fuzzy 1920 law, all trade from and to Alaska must go in United States bottoms and on United States rails. The results of this outrageous protectionism are unmercifully high monopoly shipping rates and what Alaskans call the FCL—fearful cost of living."

Well, let's have a look here.

There is no monopoly in the Alaska trade. Any United States operator who desires can enter that trade. All it takes are fortitude and capital, rather plenty of both.

As for outrageous protectionism the United States Merchant Marine needs all the help it can get these days—but the weekly should know that this situation exists in all 48 States and United States Territories.

It should know also that an exception to the principle is allowed by the Merchant Marine Act of 1920. Canadian rail lines in transporting cargo between United States points may use foreign craft for a portion of such movement under interstate commerce regulation. But for reasons obvious to those familiar with ocean shipping, the exception

does not apply to Alaska. Neither does it apply to points in Hawaii or Puerto Rico.

What's more, Alaska rates are under the jurisdiction of the Federal Maritime Board.

And Alaska's foreign trade is as open as the Alaskan skies. If the weekly cares to send a competent observer north he will likely see foreign ships calling for lumber, woodpulp, and other commodities.

As we have mentioned here often, Seattle owes Alaska far more than Alaska can ever owe Seattle. But the picture of Seattle and Seattle companies as the villains of Alaska's plight is a tired old melodrama that has little or nothing to do with the statehood problem.

Kate Duncan Smith DAR School

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. RAINS. Mr. Speaker, the Daughters of the American Revolution support a number of fine educational projects throughout the country and among them is the Kate Duncan Smith DAR School which is located in my district.

This school, high atop Gunter Mountain at Grant, Ala., has turned out scores of well-trained, patriotic and useful citizens since it was established by the DAR in 1924. This school, like other DAR educational projects, has undertaken to teach better farming methods and better homemaking to rural children of the area it serves. We in Alabama are proud of the great DAR school and of its graduates. I would like to call the attention of my colleagues to an address delivered by Mrs. June Gayle Troup, an alumna of the school, at the recent DAR Continental Congress:

KATE DUNCAN SMITH DAR SCHOOL

(By Mrs. June Gayle Troup, a graduate)

I should like to take this opportunity of saying "Hello" to all of you, my DAR friends. I feel as though I know you all even if I haven't had the pleasure and privilege of meeting you personally.

I'm very proud and happy to be a graduate of the Kate Duncan Smith DAR School. I feel that we have many opportunities that other schools of the State do not have. As a matter of fact, my son and daughter both attend the Kate Duncan Smith School. It is with intense pride that my family holds the record of having the largest family group ever graduated from the Kate Duncan Smith School. I am 1 of 6 children. My sister, Charlotte, graduated in 1939 (her oldest son will do the same within 3 years); my brothers, Wallace and Gene, both graduated in 1941. I graduated in 1945; my sister, Ruth, graduated in 1946 and lastly, my sister, Earlene, in 1948. Two of her four children also attend the Kate Duncan Smith School.

At times we have discussed moving to a new place of residence, but it would necessitate severing our "tie that binds" with the Kate Duncan Smith School and my children, Rhonda and Tommy, protest very vigorously. To prove this point, last Saturday, my daughter actually made this statement when we were approaching the town of Guntersville, "Mama, this would be a pretty place to live if we had the DAR School over here."

They are quite attached to the school and try to prove their affection and loyalty in attaining the best marks possible. They are zealous in their schoolwork and all of us enjoy the recreation night when parents cease to become parents and assume the rolls of grownup playmates. The spirit of the home pervades the surroundings and for an hour or so, the parents have turned back the hands of time and become upperclassmen. You can understand the deep love of school when I tell you my children cry and are upset, if, for any reason, they have to be absent. Their father understands their feelings, too, as he also graduated from the Kate Duncan Smith School. So, you see, we are into the third generation attending our DAR School.

It is with sincere humility I stand before you today in this great city of Washington. It is fitting that I bring you a report of the progress of our school from the time of its founding, 34 years ago, to the present.

As early as the year 1910, the Alabama chapter recognized the need of a school for the mountain children of northern Alabama. However, the matter rested until 1921, when this resolution began to rouse interest and action. It was then the people of Gunter's Mountain began to talk and plan how it wolud be possible for them to obtain the location of the school for their community. Special effort was made to contact the common people since the school primarily was for their use. Successful results depended upon the honest efforts, understanding, hard work, and sincerity of all concerned, speaking favorably for their earnestness in desiring this particular school.

Through the efforts of a Mr. Jasper Morrow, the rural postman, speaking at length of the needs, stressing the benefits, the aid and interest of the people were aroused. These people of pioneer stock, courage, and farsightedness were determined to bend every effort for success.

In 1922 they receive the long awaited news that they were being considered, among others, as recipients of the school. It is to the everlasting credit of the people that they chose to be themselves, to present the visiting delegation with the homespun hospitality natural to themselves. They proved their practicality in surmounting obstacles when it was necessary to pull the carload of delegates up the rough and muddy mountain road. Once there, they were treated to a huge picnic spread, speeches of welcome, and delightful singing of the children. The "family" air surrounded the mountain people and spoke favorably for cooperation necessary among people with such an important goal in mind.

It was a strange entourage that accompanied the car of the delegates to the proposed sites—wagons, buggies, an oxcart, and the rest walked. What a gay parade. Laughter, happy chatter, and the voices of joyous children raised in song. A friendly rivalry coursed between the local people as to the location of the desired school. When the crowd reached the site of the present school, a hurried conference determined the choice on the spot. Quickly the land was obtained at a very reasonable price and people donated their labor, wagons, and horses. Everyone joined in helping—women preparing food, children fetching drinking water and running errands. Our school began humbly as a 4-room building, 2 teachers, and 100 students. Today it comprises 23 teachers, 22 buildings, and nearly 600 students. In addition, we have our own school farm and a school chapel. Many students have been aided in college as the result of our college-aid program. We are fortunate in not having a teacher shortage and our classrooms are not overcrowded, which permits more careful supervision and individual instruction per pupil, due to careful, farsighted planning for necessary expansion. However, we have not neglected the student who excells by the use of his hands. Some students show outstanding ability with intricate problems, scientific, business, or mathematical, while others show a marked ability with their hands. It is for these students we now have a mechanical arts building to teach, train, and observe the results of these talented children. This is very timely since so many of our young people obtain employment at the famed missile agency close by. However, of great importance, is the fact these youngsters still maintain their homes and interest in and around Kate Duncan Smith School. Eagerly they assume their share of responsibility for helping others to follow them.

Lastly, we sincerely acknowledge that all this could not have been possible without the initial and continued interest on the part of the DAR. Truly, we cannot help feeling the common bond uniting us all in love, Christian brotherhood, and Americanism. It is best expressed by the words of Ruth to Naomi, "Thy people shall be my people."

Statement on Senate Bill 2791

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a statement made by Joseph Meegan, executive secretary of the Back of the Yards Social Action Club of Chicago, Ill. It was made to the members of the Senate Housing Subcommittee on May 15, 1958.

The Back of the Yards Movement is an outstanding illustration what progress can be made beneficial to ten of thousands of persons when the civic spirit and interest of a community is aroused to action. Mr. Joseph Meegan, a dedicated man in this notable contribution has been executive secretary of this Movement for years.

Throughout the years he has also been a leader in establishing by law, and strengthening and extending the National school lunch program.

STATEMENT OF JOSEPH MEEGAN, EXECUTIVE SECRETARY, BACK OF THE YARDS SOCIAL ACTION CLUB, CHICAGO, ILL., BEFORE THE SENATE HOUSING SUBCOMMITTEE HEARING, MAY 15, 1958

On behalf of the Back of the Yards Social Action Club, I welcome this opportunity to testify before this committee on Senate bill 2791. With me today and also representing the club are: Mrs. Anne Murrell, housewife; Mr. John Higgins, a builder; and Mr. Emil Seliga, president of a savings and loan association.

The Back of the Yards Social Action Club represents nearly 100,000 people living in back of the stockyards, an area which is familiar to you as the scene of many national political conventions. The club was organized to promote the general welfare of our community.

The Back of the Yards Social Club is interested in all problems of the community. We differ from other local organizations because we were not organized to deal with one specific problem and abstain from getting enmeshed in other problems which are related to each other.

Because of our many accomplishments, our record in health, nutrition, delinquency

prevention, safety and other related problems is known all over America. In the field of neighborhood conservation, we have received national recognition because of the achievements by our people themselves, without the aid of outside planners and a multiplicity of agencies duplicating each other's efforts.

Please permit me to tell you something about our self-help conservation program which is related to Senate bill 2791. Back in 1953 we recognized that blight, which is a common problem in every old community in America, was casting its shadows in back of the yards.

Representatives of church, labor, business, industry, real estate, and savings institutions met for the purpose of attacking neighborhood decay, blight, and flight. We asked ourselves the question, why should we move away from our community? Where else are there 20 churches and schools all paid for, and where else are there places to work, nearby shopping centers, 33 recreation agencies, and 29 savings institutions? We asked, where else is there a community with children wanted and appreciated? We talked about our low taxes. We had no hidden costs in the area such as special assessments to pay for paved streets and alleys and sewers to eliminate floods. After reviewing all the benefits we were blessed with, we decided not to run away, but to stick and stay and work on a program of positive action by repairing and remodeling our present homes, and at the same time building new ones with private financing which was furnished by 22 of our savings institutions.

Without delay, our self-help program swung into action. Local home-improvement contests, sparked by appeals from local churches and by our community paper, stimulated unprecedented home improvements and remodeling. Thousands of residents were cited with certificates of merit as recognition for beautifying their homes. Cash prizes and savings bonds were awarded to citizens whose homes showed the greatest interior and exterior remodeling improvements.

Social pressure played an important part in encouraging neighbors to improve their homes in order to keep up with their neighbors. Today, more than 4,000, or over 50 percent, of the homes in our community have been repaired and remodeled.

With the aid of the mayor and other city officials, a rigorous program of enforcement of building codes, zoning and sanitation laws has been maintained. There are no sneak or illegal conversions in back of the yards. Our streets and alleys are among the cleanest in Chicago.

At present, the extent of local interest is best reflected in the fact that over 162 blocks in back of the yards are participating in a citywide home improvement contest sponsored by the Chicago Real Estate Board with cash prizes amounting to $20,000 offered to the winning blocks in the community.

The Back of the Yards Social Action Club recognized the need to build homes for our own people who couldn't find housing in the community and who, as a result, would be forced to move away. Here is how we are attacking that problem.

We successfully completed a tax and title search on over 800 pieces of vacant property in the community. Our committee has been told by the Chicago Title and Trust Co. that no community, to their knowledge, ever did this before. Our zeal was not to be deterred by painstaking searches and because no one else ever attempted this project.

The Back of the Yards Social Action Club decided to buy 2,000 front feet of property to be subdivided for 49 homes in our old neighborhood. The subdivision was named Destiny Manor with homes only for those with children. With the help of our mayor and other elected officials, we paved our own streets, provided water, gas, electricity, sewers, sidewalks, and alleys.

To date, over 150 new homes have been built in back of the yards. These 3-bedroom, full-basement, fully plastered homes with paved streets, sidewalks, sump pumps, and overhead sewers are sold for as little as $15,900.

Now, we are ready to begin another phase of our conservation program of new home construction which we believe will enable us to make possible the most dramatic progress to date in improving and conserving our community.

In the back of the yards area, there are approximately 600 vacant lots with frontages of 24 and 25 feet. The Chicago City Council recently amended its building and zoning regulations to permit 20-foot wide homes to be built on 25-foot lots, and 19-foot homes to be built on 24-foot lots. Most of the lots are 125 feet deep, so that the lack of frontage for the homes will be more than made up by the length of the house. Each house will have three bedrooms, a full basement, a combination living-dining room, and a kitchen.

We are now in the process of beginning construction of several hundred new homes. As was the case with Destiny Manor, all of the new homes will be hold to relatives of families already in the back of the yards area. We hope a substantial number will be purchased by young married couples. Frankly, we want to keep these young families in our community because they assure a continuation of healthy progress in the area, and because they assure too, a continuation of efforts to achieve high standards of neighborhood improvement and maintenance.

A surprisingly large number of the folks who have purchased these newly-built homes have had a large cash equity, but as this committee recognizes, many young families are unable to come up with more than a modest down payment. To satisfy these financing needs, we naturally turn to the 29 savings and loan associations located in the back of the yards area. They have worked closely with us both on our current programs and in our Destiny Manor development. They, like all the people of our community, are anxious to do their part to improve their community. These institutions, holding over $406,754,000 of neighborhood savings, have furnished us a complete and highly satisfactory service with but one exception. By charter and regulations they are limited to loans not in excess of 80 percent of value. Nor will they approve loans where the difference between their top loan and the purchaser's down payment might be covered by secondary financing, for which we commend them. We believe this one shortcoming, a higher conventional mortgage loan, can and would be overcome if Senate bill 2791 were enacted into law. We know from our experiences with our people that a 10 percent down payment is within the reach of the majority of our young folks and we know our savings associations are willing to make the higher percentage loans under such a program.

I hardly need describe the immediate stimulating effect this will have on employment and on restoring confidence during the current recession. Our buyers are at hand, our builders are ready, our savings associations have the funds and are prepared to grant loans immediately.

We therefore respectfully urge Congress to endorse this bill and thus provide another important step in our neighborhood conservation program.

Our Trade Problems With Canada and the Latin American Countries

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. BOGGS. Mr. Speaker, I cannot emphasize too strongly the remarks that I made on the floor on yesterday with respect to the Soviet economic penetration in Latin America.

As I pointed out at that time I have been attempting to acquaint the Members of this body with the problems existing these since my subcommittee made a tour of the area late last year.

You will recall that I incorporated a speech in the RECORD, which I made before the Mississippi Valley World Trade Conference in New Orleans way back in January.

In this talk I pointed out that the Soviets were exploiting the economic distress in most of the areas of Latin America; how they were negotiating for the purchase of raw materials and agricultural commodities from Colombia, Brazil, Peru, and other countries; and how many of our policies were helping them in building up unrest and animosity against the United States.

I specifically pointed out the very damaging effects of the recommendations of the administration with respect to lead and zinc, not only in Mexico and Peru, but in Canada as well. As I said on Thursday, it helps us not one whit to bury our heads in the sand about these proposals. We had best face up to them and come up with constructive solutions.

I am very happy that we have reported a good reciprocal trade agreements bill. Development in Latin America point up the necessity for passing this bill better than any arguments that I can advance. It can certainly be said that if we fail to pass the bill we will have tremendously aided the Communists in their economic penetration of the good-neighbor countries.

I include herewith an article which I wrote for the New Orleans Item some months ago:

OUR TRADE PROBLEMS WITH CANADA AND THE LATIN AMERICAN COUNTRIES

(By HALE BOGGS, chairman, Subcommittee on Foreign Trade Policy, of Committee on Ways and Means)

As Chairman of the Subcommittee on Foreign Trade Policy, I have just returned from an extensive trip to Canada and South America, studying the trade problems of these countries with the United States. This subcommittee of the Committee on Ways and Means has also just now completed 2 weeks of panel discussions on all phases of our foreign trade policies. So I am very pleased, indeed, to comply at this time with the request of the item and write some of our observations about our recent trip, as well as speculate on the prospects for trade legislation in the approaching session of Congress.

I might first point out that the Subcommittee on Foreign Trade Policy was created

by the Ways and Means Committee in the closing days of the 84th Congress and has been continued for the life of the 85th Congress. In a period of about 15 months, the subcommittee has completed one of the most thorough studies ever made of the trade relations of our country. In this work we have been greatly aided by Mr. Charles Nutter, the very able secretary of International House.

In the fall of 1956, we divided the subcommittee into 2 groups. One group headed by myself studied trade relations in the Far East, principally in Japan but we also made inquiries in Formosa, Hong Kong, the Philippine Islands and Thailand. At the same time, half of the subcommittee was conducting investigations in all of the free nations of Europe. Prior to starting these journeys, we conducted hearings in Washington on the history and background of our tariff policies.

In March of 1957, the subcommittee reported on the trips abroad and also made a comprehensive report to the House of Representatives on the general subject of tariffs. This report—known as the Report to the Committee on Ways and Means on United States Customs, Tariff, and Trade Agreement Laws and Their Administration from the Subcommittee on Customs, Tariffs, and Reciprocal Trade Agreements—is now found in practically every library of any consequence throughout the country and has become almost a standard textbook on our trade laws. The report has recently been supplemented by a compendium of papers which has also gained wide attention throughout the commercial and trade centers of our country.

The subcommittee now contemplates filing its recommendations with the House of Representatives shortly after Congress reconvenes in January. These will be the first recommendations of the subcommittee.

Thus, I think, it may be said that our subcommittee has worked quite hard. Whether or not we will be able to contribute to a further liberalization of the trade policies of the United States remains to be seen.

Now back to some observations relative to our recent tour through Canada and South America.

First off, I believe that your readers will be interested in the type of schedule we followed and the people that we contacted.

Upon arrival in a given country we would be briefed by our Ambassador and his staff. This briefing would consist of a comprehensive summary of the political conditions existing in the given country, economic developments and finally a rather close look at trade between that country and the United States and the frictions, if any, existing therein.

After this briefing, we would generally meet with the Foreign Minister of the country and members of his staff, followed by similar meetings with the Minister of Commerce and the Minister of Finance and other officials of the Government. On successive days we would meet with the American business community, with the local business leaders, with Members of the Congress, and frequently with the President or Prime Minister. In Canada we had the great privilege of meeting with the new Prime Minister Mr. John Diefenbaker who impressed us as a devoted and dedicated public official. We also met with President Perez Jimenez of Venezuela and with Provisional President Pedro Aramburu and Vice President Admiral Isaac Rojas of Argentina.

In a short space, it is difficult to do much more than make rather general observations. Among these are the following:

We have a tremendous reservoir of good will throughout Latin America, but even our very good friends sometimes find it difficult to understand some of the vagaries of our foreign policy.

For instance, when the administration recommended an increase in duties on lead and zinc last summer, this created very little attention in the United States but to Canada and Mexico and Peru, three of our best friends, it was most alarming. In the case of Peru, it nearly brought about a panic. I can cite similar instances.

We have no better friend on earth than Canada. Historically, we have held up to the world the example of these two great nations with a common frontier of 3,000 miles dedicated to friendship, and, yet our surplus wheat disposal program has created a very serious problem in Canada. Canadian officials pointed out to me that our policy had resulted in transferring a hundred million bushels of wheat from American storage to Canadian storage. The political impact of this sort of thing is very difficult to judge, yet these are the things which create friction and strain friendly relations.

Unfortunately, I could go on with many such examples.

On the affirmative side of the ledger, South America is probably the finest potential area for development in the world and no section has done more to establish friendly relations than has our own city of New Orleans. I think that Mayor Morrison is probably the best known public official in Latin America and International House has done a magnificent job throughout the area. Probably the most impressive thing about South America is the effort being made everywhere to establish economic stability as well as political stability. This is particularly true in the great country of Argentina which is trying desperately to overcome the legacy willed it by Peron and his henchmen.

If you can imagine a nation almost the size of the United States which has almost all of its rail system in disrepair, which has built no roads of any consequence for the last 10 years, which has incurred a fabulous debt and which is going through a period of staggering inflation, then you get some concept of the problems facing the Provisional Government. The important thing, however, is that here, as elsewhere in South America, the Government is facing up to its problem and reestablishing confidence.

One of the encouraging signs is the maturity of our American businessmen abroad.

I met with the American Chamber of Commerce in Caracas, Rio, Sao Paulo, Buenos Aires, Santiago, Lima, and Bogota. In each country I found the officers and members of the American business community anxious to translate to the American Government and American officials the importance of encouraging more trade and the dire consequences of the imposition of new trade barriers.

For instance, the most eloquent spokesmen against new duties on lead and zinc were not found in the Government officials of Peru, although they too recognized and pointed out the serious problems involved, but among American businessmen.

Throughout the area, the Russians are watching what we do. The Khrushchev regime in Moscow is using trade as a weapon for political action and Latin America has not been neglected. Only recently, you will recall, Mr. Khrushchev said that Russia would buy more coffee and sugar from Brazil, providing Brazil established friendlier political relations with Russia. Actually, if Russia desires to purchase these commodities she can do so with the greatest of ease, but invariably Russia considers the political consequences of such trade and in many areas of the world is using this weapon to subvert or to attempt to subvert free governments throughout the world.

That is why it is so important that we do not reverse the direction of our foreign trade policy. As I write this the NATO nations are meeting in Paris. The free Europeans for the first time in modern history are about to create a common market. The implications of this market on American trade have not even been explored, but this much can be said. For us now to reverse ourselves and to change the policy created by Cordell Hull in 1934 would be, in my opinion, a catastrophic thing for America.

That brings me to the approaching session of Congress. On June 30, 1958, the existing trade-agreements program expires. Although it seems elementary that this program should be extended without crippling amendments, there are many forces at work in our country today opposed to such an extension. Some people argue that failure to extend the program would simply mean that the President of the United States would no longer have the power to negotiate multilateral trade agreements, and this failure would really have no consequential effect upon the foreign trade of the United States. Actually, nothing could be further from the truth. Foreign trade is simply an extension of domestic trade. Those of us who live in New Orleans understand this perfectly. We see it happen everyday. We see manufactured articles from plants on the Ohio come down the Mississippi River to New Orleans. From New Orleans, these manufactured articles, tractors, let us say, may move through the inland waterway system to parts of Texas or Florida. This is domestic commerce. Some of the same tractors may move by ship across the Caribbean Sea to Venezuela; this is foreign commerce.

The same essential factors are involved. The seller must have a buyer in whom he has confidence. The buyer must be able to pay for what he buys. Now, if we fail to extend the Trade Agreements Act, buyers all over the world will interpret this action as a return to the high protectionist policies of the late 1920's. They will lose confidence. They will decide that the American market is closed to them and that they will no longer be able to turn to buying from American manufacturers, from whom they are now buying.

This psychology will in turn be translated to the governments of these nations, and they, in turn, will reflect their uncertainty in many different ways. The net effect will be that Russia will be given an opportunity to move into areas which heretofore have totally and completely resisted this influence.

I previously mentioned the European common market. The treaty establishing this common market will come into being in January. For us to face this new type of Europe without the ability to negotiate with the common market would be a very serious thing from the point of view of our own exporters and importers.

From the point of view of New Orleans, the necessity for maintaining liberal trade policies is obvious. A few days ago, when we had the ceremony marking the beginning of work on the tidewater canal, I saw a great number of oceangoing vessels waiting at anchor near the mouth of the industrial canal because they were unable to obtain berths along the riverfront docks. In other words, business is booming in our port. But this is because nations are trading with us and we with them. If we reverse this policy we won't see all of those ships bringing goods and commerce and progress and work into our city.

So, we face a fight which is a very difficult one, but one which I am proud to have a part in. The battle on trade agreements will begin almost simultaneously with the opening of the next session and will continue through most of the 2d session of the 85th Congress. I know that it will be followed carefully here in New Orleans.

Reds Gain, West Loses, if Atomic Tests Suspended

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

REDS GAIN, WEST LOSES, IF ATOMIC TESTS SUSPENDED

(By Edgar Ansel Mowrer)

Nikita Khrushchev's offer of technical negotiations on stopping nuclear bomb tests may bring to a head the dispute within the American administration. For strange as it may seem, some important Americans—as well as all Communists—believe the tests should be stopped.

On one side—against stopping—are Adm. Lewis Strauss, head of the Atomic Energy Commission, and scientist Edward Teller. On the other—for stopping at once—are Harold Stassen, former disarmament adviser to the President and, more recently, Hans Bethe, member of the President's Scientific Advisory Committee. (Mr. Teller is called the "father of the H-bomb," which other American scientists would have allowed the Russians to produce first, while Mr. Bethe, an able mathematician, predicted that the A-bomb could not possibly be made.)

The President is of divided mind. Presumably the final vote may be cast by Secretary of State Dulles on the basis of what the Russians have to offer at the technical negotiations.

In my opinion, this decision will be as important as the one to use the first A-bombs against Japan in 1945. It will shape international relations for many years.

I favor continuing tests. The reason is simple: further tests promise to put an end to the present stalemate of terror. It will do so by giving the free world a weapon it will dare to use in its own defense. Today's dirty bombs are so full of lethal fallout that to use them would presumably both kill people by the scores of millions and harm their descendants.

Under these circumstances, the American President might refuse to use present bombs against Soviet forces invading Europe or the Middle East with partly conventional forces. Since the West, for economy reasons, has refused to create equivalent conventional forces, it would be helpless against such an invasion. Once the Russians become convinced that this is the case, why should they hesitate?

The United States administration has wished to continue tests until it has clean bombs of all sizes, down to the smallest. In that case, it would not hesitate to use them since they would kill only those in target areas. Very small ones could be used against enemy forces on friendly territories, as present bombs cannot.

Clean bombs here would compel the Soviets themselves to produce and use only clean bombs or to take the risk that the United States would retaliate against an attack by dirty bombs with its own dirty bombs and destroy the U. S. S. R.

In consequence, any future war would either be limited to clean bombs or, better, would never occur. In fact, one can state that once the Western peoples have an armory of clean bombs to stop any invasion, and shelters against a sneak attack, they will be in a position to checkmate the U. S. S. R.

OPPOSITE REASONS

This unhappily is not what pacifists want and not what the Kremlin leaders want. Both prefer dirty bombs, though for opposite reasons.

Pacifists believe that the horror of present weapons may induce first disarmament and then perpetual peace by removing the element of force from international relations.

This I consider a complete illusion. Fear has never prevented war. History shows that the only alternative to the use of individual violence has been the disarmament of individuals under enforceable law. In the case of nation states, this implies a world authority. Many of those who would ban nuclear tests hope to get the governments to agree to such an authority.

This, in a world divided like ours, I consider utopian. Force—latent or active—will continue to decide disputes among nations as long as these remain sovereign. It therefore behooves the free nations to create preponderant force in the form of weapons which their ethics will permit them to use if they must—in other words, to end the present stalemate of terror.

For the same reason, it is desirable to extend the possession of clean nuclear weapons from the United States, England, and the U. S. S. R. to our strongest allies so that they can defend themselves. For an alliance can endure only among equals. Without NATO—should Europe drift into communism—the United States is sunk and no mistake.

WIN PIECEMEAL

Kremlin leaders also want tests stopped while both sides have dirty bombs.

First, because they are beginning to believe that Washington would be afraid to use such bombs to defend anything but United States territory.

Second, because they would like to get rid of nuclear weapons in order thereafter to dominate the planet by conventional forces.

Third, because Khrushchev desperately wants to prevent France and particularly West Germany from having nuclear weapons, since once they did, a united West Europe would equal the U. S. S. R.

So long as they do not, Khrushchev can hope to divide the West and ultimately take it over piecemeal. (This can also be done by some disengagement scheme that gets West Germany out of NATO.)

One can understand the Russians. It is hard to understand why westerners should play into their hands by stopping atomic tests or banning nuclear weapons altogether.

Alaska as the 49th State

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond, which appeared in the New York Herald Tribune of May 14, 1958:

ALASKA AS THE 49TH STATE: WHY THE OUTLOOK IS BRIGHT

(By Roscoe Drummond)

WASHINGTON.—The outlook now is that Alaska will become the 49th State in the Union before the next Congress has run its course. The statehood bill has cleared the committees. An early vote in the House is in sight. It has been before Congress since 1916, and its supporters are convinced that at last the votes are at hand to make Alaska statehood a reality. Should Congress again say no:

It would be reneging on the most explicit commitment both parties ever put into their national platforms. In 1956 the Democrats and Republicans pledged "immediate statehood" for Alaska.

It would violate the manifest wishes of the American people, who in a series of public opinion polls running from 1946 to 1958 have increased their support of Alaska statehood from 5 to 1 to 12 to 1.

It would dishonor the promise of the 91-year-old treaty by which Alaska became an American territory and in which we pledged to give its inhabitants "all the rights, advantages, and immunities of the United States." The right to self-government is one of them. The right to be free from taxation without representation is another.

The more one examines the merits of Alaskan statehood, the more persuasive the case becomes. Obviously there are great advantages to the citizens of Alaska, whose elected representatives in the Territory Legislature only last year voted unanimously for statehood. There are also many advantages to the United States, particularly when you consider that on this round earth Alaska is the doorstep to the American continent and the most strategic outpost of our defenses as the alert-flights to the Arctic demonstrate.

All may not be familiar with such basic facts as these:

The Alaskan people: Eighty-five percent of the Alaskans are of the stock of the American pioneers who trekked across the plains and mountains to build the Western United States. About 15 percent are Eskimos, Aleuts and Indians. They are a sturdy, worthy and resourceful people.

The Alaskan population: At present it stands at 212,500. But the most significant fact is the rate of growth. Between 1950 and 1956 the population increased by 53,000, or 48.6 percent. Alaska has shown a greater percentage population growth than any State in the Union for 17 years.

At least 22 of our States had fewer people when Congress granted them admission.

Alaskan loyalty: Only in Alaska did the enemy invade North America in World War II. No more loyalty, no more patriotism, no more willingness to sacrifice were displayed by any part of our pepole than by the Alaskans.

Alaskan communism: The last report made by the Federal Bureau of Investigation in 1951 stated that there were 10 Communists in Alaska. There is no reason to believe there are any more today, probably fewer. Would that we did as well in continental United States.

The Alaskan land: Business Week puts it this way: "Picture a land mass stretching from Maine to Florida, from the Great Lakes to the Gulf of Mexico, embracing 20 easternmost States. Wrap around it a coastline greater than that of the United States itself, and you have an image of Alaska, twice the size of Texas and one-fifth as large as all the 48 States together."

Alaskan resources: The United States has already got back 425 times over the $7 million purchase price it paid to Imperial Russia. In metals, minerals, timber, and oil, Alaska is rich in resources. Geologists conservatively estimate that Alaska is 1 of the 4 greater petroleum basins in the world. No wonder Alaska isn't developed when you consider that the Federal Government owns 99 percent of the land.

Latin Press Comment on the Vice President's Tour

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following exerpts from various Latin American newspapers commenting on the recent attacks on the Vice President, which the New York Times compiled and published in its edition of Friday, May 16. I found this commentary most illuminating and commend the Times for yet another example of its excellent service to its readers:

RIO DE JANEIRO

THE CAUSES GO DEEP

(Diario Carioca (progovernment))

The demonstrations attending the Vice President's visits are "receiving the strongest disapproval of this continent's public opinion."

"However, we believe it our duty in loyalty to continental unity in the defense of the democratic world to state that any interpretation attributing all the origin to Communist inspiration does not represent all the truth.

"The roots of Argentine, Peruvian, Colombian, and Venezuelan events are deeper and more serious. They go beyond the boundaries of each country because they belong to all South America, if not all Latin America.

"The causes spring from an accumulation of mistakes in policy by the present leaders of the North American Government toward its natural Latin-American allies. This policy amounts to negation of understanding the United States' own national and international interests, which President Roosevelt showed in launching the good neighbor policy.

"The present Government of the United States has been showing progressive inability to understand the crisis which they themselves daily increase. The present Government is placing incapable men to head many governmental agencies to deal with hemisphere and international problems.

"The United States Government has not tried to avoid reasons for friction and crisis, which become points of infection to good continental relations—petroleum and prices of basic commodities which we export and on which we base our economic survival."

SENDING OF TROOPS TACTLESS

(Jornal do Brasil (independent opposition))

"We regret to add our protest to that of all free minds in Latin America against the measures taken by the American Government, which are reportedly the inspiration of President Eisenhower."

The movement of troops "is sadly reminded of the period when Marines constituted the real power in the Caribbean and South America." The present action is an "unimaginative, tactless measure whereby the Department of State collaborates with Khrushchev to create anti-American sentiment."

NIXON PROMISE WELCOMED

(Brazil Herald)

Vice President NIXON's promise to change the trade policy is welcomed by Brazil.

GUATEMALA

LACK OF COMPREHENSION CITED

(El Imparcial (conservative))

"We believe we are far from enjoying a profound knowledge and ample comprehension" between the United States and Latin American nations.

"Undoubtedly, many are errors that can be ascribed in fields of economic cooperation and political interdependence to the United States, a nation which by its very strength constitutes an expansive force which is necessary to contain."

MOST UNFORTUNATE ACTION

(Prensa Libre (leftist))

The sending of troops was "Washington's most unfortunate action."

"It has all the earmarks of an intimidatory act, reminding us of the intervention of Marines in Nicaragua." The United States should review its policy to help solve the hemisphere's economic problems with "equity and collaboration" and to show its sympathies with democratic regimes.

The United States has deluded itself "if Americans content themselves with blaming Communist agents for the outrages against Nixon."

BUENOS AIRES

UNJUST TREATMENT FACTOR

(Blanco (rightist))

"The attack on Nixon (in Caracas) cannot be explained just by saying 'Communist agitation'. * * * Attack demonstrates hemispheric state of mind which should make Washington think twice about the direction its Latin American policy is taking. * * * Inadmissible forgetfulness and unjust treatment seem to be the two dominant factors of United States policy toward its southern neighbors in recent years."

LET US LIVE INDEPENDENTLY

(Propositos (left-wing))

Americans would get on well everywhere "if the United States would stay within its borders and let us live independently without forcing us to accept war commitments, without trying to conduct our international relations, without obliging us to enter into economic blocs, monetary funds, world bank, etc."

BOGOTA

ATTACKS ARE A DISGRACE

(El Independiente (liberal))

The Caracas attacks were "a disgrace." "Things went even beyond physical violence when someone spat in Mrs. Nixon's face, an act of infamy which all America rejects with shame and indignation."

"We would not want a representative of our country to receive in the United States the treatment given Mr. NIXON in some of the cities he has just visited. We would consider it an offense to our country's sovereignty. * * * The people of the United States, whose information about Latin America is traditionally very deficient, are now receiving fullest coverage of news which in no way contributes to betterment of false impressions they have of us. * * * And on the other hand, the manacing and spectacular mobilization of North American troops transported by air to bases near Venezuela will constitute motive for new resentment among Latin peoples, among whom this demonstration of force will produce indignation."

"All the Latin American people have not participated in them. The stones came from small groups of extremist elements. The insults, too. Healthy and free America, respected for its culture and its traditions, actively regrets that it was possible for Mr. NIXON and members of his group to be objects of such unjustified and censurable aggressions and offenses on the part of irresponsible minorities."

PANAMA

NIXON TRIP A FAILURE

(El Dia (independent))

Mr. NIXON's trip was a failure because of United States foreign policy. The Vice President is "a typical example of North American mediocrity." It is usual for the United States to have mediocre Presidents and exceptional when "the White House occupant is a statesman of the caliber of Franklin Roosevelt."

"The United States is a profoundly democratic country that seems incapable of making itself understood to demonstrate the efficacy of this system of government."

ATTACKS NOT JUSTIFIED

(El Panama-American (independent))

All responsible Latin American opinion condemns the incidents, observing that these violent censurable acts do reveal Latin American resentment against the unfortunate United States policy toward dictators, and also its policy toward major Latin American problems while pouring funds into Europe and Asia. This explanation does not justify the use of sticks, stones, and spit in settling issues.

LIMA

SOURCE IS DICTATORSHIPS

(La Tribuna (leftist))

"The Caracas incidents, like the Lima incidents, originated in long dictatorships suffered by both countries.

"The United States recognized the military coups of 1948 too quickly and the dictators in both countries later were decorated by President Eisenhower for their fight against Communist subversives.

"It is significant that in two countries whose regimes received blessings by Washington the most serious incidents occurred."

HABANA

COMMUNIST-INSPIRED

(Havana Post)

The attacks were "Communist inspired." The sending of troops and marines to bases near Venezuela for "the declared purpose of collaborating with the Venezuelan Government if such help should be sought in a crisis brought about by Communists" was completely justified. There could not be any implication of intended intervention in Venezuelan internal affairs.

SAN JOSÉ

COULD HAVE BEEN FORESEEN

(Diario de Costa Rica (progovernment))

"The Venezuelans who have acted like that have elected to leadership persons who cannot call themselves civilized. It is surprising that the United States intelligence service apparently was unprepared for the anti-NIXON outbursts. These could have been foreseen since they arise from well-known causes; namely, the present struggle between democracy and communism."

The United States faces a disquieting dilemma: either to support the antidictator movements that inevitably lead to a period of political anarchy and of which the Communists easily can take advantage, or else approve the consolidation of tyrannical governments, which, at least, have a common front against communism.

"The United States must have observed in Venezuela that if the provisional government there lacks authority to guarantee the lives of Mr. NIXON, his wife, and high officials against brutal and savage mob violence, then neither has it the authority to prevent a coup d'état by a Communist minority which could repeat the spearhead gained by Moscow in Latin America when Arbenz ruled Guatemala."

CARACAS

PAST IS RECALLED

(El Mundo)

In the sending of United States troops to the Caribbean "is Washington returning to the times when battleships and Marines

sealed the lips of national independence in order to collect Wall Street debts?"

HONDURAS

CAUSE IS ECONOMIC CRISIS

(El Dia Independent)

The underlying cause of the attack in Peru was an economic crisis exploited by Communist agitators.

MANAGUA

HIDDEN HAND OF MOSCOW

(La Prensa)

"In Venezuela * * * the hidden hand of Moscow found adequate material for its designs. It is to be hoped * * * that immediate and energetic revisions of United States policy with Latin America will follow."

COMMUNISM IS EXPLANATION

(Novedades)

The attacks implied that Venezuela "has been converted into a camp for the spreading of communism, which is the only explanation for what has occurred."

Our Republican Party and Our Foreign Giveaway Program

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. MASON. Mr. Speaker, in 1952 when Eisenhower was first elected there was unity and harmony in the Republican Party. Two strong men, Taft and Eisenhower, were teamed up in an effort to establish an efficient, honest, economical government in Washington. That kind of government had been promised in the campaign, and that was the kind of government these two Republican leaders were determined to establish.

An excellent, capable cabinet was selected and installed. A considerable reduction in Federal spending was made during the first 2 years of the new administration, followed by a $7.4 billion tax cut. Besides this the Hoover Commission was set up to point out where efficiency and economy could be made.

After Taft's death the President turned to other advisors, New Dealers all—Sherman Adams, Arthur Larson, Milton Eisenhower, Harold Stassen, and Paul Hoffman. These new advisors prevailed upon the President to repudiate his campaign promises, to repudiate his economy program, to adopt the New Deal-Fair Deal spending program, and to adopt an international foreign policy that will end in financial chaos and national bankruptcy.

From 1946 to 1958 we have handed out in so-called foreign aid $73.7 billion, an average of over $6 billion per year. Since Eisenhower was inaugurated in 1953 we have handed out in foreign aid $30 billion, an average of $5 billion per year. What have we received in return for the billions we have handed out? Has this giveaway program produced the results promised or expected?

Mr. Speaker, our unsound foreign policy has been so well analyzed and outlined by Dean Clarence Manion on the Manion Forum Network in a broadcast on May 11, 1958, that I include the text of that broadcast as a part of these remarks for the edification of my colleagues:

OUR INTERNATIONALIST FOREIGN POLICY: ROAD TO RUIN OF CIVILIZATION

Death is a grim reaper. The bitterness of its random harvest is impressed upon any patriot who thumbs through old issues of the CONGRESSIONAL RECORD.

There was Senator Robert Taft, and Senator Pat McCarran, and finally Senator McCarthy. Think of the difference that their combined presence could make upon the rough course of current events.

Over this microphone last week, we heard the voice of Senator McCarthy urging us to work for a rejuvenated foreign policy. Senator Taft had previously declared that we cannot solve any of our pressing problems until we come to grips with this foreign policy upon which all other policies now depend.

In his very last political speech, released from his sickbed in Cincinnati (May 26, 1953), the Ohio Senator urged the United States to go it alone in Korea and forget about the United Nations. The dramatic news about Taft's fatal illness obscured this final warning to his countrymen.

If we had heard and followed that advice, we would have won the Korean war. North and South Korea would now be united in freedom and the resulting impact upon the Red Chinese Government would have sent that godless despotism reeling into a full-blown anti-Communist revolution.

How many of our frustrating failures at home have been attributable to our persistent stubbornness in following a proved pattern for failure abroad? The answer is: "All of them."

Taft was right. Today all of our policies depend upon our foreign policy, and for at least 15 years, our foreign policy has been a continuous, colossal, catastrophic flop.

Forty-five years ago, our foreign policy was actually and literally as foreign to the average American as it was to the United States itself. Our tax, tariff, labor, money, and other problems were completely homegrown, and we tackled each of them with the practical purpose of doing what was best for the people of the United States.

With that simple, sensible motivation, our governmental policies preserved American freedom and protected our national independence while the prosperity of the country was steadily increased.

It is standard procedure, at this point, for somebody to break in and say that the world began to shrink 45 years ago and our statesmen were consequently forced to lift their sights far beyond our borders. That is something less than a half-truth. Our statesmen were induced to lift their sights to foreign lands but not by any figurative shrinkage in our geographical boundaries.

The force upon our statesmen was applied by professional internationalists who were determined to make American resources support the falling arches of imperialistic interests all over the world. Today these pragmatic propagandists are still on the same job. For them, the facts of international life are the emotionalisms that they fabricate periodically to fit the necessities of each succeeding crisis in their grand design.

It was this phalanx of illuminated intelligence that turned our sauerkraut into "liberty cabbage" while we dethroned the German kaiser and made "the world safe for democracy." Twenty years later, this same cogent coterie persuaded us to lend the Allies some tools so they could finish the job against Hitler.

For the past 10 years, this identical clique of self-serving internationalists has been busy galavanizing the strength of what they call the free world against the menace of international communism.

We are told that the free world countries can win out over the Soviet bloc only if they work together. In the course of this free world togetherness, the United States is expected to abolish its tariffs, repeal its immigration laws, arm its allies, finance the neutrals, conform its internal and external government to international standards fixed by such things as WHO, ILO, GATT, and UNESCO, then proceed to make all of this permanent by periodic assignations in coexistence at the summit with the dreaded Communist enemy.

For 10 years this has been the sustained direction of our foreign policy upon which all of our other policies are made to depend. In the promotion of this program for our national suicide, the liberty cabbage salesmen are just as slick and seductive how as they were 40 years ago.

INTERESTS OF UNITED STATES? HUSH

At this point, they have made it unfashionable for our President or our Secretary of State to express any anxiety about the special interests of the United States. All of our official concern now is with the safety of the free world.

Last October 26, President Eisenhower himself, in concert with the Prime Minister of Great Britain, said this: "The concept of national sovereignty is now out of date * * * the countries of the free world are now interdependent."

This grand alliance of unbreakable interdependence is supposed to strike terror into the heart of the Communist enemy and carry comforting confidence to us and to all other people in this free world. However, when one sets out to measure its boundaries, he finds that for all of the practical purposes, such as paying the check, this big free world, so-called, has suddenly shrunk to the dangerously declining dimensions of the American taxpayer.

It is American money which pays all of the bills and American soldiers who stand guard at the lonely, inhospitable perimeters of the Iron Curtain. Now, at long last, it is our rising national debt and our deepening economic recession which floodlights the fraud of this fatal foreign policy upon which all other policies depend.

The important point is not that this prolonged foreign policy is futile and that it will eventually be fatal to the United States. The important point is that this futile fatal foreign policy is deliberately fraudulent.

Official implications and popular impression to the contrary notwithstanding, the purpose of this foreign policy is not to destroy the big bad Communist enemy but to preserve that enemy and use it indefinitely as a built-in excuse for the progressive destruction of the solvency, the sovereignty and the Constitutional Government of the United States.

For the slick super-salesmen of our present Internationalist foreign policy, the greatest of all possible disasters would be the sudden collapse of the Kremlin dictatorship, the revival of national independence in the subjugated countries of Russia and Eastern Europe and an explosive anti-Communist revolution in China.

If that happened, it would dissolve the whole rationale of the Internationalist crusade against American independence. It is the very real possibility of this eventuality that spurs the present drive for a summit conference and propels the promotion of cultural exchanges with the Soviet Union.

The big disturbing nightmare of the Internationalist cabal is the imminent possi-

bility of another Hungarian revolution that might melt down the whole Iron Curtain from the inside. Thus, when sparks of anti-Communist resistance fly up in Poland, the Internationalists see to it that more American aid is rushed to Gomulka to stabilize his tenuous tyranny.

Tito cannot insult us loud enough to deflect the flood of American money that has kept him in power for years. We constantly ship strategic materials to England and France that are practically earmarked for transshipment to the Kremlin and Red China.

The Internationalists are not afraid of Soviet strength. What alarms these alien-minded fabricators of our foreign policy is the possibility that the Red dictatorships may collapse.

An ever more menacing Kremlin is very useful to the whole Internationalist program. For instance, what would these Internationalist promoters of GATT and its continued control of our reciprocal trade do now without the convenience of this so-called Communist threat to our world markets?

This explains the current nationwide publicity buildup about Russia's growing economic, scientific, and industrial strength. The Internationalists can make everybody believe this, except the Russian people who know better by firsthand experience.

The purpose of another summit conference is not to work out mutual agreements between this country and the Kremlin. Mr. Dulles himself, admits that the Reds regard such agreements as crusts of bread which are made to be broken.

BIG IDEA TO PROMOTE KHRUSHCHEV

The purpose of a summit conference is to provide desperately needed prestige to Khrushchev and Company, inside the Iron Curtain. Once more, the restless slaves need to be demoralized, discouraged and subdued by more official international recognition of their slavery.

The captured Czechs, Slovaks, Poles, Hungarians, Latvians, Lithuanians, as well as the Russian people, need to be assured that resistance is useless, that their hated killer, Khrushchev, is not really a killer but a great statesman who is accepted by President Eisenhower as an equal.

This is the crime against truth and justice that our President is asked to commit as he climbs to the summit with the bloody butcher of the Ukraine—the completely self-appointed jailer of one-third of the world.

President Eisenhower is said to like Wild West stories. For diversionary reading on his way to the summit conference, I recommend a true story of the far Wild East and of the frozen Arctic North—the sensational story of life, death, and mass rebellion in the Communist slave camps. This book is the personal experience of John Noble, an American who was held as a slave by the Soviet Government for nearly 10 years. (I Was a Slave in Russia—Noble, Devin-Adair, $3.75.)

I do not recommend this story to children or to men and women with weak stomachs, but, for those prospective summit conferees who are preparing to deal officially with the Soviet gangsters as if they represented a civilized government, this book is a must.

Personal sin, immorality, even depravity are to be expected in some areas of our tainted human nature, but never in history, before the advent of Soviet Russia, has a whole society of people been corralled and ruled on the basis of beasts.

This book is no series of lectures on law and life in the Soviet Union as they would be delivered by a visiting Soviet professor or by one of our gullible citizens who has been culturally exchanged under the benign surveillance of the Soviet Government.

This is the raw story of one of the 25 million political prisoners now being systematically worked to death in the slave camps of Communist Russia. The author is one of the very few who managed to live and tell about it.

Those who are misled by Internationalist propaganda concerning the great and growing industrial powers of the Soviet Union will be surprised to learn that the Communist leaders distrust labor-saving machines because they place too much power for sabotage in the hands of the operating workman. In a realm where everybody is suspected of disloyalty, and with good reason, the risk is too great.

The compelling point of Noble's harrowing, horrible 10-year experience is this: Any civilized man who consciously aids the continuity of this hell-born system of human degradation called Communist government is inviting the terrible retribution of history here on earth and God only knows what else hereafter.

Those fabricators of our Internationalist foreign policy who use American aid, diplomatic recognition and summit conferences to keep this evil thing alive are accomplishing more than the eventual destruction of American independence. They are planting a short-time bomb under the foundations of human civilization. May God have mercy on their souls.

Statement of Hospital Association of New York State Regarding Community Facilities Administration Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement of the Hospital Association of New York State presented to the House Banking and Currency Committee, urging inclusion of voluntary nonprofit hospitals in the provisions of the community facilities bill which is now before the committee.

STATEMENT OF CHARLES M. ROYLE, EXECUTIVE DIRECTOR, THE HOSPITAL ASSOCIATION OF NEW YORK STATE BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE

Mr. Chairman and ladies and gentlemen of the committee, the Hospital Association of New York State is a nonprofit corporation incorporated under the membership corporation law of the State of New York. It represents 308 voluntary and public nonprofit hospitals located in the State which provide in excess of 95 percent of all general and allied special hospital beds and facilities. These hospitals admit and care for almost 1¾ million patients in any one year. This represents in excess of 96 percent of all patients admitted to this class of hospital.

Although inroads have been made in the elimination of obsolescence of hospital facilities; beds and facilities in nonfire-resistive buildings; the expansion of existing acceptable hospitals to measured need; and in the construction of needed hospital facilities where none existed, much more remains to be done if factually, measured need is to be even partially met. What has been done has resulted from local initiative and effort together with, in many instances, assistance from the Federal Government through the medium of the Hill-Burton hospital program.

The New York State Joint Hospital Survey and Planning Commission, the State agency established by enabling legislation to supervise and carry out the Hill-Burton program, reports that its annual survey of need for 1958 indicates a total number of 118 potential hospital construction projects, the majority of which involve voluntary nonprofit institutions, many of which could go to contract by June 1959. The estimated value of this construction at the current level of cost is $177,050,000. Excluded from these figures are those projects which have been approved to receive Federal funds under the Hill-Burton program plus those which are eligible should the President's Hill-Burton budget of $121 million be approved for the fiscal year July 1, 1958.

It is reasonable to believe that some of the 118 projects are not amenable to the provision of hospital facilities with the use of borrowed money and with the lack of sufficient local money and current ineligibility for Federal money under the Hill-Burton program, will not contemplate construction for many years in the future. However, to provide the incentive today through the availability of low-interest bearing Federal loans will, in all probability, initiate immediate action on many delayed projects and will result in the obvious provision of an increase in available jobs.

The hospital association, therefore, respectfully urges that the House Banking and Currency Committee, in its deliberations of the above-captioned H. R. 11474 and S. 3497, give full cognizance to the necessity for the inclusion of voluntary nonprofit hospitals in the provisions of the community facilities bill. To do so will go far in the meeting of two needs.

1. Provide many additional job opportunities.

2. Help overcome continuing hospital facilities shortage and obsolescence.

Signal Hill, the City Within a City

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. HOSMER. Mr. Speaker, a towering forest of oil wells rises from the southern California coastal plane within the congressional district which I have the honor to represent.

Geographically it is one of the richest oil-bearing areas in the world. Politically it is a 2¼ square mile city, Signal Hill, nested completely within another city, Long Beach. Basically industrial, only 15 percent of the city is zoned for residences. Most of the remaining areas contain over 1,000 oil wells and related activities.

Describing Signal Hill as an "Island City of Gold," Ted Krec, in a recent issue of Westerways wrote as follows:

Deep in the heart of Long Beach is the strangest little community in California—the fiercely independent city of Signal Hill.

An island completely surrounded by Long Beach, Signal Hill is the home of 4,650 persons, yet there is no shopping center. And a number of citizens living on the fringes of the community get 2 tax bills a year—1 from Long Beach and 1 from Signal Hill—for the city lines bisect a good many homesites.

The city has an elevation of 360 feet—the highest spot for miles around—an area of 2.25 square miles and an average width of 1 mile. And packed into this tiny space are a good many virtues. The tax rate is only 77 cents for each $100 of assessed valuation, one of the lowest in the entire State.

The fire department is composed of 14 firemen and 2 pumping engines; but since 75 percent of the city is under some sort of oil lease, these firemen are all oil field specialists, exceptionally well trained.

The police department consists of a chief, 13 officers, 2 crossing guards, and a matron. The police have excellent equipment and their own jail—named Hotel Murphy in honor of a former chief. But there are no Signal Hill courts. Signal Hill comes under the Long Beach area of the State judiciary.

To carry the paradox still further, the happy children of the hill go to school in Long Beach—there is no Signal Hill school system.

Almost every city in America has an industrial area in the center—a core around which a residential area develops. The usual division is 85 percent residential and 15 percent industrial. Not so in Signal Hill. This community is zoned 84 percent industrial and 16 percent residential.

Sixty-five percent of the gross revenue of the city stems directly or indirectly from the production of oil. This means that all the business area of the city basically is oil property, and oil land is expensive. Therefore, homebuilding suffers, for the cost of the property is wrong, householders in a good many areas couldn't afford the fire insurance, it would cost too much to build a house and there are many neighborhoods which would be undesirable because of their proximity to the oil installations.

Yet, during the depression, many persons moved to Signal Hill and settled on the fringes because the taxes were cheaper and the areas were close to but not exactly in the oil fields where many sought work.

The history of this little community is one of southern California's most interesting stories. Naturally, the city takes its name from Signal Hill itself, a misshapen, dry height which juts up from the coastal plain in a most unexpected way.

And the hill got its name from the mission days when the promontory was used as a lookout point. From here the missionary fathers of San Gabriel could see miles in every direction, even across the channel to Catalina. When Indian invaders were sighted signal fires were started.

During the days of the dons, the line between the ranchos of Los Alamitos and Los Cerritos ran through the Signal Hill area. In those days there was a road running down the south side of the hill to the sea. And on this road rival horsemen from the two ranchos used to race, thundering down the steep side of the hill, clattering across the plain to the sea and back up to the height while gaily dressed crowds watched and cheered from atop the hill.

Then came a period of doldrums, during which Signal Hill was just a geological oddity. But on March 23, 1921, oil exploration men began a well at the corner of Hill Street and Temple Avenue. On June 25, 1921, the gamble paid off. Oil was discovered at 3,114 feet and the well began flowing at the rate of 590 barrels of oil a day.

The well, named Alamitos No. 1, became one of the most famous in the world, for it led to the development of one of the most productive oilfields on the globe and helped materially in establishing California as a major oil-producing State.

The Signal Hill area took on all the aspects of an oldtime boom town. Fortunes were made and lost daily, and the rush was on for land on the hill—any land at all!

And herein lies a real oddity. The original subdivision by the Bixby land interests had not been surveyed too accurately. The old-time surveyors had curved the corners and failed to center corner lots in the center of the street, thus creating tiny islands in the middle of intersections. These little patches of no man's land were unimportant until oil was discovered. Then opportunistic promoters filed on them and sank wells. There they stand today—tiny islands of land with towering derricks on them—and pumps going at full speed.

In 1924, the city of Signal Hill was incorporated to prevent its being annexed to Long Beach. It seems that Long Beach was attempting to develop a huge harbor and needed land valuation, so it turned its eyes on the Signal Hill area which overnight had become highly valuable.

The oil companies, realizing that their expenses would be much higher if the area joined Long Beach, promoted and financed the incorporation, even paying a voluntary derrick tax so the new city could operate. The tax rate in Signal Hill was 35 cents, while in Long Beach it was $1—so the oilmen saved millions.

Robert Clark, spokesman for the oil firms, told the Signal Hill folk:

"If you go ahead and incorporate every street will be paved with gold and the streetlights will glow a golden color."

Jessie Elwin Nelson was the first mayor and William Hinshaw was the most famous—serving for 16 years. The oil companies controlled everything. They produced a lot and paid in comparatively little.

Today in Signal Hill there are 970 oil wells in operation, but almost as famous as the oil wells are the water wells from which the little city produces its own water—and it's wonderful.

The city of Signal Hill is prospering, too. Gone are the days of boomtown disorder and huge oil firm profits. Today the city has a total worth of $1,700,000, and there are no fewer oil wells in production than in 1940. Experts say that the field is only 35 percent depleted. Despite the fact that production costs increase as the oil depletes, Signal Hill is going to be solvent for a good many years.

And if there are any doubts about the financial condition of the folks who live on the hill, consider this:

The addition of the 1 percent sales tax which took effect in April 1956, all over the county, will provide the city with enough revenue that a tax boost will not be necessary. The city will be able to finance a 5-year program of paving all residential streets and alleys and renewing and resurfacing all thoroughfares.

It's true that many of the vistas in Signal Hill are drab and industrial, and it's true that the streets aren't paved with gold. The streetlights don't glow with a golden hue, either, but this little community is built on money—and it goes way, way down.

Guiding the destiny of this unique city is Mayor Benjamin A. Moyle and a staff of extremely able elected and appointed officials. The Independent Business Men's News recently recognized them as follows:

Mayor Moyle arrived in Long Beach in 1909 and attended our local schools. He joined the Long Beach Harbor Department as an engineer in 1921 and later was chief chemist and engineer with MacMillan Oil and Rio Grande Oil Cos. In 1924 he entered the military service attached to the United States Army Air Corps. He was elected president of the Signal Hill Businessmen's Association in 1947 and was appointed chairman of the Signal Hill Planning Commission in 1949.

He was elected to the Signal Hill City Council in April of 1956 and was chosen mayor a year later.

Associated with him in guiding the affairs of Signal Hill, are the following city officials: Harold V. Clark, councilman; Nellie J. Combellack, councilwoman; Emil B. Hautly, councilman; Frank B. Vaughan, councilman; Heber M. Chapman, city clerk; Gertrude A. Beebe, city treasurer; Clarence W. Heier, police chief; Lloyd S. Colson, Jr., fire chief; George I. Osborn, street and water superintendent; and Lois Hiatt, deputy city clerk.

Benjamin A. Moyle and his highly efficient staff have been ardent workers for Signal Hill and the Long Beach area. With the efforts being put forth by these people, Signal Hill continues to be a city of destiny.

Like a precious crown, Signal Hill rests atop the center of Long Beach attesting to a successful past and a confident approach to the future.

Approval of Area Development Legislation for the 149 Labor Surplus Areas Is Imperative Since 2,970,000 Unemployed Persons, Among the Nation's 5.2 Million Unemployed, Reside in These Chronically Distressed Areas

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. VAN ZANDT. Mr. Speaker, since 1955 when I introduced the first area development bill in Congress, I have constantly endeavored to find a means of compromising the different versions of the various bills on the subject. As a result of my continued efforts to secure approval of a sane and reasonable area development bill, I introduced on April 17, 1957, H. R. 6975 which is estimated to cost in the neighborhood of two hundred million dollars and is a fitting compromise to the more liberal and the too conservative versions of the legislation.

It was my privilege to have the opportunity of appearing before the House Committee on Banking and Currency on May 19, 1958, in support of my bill, H. R. 6975, designed to establish a program of financial and technical assistance for the purpose of alleviating conditions of substantial and persistent unemployment in economically depressed areas. My statement follows:

STATEMENT BY REPRESENTATIVE JAMES E. VAN ZANDT, OF PENNSYLVANIA, BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE, IN SUPPORT OF THE VAN ZANDT BILL, H. R. 6975, TO ESTABLISH A PROGRAM OF FINANCIAL AND TECHNICAL ASSISTANCE DESIGNED TO ALLEVIATE CONDITIONS OF SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT IN ECONOMICALLY DEPRESSED AREAS, MAY 19, 1958

Mr. Chairman, I appreciate the opportunity of appearing before your committee in behalf of my bill, H. R. 6975, introduced on April 17, 1957, which is designed to alleviate conditions of substantial and persistent unemployment in economically depressed areas. In short, if enacted, my bill would be cited as the Area Redevelopment Act of 1958.

Mr. Chairman, as you and many members of this committee know, I represent the 20th District of Pennsylvania comprising the counties of Blair, Centre, and Clearfield,

which, by the way, are located in the heart of Pennsylvania. Before and since the end of the Korean war, 2 of the 3 labor markets in my 3-county area totaling nearly 90,000 jobs have been classified by the United States Department of Labor as labor surplus areas.

Most of the time the area has been classified as being among the major labor surplus areas of the Nation. At one time we had 18 percent of the civilian labor force unemployed and today the average is over 17 percent, or about 15,000 of the 90,000 labor market unemployed.

For your information, the unemployment in my district that has existed prior to and since the close of the Korean war results from depressed conditions in two basic industries; namely, bituminous coal, railroading and related industries such as brickyards, machine shops, and so forth.

The depressed conditions that I have mentioned result principally from substitute fuels such as foreign residual oil from Venezuela which have just about destroyed our eastern seaboard coal market. Then, also, the loss of this coal as freight and the conversion of locomotive power from steam to diesel power, together with other technological developments in the railroad industry are contributing factors.

To be a little more specific, in the central Pennsylvania area, which comprises several congressional districts, the production of bituminous coal has been on the decline since 1948. For example, 58 million tons were produced in 1948 as compared with 36 million tons in 1957 or a loss in production of 48 percent. In manpower, in 1948 these mines employed nearly 49,000 miners while in 1957 the number employed was approximately 23,000, a decrease of 54 percent. In other words, 266,000 coal miners lost their jobs.

In all fairness, the loss of coal production and jobs cannot be wholly charged to foreign residual oil because when the railroads shifted from steam to diesel power and homeowners converted to oil and gas, these changes were reflected in the total loss of coal production and manpower.

In addition to the loss of production and jobs in the coal industry, let me cite some figures concerning the situation at Altoona, Pa., where we have the largest railroad shops in the world. From a peak employment of 14,361 in 1951 in the Pennsylvania railroad shops, today there are only about 4,000 employees working, a loss of better than 10,000 jobs.

In addition, when taking into consideration the loss of jobs in the operating divisions of the Pennsylvania Railroad Co. in the Altoona area, the number of unemployed railroaders increases to 12,000.

The unemployment that I have cited is for the period before and after the Korean war. While a percentage of the coal miners, railroaders, and others in related industries have gone elsewhere seeking employment, as I have already mentioned, in my area in central Pennsylvania at the present time we have about 15,000 unemployed. Many of these unemployed have worked off and on for short periods during the past several years, but now are unable to find any type of employment.

Meanwhile, many of them have exhausted or soon will exhaust their eligibility for unemployment-compensation benefits, and, therefore, they must rely upon public-assistance benefits and surplus commodities. Mr. Chairman, while the present business slump is regarded nationwide as a temporary recession, in my congressional district, we have suffered from substantial and persistent unemployment for over 10 years.

For an illustration, in September of 1956 with a civilian labor force of 87,000, we had nearly 8,000 unemployed or approximately 11 percent; in September 1957 we still had nearly 8,000 unemployed even though our labor market increased to nearly 90,000 or approximately 9 percent. As previously stated, today we have over 17 percent, or 15,000 unemployed out of a civilian labor market of nearly 90,000. These figures prove conclusively that our unemployment is chronic and persistent.

Mr. Chairman, many times you hear unkindly criticism to the effect that local communities in labor surplus areas are lax in helping themselves. That is not true in my area of central Pennsylvania. Years ago my communities organized area development groups and have constantly sought to attract new industries in a determined effort to bolster the economy. They have given of their time, money and effort. They have borrowed at the banks to the legal limit and have been aided by the Small Business Administration and the State of Pennsylvania. Frankly, they have gone the limit and need further assistance such as is provided for in the many area development bills pending before this committee.

Many communities through their area development groups have been successful in various degrees. In my hometown of Altoona, Pa., since 1946 as a result of an active industrial development group that raised nearly a million dollars mostly through voluntary payroll deductions, 11 new industries have been brought into the area solely through community, State, and Federal effort.

These new industries have provided 3,600 new jobs and a $12 million increased annual payroll. Seventy percent of the new jobs are for men. This highly successful effort stems from what is commonly known nationally as the Altoona plan.

Mr. Chairman, from what I have said I think you will agree that the citizenry of my 3-county area are entitled to a "well-done" for their effort.

But their effort alone is not sufficient to overcome the unemployment problem. With more State and Federal assistance, in my opinion, the economy of my area can be diversified which means that much of the unemployment will be alleviated.

We recognize that the field for new industries is great, the competition is keen, yet we are ready with additional Federal assistance to take our chances with the remaining 148 labor surplus areas in seeking a definite solution to the unemployment problem.

Mr. Chairman, it is common knowledge that in the history of area development legislation, a stalemate developed over the relative merits of the administration bill, S. 1433, and the Douglas bill, S. 964. Some were of the opinion that S. 1433 was too conservative while others regarded S. 964, the Douglas bill, as being too liberal and too costly.

In a sincere effort to end the fruitless discussions and the resultant delay and confusion that surrounded distressed area legislation, I introduced my bill, H. R. 6975, as a compromise between the administration bill and the Douglas bill, which is identical with the Spence bill pending before this committee.

For the information of this committee, my bill, H. R. 6975, retains to some degree many of the features of the administration bill and the Douglas-Spence bills. In addition, some of the provisions in Senate bill 3683, approved by the Senate last week, are contained in my bill, H. R. 6975.

Mr. Chairman, my bill, H. R. 6975, is regarded as a sane and sensible compromise and should serve as a reasonable and realistic basis for perfecting a legislative measure acceptable to all shades of opinion.

However, I wish to state that I have no pride of authorship. My sole concern is to have the House approve an area development bill that will become a law at the earliest possible date.

It is my opinion that the administration bill, Senate 1433, does not go far enough to meet the needs of chronically depressed areas which need Federal help in forms of grants, vocational training with compensation, and Federal loans. While, on the other hand, the Douglas bill, Senate 964, provides too liberal aid to areas whose economic decline is of recent duration. In this connection, such communities normally have sufficient resources and should not be entitled to the variety of programs offered in the Douglas bill.

AID SHOULD BE PROVIDED ON BASIS OF NEED

I believe that the solution to this difference lies in providing various types of aid that would be available to communities with labor surplus. The extent of the help would be based upon the duration and levels of unemployment. Under my proposal, as embodied in my bill, H. R. 6975, the neediest communities would get the most aid, while the help extended to the less needy communities would be more limited.

This approach would also make it possible to reduce the Federal expenditures, but still leaves sufficient funds for communities which meet the most rigid tests of chronic unemployment and economic distress.

My bill, H. R. 6975, provides for designation of three different levels of unemployment, such levels determining the eligibility of the areas for different types of programs.

The three levels of unemployment are as follows:

No. 1, first level: The unemployment rate in the area is 6 percent or more, adjusted seasonally, and has been 6 percent or more at least 8 months in each of the preceding 2 years.

No. 2, second level: The unemployment rate in the area is 6 percent or more, adjusted seasonally, and either has been 8 percent or more for the major portion of each of the preceding 2 years, or has averaged 12 percent or more during the preceding year.

No. 3, third level: The unemployment rate in this area is 6 percent or more, adjusted seasonally, and either has averaged 6 percent or more during the preceding 5 years, 8 percent or more during the preceding 3 years, or 12 percent or more during the preceding 2 years.

Here is how I would apply these criteria to the various types of programs offered in the administration and in the Spence bills.

I. TECHNICAL ASSISTANCE

I believe that all communities with labor surplus should be entitled to technical assistance from the Federal Government. But that does not mean that the community which has had just 6 percent unemployment for parts of the last 2 years should be entitled to receive the same aid as the community which has been subjected to chronic unemployment many years.

I would, therefore, limit the extent of technical assistance given by the Federal Government to communities in the first level, mentioned before, to only one-third of the total cost of the needed technical assistance, and would require that the other two-thirds of the needed funds should come from State or local sources.

However, for the most needy communities I would extend Federal assistance to provide as much as $3 out of every $4 needed.

II. LOANS

The administration bill, S. 1433, now provides that Federal participation in loans to labor surplus areas should be limited to 35 percent of the cost of the proposed projects. The Douglas bill, S. 964, would go as high as three-fourths of the total cost of the project.

In this connection, I believe that the administration proposal is amply adequate for communities which meet the criteria of the

first level of unemployment, but is certainly not sufficient for areas which have suffered from chronic unemployment for many years.

My bill, H. R. 6975, would extend Federal participation under the proposed loan program as follows: (a) For the first level areas, up to one-third of the total cost of the project; (b) for the second level areas, up to 50 percent of the total cost of the project; and (c) for the third level areas, as much as 75 percent of the total cost of the project.

In addition to providing loans to labor surplus areas, my bill, H. R. 6975, will amend section 207 (a) of the Small Business Act of 1953, by providing that in making and approving loans first preference be given to small-business concerns which are otherwise qualified and which are located or are about to locate in areas of substantial and persistent unemployment.

Section 207 (a) of the Small Business Act of 1953 is also amended by making eligible for loans local private nonprofit organizations—including industrial foundations, development corporations, and similar groups—formed to assist, develop, and expand the economy of areas of substantial and persistent unemployment as certified under section 4 of the Area Development Act of 1958, but only where the purpose of the loan is to enable such organizations to provide supplementary assistance to one or more small business concerns in such areas which have qualified for loans under the preceding provisions of this subsection.

In making and approving loans under this subsection, first preference at all times shall be granted to qualified small business concerns certified as being located in areas of substantial and persistent unemployment or about to locate in such an area and to local nonprofit organizations previously described under this amendment to section 207 (a) of the Small Business Act of 1953.

III. GRANTS

The administration bill, Senate 1433, makes no provision for grants except in the case of technical assistance; while the Douglas bill, Senate 964, provides for Federal grants for public-facility proects. I do not believe that all the communities that have some labor surplus should be entitled to this type of aid. Therefore, my bill, H. R. 6975, in addition to providing loans for public-facility projects, would allow Federal grants up to one-third of the cost of the public-facility project in level 2 areas, and up to two-thirds of the cost of the project in level 3 areas.

IV. SUBSISTENCE PAYMENTS

The administration bill S. 1433, does not allow any subsistence payments to persons undergoing training for new jobs in labor surplus areas. I believe that this type of program should be used sparingly and in extreme cases only. Therefore, my bill, H. R. 6975, extends Federal subsistence payments to people undergoing training only in areas with the most chronic unemployment; namely, those which are classified in level 3.

My bill, H. R. 6975, would assure that the neediest communities would get adequate aid and in addition, it encourages the several States to establish their own program of area redevelopment and by limiting some of the aid provided by the Douglas bill. S. 964, it would also be possible to reduce the total cost of these area redevelopment programs.

Mr. Chairman, it is my belief that my bill, H. R. 6975, constitutes a genuine compromise between the administration bill, S. 1433, and the Douglas bill, S. 964. This is especially true when you compare the cost of the three bills.

Recognizing the administration bill, S. 1433, as a conservative approach, it will cost about $55 million; while the Douglas bill, S. 964, represents an ultraliberal approach to the subject and would cost in excess of $325 million. My compromise bill, H. R. 6975, would cost in the neighborhood of $200 million and would extend Federal aid to labor surplus areas in a reasonable yet realistic manner.

Mr. Chairman, I have repeatedly stated that I have no pride of authorship regarding distressed area legislation. The time has arrived for the 85th Congress to stop squabbling over details and to unite in providing Federal aid for chronically distressed areas.

Let me repeat again that over 17 percent or 15,000 of the civilian labor force in my congressional district are unemployed. I know that some of my colleagues have a higher rate of unemployment in their congressional districts, because there are 149 labor-surplus areas in the Nation suffering from the unemployment problem.

In pleading for legislative action by this Committee and the 85th Congress, I hope that the legislation enacted will provide real benefits to these 149 labor-surplus areas and not be merely of the stopgap variety, for we have suffered too long from chronic and persistent unemployment.

Mr. Chairman, according to the United States Department of Labor, the Nation's unemployment is 5.2 million of which about 3 million represents minimum annual unemployment, leaving about 2.2 million to be charged to the present business slump.

It is significant that the unemployment figures for the 149 labor-surplus areas reveal 2,970,000 unemployed. Allowing for a portion of this number to be charged to the annual minimum of 3 million unemployed, it means that if the unemployment in the 149 labor-surplus areas is alleviated, the unemployment problem today would be greatly simplified.

Percentagewise, as of March 15, the employment in the 149 labor surplus areas represents 37 percent of the Nation's labor market while unemployment in the 149 labor surplus areas represents 48 percent of the Nation's unemployment today. In other words, the heart of our unemployment problem today as a Nation is in the 149 labor surplus areas.

Therefore, the answer to our unemployment problem is distressed area legislation, and the sooner this committee can get a bill started on its way to the White House, the better it will be for millions of the unemployed, hundreds of communities, many States, and the Nation as a whole.

Thank you, Mr. Chairman, and members of the committee for your kind indulgence.

Report of New York County Lawyers' Association on H. R. 10634

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1958

Mr. MULTER. Mr. Speaker, the committee on the Federal courts of the New York County Lawyers' Association adopted, on April 29, 1958, a report recommending disapproval of the provisions of H. R. 10634 which seeks to remove the present provision of law which permits Federal courts to issue writs only in aid of their respective jurisdictions.

The report of the committee is as follows:

NEW YORK COUNTY LAWYERS' ASSOCIATION, COMMITTEE ON FEDERAL LEGISLATION, *New York.*

Report of committee on the Federal courts on H. R. 10634 which seeks to amend section 1651 (a) of title 28 of the United States Code, in relation to Federal courts issuing all necessary or appropriate writs where agreeable to the usages and principles of law.

RECOMMENDATION: DISAPPROVAL

While intended to eliminate jurisdiction over cases in which the district courts have no jurisdiction, the bill is too vague and general in its present wording to effect this intention.

Respectfully submitted.

COMMITTEE ON THE FEDERAL COURTS.

Testing of Nuclear Weapons

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. DELLAY. Mr. Speaker, in my opinion the clamor for cessation of testing of nuclear weapons is an extremely dangerous one and one that is incited by emotion rather by careful analysis of facts. I think we are losing sight of the fact that scientific advances in weaponry have increased, and continue to increase the ability of an aggressor nation to launch an attack which would be very damaging to the United States. Since we are a democracy, we are cast in the role of defenders and the role of aggressors necessarily goes to totalitarian governments.

Targets of attackers are large—our cities. Targets of defenders are small—enemy planes and missiles. Weapons of the defender must therefore be more accurate and more numerous than the weapons of the aggressors and, since many would be used over our own or friendly terriitory they must be designed to perform their function and to produce the absolute minimum of radioactive debris. The interruption of testing would directly affect our development for there is no substitute for tests in determining whether a nuclear weapon or even a conventional weapon will perform as anticipated. It is my belief that cessation without acceptable assurance that the Soviet will not violat the agreement would be to no avail. Cessation should only be taken place if both parties are willing to allow the inspection necessary to reduce to the utmost the possibility of secret violation. This step which when taken will freeze our defensive research, but will do nothing to curtail the improvement of an aggressor's delivery systems.

Disarmament to have a chance of reducing the possibility of disastrous war, must apply equitably to its parties. It must not impair the defensive and retaliatory power of ourselves and our allies without a convincingly compensating restriction on an aggressor's ability to attack. History furnishes too many examples of disarmament attempts in the

past which have been honored by one power and not the other. Thus, the violator has made his attack when he believed the time right and the other side sufficiently weakened and unprepared.

All of us would like to have evidence that the Soviets desire disarmament. But the long record of false propaganda and the use of force to achieve unjust ends since the end of World War II point the other way.

A new positive step in disarmament would be initiated by the cessation of the buildup of the weapons stockpiles, if coupled with the initiation of the return to other uses of already stockpiled fissionable material. It would be the beginning, though only the beginning, of restriction on nuclear armaments. It would be a recognition by both the Soviets and ourselves that we were willing to reverse the trend of building ever larger nuclear weapons stockpiles. It could be a real and substantial start toward disarmament. It would require a monitoring system capable of achieving a reasonable degree of success. This would mean a major outlay of means. It would also require that both parties permit full access to all plants and personnel concerned, and rapid and immediate access to areas wherever the party could engage in the production of material.

In this connection, I would like to commend Assemblyman Frederick H. Hauser, of Hoboken, N. J., for his heroic efforts to have deleted from the New Jersey Democratic platform a proposal favoring an end to nuclear tests as pointed out so poignantly in an editorial in the Hudson Dispatch of Saturday, May 10, 1958.

At this point I submit for inclusion in the RECORD a resolution adopted by the Department of New Jersey, Reserve Officers Association of the United Sates, at its 32d convention on April 26, 1958:

The following resolution was adopted by the Reserve Officers Association of the United States, Department of New Jersey, at its 32d annual convention, April 26, 1958, Fort Monmouth, N. J.:

"Whereas the Soviet campaign of propaganda aimed at inducing the United States to cease the testing of nuclear weapons has created doubts in the minds of some individuals, including elected representatives, of the wisdom and necessity for continuing such tests; and

"Whereas we believe that if further testing is necessary for the development and perfection of clean nuclear weapons and devices, such testing is not only desirable but vital for the security of the Nation; Now, therefore, be it

Resolved, That the Congress of the United States be memorialized to authorize, and the appropriate officers of the United States Government be urged to proceed with, whatever action and testing may be necessary to develop and perfect clean nuclear weapons, in order better to assure the security of this Nation and of the free world; and be it further

Resolved, That Reserve Officers Association of the United States, in convention assembled, adopt this resolution establishing the foregoing as the policy of said association."

Federal Excise Tax

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. CHAMBERLAIN. Mr. Speaker, Mr. Arthur S. Boettcher, of Lansing, Mich., chairman of the tax committee of the National Luggage Dealers' Association, has been devoting tremendous time and energy during the past several years calling attention to the inequities of our excise taxes. Mr. Boettcher is particularly interested in the repeal of the excise taxes on leather goods, in accordance with the bill I introduced in February, H. R. 10777.

I respectfully request the consideration of all Members of Congress of a recent statement made by Mr. Boettcher concerning this matter which follows:

FEDERAL EXCISE TAX

(By Arthur S. Boettcher, chairman, tax committee, National Luggage Dealers' Association, May 1958)

This year the travel industry has enjoyed the largest business volume in its history. Logic leads us to believe that luggage sales for 1958 should have increased or at least kept pace with those of last year; but figures gathered from 153 of the leading luggage and leather goods stores in 39 of the 48 States show an average decrease of 23 percent in luggage sales and an average decrease of 17 percent in sales of small leather goods. Individual decreases were as high as 50 percent. We must have relief now—or we will be taxed out of existence.

The loss shown by these percentage figures indicates, without a doubt, that:

1. The excise tax on luggage and leather goods has reached a point of diminishing Government returns.

2. Luggage and leather specialty stores will soon lose their identity by being forced into unrelated lines in order to survive.

3. Business being lost to all other industries not struggling under this high burden of taxation will result in more and more unemployment in the luggage industry.

4. So-called wholesale or discount houses, which do not collect the tax and in most cases do not sell at wholesale, are creating unfair competition against the small, honest, hardworking merchant.

We expect to carry our fair share of the responsibility of maintaining the expense and defense of our Government. We know we are a small industry and that we do not represent a power at the polls or as a pressure group, but should we be discriminated against by the very Government that, in time of war or peace, we are willing to defend and protect?

Eighty-one percent of all travel is being charged to business expense. Bearing this in mind, it is reasonable to believe that 81 percent of the luggage and leather goods sold is for business purposes and only 19 percent for luxury or vacation travel. The items which carry the tax in our industry are as essential to the statesman, the professional man, or the small-business man as a hammer is to a carpenter or a pipe wrench is to a plumber. Why should some, and not all others, be penalized 10 percent for the tools needed to carry on their business?

The administration, Congress, and the Ways and Means Committee claim that they wish to correct all inequities existing in the tax structure. Can anyone cite a more glaring example?

We suggest that the Government either tax all industries' productions at the retail level, or put a broad-base tax on all finished goods at the manufacturers' level to equalize the burden of taxation, or eliminate the tax. The increase in business resulting from the removal of the tax would provide jobs for more people as well as increasing corporation and income taxes paid to the Government.

We respectfully request that this administration and Congress do what other administrations have not done, keep their promise to remove the tax, a promise that was to be effective 6 months after World War II hostilities ceased in 1946. We are still waiting for action in 1958.

We have been patient; we have been loyal; we have been honest. We ask you now, gentlemen, to be loyal and honest with us.

Report on Forest Fires

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. McINTIRE. Mr. Speaker, I wish to call the attention of my colleagues to a report on forest fires recently issued by the Department of Agriculture. This report can be obtained from the Department.

As this report indicates, forest fires on a nationwide base have hit an alltime low, and for this splendid record attained I would like to commend the United States Forest Service, the forestry organizations of the various States, the wood industries, and sportsmen and other citizens who use our forests for recreational purposes.

All of these have cooperated toward the end of using diligence, care, and wisdom in preserving a very vital asset, the forests of America.

A brief of the report follows:

FOREST FIRES NATIONWIDE HIT ALLTIME LOW

Forest fires were held to record low of 83,400 nationwide in 1957, breaking 100,000 mark for first time. Statistics compiled by USDA's Forest Service are based on reports from its field offices, State foresters, Department of Interior, and Tennessee Valley Authority. Last year's record compares with 143,000 forest fires in 1956 and 200,800 10 years ago in 1947. Area burned was almost halved, dropping from 6,605,900 acres in 1956 to 3,409,000 in 1957. Ten years ago fires burned 23,225,932 acres. Much credit for 1957 record is due American public. USDA commended three programs for outstanding contributions to forest fire prevention. One is Smokey Bear campaign sponsored by its Forest Service and State foresters under leadership of Advertising Council. Another is Keep Green programs conducted by forest industries and States. Third is work of American Forestry Association in spearheading Southern Forest Fire Conference in New Orleans 2 years ago which did much to decrease fires in South. In appreciation of their work, president of American Forest

Products Industries, president of American Forestry Association, and chairman of board of Advertising Council were given special recognition at White House today (Thursday, May 8). Greatest reduction in number of forest fires occurred in South where 44,100 were reported in 1957 as compared to 102,700 in 1956.

Reclamation Projects Provide Important Fishing and Recreational Projects

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BALDWIN. Mr. Speaker, I call to the attention of the Members of the House of Representatives and to other interested citizens the attached article from the San Francisco Chronicle dated May 7, 1958. This article refers to the reservoir behind Monticello Dam, which is a portion of the Solano reclamation project in California. It indicates that these reclamation projects provide many additional benefits in the way of fishing and recreation, in addition to making water available for irrigation and domestic purposes:

[From the San Francisco Chronicle of May 7, 1958]

MONTICELLO RESERVOIR NEWEST BLACK BASS SPOT

(By Bud Boyd)

California's better black bass lakes had best look to their laurels. A new spot in Napa County is liable to end up top dog in the race for fishermen's favor.

The place is Monticello Reservoir—Solano project—known to some as Berryessa Lake. The reason for this popularity is, of course, black bass. They are thick there and getting even more numerous.

This I guarantee. Just the other day, when prowling in that neighborhood, I took time to check it out. I strung a flyrod, tied on a favorite popping bug, and started casting.

The bug plopped on the surface, and as ripples from its fall subsided the first bass came. One lazed up from the depths to lie motionless below the bug, eyeing it intently as only black bass can.

Then another fish appeared. Then another took up station, and as a cat's-paw wind began to blow the bug across the surface one of the bass was after it. He swirled the surface, hooking himself, and began the crazy jumping blacks are known for.

There, in a nutshell, is the reason why this lake is winning friends. The new, shallow water, is exceptionally fertile, and bass are growing there like weeds. Fat, healthy, and numerous. Right now most fish are small—about 8 inches—but, as many anglers phrase it, "Just wait until next year. These 8-inch fish will be a foot in length, and 2-pounders will weigh in at 4 or better."

So the lake has much to offer, although some of it is hard to see right now. It floods the Berryessa Valley. The great expanse of water spreads out between the khaki-colored hills, filling every creek arm. If you know that country, but haven't been there for some time, you'll be surprised to learn the lake is almost to the mouth of Trout Creek. It has grown that much.

Although fishing promises to get fantastic there, the spot has drawbacks. Biggest hindrance to all-out success is lack of facilities for people. Then, too, although the lakeshore is a pretty sight right now with green grass growing to the water edge, it won't look near as pretty in another month. When summer temperatures arrive that country sizzles.

But, even so, the area around the lake is swarming with recreation-minded Californians. Five hundred cars there Saturday, and over 800 Sunday show the extent of this. Boating fans are wild about the place. Lacking good launching sites, they manhandle their craft into the water.

Campers are everywhere. Tents and trailers have sprung up like miniature cities on the unlovely hillsides. Fishermen are casting from both boats and shoreline.

While fishing there the other day, I noticed most of the boys were using worms or minnows dunked below a floating bobber. Some tossed standard plugs, while some got their kicks from streamer flies and bass bugs.

Of course, black bass are an unpredictable lot, but on the day—and the hour—I fished it, the bass were looking for a floating bug.

The future at this lake holds both a promise and a warning. The biggest stumbling blocks are lack of shade, launching sites, eating and sanitary facilities. Here something has got to give, and probably the State will come to the rescue. Drinking water and other campsite necessities will start a real boom there.

But, in the meantime, black bass fishermen are too busy casting to worry about details. One fellow summed it up neatly the other day. He said, "Man, you could line this shore with broken glass and I'd get here if I had to come on my knees." He pointed at the water where a dozen bass lazed leisurely. "Look," he said. "There are a dozen perfect reasons."

Hawaiian Coffee

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. BURNS of Hawaii. Mr. Speaker, during debate on the State, Justice, Judiciary, and related agencies appropriation bill, 1959, on Thursday last, the gentleman from Missouri [Mr. CURTIS] made a statement on page 7955 of the CONGRESSIONAL RECORD that we do not raise any coffee in this country.

I know that the statement by the gentleman from Missouri was made in good faith. However, the facts are otherwise. This statement was not corrected at that time for apparent reasons.

Hawaii does grow coffee. Hawaii is an integral part of the United States; hence, we do raise coffee in this country. I am sure the Members of this House will be interested to know that the Kona coffee crop this season, ending June 1958, is expected to surpass last year's output by 3 million pounds. This season's crop is expected to hit around 12 million pounds and may go even higher, according to the Cooperative Crop and Livestock Reporting Service. The 1957 year total crop was 8,809,000 pounds.

Not only does Hawaii, United States of America, grow coffee, but it grows a coffee known to gourmets as one of the finest coffees grown. While it is packed and sold on the market as a premium coffee in small quantities, its greatest use is as a blend to improve the quality and taste of some of the most widely known brands of coffee on the American market.

A particular feature of this coffee is the fact that it is grown in lava on the Kona coast at an elevation between 1,000 and 4,000 feet. It is estimated that some 25,000 or so acres of good volcanic soil in this favorable climatic belt are still available. A still growing industry, it has made significant contributions to the coffee culture of the world. Hawaii has been favored with the soil and the climate necessary, but, more importantly, she has been endowed with the human skills and talents which are needed to put favorable conditions to work. Coffee farmers of Hawaii have traveled to many parts of the world to give advice and share of their knowledge in this field.

United States and Russian Economic Growth

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting in the Appendix of the RECORD the summary statement made by Prof. G. D. Bodenhorn of the University of Chicago on the subject of Investment and the Price System. Professor Bodenhorn was one of the 45 panelists who prepared papers at the request of the Joint Economic Committee on the general subject, The Relationship of Prices to Economic Stability and Growth. These papers appear in the compendium printed by the Joint Economic Committee, March 31, 1958, and are well worth reading.

All last week and continuing on this week these economic experts have been testifying before the Committee on their papers, in panel groups of 5 to 7.

I was particularly impressed with Professor Bodenhorn's appraisal of the competition we face presently with Soviet Russia. I am more concerned lest the United States make wrong moves in light of Soviet competition than that we will make no moves. In my judgment what we need to do primarily is to keep hoeing our own row; continue with our system of self-criticism; correct errors that come to light; and avoid these alarmists who want to promote crash programs.

The statement follows:

STATEMENT FOR JOINT ECONOMIC COMMITTEE, MAY 16, 1958

(By G. D. Bodenhorn, professor of economics, University of Chicago)

In a free-enterprise economy, investment decisions are made by private individuals and corporations who are seeking primarily to further their own self-interest. It is the function of the price system to draw investment into socially useful projects, and to see to it that the total level of investment is high enough. Public policy requires that we be concerned whether these functions are adequately performed.

In the first place, at the level of the individual firm, investment should flow into firms which can use the resources most efficiently. Efficiency in the use of productive resources is measured by profits which are earned, so that we want profitable firms to attract investment and expand output. Recent studies in this area seem to indicate that, by and large, this function is being performed properly. This does not mean, to be sure, that no mistakes are ever made, but simply that, on the average, profitable firms attract more investment than less profitable ones.

Profits and investment perform similar functions at the industry level. Here again, the society benefits if profitable industries attract investment and expand, while unprofitable ones do not attract investment and decline. Our economy is apparently performing satisfactorily in this respect, even though there are occasional lapses, particularly in agriculture and railroads, where the price system is doing its best to discourage investment in spite of the large amount of interference.

The total investment of the economy as a whole is supposed to perform two functions, and these have been rather controversial in recent years. First, investment should be large enough to maintain the flow of income which is cut off by those members of the society who save, and second, investment must provide for the future growth of the national product. Let us consider briefly the recent performance of our economy in each of these areas.

In balancing the flow of saving, investment provides employment for those people who are not required to take care of the immediate consumption needs of the economy. Instability of total investment, primarily inventory investment, but currently also investment in plant and equipment, has played an important role in our postwar business cycles. However, the postwar cycles either in total output or in investment have been quite mild, and some cycles in business activity are inevitable in a free enterprise economy. The type of monetary and fiscal policy which we have employed in combating such cycles is more appropriate than a policy aimed directly at smoothing out the rate of investment. A policy aimed directly at the investment cycle might easily have the effect of causing a lower average level of investment by inhibiting more investment during prosperous periods than it promotes during recessions.

Concern over the problem of the adequacy of the rate of growth of our economy stems from recent comparisons with Russian growth rates. Here again, I would urge a very cautious approach to public policies designed to stimulate the rate of growth of our economy, and for two reasons. First, it is not clear that the Russians can continue to grow at the rates which they have recently achieved, and produce a national product as large as ours within the next 20 years, as has frequently been predicted. It is much easier to achieve high growth rates by applying production techniques which have already been developed as the Russians have been able to do in the past, than it is when growth depends primarily upon the invention of new products and processes. We may, therefore, see slower Russian growth rates in the future. Second, even if the Russians succeed in continuing their present rate of growth and in catching up with us, we should be very careful of the kinds of measures which we take to counteract this. The great advantage of our social, political, and economic system over that of Russia is not that we can produce a higher standard of living for our citizens, but that our citizens are free men who control their own government. In the past, we have been lucky in that our system has not only permitted freedom and dignity for the individual, but also produced the highest standard of living in the world. If, in the future, we are faced with a threat to our leadership in living standards, we should not sacrifice our freedom in order to try to maintain that leadership, and I am not sure that it would be possible to double our present rate of growth without severe impairments of our basic freedoms.

Extra Long Staple Cotton Acreage Allotments Bill

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. RUTHERFORD. Mr. Speaker, on Thursday, May 15, I introduced in the House H. R. 12531, a bill to amend the Agricultural Adjustment Act of 1938, as amended, to permit the State committee to allocate from the acreage of extra long staple cotton reserved under section 344 (e) of the act an amount not to exceed 1½ percent of the State acreage allotment to farms for the production of high quality extra long staple cottonseed.

A companion bill to my measure was introduced on the same day in the United States Senate by the junior Senator from Texas [Mr. YARBOROUGH].

I would like to point out that only the producers of extra long staple cotton are affected by this bill. All of the extra long staple cotton grown in Texas is in my congressional district, and the only other areas where this cotton is produced are in southern New Mexico and southern Arizona. The bill will in no way have any bearing upon the acreage allotments of upland cotton.

The Agricultural Stabilization Committee would have authority to make this allocation under section 344 (e) of the ASC Act, which allows 10 percent of a State's extra long staple allotments to be set aside for hardship cases and other special purposes.

At the present time the Texas growers must obtain their cottonseed for planting purposes from New Mexico and Arizona growers, who sell it to them at little or no profit. The New Mexico and Arizona growers are completely in accord with the provisions of my bill.

The reasons the extra long staple producers want H. R. 12531 enacted are as follows:

First. It will allow them to properly isolate and cultivate land for the purpose of growing their own cottonseed;

Second. It will eliminate the transportation cost of bringing their cottonseed from New Mexico and Arizona;

Third. By growing the cottonseed in the area where it will be replanted for commercial purposes, a greater yield may be expected as the seeds will be acclimated to the soil and weather conditions there.

Officials of the long-staple cotton growers association tell me there will not be as many as 2 men in the entire State of Texas who would lose as much as 3 acres should my bill be enacted. In fact, the State average is figured at three-tenths of 1 acre. The members of the Supina Cotton Association—made up of growers of long-staple cotton—are solidly behind my bill.

I stress that no acreage will be taken away from any other cotton area; no State's allotment for upland cotton will be affected. The seed-growing area would come out of the existing long-staple cotton acreage allotment.

Mr. Speaker, the members of the Supina Cotton Association have a slogan: "If we grow it, let us sell it." The members have contributed $3 per bale each to contribute toward a fund for promoting their product and expanding their own market.

At their request, I authored a bill last year which dropped their price supports from 90 percent to 75 percent of parity in order that they might compete with foreign imports. This session the House has passed another measure requested by the Supina Association, dropping the price supports on extra-long staple cotton from 75 percent to 60 percent. I believe, Mr. Speaker, the Members of the House will concur that their attitude has been most commendable.

I ask the House to give favorable consideration to H. R. 12531 when it is presented for action.

Schools Need the Efforts of All

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Winnsboro News and Herald, Winnsboro, S. C., of May 15, 1958:

SCHOOLS NEED THE EFFORTS OF ALL

The challenge to this country posed by the Soviet Union is not a military and economic one alone. It is also an educational one, and the failure of some of us to actively support better schools is a disturbing sign.

It will be recalled that President Eisenhower's Committee on Education Beyond High School stated that the gap between this country's educational needs and its educational effort is "widening ominously."

While we cannot subscribe to the Soviet formula for teaching, we cannot hide from the fact that the U. S. S. R. is making tremendous strides in education. In the field of science and related courses, the Russians are training far more students than we are today.

We do not agree with some of the critics of the United States school system, but former Harvard President James Conant is correct in saying one of the foundation stones of our system, the liberal arts college, must be retained. However, there is much improvement to be made, all the way from the grammar school level to the college level.

Because of various circumstances, it seems that the Federal Government is handicapped extensively in dealing with the problem. Schools are a local affair, in any event, are

run by the States, or local communities, and not run by the Federal Government. Nevertheless, the task is a many-sided one.

We need to have whatever constitutional Federal support that can be beneficially received, and more support from State and local governments. In brief, we need the backing of all the people—to make our schools better and to offer our children the best possible chance to survive and excel in tomorrow's world, to be equipped to cope with whatever challenges they may face.

We have no specific plan in mind. However, we call the attention of all citizens that it is time for us to stand for better schools, better curriculums, and higher standards even if it costs them time, money, and effort in big quantities. It is a sizable problem which confronts us.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 17, 1958

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my weekly newsletter to constituents for May 17, 1958.

WASHINGTON REPORT
(By BRUCE ALGER)
MAY 17, 1958.

The Mutual Security Act (foreign aid) authorizing $2,958,900 was hotly debated for 8 days before final passage, 259 to 134 (ALGER against). A 31-page bill, 124-page committee report, and 1,924 pages of hearings documented the debate. The bill provides assistance to 63 nations and 10 territories. Eleven countries get military aid only, 30 countries get military and economic aid, 22 countries and 10 territories get economic aid only. The complicated array of facts, figures, and opinions requires careful study and attention (most difficult to present briefly). Members, all dedicated to what they think best for this Nation, came to widely divergent solutions to the basic question, "How best to achieve or try to achieve mutual security." Hanging over the world, like the sword over Damocles' head, is the threat of atomic annihilation and Communist enslavement.

After study, I joined those Members who wrote the minority or dissentig views. The temperate but documented conclusion of their report states:

"Despite this extension of our interest and unwanted generosity, there has developed among recipient nations no adequate understanding of our fundamental American purpose; no sufficient comprehension that we have undertaken a mutual effort to help men live and govern themselves in terms of freedom, equality, human dignity, and peace. There has, in fact, been little or no mutuality to the program. Merely voting more dollars for the continuation of such a program is not enough. What is needed is more consistent policy, better programing, much better administration; and, what is more important, a complete review of the fundamental policy. To continue, without new direction or directives, a program that has been tried and found wanting is as dangerous as it is ineffective. This minority, which is second to none in its desire to maintain the security and peace of this country and of the world, has long held that the concept of mutual security, the implementation thereof, and the annual enabling legislation should be reviewed and revised. We again call for a review of the program and of the underlying policy.

"In view of this, in view of the fact that Congress has failed to reassert its control over the mutual security program, in view of the failure of the justifications for the program to measure up to critical analysis, in view of administrative laxness in carrying out the program, and in view of the needless authorization of billions of dollars when the pipeline already contains billions, we cannot support the mutual security bill for 1958."

Other selected facts from a long list are revealing: 1. Public Law 480 under which agricultural products are given away (in the billions) is not part of or related to this foreign-aid bill; no reason for it, it just isn't; 2. The new development loan fund is self-perpetuating and outside the control of Congress; 3. Many examples of ridiculous waste and poor planning or lack of policy are shown by (a) Afghanistan's expensive airfields in a country where most travel is still done on camels; (b) aid has financed an underground parking garage in Brussels, gambling casino in Le Havre, luxury hotel in Copenhagen (costing $23,000 per bedroom), highways where there aren't autos, jazz-band travels, and countless other examples, some too ridiculous to believe.

The continuation of our present hit or miss, hodgepodge subsidy of United States industry under the guise of charity to others, I have concluded, is wrong and self-defeating. Military or mutual security is lacking as we help neutrals and enemies more than friends. Charity it is not, as we claim, since we are manipulating others through military aid, economic help, and political diplomacy. First, we must decide what our policy is, then call it what it is. It should be hardheaded, self-interested, looking after ourselves (charity is between people, not governments). A strong United States can attract military allies and command respect from enemies. Giving money away and deficit financing, resulting in higher taxes and inflation, cannot result in security, mutual or otherwise. Weakening ourselves through overspending cannot possibly strengthen the team of freedom-loving nations. Certainly there is some need for mutual military aid for allies, but only as a part of a clearly defined policy and within a balanced budget. United States fiscal suicide is Russia's goal. Finally, from many examples of the self-defeating nature of mutual security spending country by country can be selected the spectacle of our giving almost $1 billion to Yugoslavia, the ruthless Communist dictatorship, whose leader is our self-proclaiming dedicated enemy. Need more be said?

Politics at Any Price

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. DEROUNIAN. Mr. Speaker, the American people have witnessed an inspiring performance of great courage and dignity carried out by the Vice President and Mrs. Nixon. Their conduct was far above and beyond any party line and we have all been justly proud of them. All but one small, narrow, little man, Paul Butler, who can think of nothing but partisan politics in its lowest form. He has been so frustrated that he has completely lost his equilibrium.

I hope the Democrat Party is as ashamed of his statements and his bitterness as the South American people are of the demonstrations of the Communists against the Vice President and Mrs. Nixon.

America commends the Vice President and his wife for their conduct and courage. They will be an everlasting example to the world of our desire for peace and good will to all people.

The Reciprocal Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. DORN of South Carolina. Mr. Speaker, the following letter was written to me, unsolicited, by a patriotic Amercan. Mr. Stilley is only asking that he be permitted to operate his business in the traditional American way. He does not believe that his employees should or can compete with the foreign plywood worker where there is no wage and hour legislation, no laws against child labor, no social security, and no unemployment insurance.

STILLEY PLYWOOD CO., INC.,
Conway, S. C., May 2, 1958.

Hon. W. J. BRYAN DORN,
House of Representatives,
Washington, D. C.

DEAR MR. DORN: I am a tobacco grower in Horry County, S. C., and I also have an interest in a plywood plant at Conway, S. C. On April 14, 1958, I attended a meeting of Tobacco Associates at Raleigh, N. C., promoted by Mr. Charles Taft to sell the extension of the Reciprocal Trade Agreements Act. Mr. Taft made many statements which he cannot substantiate. He deliberately failed to tell the Southern tobacco growers the facts relating to tobacco production and exports under the Reciprocal Trade Agreements Act.

To identify Mr. Taft. He is a high salaried, professional lobbyist for the Committee for a National Trade Policy. This committee has a reported budget of several hundred thousands of dollars. Its principal financial supporters are importers and large industrial concerns with interests in exports or production in plants abroad such as Ford Motor Co., with hundreds of millions invested in plants in England and Germany; Gulf Oil Corp., 70 percent of its 1956 production was abroad; Grace Lines, millions invested in foreign countries; International Harvester Co., with 41 percent of sales from exports and overseas plants; International Telephone and Telegraph, 57.8 percent of their total sales from operations in foreign countries; Standard Oil Company of California, 59 percent of its gross production abroad. Mr. Taft represents the industrial giants which are financially able to build plants abroad to cash in on the low wages. How much genuine interest do you think this group has in the Southern tobacco farmers?

The Reciprocal Trade Agreements Act which Mr. Taft lobbys to extend, has been in effect since 1934. Since 1947, the State Department has used the act to reduce the duty on thousands of American imports, ostensibly for the purpose of increasing exports by reducing foreign country restrictions on imports from the United States.

What reciprocity did flue-cured tobacco receive under the State Department's trade agreements? Between 1952 and 1957, United States flue-cured tobacco production dropped 395 million pounds, or 30 percent; foreign production increased 553 million pounds, or 48 percent; United States exports were 17 million pounds less than 1951; and, world exports of flue-cured tobacco increased 105 percent. United States share of world flue-cured tobacco exports dropped from 69 percent in 1951 to 51 percent in 1956 and was even lower in 1957. United States Department of Agriculture Foreign Agricultural Service publication, January 1958, titled, "Competitive Position of United States Farm Products Abroad" is the source of these figures.

The Department of Agriculture in the same publication, page 30, says:

"The major problems facing United States tobacco exports arise from actions taken by other countries.

"Over three-fourths of all foreign tobaccos (excluding United States imports) entering international trade are covered by bilateral agreements, guaranteed purchase arrangements, preferential import duties, or other controls which virtually exclude United States leaf. * * *

"In some countries, including Japan, Australia, and the Philippines, prices of domestic leaf are well above those received for comparable qualities of United States tobaccos. Self-sufficiency policies of these areas do not permit greater imports of United States leaf."

The Department of Agriculture, in its Foreign Agricultural Service circular of March 14, 1958, says: "Exports (tobacco) in 1958 are likely to drop somewhat from the 1957 level. Quantities of competitive tobacco grown in other producing countries are likely to be larger than for 1957 (early reports indicate a near record crop of flue-cured in the Federation of Rhodesia and Nyasaland for harvesting early in 1958)."

The Department of Agriculture, Foreign Agricultural Trade for November 1957, table 7, shows that the tobacco leaf imports in the year July 1, 1956–June 30, 1957, amounted to $84,284,000.

On April 15, 1958, Senator HUMPHREY, of Minnesota, placed in the CONGRESSIONAL RECORD, a report on international trade authored by Mr. Ken Miller. Mr. Miller says that Dr. Howard S. Piquet, senior specialist in international trade of the Library of Congress, has expressed the view that the export of some of our products will be seriously hampered by the European Economic Community, but that goods needed to feed the Continent's own industries, like cotton, coal, scrap iron, copper, tobacco will be unaffected. This statement confirms a well-known fact that many of the items we export, such as tobacco, would not be affected by the amendment of Congress of the Trade Agreements Act.

The decline in United States production of flue-cured tobacco, the increase in production in foreign countries, and the failure of the United States to get its share of increased use of tobacco, are the direct results of a policy pursued by our State Department in furtherance of hopelessly intermingled foreign-aid and trade relations. This policy benefits only foreign producers. Until 18 months ago, the State Department and the foreign-aid agencies, such as the ICA, maintained an agricultural-extension program for flue-cured tobacco in many foreign countries, including Rhodesia, Nyasaland, and so forth. This program provided technical aid to the farmers in foreign countries so that they could produce flue-cured tobacco to compete with the tobacco of North Carolina, South Carolina, Georgia, Virginia, and Florida in the world markets. The State Department policy was successful, world production of flue-cured tobacco increased 48 percent while United States production dropped 30 percent. How did this benefit the United States tobacco farmers? This program has been continued; the State Department brings people to this country to study our agricultural processes and sends experts to the foreign lands to help increase the production of tobacco. A Department of Agriculture spokesman is my authority for my statement.

As a plywood producer, I know what has happened in my industry with reference to shipments, prices, and employment. The Japanese, operating with 11½-cents-an-hour wages, in the most modern plywood plants in the world, are shipping hundreds of millions of square feet of plywood to the United States each year to be sold at prices less than our cost of production. Domestic hardwood plywood shipments in 1957 were 117 million square feet less than in 1956. Employment is down and dropping steadily. There have been a number of hardwood plywood plants which have closed, maybe some in your area. The hardwood plywood industry is not the only one injured—others are textiles, petroleum, coal, chemicals, pottery, glassware, watches, and many others. The Americans buy 60 percent of the flue-cured tobacco produced in the United States. If the employment in all the industries affected by imports returned to normal, Americans would buy more of our tobacco. If Mr. Taft and his associates are permitted to delude the public into accepting their fairy tale, then our tobacco industry will go the way of textiles and hardwood plywood. Where will our States be then? Your jobs may be up for export by the free traders.

Mr. Taft's claim that only 28,000 jobs were lost because of imports does not coincide with the facts. Just a few days ago, Senator PAYNE, of Maine, pointed out that since 1946, 345,000 Americans had lost their jobs in the textile industry alone. This is but one industry of the many injured by imports. The Department of Labor has been requested on numerous occasions to furnish figures on the number of American workers affected by import competition. The Department has repeatedly stated they are not in a position to submit a concrete estimate for number of workers which are displaced by imports. Mr. Taft's statement is without substance and I am confident that he is well aware of this.

Mr. Taft says 3,100,000 are employed in direct production for export and 1,400,000 in processing imports. Mr. Taft cannot support this statement by statistics. It has no factual basis, Secretary of Commerce Sinclair Weeks said before the House Ways and Means Committee, March 25, 1958.

The proposal before Congress to amend the Trade Agreements Act to provide a minimum means of protection for the American worker will not jeopardize the jobs of anyone; it will help some to keep their jobs. The facts are these: 32 percent of the dollars used to pay for our exports are obtained from foreign aid, private investments, tourist travel, etc.; another 52 percent was earned from the sale of duty-free imports or imports on which there is only a token tariff; this leaves only 16 percent of the total exports which might be affected by astronomically high tariffs. These facts establish one valid conclusion, Mr. Taft's statement that the Trade Agreements Act must be extended or jobs will be lost, is just bunk.

You and I are interested in tobacco exports. I am also interested in maintaining employment for over 200 persons, some of whom have devoted the greater part of their lives to working with my family in our hardwood plywood plant. The Trade Agreements Act has operated to my detriment, both as a tobacco grower and as a plywood producer. I have had to study both sides of the story. Mr. Taft came down here, treated us like a bunch of country boys, told us half-truths and exaggerations, and thinks we are not smart enough to get the facts. Here are the facts from one of your members, if you want more, write your Congressman or the Department of Agriculture for all the publications on tobacco. We should not let somebody with nothing but a name bamboozle us into making a mistake. Study the facts, make up your own mind. I hope you will tell your Congressmen and Senators that you want a true Trade Agreements Act which provides protection for American industry and workers and guarantees the elimination of restrictions by foreign countries on imports of United States agricultural products. Our mutual interests lie in all the people of our State; we should act together to help all of the people as well as ourselves.

Sincerely,

WALTER A. STILLEY.

Cost of Crime $20 Billion a Year

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. CURTIS. Mr. Speaker, I was very much impressed by a recent address by Hon. William P. Rogers, Attorney General of the United States, before the Advertising Council, Inc., at the Statler Hotel, on Monday, May 5, 1958, on the subject of the steps being taken by the Department of Justice to combat national crime.

A $20-billion-a-year crime bill is indeed staggering, and is second only to national defense in terms of cost. This figure points up the magnitude of the job to be done in the field of law enforcement, not only on the Federal level but primarily in the various States and localities. The Attorney General's statement follows:

THE COST OF CRIME $20 BILLION A YEAR

Tonight I want to talk about a problem which I believe requires serious attention. These days, quite naturally, we are concerned with the economy of our country and our national defense. In a very real sense, the problem of crime is related both to our economy and to the future strength of our Nation.

As you know, this year the Nation will spend more than $40 billion on national defense. But how many people know what crime costs our country? Most people are wholly unaware of the staggering proportions to which it has grown—unmindful of the fact that it is second only to national defense in terms of cost. The estimated cost of crime in the United States in 1 year is about $20 billion.

Twenty-five years ago the Attorney General was appalled by the fact that in 1933 1½ million major crimes had occurred, 1 for each 84 persons in the Nation. In 1958, it appears now that about 3 million major crimes may be committed, twice as many as in 1933. This means that in 1958, 1 major crime will be committed for every 60 persons in the United States.

Since 1950 the rate of crime in our country has been exploding at a rate four times as fast as the rate of growth of our population. The rate of crime in 1957 increased 9 percent over 1956.

These statistics only being to tell the story. One of the facts which stands out in bold relief is the alarming increase in the number of crimes committeed by young people.

Almost half of the persons arrested for major crimes last year were under 18 years of age. Somehow there has been a failure properly to inculcate our people, particularly our young people, with a sense of moral values, with an awareness of how destructive crime is to them and to the country. These figures indicate that there is a tremendous job to be done by schools, churches, parents, and organizations such as this in the years ahead.

Tonight I want to talk not about general problems relating to crime but rather about some of the things we hope to do in the field of law enforcement. Let me mention that I would hope too that this influential organization which has contributed so much to solving important problems of our Nation in the past, will want to give its thoughtful attention to what it can do to help reduce the rate of crime in our country.

What is one of the most obvious facts about the growth of crime in our country? It is the growth of organized crime and the success of its operation.

Syndicates made up of criminals have coordinated and extended their operations over many States and in many cases, across national boundaries. Why is this true? It is true because organized racketeers and hoodlums have learned how to make crime pay.

The top echelon of organized criminals have been able to remove themselves from exposed positions and now operate by scheming, directing, and organizing. Organized criminals exert general control over those types of criminal activities that yield the most profits; gambling, narcotics, and extortion, to name the big three. And, obviously, they pay only a small portion of their taxes on these activities because if they paid all of their taxes as ordinary citizens do, a life of crime would not pay.

In order that you may have a better understanding of the problem from the standpoint of a law enforcement official let me make some general observations.

First, I notice that there is a widespread lack of awareness as to the respective roles of Federal responsibility as compared with the State and local responsibility in the field of law enforcement. Generally speaking, responsibility for law enforcement in our country rests in large measure on the States and localities. The fact is that less than 10 percent of all crimes violate Federal law.

Yet almost every time a serious local crime is committed which gets national publicity some Senator, Congressman, governor, or civic group will immediately demand that the FBI investigate it. This is a very fine tribute to the FBI but it demonstrates a lack of understanding of the law and tends to shift the responsibility away from the States and localities where it belongs.

Consider the recent atocious bombings of schools, churches, and synagogues which have occurred in Florida and other southern States. At first there were demands that the FBI take over the investigation. The Federal Government did not have jurisdiction in those cases because no Federal law was involved. The Federal Government does not have jurisdiction merely because the perpetrators of the crimes may have crossed State lines or because a conspiracy may be involved or because a series of crimes are involved. Unless a Federal law has been violated the FBI has no jurisdiction to investigate.

The law enforcement officials of the States and localities involved have recognized their responsibility. Officials from 29 southern cities have conferred for the purpose of taking cooperative action to solve these shocking crimes. Those responsible are to be complimented for taking this affirmative, determined action.

The FBI stands ready to help the local authorities in every way possible. Its laboratories, identification facilities, information from its files, etc., have been made available. It is maintaining the closest liaison with the responsible authorities and will give them every assistance possible.

The point I hope you will remember is that it is important for the public to place responsibility where it belongs. Communities get the kind of law enforcement they deserve and the public must know where the responsibility lies.

Another fact which is not always fully appreciated is that within the Federal Government itself jurisdiction for investigating crime is divided. The jurisdiction of the FBI is limited to general crimes and crimes involving national security. Internal Revenue has its own investigating staff which has jurisdiction of matters pertaining to tax frauds. The Narcotics Bureau in the Treasury Department has primary responsibility for investigating narcotics violations. The Secret Service is responsible for investigating counterfeiting and crimes relating to the public moneys. The Post Office investigates misuse of the mails.

All of these investigating agencies have compiled outstanding records in their respective fields but organized criminals have not seen fit to compartmentalize their activities so as to fit neatly into these niches. The Department of Justice has complete and sole responsibility for the prosecution of all crimes. It seems obvious then that the information obtained by separate investigating agencies must be fitted together more effectively by the prosecutors than in the past if we are to meet today's crafty challenge of the organized criminal.

About a month ago, I announced a long-range program for combating organized crime in this country. Although, as I have mentioned, the Federal Government has a limited jurisdiction, we do have some powerful weapons. The main ones are the income tax laws, the tax laws relating to narcotics, and the Hobbs Act and the Taft-Hartley Act relating to extortions and payoffs in union activities.

Let me briefly sketch the three main points of the program.

First. The program will be concentrated. We will give top priority to 100 of the top racketeers in the United States. That is not to say we will ignore the others for we plan to attack crime on as many fronts as we can. It does mean, however, that we will give immediate and concentrated effort to the 100 worst hoodlums and racketeers in the country.

The list of names will not be made public for two reasons. In the first place, it would tip our hand and make the investigative work more difficult. In the second place such publication of the names might be attacked as prejudicial in the event of trial. After there have been convictions or deportations we will announce the names and will replenish the list with others who are deserving.

You may wonder why a list of 100. Of course, it is an arbitrary figure to be used principally for purposes of concentration of effort. A brief discussion of how organized crime functions today will indicate why this concentration, I believe, will be effective.

Last November at Apalachin, N. Y., a meeting of 64 top racketeers and hoodlums took place. A majority of those in attendance came from New York, New Jersey, and Pennsylvania, but there was a fair representation from the South, Midwest, and even the west coast. A few of those in attendance had been in a similar meeting as far back as 1928 in Cleveland. Many of them were in attendance at a meeting in 1952 in the Florida Keys, in 1953 at Miami, in 1954 at Chicago, and in 1956 at Binghamton, N. Y. Meetings such as these at Apalachin, attended by what amounts to the board of directors of organized crime for a given area, serve many nefarious purposes. Lines and means of communication are established, methods of distribution are agreed upon, territorial arrangements are made. As a result, gang wars of the 1920's and 1930's have been almost completely eliminated.

The members of these top level planning boards are also the key figures in organizations with headquarters in New York, Miami, Chicago, and other cities in the United States. Here the multi-million-dollar businesses take shape. Those on top seldom come in contact with the local hoodlums who are responsible for maintaining discipline, bribing local officials, or actually dispensing the products of crime. But through strong-arm tactics carried out through subordinates in a chain of command and with the power to shut off necessary financing, production, and sources of supply, they exercise control over most of the profitable forms of illegal activities. The dope peddler, the bookie, the numbers runner, the vendor of obscene magazines, are all largely dependent for their illicit merchandise and for permission to engage in these activities upon these overlords of crime.

These overlords of crime in many instances have invested their ill-gotten gains in hotels, night clubs, coin-operated machines, scrap iron trucking, etc., and hide behind these legitimate fronts while directing their criminal activities.

It is our purpose to concentrate on these overlords. We plan to find out everything that we can find out about them—their sources of income, their present activities, how they invest their money, and how they avoid paying their taxes. Without in any way denying them any of the rights which our citizens have under our system of justice, we will attempt to find out what Federal law they have violated and to obtain the necessary evidence to prove it.

2. The program will have a government-wide coordination of effort.

After consultation with the Secretary and Under Secretary of the Treasury, the Director of the FBI, the Commissioner of Narcotics, the Commissioner of Immigration, the Secret Service, and the other investigative agencies we concluded that we would turn the combined strength and resources of all Federal investigative and law enforcement agencies in a common effort against the organized criminal.

Of course we have not been oblivious in the past to the activities of organized crime and the need for cooperation. What seemed to be lacking and what we are in the process of establishing is a unified prosecutive command, where all information on racketeers from all investigative agencies will be correlated, studied and acted upon.

Let me cite an illustration of what I mean. The distribution and sale of narcotics, particularly to young people, is one of the most reprehensible of all crimes. Almost all of it is imported and it lends itself peculiarly to the control and distribution practices of the organized criminal conspiracy. Most heroin comes from Turkey, Syria, and Iran, in the Near East and China in the Far East. Organized crime has built up a giant transmission belt for securing this drug, for providing for its safe importation, and ultimately for its distribution to the dope peddlers. One pound or heroin is worth about $150,000. The Bureau of Narcotics seized about 1700 ounces of heroin in 1957.

Most marihuana comes from Mexico. Over 26,000 ounces of marihuana were seized at ports and borders, and over 11,000 ounces were seized within the United States in 1957. So you can see that the sale of narcotics is a huge business.

In many instances it is possible to identify top racketeers who traffic in narcotics but not to obtain the necessary evidence to seek an indictment. Now the important thing is to put this criminal out of circulation—the crime for which he may be convicted is of secondary importance. So we will study all

the evidence which the Government has in its possesion from all the investigative agencies. Perhaps we can prove a tax fraud case, possibly he may be subject to deportation, the FBI may have information which placed together with all other information obtained from the Narcotics Bureau may show the violation of some other Federal law, or in some instances we may be able to supply local law enforcement officers with evidence sufficient to convict for a local crime.

3. It will be a long-range, sustained program.

From my experience in law-enforcement work I have noticed that efforts directed on organized crime are apt to be sporadic. A series of vicious crimes occur or a congressional investigation is held and a drive on crime is started. When the excitement dies down the drive is apt to die down.

The program we have in mind is not intended to produce quick or sensational results. Rather it will be a long-range program built on policies which will be lasting and intended to meet a continuing and constantly changing problem.

Recently we have seen instances of how effective racketeers have been in taking over control of a few powerful labor unions. They not only steal money from the union treasury but they use the unions to extort huge sums of money from contractors.

Obviously the efforts of the racketeers to penetrate these unions are well planned and sustained. A few years ago the most powerful racketeer in southern Illinois was Evan Dale, who was president of a union of hod carriers and common laborers. For years he exercised complete control over the rank and file of his union, responsible to no one. During his trial for extortion Dale described himself in the following language:

"I am a Chicago boy. When I left Chicago I threw away my shovel for a blackjack and I have been using it effectively ever since. I came to southern Illinois 15 years ago to carve out an empire. I have carved out an empire. I have 38,000 laborers and 28 business agents under me."

For his part in the multi-million-dollar shakedown of contractors during the construction of a power plan for the Atomic Energy Commission, he was sentenced to 15 years in jail.

There is only one way to combat successfully the activities of such racketeers who have taken over a few labor unions—and that is with a sustained and long-range program of law enforcement. Of course it is not possible or desirable to spell out in any detail all the plans of the Department in this field. What I have said represents a general approach to the problem.

The policy of the Department of Justice can be expressed this way:

1. We will attack the problem of crime on all fronts within the limit of our jurisdiction.

2. We will give top priority to concentrating on the top 100 racketeers.

3. We will urge the courts to impose maximum penalties and within the procedures laid down by the law will seek to expedite the trial of cases.

4. We will urge Federal legislation to give the Federal authorities more weapons to cope with organized criminal activities that have interstate ramifications.

5. We will cooperate with State and local authorities to the greatest extent possible.

The program which I have discussed this evening deals only with one phase of the crime problem in the United States. The problem is a much broader and more serious one than anything that improved law enforcement alone can solve.

There are many things which must be done. For example, the public must be more alert to the tieup between crime and local politics. Experience shows that organized crime on a profitable basis cannot exist for long in any area without the connivance of local law enforcement officers.

Then, too, the public must be made more aware that their support and cooperation in giving information about crime especially in the field of extortion is essential if our law enforcement agencies are to cope effectively with the ever-increasing rise of crime in the United States.

Finally, there is a heavy responsibility which rests on all of us more effectively to instill young people with the basic traits of character which are so vital to our free way of life.

The advertising council which has given so generously and so successfully of its time and talents to programs for human betterment may want to give some of these and other broader aspects of the problem its future consideration. If you do I assure you that all of us in the Department of Justice will give you our enthusiastic cooperation. I can think of nothing which would be more helpful to the Nation than to have the benefit of your thought and counsel and your active participation in helping to solve this grave national problem.

Our International Intelligence Failure

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. MADDEN. Mr. Speaker, the following editorial from the Gary (Ind.) Post Tribune raises the question as to whether our State Department through its intelligence branch, were efficient in not warning the executive department as to the dangers involved in Vice President NIXON's trip to certain countries in South America:

[From the Gary (Ind.) Post-Tribune of May 18, 1958]

HOW GOOD A NEIGHBOR ARE WE?

Walter Lippmann made a strong point yesterday when he recommended an official inquiry into how it happened that Vice President and Mrs. Richard Nixon were exposed to such an outrage on their South American trip.

It is clear now that the trip should not have been made. But what was so wrong in our diplomatic and intelligence services that they did not know the situation sufficiently in advance to call off the Nixon tour? Are we as ill informed generally about the economic and political situations in South America as this situation would indicate? We'd better find out.

Nixon and his wife are deserving of the praise they have received for the way they comported themselves in the face of the violent anti-United States demonstrations. Nixon demonstrated personal courage and a fine ability to maintain his composure. If there is criticism, it is that he was too courageous; he gave the mobs extra opportunity to demonstrate. But we would prefer that to any indication that he was lacking in fortitude.

President Eisenhower displayed again the personal affection he is known to have for the Nixons. His action in sending Marines and paratroopers to Caribbean outposts was something like that of a fond father determined that no harm should come to a son. Perhaps the South American people can be induced to view his action in that light.

But they are more likely to regard it against the background of the past, the period of dollar diplomacy, the time when we sent the Marines into Nicaragua and Haiti. The United States must have appeared again as the colossus of the north flexing its muscles. The troops hardly could have arrived in time if NIXON had been in peril; they were more a threat of retaliation than a security to the Vice President. If it was regarded as essential to shift them to Caribbean outposts, the move could have been made quietly rather than in a flamboyant and menacing manner.

The President did better in discussing the matter in his press conference. He played down the troop movement. And he accepted that economic troubles were at least partly responsible for the rioting directed against the Nixons; he did not put the full blame on Communist agitators.

The whole affair is a lesson that our relations with the Latin American countries are not nearly so satisfactory as we had believed. The demonstrations were not against NIXON personally; they were against him as the symbol of the United States. It has been suggested that the Peruvian and Venezuelan Governments were remiss in not squelching them before they got out of hand, that they might have abetted them in the beginning. But if that is true, it only shows further the deterioration of our relations.

Our Government has trouble on its hands in other parts of the world. But it should not fail to act on the storm warnings from Latin America. More than at any other time in years, there is need to make the good neighbor policy work effectively.

Stan Musial

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in the St. Louis Globe-Democrat, Wednesday, May 14, 1958, entitled Stan Musial.

The article follows:

STAN MUSIAL

Stan Musial has joined the most exclusive society that baseball has to offer, the organization of players who have achieved 3,000 hits in their career.

He is only the eighth man in the history of the game to gain admission, joining Ty Cobb, Tris Speaker, Hans Wagner, Eddie Collins, Nap Lajoie, Paul Waner and Cap Anson. He is the first in 16 years to make it and is likely to be the last for at least that long a time again.

No player in the game today is even close to 3,000 hits. Ted Williams might have made it had he not been deterred by two long service hitches and a succession of prolonged injuries.

Perhaps it is easier to note what an achievement is Musial's by a listing of great players who did not make it. Rogers Hornsby didn't get 3,000 hits. Neither did George Sisler nor Lou Gehrig nor Joe DiMaggio nor Al Simmons.

What is it that makes the 3,000-hit club so exclusive? It demands perfection; it demands consistency. It does not allow for the occasional good year, the platooned player or the Sunday soldier. It demands year-in, year-out concentration on the job.

Stan Musial has always been such a perfectionist. He loves the game of baseball and works at it every day. The recent words of Chicago White Sox Manager Al Lopez are significant. "Musial wasn't hitting a lick on the way home from Florida," Lopez said, "but he took special batting practice during a snow storm in Denver and look at him now."

Look at him indeed. This is the boy out of Donora, Pa., who survived a crippling arm injury deep in the minors in 1940, fought his way up the ladder and was with the Cardinals in September of 1941.

He has been here ever since. We in St. Louis take pride in Stan Musial not only as a great player with the Cardinals, one of the most respected and admired men in the history of the game, but also as a distinguished business and family man of our city.

Congratulations to one of our most illustrious citizens. When the day inevitably comes that he must shed that famed number 6 uniform, he'll still be Stan the Man to all of us. And forever more.

Heroic Rescue

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. JOHNSON. Mr. Speaker, we hear so much about juvenile delinquency that sometimes we lose sight of the vast majority of our young people who reach maturity without the fanfare often given to wrongdoers. Among that majority are many, who, under stress and strain, react in a manner which should give pause to any who are quick to find fault in young people. Early this year a 15-year-old girl named Sharon Boero acted heroically in rescuing from fire five children who had been left in her care. I am requesting that an account of that rescue which appeared in the Independence (Wis.) News Wave be made a part of the RECORD. It follows:

FIRE LEVELS CHIMNEY ROCK STORE; BABYSITTER RESCUES CHILDREN

Fast thinking by a plucky 15-year-old babysitter, Sharon Boero, daughter of Mr. and Mrs. Ernest Jacobson, was credited with averting tragedy as a fire roared through the Chimney Rock store and attached residence about 8 miles north of here, early Sunday morning.

Two children of the Robert Eversons, operators of the store, were reported improving at Whitehall Community Hospital, following close brushes with death.

Sharon Boero, 15, was napping on a davenport while babysitting with the Everson's four children when she awoke about midnight and smelled smoke.

Sleeping upstairs were the Everson children—Ellen, 4; Virginia, 5; Ronald, 7; and Peggy, 8—as well as Sharon's half sister, Marie Arneson, 9.

The babysitter ran upstairs, awoke the sleeping youngsters and began to lead and carry them to safety. Marie smashed a window in the smoke-filled bedroom and ran out on a porch roof. She tried to get the boy to accompany her, but he was afraid, so she made her escape down a drainpipe.

After making two trips upstairs, Sharon discovered that Ronald was still somewhere in the house. Turned back by smoke and flames she raced to the road and stopped a car driven by a neighbor, Bernard Colby.

Colby sped home and quickly returned with a ladder. The smoke turned him back on his first attempt to find the boy, but on the second trip through the bedroom window he found Ronald and lowered him to safety.

In the meantime, another car driven by Ralph Bautch of Independence had stopped. Audrey Stuve of Whitehall attempted artificial respiration on the unconscious boy, who was then rushed to the hospital by Colby.

Since the telephone line had been burned, Bautch sped south to call the fire department at Independence. Fire Chief Willie Smieja reported that he heard the alarm at about 12:55 a. m., and that the entire building was ablaze when the equipment arrived.

Ronald was listed in critical condition when brought to the hospital, but had begun to show improvement 24 hours later. One of his sisters, Virginia, was also a patient, being treated for burns on the hands, feet, and face. The babysitter also sustained burns on her feet, hands, and face, and had her hair badly singed, but neither of the girls was listed as critically burned. Nine-year-old Marie was treated for cuts she received when she smashed the window, but was later released.

The Eversons, who were at Independence, were notified of the fire about 12:45 a. m.

Independence firemen were assisted at the scene by the arrival of a 1,200-gallon-tank truck from Whitehall which aided them in keeping the fire from nearby sheds and the gasoline pumps.

Seventieth Anniversary of Jewish Publication Society of America: A Call for 100,000 Members

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. DINGELL. Mr. Speaker, I am proud and happy to insert into the CONGRESSIONAL RECORD an editorial by Mr. Philip Slomovitz from the Detroit (Mich.) Jewish News announcing the 70th birthday of the Jewish Publication Society of America. The author of the article entitled "Purely Commentary," appearing in the Detroit (Mich.) Jewish News of April 25, 1958, is a member of that fine organization. Two other distinguished Detroit citizens, also members, are Judge Theodore Levin of the United States District Court for the Eastern District of Michigan, and Mr. Leonard Simons, a well known and widely respected citizen of our city of Detroit, whom I have known for many years and whose friendship I cherish highly.

It is with considerable pleasure that I insert this article into the RECORD and wish the members of the Jewish Publication Society of America and their many friends well on its anniversary.

The article follows:

SEVENTIETH ANNIVERSARY OF JEWISH PUBLICATION SOCIETY OF AMERICA: A CALL FOR 100,000 MEMBERS

American Jewry will mark a very important anniversary on June 7. It will be the 70th birthday of the Jewish Publication Society of America, and it should serve as an occasion to inspire increased interest in this publishing venture.

The Jewish Publication Society program must be viewed as the book publishing project of the entire American Jewish community. It is a nonprofit venture that undertakes to print the most acceptable books of Jewish interest by our ablest writers and keeps in print the outstanding Jewish classics.

This society has pioneered in many fields. It sponsored the first authorized translation of our Scriptures into English a generation ago and now is sponsoring a revised Bible translation, outstanding scholars being engaged in this important task.

It introduced to the English-speaking communities the works of Israel Zangwill and published, in an English translation, Heinrich Graetz's History of the Jews.

It has published, and continues to issue, books on Jewish history, sociology and Philosophy. It is, indeed, the backbone of Jewish publishing efforts in this country.

The latest Jewish Publication Society venture is the publishing, together with Farrar, Straus & Cudahy, of a series of children's books, to be known as the Covenant Books. We wish especially to commend this venture which seeks to instruct and inspire our youth with stories about outstanding Jewish personalities in America.

The first two books in this series, Silversmith of Old New York: Myer Myers, by William Wise, and Border Hawk: August Bondi, by Lloyd Alexander, deserve commendation at the very outset. Under the imprint of the Jewish Publication Society and Farrar, Straus & Cudahy, these Covenant Books delineate the lives of two charming personalities.

Myer Myers, son of Dutch Jews who settled in New York at the beginning of the 18th century, became a great silversmith. He became a leader in the first Jewish congregation in New York, Shearith Israel, and he took a deep interest in Jewish activities. His Jewish ceremonial objects, his love for his art as a silversmith, his experiences with the British during the Revoluntionary War, are eloquently described in this charming story.

Similarly, the story of August Bondi will enchant the reader. It is a tale about a young Jewish boy who fought on the Vienna barricades in 1848, came to the United States and became a leading opponent of slavery, having been shocked by the activities on the New Orleans slave market. Bondi became an outstanding citizen and community leader in Salina, Kans. Not only his adopted country, but his birthplace as well—Vienna—recognized his genius, and he was honored in Austria on a return visit there towards the end of the last century.

These two stories are for children who will be enlightened by knowledge about outstanding Jews in this country. By the same token, they will inspire the parents who will read these books with their children as well as the youths, and will throw light on interesting chapters in our history.

The joint effort of publishing such volumes is so commendable that we link it with the overall 70-year history of the Jewish Publication Society, as an interesting development in the society's 70th year. The fact that it joined forces with so enterprising a publishing house as Farrar, Straus & Cudahy in the Covenant books project lends added importance to its leaders' vision.

The Farrar, Straus & Cudahy group was recently analyzed in the Trade Winds column in Saturday Review by John G. Fuller, who pointed out:

"This yeasty house (Farrar, Straus & Cudahy) is now only in its 12th year, but already has an imposing list of authors developed under the overall guidance of John Farrar, chairman of the board, Sheila

Cudahy, vice president and secretary, and Robert Giroux, vice president and editor in chief.

"Farrar, Straus & Cudahy owes a lot of its energy to its fireball president, Roger W. Straus, Jr. He is direct, outspoken, dynamic.

"'We started the company on a capitalization of $300,000,' he said. 'And we lived on raw nerve for awhile. You couldn't do the same thing today for less than a million. But we've been in the black for 8 out of our 12 years—and this year our volume will be about a million and half. About a third of this will come in from our backlist books—which is the life blood of many publishers.

"'I believe in pushing the subsidiary rights of every book we publish, and I get pretty unpopular because I hold out for everything I can get for the author. I hate like the devil to see authors starve between books, and publishers would get better results if half their novelists didn't have to teach school in East Overshoe, Ark., to keep alive.'"

More power to this type of enterprising publishers.

To return to the Jewish Publication Society:

The 70th anniversary of this very constructive organization deserves a great deal of attention from all of us.

The event will be truly great if a large number of American Jews, who are now unaffiliated with it, will become members.

There is a lot of talk about the need for advancing American Jewry's cultural status. One way of doing it is to encourage people to read. At this time, the Jewish Publication Society has only 10,000 members. The 5,500,000 Jews who form the American Jewish community should provide at least 100,000 readers of JPS books. This may sound like a fantastic figure—since we are starting with the small number of 10,000—but if we are to rise to higher planes that should be our goal.

This is an objective for the 70th anniversary year of the Jewish Publication Society of America. Will our communities respond to such a need?

Public Health Service Position on Water Fluoridation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I have received a considerable amount of correspondence from my constituents relating to the problem of fluoridation. A review of this correspondence indicates a great deal of misunderstanding about the many local fluoridation programs. Accordingly, I wrote to the Department of Health, Education, and Welfare to find out what studies that Department had made on the subject of water fluoridation and what statements had been issued by the Department for public guidance.

I was happy to receive a statement by Dr. Leroy E. Burney, Surgeon General, United States Public Health Service, dated April 25, 1958, which had been released by the Department of Health, Education, and Welfare, Public Health Service. This statement needs wide dissemination and so I am placing it in the CONGRESSIONAL RECORD:

Fluoridation was approved by the United States Public Health Service in 1951 after a thorough examination of all scientific evidence relating to its safety, effectiveness, and practicability.

Since that time, many communities throughout the Nation have instituted local fluoridation programs. Careful study of their experience with this measure plus continuing scientific research have provided additional evidence of the dental health benefits of fluoridation.

Fluoridation causes no bodily harm; it is remarkably effective in reducing the incidence of tooth decay by two-thirds; and its cost is minimal, about 10 cents per person per year.

The Public Health Service has, therefore, recommended the adoption of fluoridation to all communities interested in progressive health measures.

Unheeded Words of Warning

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. SIKES. Mr. Speaker, I read with a great deal of interest the article headed "Unheeded Words of Warning" which appeared in the Sunday Star on May 18, 1958, and I think this should be called to the attention of the Congress. The article consists of excerpts of the testimony by Gov. Luis Muñoz-Marín, of Puerto Rico, before the Senate Foreign Relations Committee last March and follows herewith:

UNHEEDED WORDS OF WARNING

(Last March 10 Gov. Luis Muñoz-Marín, of Puerto Rico, discussed relations between the United States and Latin America before the Senate Foreign Relations Committee. Excerpts from his testimony, which has taken on new significance in the light of events of the past week, follow:)

One does not have to look around the world much to come to the inescapable conclusion that the more authoritarian the government, the more nationalistic its behavior. In Latin America we have an often undervalued counterbalance to that in the natural spirit of democracy and freedom that all Hispanic, all Iberian people possess. Too often it is throttled into temporary voicelessness by ambitious and unscrupulous leaders, but it is always there and I am glad to note that recently it has made very much progress, and has been very much in the ascendancy.

It would serve the interests of the United States if it took greater care to encourage this inherent will toward free institutions. There needs to be some greater distinction than in the past between the United States attitude toward friendly peoples with friendly democratic governments and friendly people with tyrannical governments that find it to their interest to play along with the United States.

I do not mean that the United States could intervene in the internal affairs of any Latin American country or that it should decide for its neighbors what form of government they shall have. This, of course, would not be proper, nor to the best interests of the United States. It is a matter of degree, and the degree is most important. When you give the same consideration to dictators and tyrants as to proven democrats you cannot help but discourage democracy.

In the field of economic development, it is the hope of many of us, in the States and in Latin America, that the United States will develop a vital policy, as distinguished from a merely friendly and well-wishing one, for Latin America, to which Latin America should respond wholeheartedly. This would be a policy that would have validity even if Russian communism did not exist, and that consequently will have greater validity because Russian communism does exist.

We should set for ourselves, North and South, the urgent goal—urgent though it may take years—of reasonably diminishing the tremendous gap between the standards of living prevailing in the United States and those prevailing over enormous areas of Latin America.

The complaint is heard that the United States devotes much more attention and much more economic resource to other regions of economic scarcity than to Latin America.

Is this because the region is considered of relatively minor importance to the security of the United States and to the maintenance of the peace of the world? Obviously not. In peacetime the United States economic machine could hardly run at any level that could be called prosperity without the natural resources of its southern neighbors—the tin, copper, oil, and so forth, that Latin America supplies. In wartime the situation becomes many times more acute. * * *

Certainly, the importance of Latin America to the United States is out of proportion to the comparative aid and attention it receives. Why? Is public opinion in the United States unacquainted with this massive fact? Probably. But can the same be said of the leaders of public opinion? I believe not. What, then, is the explanation? The explanation, I fear, is a form of thinking that takes the following lines:

"Yes, Latin America is of great importance in peace or war, but we can count on it anyway. They are our friends and neighbors. They are as much against Communist despotism as we are. We can take them for granted. Of course, we should and do help them, but the situation in other parts of the world is more urgent."

The experience with colonialism and imperialism which accompanied capitalism into Asia and Africa was not a happy one for the peoples there. Even in Latin America former policies of the United States Government have left a sediment of memory that can be very easily stirred into a sense of grievance to be exploited by political forces.

Since private investment must carry the ball for the bulk of development, and since it is easy to stir suspicion against it, as a device inimical to local justice and local interests, it is of paramount importance that the United States or the developed Western Powers avoid seeming to try to ram a doctrine down the throats of those who wish to receive their aid.

In a democracy, there must be a record of the reasons for arriving at a decision to aid other countries. The Russians, because of the kind of government that Russia has, need no such record. They can pretend, with naught but opinion and precedent to dispute them, that every ruble they give is out of the goodness and generosity of the Soviet heart.

The United States, as a democracy must do, records the arguments that lead to its decisions. And the record contains the emphasized and reemphasized assertion that aid policies are proposed to serve the selfish interest of the United States.

Now, as a Puerto Rican and as a citizen of the United States familiar, I believe, with

the spirit of the American people, I would like to question this. I do not believe that selfishness is a notable ingredient of American character. I believe that the American people are generous, that they take a real interest in their neighbors, that they are endowed with a spirit of sensible idealism. I believe this has been shown in many ways, many times.

But for some peculiar reason there seems to be a certain feeling of shame about this, shame of not being practical, shame in using money in ways that may not be considered basically motivated by selfishness. It is a most peculiar trait of a most generous people, and it makes for misunderstanding throughout the world of the aims and policies of the United States.

I would earnestly recommend to the Congress, to the schools, to the universities of the United States, that each do something in its own sphere to make the American people feel more natural in their goodness. Let us cease to pretend that the American people are extraordinarily hardheaded in order to hide the altogether creditable fact that they are decently kindhearted.

TVA Helps Heal Farms and Forests

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1958

Mr. EVINS. Mr. Speaker, in connection with the 25th anniversary of the TVA, I ask unanimous consent that the following article by the Honorable James P. Pope, entitled "TVA Helps Heal Farms and Forests", be reproduced in the Appendix of the RECORD. The article follows:

TVA HELPS HEAL FARMS AND FORESTS

(By James P. Pope)

When Senator Ellison D. ("Cotton Ed") Smith, of South Carolina, introduced a bill during World War I providing for Government ownership and operation of nitrate munitions plants, he almost certainly had no notion of the eventual impact his proposals would have on the Nation's agriculture. Nor did he have any idea that he was planting a mustard seed that would grow into TVA, an integrated resource development with nationwide benefits and worldwide fame.

"Cotton Ed" was interested in agriculture, and primarily Southern agriculture which consumed great quantities of nitrogen fertilizer, then practically all imported, in growing cotton. His idea was that after the paramount demands of national defense had been met, the Government nitrate plants should be used in peacetime to produce fertilizers for American agriculture. His proposals became section 124 of the National Defense Act of 1916, and under this act the War Department built Wilson Dam and the nitrate plants at Muscle Shoals, Ala.

In the happy heyday after World War I, when other Government surplus wartime properties were being auctioned off for a song, the mandate that the nitrate plants should be used for the benefit of agriculture saved the Muscle Shoals properties from the common fate. Not that private interests didn't eye them covetously. The hitch was that, in the Senate, all bids and proposals came before the Committe on Agriculture and Forestry, headed by Senator George W. Norris of Nebraska. Norris not only objected to disposing of the properties for a fraction of their cost—one proposal he described as "the greatest gift to mortal man since salvation was made free to the human race"—but he saw them as a great public asset, the start of a vast program to develop the water and land resources of an entire river valley.

It took nearly a decade and a half of debate, in and out of Congress, before TVA was set up not only to control the river through dams and reservoirs but to concern itself with the problems of agriculture and forestry, with conservation of soil and water on the land.

In the operation of the Muscle Shoals properties, it was recognized in the act that research, development, and demonstration of new and improved fertilizers would be more important than simple production. Moreover, although TVA is best known as a regional agency, in one respect—the operation of the fertilizer-munitions facilities—the region it serves extends to the national borders. In the 25 years since 1933, the fertilizer research and demonstration activities centered at Muscle Shoals have extended their benefits to three-quarters of the States of the Nation. A few examples will illustrate.

In Washington and South Carolina last year, practical farmers, using TVA fertilizers, were demonstrating how productive, soil-healing pastures could be established. In Minnesota, a wholesale fertilizer company and its retailers conducted dozens of farmer meetings, published pamphlets, and sponsored radio programs on the proper use of fertilizers as recommended by State agriculutral experts.

Minnesota farmers are buying plant food of high analysis—20 pounds of nitrogen, 30 pounds of phosphate, and 10 pounds of potash in each 100-pound bag. The fertilizer is about double the concentration of the average material used in the United States. Private distributors make some of it by mixing ordinary fertilizer with a new TVA research product, diamonium phosphate, which contains 74 percent plant nutrient. Private industry is turning to its production.

In Idaho, a farmers' cooperative was planning a new fertilizer factory. The design was developed by TVA and made available for commercial use without charge. The plant is planned to produce calcium metaphosphate, developed by the TVA, containing an unusually high proportion of phosphate plant food. Nearby in the same State, private chemical companies are smelting rock phosphate in electric furnaces. Much of the technology they use was developed by TVA.

More than a hundred fertilizer plants in the country today are mixing plant foods with a machine called a continuous ammoniator granulater, a product of TVA chemical engineering research. Its use produces fertilizer mixtures more cheaply and results in a better product.

TVA's development and demonstration activities have been conducted over a period in which farming has steadily become more complicated. Today's farmer must be a manager in the most modern sense. He must test his soils and apply the right fertilizers in the right amount, weighing carefully the efficiency of his operations. Moreover, this has been a period when the use of fertilizers has expanded geographically. Fertilizer use today is no longer principally a southern practice, but is nationwide and growing fast.

The TVA's chemical engineering research and its demonstration programs have played a pioneering role in this development over the past quarter century. TVA's fertilizers, produced experimentally in plant-size units at Muscle Shoals, amount to less than 2 percent of the fertilizers produced and used in the United States. But they are used in ways which stimulate the interest of farmers and fertilizer manufacturers and dealers to make and use fertilizer in new ways and with greater efficiency. New practices, recommended by the various state agricultural colleges and extension service experts but not generally accepted by farmers, are stressed.

The farm problem was considerably different in 1933 from what it is now, southern farmers to a large extent depended on row crops such as corn, cotton, and tobacco for their living. Such agriculture was wasteful, leaving the ground bare much of the time to rains which washed away the topsoil. Science at the time knew how to end this waste. College experiment stations had shown that phosphate and lime would make clover, alfalfa, and grasses grow on hillsides, making livestock farming and better balanced farming systems feasible.

It was in accordance with this knowledge that TVA undertook first to work on phosphate fertilizers and to develop the techniques of electric furnace processing of phosphate ores to produce higher concentrations of plant nutrient. The new materials were brought to the attention of farmers through TVA's first educational program, the farm test-demonstration program, based on the belief that seeing is believing. Administered by the State extension services and aided by county organizations of farmers, the program brought the facts of fertilizer use to farmers through actual use of TVA fertilizers by individual test-demonstration farmers. One of the important results has been the establishment of a decided trend in southern agriculture away from row crops to pastures and forage crops and livestock production.

However, the problem was not confined to the South, but was national in scope. As chairman of a joint congressional committee on phosphate resources and use in the United States in 1938, I heard soils scientists testify that four-fifths of the soils of America were deficient in phosphorus. More than this, we had testimony that phosphorus deficiency had been noted in farm animals in several States. The committee concluded that the use of phosphates in agriculture should be drastically increased and that efforts should be made to tap the huge, but then virtually unused, phosphate resources of the western States of Idaho, Montana, Wyoming, and Utah.

The development of new and improved fertilizer in laboratories and plants is only the first step in the process. To bridge the gap between fertilizer technology and the farmer on the land, TVA has carried on two widespread educational programs which are guided by the agricultural colleges in the various States. One of these programs has been mentioned—the farm test-demonstration program, started in 1935. Some 71,000 farms in 38 States, covering more than 10 million acres, have participated.

The other program, affecting more farmers in more States, is the distributor demonstration program. The most important feature of this program is the fact that private and cooperative commercial distributors and their dealers participate in getting fertilizer use information to the farmers and themselves undertake experiments to improve industry processes, products, and distributor methods. Some 70 wholesale distributors—53 cooperatives and 18 industrial firms—are taking part in the program under contracts providing for major educational activities in introducing new fertilizers and improving their use. Their retail outlets, numbering more than 2,000, operate in 31 States.

TVA's primary interest is in the farmer, but this leads automatically to an interest in aiding the fertilizer and chemical industries, on whom the farmer must depend for his fertilizer supplies, to improve their manufacturing machinery and techniques and their products. The results of TVA's chemical engineering advances are made freely available to industry through licensing of

TVA patents. The licenses are royalty free and nonexclusive.

In all this, the dual purpose of the Muscle Shoals facilities—agriculture and national defense—has not been lost. Rather, the two aspects of use of the facilities are complementary. TVA's electric furnace developments enabled it in World War II to supply large quantities of elemental phosphorus to the armed services.

In the Tennessee Valley, only about half the land problem, geographically at least, is accounted for by agriculture. More than half the valley land area is in forests and woodlands. Not only are they important as an economic asset, for the production of lumber, pulp, and other wood products, but also for watershed protection, augmenting underground water supplies, and slowing the rush of rainwater into the streams.

Tennessee Valley forest products today are valued at $450 million a year. The forest products industries employ about 50,000 persons earning $100 million a year. Valley forests, once cutover, depleted, and on the downgrade, today are growing at the rate of 1.5 billion board feet a year.

These evidences of the productive use of the forest resource and of its future potential are the result of a long period of concentrated effort in which forestry and agriculture agencies of the seven valley States worked hand in hand with the TVA, the United States Forest Service, the Soil Conservation Service, the forest-products industries, and many other regional, State, and local groups.

When TVA was set up a quarter of a century ago, the forest resource, outside of the national forests, had received inadequate attention. Nearly a million acres of land in the valley burned over each year. Only a few private landowners were practicing systematic timber management. The State forestry budgets were low, and the 7 States together employed only 36 foresters.

One of TVA's first contributions to forest improvement was an extensive fire-prevention campaign which would build up public awareness of fire damage and bring more forests under protection. TVA helped State foresters in selecting sites for fire lookout towers, installing and operating fire danger measuring equipment, and making surveys of fire causes. Today more than 95 percent of the land is protected from fire by the States and 111 of the 125 counties in the Tennessee watershed cooperate financially in fire control.

In 1933, erosion had taken a half million acres out of production, and only about 1,000 acres had been reforested. TVA developed large nurseries, streamlined operating techniques, and began producing seedlings. Over the years, close to 45,000 valley landowners have planted about 366 million seedlings on 326,000 acres. Of the total seedlings, TVA nurseries supplied 314 million. Today the situation is different; State forestry agencies are much more active and in the past couple of years the State nurseries have supplied more tree seedlings than TVA for planting in the Valley. Moreover, the reforestation activities have spread over the entire seven-State area.

Forest management demonstrations set up through the cooperation of TVA, State forestry agencies, and forest landowners have led the way toward improving use of the forests. Today there are 285 such demonstrations in the valley covering 562,000 acres, and an additional 1.2 million acres are being put under management by industry and consulting foresters working with landowners.

Thus, on the agricultural and the forest lands of the valley, as well as in the multiple-use of the Tennessee River system, the resources of an important region are being developed into fuller productivity through the cooperation of a Federal agency, the TVA, and the people of the valley and their institutions.

A Prime Human Responsibility of Our American Citizens

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I read with a great deal of interest and appreciation the fine statement of Dr. Arthur H. Compton wherein he concludes nuclear test dangers are slight compared to atomic war. Dr. Compton is a distinguished service professor of natural philosophy at Washington University in St. Louis, and he is its former chancellor. He devoted a great deal of his time, energies, and talents to the study of physical properties of X-rays, cosmic rays, and other ionizing radiations. He has been recognized for this work by many scientific organizations at home and abroad. He was awarded the Nobel prize in 1927 for his work with X-rays. Without question, Dr. Compton is one of the most distinguished and dedicated Americans in his field today.

I am placing in the RECORD today Dr. Compton's statement together with an editorial which appeared in the same edition of the St. Louis Globe Democrat. In closing I would but reaffirm Dr. Compton's statement that it would be a tragedy for the world and a major hazard for America if our Nation should reduce the effectiveness of its nuclear armament without firm assurance that Russia is not left in a position to exercise military dominance over its neighbors.

The statement follows:

[From the St. Louis Globe-Democrat of May 14, 1958]

DR. COMPTON'S LETTER

The Globe-Democrat is privileged to be able to present, with Dr. Compton's and Senator SYMINGTON'S permission, the copy of the letter the celebrated nuclear physicist wrote the Senator on the subject of the continuation of testing of nuclear weapons.

In our view, it is the most thoughtful and penetrating analysis of this vital subject ever presented. It should be required reading for every American.

Dr. Compton's contributions to mankind are far too well known to be detailed here. He is one of the greatest men in the world today, and for these reasons, his views on a subject in which he is so thoroughly qualified take on added meaning.

Dr. Compton's views on the necessity for the continuation of tests should do a great deal to dispel the fuzzy thinking and the hopelessly visionary and unrealistic attitude of those who, by urging the halting of nuclear tests, wittingly or unwittingly mirror the Moscow line.

Dr. Compton's logic is so exact and his thinking so crystal clear that his letter should serve as a text reference for those whose own lack of knowledge of the subject necessarily dictates that they must be guided in their opinions by those best qualified by knowledge and experience to speak.

In his views, Dr. Compton is joined by many others of the most distinguished and dedicated Americans in their field today, including Dr. Ernest O. Lawrence, Dr. Edward Teller, and Dr. Wernher von Braun.

Dr. Compton's letter is but another in a long series of valuable services to America, the free world, and, most important of all, to the dignity of man.

TEXT OF DR. COMPTON'S LETTER—SAYS NUCLEAR TEST DANGERS ARE SLIGHT COMPARED TO A-WAR

MAY 8, 1958.

The Honorable STUART SYMINGTON,
United States Senator from Missouri,
Washington, D. C.

DEAR SENATOR SYMINGTON: The point of this letter is twofold. First, I want to express my congratulations for your recent (Apr. 22) testimony before the Senate favoring a continuation of the testing of nuclear weapons. Your testimony showed careful study, mature balance of judgment, and a high degree of moral courage. I hope your recommendations prevail.

Second, because the question of what should be done about nuclear tests comes to me repeatedly from many quarters, I want to summarize for the record my present views on this matter. At your invitation I presented testimony before the Senate Armed Services Committee, meeting here in St. Louis on December 12, 1956. This letter may be considered as an extension of this earlier statement. Such further testimony seems appropriate at this time because of the sharply divided views regarding the value of nuclear weapons tests as expressed recently by various scientists, and particularly in view of the vigorous opposition to such tests currently publicized by certain of my esteemed colleagues at Washington University.

I favor a vigorous extension of the American work needed to enable our Nation to use nuclear explosives effectually for either military or peaceful purposes. To the best of my knowledge this agrees with your own views.

QUALIFICATIONS

The study of physical properties of X-rays, cosmic rays, and other ionizing radiations was my primary professional task from 1913 until 1942. Recognition of my work in these fields has included many medals and honorary citations by scientific organizations in this country and abroad, including the Nobel Prize in 1927 for work with X-rays. I served as President of the American Physical Society in 1934 and as President of the American Association for the Advancement of Science in 1942.

The physiological effects of ionizing rays have also been a matter of active concern for me. I was a member of the National Cancer Advisory Council from 1937 to 1944, and served as its representative in supporting the construction of a cyclotron at Berkeley, Calif., for the study of the biological effects of neutrons, and in the building of a cyclotron at St. Louis designed especially for producing artificial isotopes for medical purposes. I also helped to organize the Chicago Tumor Institute and served on its Scientific Committee from 1937–49.

I had the responsibility for initiating and organizing (in 1942) the health and safety program for the use of radioactive materials in connection with the American nuclear reactors. I worked closely with the officers of the Manhattan District in setting up the procedures for health and safety and also the radio-biology research for the entire atomic energy program. This program of safety precautions has resulted in an exceptional record for safety among those working with nuclear reactions. The research we began on the biological effects of radioactive materials continue to be carried on, with extensions and improvements, by the United States Atomic Energy Commission.
